The "strange anomaly" to which you allude on page 141 is this, as I understand it: that, in the nation's direst need, a *man* was wanting in the Presidential office; that the logical leader of the forces willing to work for peace and civilization proved to be acephalous and invertebrate. As a contribution to the explanation of this tremendous phenomenon I offer the following: The fatal defect in Mr. McKinley's intellectual and moral make-up was the almost total lack of the love of truth. His whole career illustrates this. He was a protectionist because he cared nothing for truth. He was a silverling as long as silver was popular; when doubts arose, he became a straddle-bug; when the party leaders assured him that only yellow wings would carry him to the White House, he promptly became a gold bug. "He who finds what he wants or makes what he wants is a god," it has been said. What Mr. McKinley wanted, first, last, and all the time, was votes; and he got them, and they filled and satisfied his soul.

But lack of the love of truth involves, it would seem, incapacity to distinguish between truth and falsehood, and therefore between right and wrong. If I am correct, then Mr. McKinley chose the wrong in a tremendous crisis, not wilfully, but blindly, and became the chief architect of the moral ruin that has fallen upon the world, not because he deliberately aspired to that bad eminence, but because he never thought, and was unable to think, of anything but votes and how to get them.

It is holy Scripture that "God is not the author of confusion, but of peace"; but President McKinley, professing all the time to desire peace, flung away without knowing it the grandest opportunity ever offered to a man, and became the author, not of peace, but of confusion.

A. F. Hamilton.

SHARPLESS'S QUAKER EXPERIMENT.

To the Editor of The Nation:

Sir: Your notice of our new popular edition of President Sharpless's work, 'A Quaker Experiment in Government,' in your issue of February 27, is such a keen demonstration that reviewing is more than an empty form in your office, that we could almost find heart to join in the laugh on ourselves, and then subside. But your reviewer has amplified his discovery that we had used an old index into what is almost a charge of fraud. He says the redundant lines in the index "betray an extensive abridgment not acknowledged on the title-page." The facts are these: There has been no abridgment of the original work whatever; the one-volume edition is an exact reprint (barring a few corrections) of the two original volumes issued in 1899 and 1900. But about a year ago we amplified the original work into the Haverford Edition, a somewhat expensive subscription work, in which were added a preface and a concluding chapter, extraneous to the proper scope of the history, but of special interest to members of the Society of Friends (to whom, almost exclusively, this edition was sold). This is the matter that was omitted in the popular edition. The said edition was advertised repeatedly in your columns, and each time it was plainly stated that the special matter of the Haverford edition was *not* included. A "reviewer's inspiration" slip inserted in the review copy sent to you conveyed the same information. We submit, therefore, that we had made no pretence that the present edition was a reprint of the Haverford edition, and we do assert positively that it is a full reprint of the original edition. Under the circumstances the imputation of fraud is hardly borne out.—Yours very truly,

Ferris & Leach.

Philadelphia, February 28, 1902.

[Our words were not intended to charge fraud, but simply to state a fact, conditioned upon the index being that of the work which we originally reviewed, but which we no longer had at hand for comparison.—Ed. Nation.]

Notes.

In addition to many works of fiction by well-known writers, Houghton, Mifflin & Co.'s spring list includes 'New France and New England,' by John Fiske, the last link in the chain of his historical series down to the adoption of the Constitution; 'Lee at Appomattox, and Other Papers,' by Charles Francis Adams; 'Charles Eliot,' a biography of this lamented landscape architect, with some exemplification of his art; 'The Life of John Ruskin,' by W. G. Collingwood; 'Daniel Webster,' by Samuel W. McCall; 'The Reminiscences of a Dramatic Critic,' by Henry Austin Clapp; 'An American at Oxford,' by John Corbin; 'Molière,' by Leon H. Vincent; 'Nature and Human Nature,' by Ellen Russell Emerson; a revised edition of Professor Norton's prose translation of the Divine Comedy; a metrical translation of the first six books of Virgil's Æneid, by Harlan H. Ballard; 'The Argive Heræum,' edited by Dr. Charles Waldstein; 'Social Salvation,' by Washington Gladden; 'The Physiological Aspects of the Liquor Problem,' edited by Dr. J. S. Billings; 'A Guide to the Literature of American History,' by J. N. Learned; and the two concluding volumes (xii., xiv.) of Prof. C. S. Sargent's 'Silva of North America.'

Spring announcements of Henry Holt & Co. embrace Seignobos's 'Narrative and Critical History of the Roman People'; Prof. Auguste Fournier's 'Napoleon I.'; the second volume of Prof. J. P. Gordy's 'Political History of the United States'; Tarde's 'The Laws of Imitation,' translated by Mrs. Herbert Parsons, Ph.D.; 'Outlines of Ethics,' by Profs. John Dewey and J. M. Tufts; 'A Manual of Logic,' by Prof. Herbert A. Aikins; a volume of 'Standard English Prose,' by Henry S. Pancoast; 'Public Exposition and Argumentation,' by Prof. George P. Baker; 'Variations in Animals and Plants,' by Dr. H. M. Vernon; and, last but not least, if a real need is supplied, 'An Italian and English Dictionary,' by Prof. Hjalmar Erdgren, Dr. G. Bico, and J. L. Gerig.

A volume of short stories, 'In the Gates of Israel,' by Herman Bernstein, is in the press of J. F. Taylor & Co.

'Nestlings of Forest and Marsh,' by Irene Grosvenor Wheelock; 'Alabama Sketches,' by Dr. Samuel Minturn Peck; and Mary Cowden Clarke's correspondence with Robert Balmanno, 'Letters to an Enthusiast,' will soon be published by A. C. McClurg & Co., Chicago.

A popular volume, with illustrations, 'Practical Talks by an Astronomer,' by Prof. Harold Jacoby of Columbia, is in the press of Charles Scribner's Sons.

The Government Printing-Office in Paris

is engaged in the production of a work that will be a masterpiece of the printer's art, namely, 'L'Histoire de l'Imprimerie en France,' intended as a present to the Emperor of Russia. Copies are to be sent also to the King of Portugal and to the King of Belgium, both of whom have for years been in close relations with the Imprimerie Nationale. The first two volumes treat of the Paris publications of the fifteenth century, while the third, now in preparation, takes up those of Lyons for the same period; the fourth recurs to Paris in the sixteenth century, and the fifth and last of the series will cover the publications in the provinces during the fifteenth and sixteenth centuries.

A further addition to the series "Our European Neighbors" (Putnams) is most welcome. In a volume of about two hundred and seventy pages, Mr. Alfred T. Story has collected his ample knowledge of 'Swiss Life in Town and Country.' The little republic is, in his eyes, not the playground of Europe, but one of the chosen homes of toil, thrift, and general earnestness of purpose. We do not know a single compact book on the same subject in which Swiss character in all its variety finds so sympathetic and yet thorough treatment; the reason of this being that the author has enjoyed privileges of unusual intimacy with all classes, which prevented his lumping the people as a whole without distinction of racial and cantonal feeling. He has perceived, for example, that, in French Switzerland alone, Genevese and Vaudois (not to mention their neighbors) are distinct types, though really of the same race, speech, and faith. In the chapter on public education, at least one paragraph should have given full credit to Swiss teachers not only for their intensity of application, but for the unusually high average of intellectual equipment in their professional training. The Swiss peasant, often slower of speech than the Frenchman, is nevertheless capable of writing a letter which testifies to the quality of methodically accurate teaching in the primary school.

From the press of Ch. Dunod, Paris, we have 'L'Achèvement du Canal de Panama,' by the engineer, C. Sonderbegger. It is a work which should be of great practical importance to our Government, if, as now seems probable, it decides to acquire the Panama property; for the author, out of an experience of eight years in actual work on the Panama route, describes and discusses in great detail the main problems which confront any contractor there—such as the climate and hygiene, rainfall, the most desirable class of laborers, and the whole question of methods of work, with all the workshops and machinery involved. M. Sonderbegger's final summing up is strongly favorable to the feasibility of the revised engineering plans.

The vexed question, worthy of an international commission, of "Transliteration from the Russian," was discussed in the *New Englander* last May by Mr. J. S. Sumner of Yale. It is largely a critique of the American Library Association's scheme. For the convenience of those interested, Mr. Sumner has had the article reprinted by itself, and it may be had for ten cents on application to the Tuttle, Morehouse & Taylor Press, New Haven. Well would it be if Russia were to enter the confraternity of Western nations by adopting the Roman alphabet. Her chosen system would then perforce be ours.

The newly published Proceedings of the State Historical Society of Wisconsin catalogues in detail the art collection presented by Dr. and Mrs. Charles Kendall Adams, and records the creation of the Mary M. Adams Art Fund through the sale of Mrs. Adams's personal jewels (amounting to $3,850). It appears that the limitations in space of the fine new Library building are already beginning to be felt, and that the completion of the north wing will put off the evil day hardly more than a quarter of a century. The volume closes with brief papers on the foreign population of Wisconsin, and a chapter on Wisconsin's contributions to American inventions—most notable being C. Latham Sholes's typewriter, parent of the Remington.

The account by Major P. M. Sykes of his work in Eastern Persia, which forms the principal article in the *Geographical Journal* for February, is a remarkable illustration of what an intelligent and zealous consul can accomplish. His definite mission was to assist and protect commerce in the wild region in which he was stationed, and in the discharge of it he travelled ten thousand miles in eight years, acquainting himself with the people and their industries. In one district, for instance, he exerted his influence to induce the weavers, who were using aniline dyes with deplorable results, to return to the old vegetable dyes, to which the lovely colors of their carpets are due. He secured the punishment of robbers and murderers, established post-routes, and succeeded in opening a caravan trade with India—"the first person," said Sir H. Howorth, "who, since the time of the followers of Alexander, has united India and Persia by trade and commerce." In addition to this work, with the aid of an Indian topographer he surveyed the unexplored regions through which he passed, examined ruins, traced the route of Alexander. In this account of his fourth journey he gives the most interesting historical facts connected with the places visited. The general impression left is of a country sinking into barbarism, the decay being hastened by opium-smoking, which has "every likelihood of ruining the whole nation, for the vice spreads by leaps and bounds." Yet everywhere are the signs of former prosperity and a teeming population. Among the illustrations is a striking picture of a high brick tower, the last of a series built 300 paces apart across a desert to guide the caravans and travellers. In a notice of the Waldseemüller map of 1507 on which is the name America, some account is given of a map discovered by Henry N. Stevens and sold to an American library, "one of the richest in cornerstones of American history," which may prove to be an earlier draught of the map just discovered in Wirtemberg.

The Consular Reports for February opens with a strong plea for the establishment of a direct steamship service to Africa. The United States has scarcely 5 per cent. of the great import trade of the West Coast, and even this is endangered. "I see scores of European steamers coming and going," writes our Consul at Goree, "loading and discharging almost every week; but, during a residence of more than twenty years in the country, I have never yet seen an American merchant steamer in African waters." In last-century slave-trade days, Americans from Rhode Island were familiar sights at Goree. It is rather singular to turn to a report on the commercial conditions of Swatow, the port of one of the richest provinces of China, whose trade is increasing to such an extent that the Germans purpose doubling the number of their ships calling at it, and read: "One of the old men, who remembered the time when fourteen or sixteen sail of our ships was no uncommon sight in this port, asked why the 'Flowery Starry Flag' was never seen now." Minister Choate gives the result of an investigation into the complaint that certain American goods suffer detriment from the London dock charges. He does not undertake to form a judicial opinion as to the merits of the question involved, but simply sets forth the facts and the claims of the respective parties. There is an interesting account of the linen industry in Bohemia, in which attention is directed to the great decline in the cultivation of flax in all Europe outside of Russia. A significant fact is reported by the Consul at Sierra Leone, who states that the superintendent of Mohammedan education for British West Africa had requested from "American publishers catalogues and specimen pages of common-school text-books in the English language for his examination, with a view to their introduction and use in the schools under his supervision, if satisfactory."

Monatsberichte über Kunstwissenschaft (Munich) contains illustrated articles, running through the January and February numbers, on "Dante's Portrait" in the pictorial art of his time, by Dr. Ingo Krauss, and on "Japanese Humor," by Günther Koch. The January number also contains an excellent reproduction of Auguste B. Glaize's interesting lithograph, "The Pillory," with seventeen figures of famous men and women persecuted by their contemporaries for their services to mankind, and two groups representing "Hypocrisy and Violence" and "Ignorance and Misery." In the accompanying text Dr. Stettner breaks a lance for lithographic art as a means of transmitting artists' works to posterity "in their own handwriting."

The German Orientgesellschaft is evidently doing thorough work in its excavations on the site of ancient Babylon. In the ninth issue of its *Mittheilungen*, the leader of the expedition, Dr. Koldewey, reports, among other things, the finding of some four hundred inscribed tablets in the Black Hill, in the centre of the field. Only two have been deciphered, and these valuable. One is a word-list, giving columns of Sumeric equivalents of the Babylonian cuneiform on the left, and of Semitic on the right. The other is a famous litany used in the processional services of Marduk. Dr. Koldewey states that the externals of the city, its streets, its temples, the public parks and places, walls, etc., as also the social, intellectual, and religious life of the inhabitants have now been fairly revealed to the investigator.

Dr. Schubart, of the Egyptian section of the Royal Museum in Berlin, has discovered in papyri recently added to its collection several entirely unknown poems from the

fifth book of Sappho. The *Reichsanzeiger* states that the manuscript dates from the sixth or seventh century, and is not in good shape. The discoverer has been able, however, to decipher two of these poems, one of which describes the poetess of Mytilene comforting a departing pupil, and another is addressed to a former pupil, who had removed to Lydia. The poems show new metrical combinations.

An important contribution to the solution of the South African problem is to be found in the report of Mr. Willcocks, the original designer of the great Nile reservoir at Assuan. In a preliminary reference to the stationary condition of the country, apart from the development of its mineral wealth, he makes the striking statement that "half a century ago it needed a farm of 5,000 acres to keep a family in decent comfort; to-day it needs the same farm of 5,000 acres to keep a single family in comfort." This condition he ascribes to the fact that to a temperate climate is joined a tropical rainfall. "When rain is wanted it is generally not there; when it is not wanted it is invariably present." A system of storage reservoirs and irrigation canals is accordingly essential for the permanent prosperity of the country. He advocates the proclaiming all rivers and torrents to be public property, and the undertaking of all important irrigation by the state alone. The suggestion is further made that the mining companies should be required to devote a part of their profits to such works. His personal observations lead him to the conclusion that three millions of acres can be perennially irrigated, and, on ten millions more, crops depending on rainfall can be raised by intelligent cultivation, thus adding one thousand million dollars to the country's wealth. The development of agriculture will solve the poor-white problem, which promises to become more acute than ever when the war is over, for "there is one kind of manual labor which the poor white considers becoming, and that is agricultural labor."

In the forbidden land of Tibet, the city of Lassa (the Mecca of Northern Buddhism) has long lured adventurous travellers. The recent attempt of Walter Savage Landor to penetrate its mysteries, and the cruelties and tortures to which he was made to submit, are quite fresh in memory. Since the visit of the French missionaries Gabet and Huc in 1846, the Swedish traveller Sven Hedin, during the years 1900-'01, in the disguise of a pilgrim, sought to enter the city, but was turned back when within a few miles of Lassa. He had good treatment, and met with no opposition in the coming or going with the caravans of pilgrims, but early last month came tidings that he had fallen into the hands of fanatical natives and been murdered, whereas from Cashmere, alive and well, he has sent a long telegram to King Oscar, telling of his adventures, and received a congratulatory reply from his Majesty. The India pundit Chandra Das in 1881-'82 remained some months in Lassa, taking photographs of the palace of the Dalai Lama and of the oval-shaped city itself. The photographs, now in the possession of the Royal Geographical Society of London, and recently published, show the imposing character of the Grand Lama's residence and of the palace in the centre of the city in which official functions are fulfilled. The wide streets, houses built in the form of a hollow square, several stories high, and whitewashed, as well as edifices constructed largely of sheep- and ox-bones laid in cement, confirm the descriptions of previous writers, and will but whet the appetite of explorers who thirst to conquer the unknown.

The Danish Minister of Transportation Hörup died at Copenhagen on February 15, in his sixty-first year. After studying law and acting as a tutor he entered journalism, and in 1876 was elected to the Folkething, where he soon won recognition as a brilliant speaker, succeeding Berg as leader of the Radical branch of the party of the Left. In 1878 he made the declaration, which sums up the views of the Danish Radicals: "The Folkething is the highest authority; there is no one above it, or by the side of it." Hörup was twice an Auditor of Public Accounts, and from 1883-'88 was Second Vice-President of the Folkething. In 1884, together with Edvard Brandes, he established *Politiken*, which became, almost from the start, the most influential Radical paper published in Denmark. *Politiken* is no less distinguished for the brilliancy of its literary columns than for the fierceness of its attacks upon the Conservative party. Indeed, few daily papers in Europe can boast of so remarkable a collection of special contributors. In the summer of 1901, after having been for a quarter of a century identified with the Opposition, Hörup became a member of the first Liberal Ministry, but was prevented by the illness that has now ended his life from performing the duties of his position.

Dubious enterprises based on human vanity and credulity are constantly brought to our attention in the domain of bookmaking. To expose them by name is to advertise them; to keep up with the number of them is difficult. The latest type is one of the literary "Libraries," conceived in a Western city, with a "Bureau" which "has elected that from five to fifty pages of your literary productions be preserved in permanent form" in said Library, and begs you "to submit such material as you may desire, which will be passed upon by the editors, and you will be duly notified of its acceptance." The dear public, seeing the *selection*, is naturally made to believe in the reality of the *election*. In the circulars before us, there is no reference to any expectation of pay in cash or by subscription to the trumpery work. First catch your hare.

—H. W. Hoare gives in the March *Harper's* a detailed account of the "Lineage of the English Bible," from the efforts of the venerable monk of Jarrow, through the various intervening partial or complete translations, down to the King's Bible of 1611. Joseph Fitzgerald contributes a paper on "Anarchism in Language," with which one is tempted to stop for a friendly quarrel, notwithstanding a bias in favor of its general tendency. The examples of English speech which he holds up for reprobation are in most cases justly subject to question, but it is equally true that in most cases they are clearly marked illustrations of fundamental processes of linguistic growth—the very processes to which are due a multitude of meanings and constructions employed without question by the most careful and accomplished speakers and writers who have ever used the English tongue. Language will doubtless continue to grow along the lines which it has followed in the past. Conscious effort may contribute to its clearness and euphony, but cannot impose upon it the straitjacket of a logico-etymological consistency. Prof. Henry F. Osborn gives a sketch of the marine-laboratory movement inaugurated by Vogt, Agassiz, Huxley, and others, which has contributed so much to the science of biology through its discoveries in the lower forms of life. The Easy Chair, apropos of Professor Lounsbury's volume on 'Shakspere as a Literary Artist,' considers at some length the present position of poetry, and invites the confidence of readers as to whether they really enjoy it, promising not to divulge names, and assuring the timid who at heart hate it, that there never was a safer time to say so than the present.

—Dr. Gilman's reminiscences, to which many readers of *Scribner's* have been looking forward with special interest, naturally begin with the opening of the university to which he has given the choice quarter-century of his life with such excellent results. In reading the details of his efforts to secure his original corps of teachers, and in recollection of his eminent success, as attested by the history of Johns Hopkins University, one realizes just why it is that he was the natural choice for the headship of the new Carnegie foundation, in which the fruition of the donor's intentions hangs so largely upon the selection of the right men as recipients of its assistance. Twenty-five years is not long, and yet it seems like a tale out of a remote past to be told of the commotion aroused by the invitation to Professor Huxley to deliver a lecture on occasion of the opening of the University. The lecture was seriously marred, it appears, by the determination of the newspapers to make a sensation out of it. Huxley was forced by the imperious reporters to the alternative of furnishing a copy in advance, or running the risk of serious misrepresentation in reports taken as the lecture was delivered. He accordingly dictated his intended remarks to a stenographer the day before, and was provided with a copy on thin translucent paper, with white sheets between to make it legible. These he thoughtlessly removed, to lessen the bulk, and consequently found himself unable, when before his audience, to read a word of what was written. The embarrassment of being thrown back upon his memory and general knowledge of his subject, after giving the speech to the press in a definite form, may easily be imagined. Mr. Vanderlip's second paper on our "commercial invasion" of Europe deals chiefly with England, showing an enormous increase in our ability to compete with the mother country, first in markets equally remote from both, and then even in England itself. England's relative loss of late years he attributes largely to the perverted development of a trades-unionism actuated by the fallacy that there is a given amount of work to be done, and that the laborer's profit out of it may be enhanced by decreasing his individual output in a given unit of time. The only point of advantage which Mr. Vanderlip feels sure that America can permanently retain, is her superior endowment in natural resources.

—No reader of the *Century* should pass over the account of the late Bishop Whipple of Minnesota, contributed to the March number by the Rev. H. P. Nichols. A frontier bishopric would not naturally be regarded as the best stage from which to secure the attention of the civilized world, and had Mr. Whipple been seeking the distinction which came to him, he would doubtless have striven for a different locality. In the Northwest, however, he found the stimulus of a great cause—the downtrodden Indian—and responded to the call with a degree of vigor and consecrated common sense that accomplished large results. He believed in the inherent worth of the Indian, treated him with absolute sincerity, and had the rare gift of ability to put himself in the Indian's place. It should be needless to say that it is no credit to our Government that he was never drafted into service as conspicuously the fittest man in the whole country to take official charge of Indian affairs. The imminent admission of New Mexico as a State of the Union gives an added interest to Albert E. Hyde's account of "The Old Régime in the Southwest," when a Colt's 45-calibre was circulating-medium in New Mexico, good for its cost as a stake in any game or over the bar. The career of "Billy the Kid," shot down by an officer at the age of twenty-one, and yet credited with twenty-one murders committed by his own hand, furnished a fitting climax to the lawlessness which had reigned in the Territory down to the early eighties, and by its very violence started a reaction which has made New Mexico a fairly safe place for any man who knows how to conduct himself. Two papers of scientific interest deal with Marconi's achievements in wireless telegraphy and the much (but unintelligently) discussed researches of Professors Loeb and Mathews, on the "Nature of the Nerve Impulse." The results of these researches, probable and possible, are too technical for any valuable recapitulation here. They are set forth by Professor Mathews with due modesty in the main, but one is somewhat staggered by a prima-facie promise of eternal physical life, in the statement that "there is apparently no inherent reason why a man should die, except our ignorance of the conditions governing the reaction going on in his protoplasm."

—For a second time, *Mélusine*, that learned "repository of mythology, popular literature, traditions, and usages," founded in 1877 by Henri Gaidoz and E. Rolland, has been obliged to suspend publication, "pour une période indéterminée." So we read with sincere regret on the cover of the December number, concluding the tenth volume. Folk-lore in the widest sense was certainly never edited in more scholarly or *spirituel* fashion than by M. Gaidoz, who stays his pen now not because of exhaustion of material or his own delightful gift of treatment, but, we may be sure, in consequence of a too limited and precarious support. He has at least the satisfaction of having amassed in the files of *Mélusine* a treasure available for all time to the curious. The closing number well exemplifies the range of this periodical. It opens with a discussion of a Breton custom of giving satirical puppets, supported on a crotch, to the victim of an engagement broken in favor of another lover. The illustration shows a handkerchief in the man's hand, symbolical of tears; and, in analogous customs noted, onions are employed with the same significance, hung upon a bouquet of willow. M. Camélat continues his animal fables from the valley of the Lavedan (Hautes-Pyrénées); one, in contrast with the fable of the fox and the crow, telling of the cock's escape from the fox's jaws by the happy device, as the bell announced high mass, of saying, "Let us pray; they are elevating the host." "Yes," said the witless fox, "let us pray God," and lost his hold in the act. M. Gaidoz chases the rainbow (we remember he began the pursuit in 1884 in the first number of the revived *Mélusine*) to the 43d chapter, and gives his 25th illustration of popular etymology and folk-lore, and his 10th of "Little Red Riding-hood," with a parting word on the nomenclature of the Devil, this time in English. Breton proverbs and sayings and the lark's song are other rubrics, and finally we read the last of the invaluable critical reviews bearing the authoritative initials, H. G. *Encore une étoile qui file.*

—Mr. M. Morison's 'Time-Table of Modern History' (Macmillan) is a series of synoptic charts which embraces the years 400-1870. In some respects the work resembles Professor Nichol's 'Tables,' but its scope is on the whole less comprehensive. Literature and art are left out in order to provide more space for politics and war. There is a further difference, which is equally noticeable. While Professor Nichol uses almost every line, Mr. Morison does not fill up anything like the whole of his space. For example, at the outset Scotland is allotted one-third of a large page, receiving equal prominence with the Eastern Empire and the Western Empire. However, as the annals of the Picts and Scots are somewhat meagre until the ninth century, the Scottish column remains almost void for eighteen pages. It is likewise with the entries under India, when a column comes to be assigned to that country. For page after page the history of India is apparently a complete blank. In such a work economy of space is a prime consideration, and we cannot altogether praise an arrangement which leaves vacant so large a part of so many columns. Where the historical records are defective or the events too trivial for notice, it is surely not the part of good judgment to lavish space upon the countries in question. They may be kept in the background until they have become important.

—The difficulties of preparing a date-book on parallel columns are obvious. Accordingly, we shall not dwell alone upon what may be termed the shortcomings of Mr. Morison's scheme. He certainly brings together a great many historical facts in such wise as to show their chronological relations. His pages are large, and towards the close of the work he divides each into seven columns, representing seven countries, with columns devoted to seven other countries facing them on the opposite page. This compilation will have its use, but, quite apart from one's conception of how a comparative synopsis should proceed, its merit would be enhanced had more pains been taken to render it accurate. While we cannot pretend that we have read the whole work, the part which we have read discloses an unnecessarily large number of slips. *E. g.*, p. 7, Albion, three times instead of Alboin, and the Empress Theodore for Theodora; p. 12, Eudo for Eudes; p. 13, Omayyad in one column and Ommeyad in another; p. 19, "Nicholas I. publishes the False Decretals, including the Donatim of Constantine" (apart from the misprint, the statement would not be altogether easy to prove); p. 20, under France and the year 910, "Foundation of the Abbey of Cluny"; p. 22, under Germany and 960, "Foundation of the Abbey of Clugny"; p. 24, Otto I. is crowned by the Pope and deposes the Pope (what Pope?); p. 26, the degree of the millennial excitement is exaggerated, and, p. 28, there is a misstatement regarding the day of the week on which the Truce of God began. We need not accumulate examples. The book is by no means impeccable. At the same time its weaknesses are largely those which are incidental to compilations of its class, and we can see no reason why it should not be of considerable value as a work of reference.

PASTEUR.

The Life of Pasteur. By René Vallery-Radot. Translated by Mrs. R. L. Devonshire. McClure, Phillips & Co. 1902. Two volumes. 8vo, pp. 301, 304.

Pasteur was heartily a Frenchman, but not after the fashionable light-hearted pattern. A heart more completely unsullied by all there is in its world to sully it—egotism, chiefly, in *his* world—is not to be found in what land or age you will. It happened that his discoveries shone brilliant to those who regarded them from the side of utility—to wit, his improvements of wine and beer, his cures of the silk-worm trouble, the chicken cholera, the swine fever, anthrax, diphtheria, hydrophobia, etc. Nor was it accidental that his discoveries had that character. Still, it was not that which made him the great man he was, but his strength in research, which cracked every nut, however redoubtable, with such surprising promptitude that one really cannot think that it was ever fully tested. When we wish to remind ourselves what scientific logic really is, we may think of Pasteur, his investigations, and his life, and ponder them well on every side, without overlooking the intimate vital link between the intellectual and moral parts of him.

He may be said to have commenced business on a certain day early in 1847, when Auguste Laurent, another chemist of clairvoyant eye—a poet, too—at that time his co-assistant in Balard's laboratory, showed him, under a microscope, some tungstate of soda, and made him remark that it was a mixture of three distinct kinds of crystals. That was enough. Pasteur forthwith set to work crystallizing tartrates and racemates. It is a pity that the biographer has not seen fit to set forth the motives which determined this momentous selection of a subject for such experiments, for it not only would have explained just what Pasteur's feat was, which is often misstated, but would also have afforded an instructive illustration of how science gets gradually built up. Tartaric acid had been one of the numberless discoveries of that muse-visited apothecary Scheele, made apparently in 1769 or 1770. In 1809 Weiss had first set forth the crystallographic systems, but it seems to have been some ten years before his work attracted much attention. In 1811 Arago had

discovered some of the phenomena of circular polarization, which Biot, beginning in 1813, had explained as a rotation of the plane of polarization. Biot had shown, too, that not merely certain crystals, but also certain solutions and even certain vapors, exhibited this phenomenon. He had found that some slates of quartz cut perpendicular to the axis turn the ray to the right, while other specimens turn it to the left. In 1821 John Herschel had remarked that, of the three kinds of quartz crystals that Haüy had noticed (namely, first, those which can be held vertically so that, of two prismatic faces to the right and left, the former has two small facets impinging upon it below to the left, the latter two similar facets above at the right; second, those which are exactly like the first except that right and left are interchanged; and third, those which are tolerably regular dipyramids), the first invariably rotate the plane of polarization to the left, the second to the right, and the third neither way. This was strong evidence, though far short of proof, that the rotation of the ray was somehow due to some molecular structure of the general nature of a right-handed or left-handed screw; and, what fired scientific imaginations, dynamics was utterly baffled to suggest what sort of force it could be that should regularly produce such an arrangement.

The year (1822) of the publication of Herschel's discovery had been that of another discovery, made two or three years previously, which no single mortal then dreamed had the remotest connection with Herschel's. The manufacture of tartaric acid is a somewhat delicate business, not unlike sugar-refining. Among other places where it was then carried on was the pretty town of Thann in Alsace, which no tourist will have forgotten, if he has been there, on account of its church. A Mr. Kestner was conducting the manufacture there by a regular routine when he one day found, to his surprise, that a certain batch of his acid, made by the regular process, had hardly any tartaric acid in it, but consisted of a new acid, less soluble than the tartaric, though closely similar. He at first mistook this for oxalic acid, but, after having been set right on this point by the Hollander John, he named it after the little town that so well merited fame, *thannic* acid. But when he tried to make more of it he failed, and so did other manufacturers, although some of them found that, when tartaric acid was wanted, this thannic acid was very apt to put in a distinctly uninvited appearance. Before 1826, Gay-Lussac had compared the new acid, which he (we think first) called by its now usual name of *racemic*, with the tartaric, and had found that their chemical behavior was identical, except toward certain bodies with which one or the other seemed to have some underhand relations, where strong contrasts appeared. By 1830 Gay-Lussac and Berzelius had severally proved that the composition of the two acids was one and the same; in Berzelius's phrase, they were *metamers*—the third or fourth instance of this phenomenon to become known. In 1835 Biot contributed the information (destined to prove so important) that tartaric acid and the less complex tartrates rotate the ray to the right.

In 1842, Eilhard Mitscherlich had published the fact that sodium-ammonium racemate is seen under the microscope to crystallize in the same shapes precisely as sodium-ammonium tartrate, although the latter rotates the ray, while the former does not. The following year, his amanuensis, Werther, took for the subject of his dissertation for the doctorate the crystal forms of the tartrates, and this dissertation was frequently used by contemporary French chemists. Although it appears that Mitscherlich had overlooked the unsymmetrical facets of the sodium-ammonium tartrate, which are certainly small, we can hardly believe that they escaped the careful study of Werther. At any rate, the crysfals are geometrically just like those of ordinary Rochelle salts, which must have come under the eye of Pasteur himself, so few things escaped it. Thus, in one way or another, it is altogether probable that Pasteur had been for some time already aware of the unsymmetrical forms of the tartrate. Indeed, we find it recorded that in a conversation held in 1844 with his bosom friend Chappuis, Pasteur repeated *verbatim* a paragraph of Mitscherlich's 1843 paper, to the effect that, although the two salts in question formed crystals geometrically indistinguishable, yet the tartrate rotated the ray, while the racemate did not. Now there would hardly be anything in this so impressive as to cause Pasteur to carry the very words in his mind, if the tartrate crystals were symmetrical. If, however, he was aware that they presented a screw-like configuration, there would be a hope of resuscitating the theory of Herschel to which Mitscherlich's observation would otherwise deal the deathblow. It is evident that he must have cherished the wish to examine the racemates—salts not easily obtainable—to see whether they were not destitute of the unsymmetrical facets. This idea, then, had been in his mind since 1844; and, accordingly, when Auguste Laurent showed him that soda tungstate under the microscope, and he saw that it consisted of three kinds of crystals mingled, we can now understand why he at once set to work making crystals of tartrates and racemates. It had evidently struck him as one of the possibilities that the racemates likewise were mixtures.

Upon how many men's backs was Pasteur mounted when he attained to the making of this memorable experiment. which marks the opening of a scientific era to the close of which our great-grandchildren may not be able to look forward! The novelty of the discovery may, for aught one can clearly discern, be attributable to Pasteur's good fortune rather than to his merit. Yet it certainly illustrates his mysterious faculty of rightly guessing at Nature's ways (a privilege upon which he never presumed); and what at any rate was a property of the man alone, and is truly surprising, was his prompt recognition of all the importance of the thing, even to its remoter consequences. We are told that the moment he first got the fact solidly in his grasp, he sprang up quite wild, and ran out, embracing the janitor in the corridor, and, though no man ever more economized minutes, betook himself to the garden of the Luxembourg, where he occupied the rest of that day in setting his disordered ideas to rights. Before long, we find him writing to his beloved Chappuis that this discovery of right-handed and left-handed tartaric acid is destined to lead to the conquest of the most dreadful diseases! What a marvel of clairvoyance! For we now know that, without being aware of it, he had set foot upon the territory of that Unsymmetrical Carbon Atom which sets the pretensions to supremacy of attractions and repulsions at defiance, and carries one of the chemical keys of life.

When Pasteur first exhibited the experiment to Biot, who had been appointed by the Academy of Sciences to report upon the matter—the aged Biot, who, though reared in and sternly attached to the materialistic school of Lavoisier and Lagrange, of Laplace, Carnot, Monge, and Berthollet, had yet never ceased to be Catholic, and in his old age was become even *dévot*—at the critical moment, the old man exclaimed: "Hold a moment, my boy. I have so loved science that this makes me feel faint." Pasteur likewise was Catholic; and if he had not been possessed of that accurate logic which caused him to be as exact as Biot himself in scientific matters, but yet to make room for spiritualistic views of life, it is safe to say that not one of his great discoveries could have fallen to him. Somebody at the Academy of Medicine was one day urging the importance of a certain hypothesis. "Oh," exclaimed Pasteur, "as for hypotheses, we fetch them into our laboratories by the armful." Mind, he did not absurdly pretend to keep them out, as some do; nor want them only in homœopathic quantities, like many more. No, he would order large supplies of them; he would consume them in armfuls. And what would he do with his armful of hypotheses, when it was fetched? He would begin by sorting them over, with unwearied industry, as he had done his right-handed and left-handed crystals. First, those that could be shown upon consideration to involve something in conflict with known facts were weeded out. Then, by a skilful alternation of excogitation and experimentation, the mass of the others would be successively bisected until all but one were discredited, while that one was made gradually luminous with apparent truth. To a less cautious man it would have seemed demonstrated. But now began the main work of the investigation. This one hypothesis which had been winning favor until it was become prime favorite, had now to be treated as an enemy, and ingenuity had to be racked in trying to find something which the hypothesis would require to be true, but which experiment should refute. This fight was always an obstinate one—it sometimes lasted for years; and it was not until every device that could be thought of for bringing the theory to grief had been tried and had been found to avail only to put its truth into stronger light, that at length Pasteur would bring it before the world. Then his scientific friends always urged upon him the view that here the business of the man of science ended, and that he should now pass to another problem; and Pasteur himself might assent to this, in his head, but his heart always overruled such counsels. He *must* see the thing accepted and acted upon, so that here would begin those struggles with all the agencies of conservatism and of night that brought Pasteur to his comparatively early death.

As an illustration of Pasteur's style of dealing with such controversialists, a little

episode that concerned Colin may be recounted. Colin wished to impress people with the belief that he knew much more about anthrax than did Pasteur. So, one day when, in a paper before the Academy of Medicine, Pasteur incidentally mentioned that fowls do not take anthrax, Colin jumped up and said that nothing was easier than to give a hen this disease. Thereupon Pasteur said that in two days he should be sending Professor Colin some specimens that he had demanded of him, and, since it was so very easy to give a hen anthrax (which develops almost immediately), he would be very much obliged to him if, in exchange, he would send him a hen dying of anthrax. "You shall have it," said Colin. At the next meeting Pasteur remarked that he had not received that hen, and Colin made some excuse, promising to send it in a few days. But at every meeting, Pasteur recurred to the hen, which was never forthcoming, though always promised. At length, after this had been going on for months, Colin rose and said that he had found that he had fallen into an error, and that it was impossible to inoculate a hen with anthrax. Upon that, Pasteur remarked that his colleague was now going much further than he had ever done, for he had only said that hens *do not take* anthrax; but that it was possible to give it to them, he would demonstrate by experiment. So the following week he brought to the Academy three hens—one dead of anthrax, a second dying of it, a third recovering from it. Colin was silenced for the moment, but at a subsequent meeting he said, with an air of insolence: "I wish we could have seen the bacteridia of that dead hen, which M. Pasteur took away with him without showing us the necropsy and microscopical examination." Thereupon, Pasteur demanded a committee of investigation, of whom Colin should be a member, so that the skeptic was thus obliged to sign his own refutation. The secret of the matter was that Pasteur had ascertained by experiment what temperature was the highest at which the bacillus of anthrax could live; and, since this had been found to be two or three degrees below the temperature of the blood of fowls, they could not under ordinary circumstances contract the fever, and he was confident that Colin, looking at the matter from quite another point of view, would never light upon the proper way of giving chickens anthrax, which was simply to immerse them in a cold bath until the disease was developed.

This book will serve to correct many a misapprehension. It shows us clearly, for example, that Pasteur was not at all, as he has so often been represented, the exponent of a certain philosophy. The extreme simplicity of his heart, the childlike single-mindedness of his gaze at truth, at one with a childlike insight into things, seem to have prevented the intense concentration of his observational and intellectual energies from becoming a source of fallacy to him. His simple peasant's religion probably did aid him to keep clear of metaphysical entanglements which might very probably have prevented his researches into spontaneous generation; but, except in this alexipharmic way, they did not influence his scientific work in the least degree. He considered the logic of science to be one thing, and the logic of life to be another, and quite independent, matter. Another mistaken notion which has been current among those who busy themselves with Borioboolah-Gha, and which was perhaps fostered by Pasteur's severity of countenance, has been that he was a monster of cruelty, whose treatment of animals and children ought to have been restrained by law. The fact we find to have been that his susceptibility and tenderness of heart were quite excessive. Again, those histories of chemistry that are written with the German determination to concatenate events, albeit at the expense of spinning threads from the substance of the writer's being, tell us that "it was his work upon optically active compounds which led him on to the treatment of biological questions." This is certainly a most rational view, and is open to no criticism whatever, except that it happens to run counter to the facts. Those facts are to the effect that, with a single partial exception, every one of his incursions into biology resulted, not from any inward leading, but against the passionate longings of his heart, from external propulsion and the compulsion of that sense of duty to which his too emotional nature was all his life enslaved.

The whole of this noble life is laid open in these pages. It is a relatively small book, and its greatest fault of which the reader will be sensible is that there is not more of it. In such limits it could not be a Boswellian mirror; nor would the life of Pasteur, who was no show-specimen of a man, lend itself to such treatment. But we rise from Boswell's volumes knowing indeed perfectly what Johnson was, or, at least, how he appeared in society and in intimate conversation, but still perplexed to imagine how he came to be the man he was; whereas, here, Pasteur is not only exhibited but explained. The whole evolution of him from his seventeenth-century ancestors, the nurture and formation of mind and heart, are made comprehensible. The father, especially, stands out distinct as an old acquaintance, no character in novel sharper lined—a veritable contribution to our knowledge of men.

The scientific world in which Pasteur lived is veraciously and vividly portrayed, and this is one of the most valuable features of the work. Many portraits are hit off with as much truth as *chic*. One of them is Biot's. Happy would be the reader who was not familiar with the 'Causeries du Lundi,' since he would have one of the joys of life still to taste; but probably the reader does know that second of two articles in the second volume of the 'Nouveaux Lundis' which describe Biot. Of course, Sainte-Beuve, as he himself confesses, could not estimate Biot. The writer was too sophisticated and fine-drawn for his subject. All that he says is true; but what rating is to be placed upon the different features as elements in the make-up of a scientific man is quite another question. The portrait, on the whole, is not agreeable; in this book, on the other hand, Biot appears in the most charming light, and, since the whole man is viewed, in a much truer light. There are points of interest that both avoid. Gay-Lussac, too, Thénard, Balard, J. B. Dumas, E. Mitscherlich, Liebig, Henri Ste.-Claire Deville, Bertrand, Lister, Virchow, Vulpian, all come upon the scene, with many a younger man. We know not where to point to so truthful and useful a picture of the world of science. If you want to understand the typical man of science, you will find the creature here veraciously expounded. Behind the chief figures there is a life-like and animated background, where Napoleon III., the Emperor Friedrich, Dom Pedro, Littré, Sainte-Beuve, Renan, Alexander Dumas *fils* (very charmingly), Henri Regnault, and other painters will be noticed. Verily, the French still maintain their clear supremacy in the art of making a book, especially a characterism.

The translation is in excellent English. Only rarely have we come across a sentence which, we are persuaded, cannot have been quite rightly rendered, or a word not just the usual scientific expression; and on the whole the translator's work has been done with so much care, and has to so high a degree the rare virtue in a translation of making agreeable reading, that we cannot help feeling particularly grateful to her. The index is excellent, notwithstanding a few misprints. The photographic portrait is a likeness. The get-up of the book is extremely beautiful, with black type and uncalendered paper; the volumes are light to hold; the linen covers, simple and in good taste. In short, the book is an unalloyed delight—the clothing to the senses, the contents to the heart and spirit.

THE MOHAWK VALLEY "AS SHE IS ROMANCED."

The Mohawk Valley: Its Legends and its History. By W. Max Reid. G. P. Putnam's Sons. 1901.

Cardigan: A Novel. By Robert W. Chambers. Harper & Bros. 1901.

The Backwoodsman: The Autobiography of a Continental on the New York Frontier during the Revolution. By H. A. Stanley. Doubleday, Page & Co. 1901.

The valley of the Mohawk, "the Flanders of America," the theatre of uncounted wars, the floor on which many races were threshed, the pathway of empire, the granary of the Revolution, has not been quite so "sadly neglected by historians and writers of fiction" as Mr. Reid, in his preface, would have us believe. Among local accounts of our Revolutionary struggle it is hard to match Campbell's 'Annals of Tryon County' or Stone's 'Life of Brant.' To the history of the valley in the Seven Years' War is devoted another valuable work, 'The Life of Sir William Johnson,' begun by the elder William L. Stone, and completed by his son and namesake. The pen of Francis Parkman himself has described not only that war, but also the wonderful earlier struggle with France, when for a century and a half the magnificent schemes of the first Power in Europe were foiled, and its armies held in check, as at another Thermopylæ, by the three hundred Mohawks and the few Dutch and English settlers who at length joined with them; and within a year the history of the valley for three centuries has been faithfully recounted in one of the most satisfactory of recent historical writings, Halsey's 'The Old New York Frontier.' Cooper's muse, it is true, walks only on the borders of the valley, avoiding its soil as it were quarantined; but even in those early days we had Hoffman's 'Greyslaer' to match the vigorous description and omit the wearisome dialogue of the choleric

Otsegan. The best of the Mohawk novels, Harold Frederic's 'In the Valley,' is too recent and too good to be forgotten; and the present market for historical novels—by which is understood novels that mention persons who are also mentioned in histories—has called from the press just ahead of Mr. Reid's more weighty tome two tales of the valley, Mr. Chambers's 'Cardigan' and Mr. Stanley's 'The Backwoodsman.' When Mr. Reid has read these efforts, he will perceive that there are sadder things than neglect.

He who runs, and, still more readily, he who walks on lower Broadway, may read that in 'Cardigan' we behold that phœnix of literature, "the great American novel." Mr. Cardigan, the hero, like all Mohawk Valley heroes, is a youth raised in the shadow of Sir William Johnson, getting into trouble just before the beginning of the Revolution, which is conveniently brought about for his deliverance, and deeply in love with a young lady, also in trouble. Unity of time the author strives for, so that within a year the hero of sixteen reaches, through perils enough for a lifetime, the matrimonial goal. The action takes place in Johnstown, Pittsburgh, Boston, and their suburbs. To verify dates and statements is drudgery; easier it is to say in a preface: "Those who read this romance for the sake of what history it may contain, will find the histories from which I have helped myself more profitable." Thus, we may not inquire too closely into dates, nor ask when Brant was "chief of the Six Nations," nor whether stage-coaches ran through from Philadelphia to Boston. But there were many strange things in those days. Trout and pickerel dwelt happily in the same stream, and "the hoof of countless deer herds made the forest runways hard" instead of making them soft as it does at this day. Cardigan was "a very Mohawk in the woods," and travelled from Johnstown to Pittsburgh in only three weeks; but from Pittsburgh a message is dispatched to Sir William Johnson on Monday, and Cardigan receives an answer on Thursday. No doubt, but for economy's sake, he had telephoned. We pass many such marvels to note that Mr. Chambers's greatest feats are done with the moon. At the full when Cardigan reaches Cresap, the obliging satellite some nine days afterwards sets at two A. M., to rise again some twenty-four hours later. Well might the moral highwayman of the tale exclaim: "She was always a friend to us, the moon." Yea, verily, for, like the compass of Nephi, she did work whither they desired her.

'Cardigan' was evidently written in the expectation that it would be melodramatized, for it contains not only an impossible hero, but a genuine old-fashioned villain. All the people are either very good, like Molly Brant, or very wicked, like Governor Dunmore; but Walter Butler was the wickedest of all. Since the author is not bound by the facts of history, it was a mistake to spare Butler when Cardigan had him at his mercy. Butler's language in February, 1775, fully justified homicide. " 'Yes,' he continued thoughtfully, 'I ride this night to Lexington. She's a sweet little thing, a trifle skinny, perhaps; but if she pleases me not to-night, I may change my mind and take her for my mistress.' " Yet Butler's fate was terrible: he was spared but to become the villain of Mr. Stanley's novel, and to say on April 26, 1776, still in pursuit of the *Ewig-Weibliche*, "I want a good squaw. Gimme this girl." Molly Brant also grows careless of her speech between the two novels. To Cardigan in May, 1774, she remarked: "A sin confessed is half-redressed. I had meant to release Felicity some time since; but, Michael, remember in future to ask permission when you desire to play with Felicity." Only two months later the same lady observed to Mr. Stanley's hero: "He bad man! He mean, wicked, wicked wretch! Him coward too. Me see him you beat one time. Sir Willum not no say, me hire Injun beat him." Mr. Stanley also introduces Dutch, Irish, and Quaker dialect. They can be recognized by the labels. For good measure there is lugged in from time to time an irrelevant Tuscarora of many winters and supernatural attributes, hight Tamalaqua, a word which no Tuscarora could pronounce. St. Mark had his lion, St. Tammany his tiger, and St. Tamalaqua is accompanied by a "tiger cat" called by the characteristic Tuscarora name of Midgard. Aside from these strivings and strainings, Mr. Stanley has given us a vigorous, readable tale, promising better things when the author has found himself. The other book, a negligent piece of work from a practised hand, is a more serious disappointment. The author of 'The Conspirators' probably could not write an entirely dull story if he tried, and even 'Cardigan' is readable. It might be much improved by being cut to three hundred pages.

Mr. Reid's more serious and more entertaining work is also a disappointment. The author, by long residence among the scenes described and long study of the events recounted, is well able to write an accurate and valuable history of the Mohawk Valley, but has preferred to make a scrap-book for his own entertainment. Accordingly, he has given us a volume replete with interesting and valuable material, much of it new to the general reader and some for the first time printed, of which half the value is destroyed by triviality, by lack of the sense of proportion, and by gross negligence of statement. So heedless is the author of the requirements of accuracy that it will not be safe to quote, as authority on any subject, 'The Mohawk Valley: Its Legends and its History.' The book can only be used to suggest inquiry, and independent verification of every statement will be necessary. We have space for but a few examples, gathered at random.

Like both our novelists, Mr. Reid makes Brant the great chief of the Six Nations and speaks of "Brant and his Senecas," saying also that Brant's father was, like Brant himself, a Wolf. The Andastes, it seems, lived in the Valley and belonged to "the Algonquin Nation." The Mohawks are "known" to have been at Hochelaga in 1535. Such spellings as "Abenaka," "Anticosta," "Recolect," "Tracey," are, in this book, hardly worth noting. The Anormée Berge theory of the name Norumbega is mentioned with approbation, and the somewhat dubious credit of its origination is given not to the author, Mr. Reid's neighbor, Mr. Weise, but to one who later quoted it (with full credit to Weise) in what Mr. Reid calls Fiske's "very excellent book, 'The Dutch and Quaker Colonies of [*sic*] America.' " Mr. Reid and the two novelists are all aware that the Mohawks could not say Peter, and, like so many evangelists, they confirm the fact by making it Quiddar (Reid), Queedar (Stanley), and, correctly, Quider (Chambers). In the history of the Valley the most important event save Oriskany seems to have been, in Mr. Reid's estimation, the massacre which took place at Glencoe in Scotland in 1690, the relevancy being that in later times there were Scotchmen in the Valley. This author thinks the twentieth century began in 1900, but is not quite sure. The word "Mohawk" he says is not Indian. Examples of Mr. Reid's moderation in statement are to be found in his remarks that there is no financial profit in archæology, that the Utica Fort Schuyler was built "after 1709," and that Visscher's men at Oriskany "retreated rapidly." So they did, very rapidly.

Yet for one who loves the quiet curves of the Mohawk and the old homesteads nestled along its borders, this book, with its gossipy chapters on old times, the wickedness of poor, overworked Walter Butler, and the author's pilgrimages among historic scenes—all illustrated by excellent plates of natural scenery and venerable dwellings—is full of charm. We are sure the author is a pleasant companion in such wanderings, and will only pray that he may some day have leisure to present us with a new edition, with half the paper and all the errors and trivialities omitted.

TWO BOOKS ON THE JESUITS.

The History of the Jesuits in England, 1580-1773. By Ethelred L. Taunton. Philadelphia: J. B. Lippincott Co. 1901.

A Relation of the Conference between William Laud and Mr. Fisher, the Jesuit. Edited by C. H. Simpkinson, M.A. The Macmillan Co. 1901.

We associate here two recent books which bear more or less directly upon the subject of the Jesuits. The connection between them is one of title rather than of essence, but, despite important differences, they both recall the vigor and prominence of the Society during the early years of the seventeenth century. Father Taunton's work is a general history of the English Jesuits from the reign of Elizabeth to the pontificate of Clement XIV., by whose brief the Jesuits everywhere were suppressed. Laud's 'Conference with Fisher,' on the contrary, has an Anglican flavor—that is to say, it is less important as an exposition of Jesuit doctrine than as the tractate of a High Churchman against the supremacy of the Pope. However, the circumstances under which the meeting took place are not devoid of interest to the student of Jesuit history. The text of the 'Conference' was printed during Laud's lifetime, and has since then been reprinted more than once. Not improbably we have it now in its final form, as Mr. Simpkinson's edition is a very scholarly one.

There is much in Father Taunton's treatment of Jesuit annals to catch the attention. He is a Roman Catholic but not a Jesuit. Indeed, so far as the Jesuits are concerned, he seems the candid friend. True friendship does not always consist in flattery. "We profess to want Truth; and Truth is not served by party spirit." It is Father Taunton's belief that the cause of the Jesuits has been but poorly served by the special pleading of their own writers, by the blindness of More and Plowden,

of Jouvency and Bartoli to the logic of facts:

"Domestic affection and a certain timidity in judging their superiors are, perhaps, in themselves admirable qualities in the Society; but they are not such in historians. Indeed, one of these writers naïvely remarks that 'a too keen feeling of that natural partiality which attaches individuals to their own Society . . . always compensates by a thousand advantages a transitory diminution of good which it sometimes occasions.' In view of such writers one is reminded of the saying that while few bodies of men have met with such opposition and hatred as the Jesuits, few have suffered more from the adulation of friends."

Father Taunton is a Romanist who sees that the Jesuits were guilty of serious mistakes, as is to be inferred from the outcome of their efforts. His point of departure is recognition of their failure, and, in seeking for the causes thereof, he does not hesitate to accentuate shortcomings when he finds them.

We are inclined to think that Father Taunton would disclaim the charge of being hostile to the Jesuits. In his concluding sentences he describes the prosperity of the English Jesuits at the present day—represented as it is by colleges at Stonyhurst, Beaumont, Chesterfield, St. Beuno's, Liverpool, London, Roehampton, and by numerous churches. "It is given to few bodies of men to have had such a golden opportunity of reforming themselves." Nor, he would seem to imply, has the lesson been in vain. But while we do not see in this book a diatribe against the Jesuits, its judgment of their policy before 1773 is decidedly unfavorable. If examples are needed, the reader may turn to the notice of Robert Parsons, to the account of the Gunpowder Plot, to the narrative of the Society's action during the reign of James II., and to the general observations about *libido dominandi*.

Of necessity Parsons is made the central figure, and in him Father Taunton sees the evil genius of the English Jesuits. He had the commanding spirit; the rest, for generations, were hardly more than his imitators. Or, better, it may be said that the English Jesuits fall into a large majority and a small minority. In the latter class are Campion, Southwell, and Thomas Garnett, who form a group of enthusiasts and sufferers, but whose heroism counts for little. Outshining them in reputation and outrunning them in influence is Parsons, surrounded by many followers and full of projects for bringing England back to Rome. We feel sure that Father Taunton has done well to distinguish between Jesuits purely religious and Jesuits largely political; nor could he avoid giving Parsons prominence above all other leaders. At the same time, he seems inclined to overestimate the importance of the Parsons tradition, and to press too far a theory that the key to Parsons's character is found in his leaning towards Puritanism.

Regarding the other points already referred to, we may observe that Father Taunton accepts the main plea of Mr. S. R. Gardiner against Father John Gerard, namely, that there was a genuine Gunpowder Plot. While he can find no evidence which shows the Jesuits to have been the instigators of it, he implicates them in earlier plots of the same conspirators; and he also points out that recent attempts to secure the beatification of Henry Garnett have been resisted at Rome. Furthermore, in discussing the relations of Father Edward Petre with James II., Father Taunton throws the whole blame for the Catholic catastrophe of 1688 upon the shoulders of the Jesuits. According to his view, they were carried by love of power beyond all reasonable bounds. "The *libido dominandi* eats into a society as well as into persons, and more easily where the individual gives up all personal ambition and makes the society his all in all."

Altogether, Father Taunton's history of the English Jesuits is an unusual performance. Besides being a work of learning, it represents an outlook upon the events of the later Reformation which is by no means common. His sharp criticism of Jesuit policy in the past seems traceable to the spirit of historical candor rather than to any feeling of professional rivalry. He does not touch at all upon the incident of Laud's conference with Fisher, but none the less it deserves to have some place in a history of the English Jesuits. The occasion was Fisher's attempt to bring over the Countess of Buckingham, the mother of King James's favorite. The date was 1622. Fisher, whose true name was Percy, had been educated at Reims and then at Rome. His presence in England, under terms which made it possible for him to hold disputation with an Anglican bishop, is accounted for by the pro-Spanish policy of James I. in those days when the marriage of Prince Charles with the Infanta was under discussion. But the King felt unwilling that Buckingham and his mother should become Romanists, and so brought forward Laud as a champion against Fisher in a formal argument.

The present text of the 'Conference' is really a report of Laud's pleading. It forms a volume in the English Theological Library, a series which started out under the patronage of Dr. Creighton, the late Bishop of London. Concerning this edition we shall say no more than that it has been prepared with great thoroughness by Mr. Simpkinson, Laud's biographer. The notes are extensive, and embody the fruit of deep research in patristic literature. But concerning the treatise itself there are two points which we should like to emphasize. It marks more clearly than anything else Laud's theoretical attitude towards Rome, and it is also a milestone in the Archbishop's own career.

The argument hinged on the issue of personal salvation, leading up to the double question, "Can I be saved in the Roman Church? Can I be saved in the English Church?" Laud stiffly maintained the superiority of Anglicanism and denied the infallibility of the Pope, but when he was asked whether or not the Roman Church was the right Church before Luther's time, he took a position which greatly exasperated the Puritans. Where they were for utter denunciation he was, to say the least, moderate. The Conference enabled him to put on record his sentiments regarding Rome, and in the course of his trial he pointed confidently to the position that he had then adopted. In maintaining the purity of his Anglicanism he urged among his proofs: "The book which I have written against Mr. Fisher the Jesuit must of necessity either acquit me of this calumny or proclaim me a villain to the world."

Ruskin and the English Lakes. By the Rev. H. D. Rawnsley. Glasgow: James MacLehose & Sons. 1901.

John Ruskin was a child of five when he first saw the English lakes, and the words in which he described the experience are graven on the Ruskin memorial at Friars' Crag, Keswick. "The first thing that I remember as an event in life was being taken by my nurse to the brow of Friars' Crag, Derwentwater." That event was, as he elsewhere says, "the creation of the world" for him. After that, he often visited the lakes and derived thus early those impressions which he was later to use in such essays as "The Poetry of Architecture," where he discusses the question of the effect of houses on the Westmorland mountain scenery. He wrote some poetry, poor verse but sincere, on the impressive beauties of the district; and was no less moved by them than was Wordsworth in his early youth. When he married, in 1848, it was to Keswick that he brought his bride, and it was among the mountains of which he wrote that "they are as a great and noble architecture, first giving shelter, comfort, and rest," that he found consolation for the disappointment of his married life. Then came a gap of twenty years, in which much of his work was written, and in 1867 Keswick saw him again. But it was not till 1871 that he bought from Linton, the engraver, his fellside cottage on the shore of Coniston Lake, "Brantwood," or the "steep wood," where he was to spend the last years of his life.

Ruskin's relations with the peasantry and his sympathy with the life of the dalesmen are described by Canon Rawnsley in a special chapter. His description of the Ruskin drawings in the Coniston Institute is one of the best chapters in this slight sketch, and will be a revelation to many of the enormous amount of work that Ruskin accomplished with his pencil. The drawings are arranged chronologically, and so form a sort of pictorial biography. It was to carry out Ruskin's teaching of the need of "the joy of the eye and hand-skill in the cottage home" that spinning-wheels began to hum once more in the Lake cottages for the manufacture of the now famous "Langdale linen." So, too, arose the "Keswick School of Industrial Arts," where the dalesmen learn wood-carving, and work in copper and brass and iron. The sale of the work brings in annually the sum of £1,700, and it is in great demand in all parts of England. The chief good accomplished is the effect on the home lives of these men, who now have a resource other than the public-house for their dull evenings. Ruskin lamented that they should work in brass, mere "base alloy," but was consoled by reminiscences of the Homeric heroes, and admitted that at any rate the result was good. The renaissance of the spinning-wheel has achieved even more for the happiness of the cottage homes. Wordsworth keenly regretted its disappearance, as may be seen from his sonnet which begins:

"Grief, thou hast lost an ever-ready friend
Now that the cottage spinning-wheel is mute."

Canon Rawnsley tells us that Miss Twelve, who began the work of restoring the spinning industry, put the pieces of an old hand-loom together from the photographs of panels on Giotto's Campanile, the secret of the con-

struction having faded from the memory of the oldest inhabitant. Thus not only is produced the Langdale linen, with its beautiful tones for art needlework, but even Greek and Sicilian embroidery has been developed in the district from these humble beginnings—the whole inspired by John Ruskin.

In his chapter on Ruskin and Wordsworth, Canon Rawnsley tries to effect a reconciliation between the art critic and the poet. The fact was, that Ruskin could not tolerate in Wordsworth a dogmatism that almost matched his own, and his admiration for him, which never seems to have been enthusiastic, became decidedly cool in later life, as may be seen from his article in the *Nineteenth Century* for 1881. It is futile to try and explain this away as Canon Rawnsley would do. He writes, on his knees, as it were, about both men, and throughout the volume displays that lack of perspective which seems inevitable to those writers who have come into even superficial contact with the lives and surroundings of the "Lakers." There is no need to speak of Wordsworth (or any other man) with bated breath because he had an estimable if not endearing character, and wrote some poetry of peculiar excellence together with a great deal that is less than prose. The spirit in which some of his admirers retail every trivial incident of his uneventful life is not likely to convert the outsider, and would estrange all but the most blinded devotees. We regret to meet again this strained pitch in Canon Rawnsley's sketch of Ruskin. There is too much talk of "the Master," too obvious an apotheosis of a man who was perfectly human. To speak of Ruskin as "God's Knight," and the "last great gladiator," even if one does so under cover of Canon Rawnsley's colorless verse, is to invite derision.

The illustrations, from photographs of Ruskin's study, bedroom, cottage, etc., will appeal to Ruskinites who have not been able to see the originals. The book is no more than an "in memoriam" sketch, and does not profess to be a biography.

Renaissance Types. By William Samuel Lilly. Longmans, Green & Co. 1901.

There is a type of book in which our English brethren have always had a certain preëminence, as to which the best that can be said is, that "no gentleman's library should be without it." The elements that go to make up such a book are: a certain fund of curious learning, a careful reading of a few special works on the subject in hand, a style in which seriousness is judiciously mingled with lightness, and in which quotations from all literature play a not unimportant part.

Such a book is this of Mr. Lilly. He uses the word "Renaissance" in a conventional sense, as denoting a period of time in which the greatest achievements of the modern mind were taking form. He selects from this period certain figures as illustrating several phases of this great movement, and attempts to characterize each in turn as a contributor to the vast result. The plan is an attractive one, and it is easy to imagine it carried out in such a fashion that our understanding of the period and its meaning for all later time should have been greatly widened. Unfortunately, Mr. Lilly has had the fear of the gentleman's library before his eyes. He has spent his energy in detail, without showing us how this detail bears upon his result. He has made a readable book, but we doubt whether any one will be much the wiser for it. The selection of persons is in itself not specially instructive. Michael Angelo, Erasmus, Reuchlin, Luther, and More are unquestionably the great figures of the late fifteenth and early sixteenth centuries, but only in this sense can they be called types of the Renaissance. It has been found necessary, in order to make the connection obvious, to characterize them still further: the artist, the man of letters, the savant—though it is a little hard to see wherein the difference between these two precisely lies—the revolutionist, and the saint.

It might have helped if Mr. Lilly had been willing to credit his readers with a general knowledge of the lives of at least four of his heroes, but he has thought it necessary to give rather a detailed biography of each, derived in every case from good modern sources, and in itself not uninteresting, but occupying too much of his space, and tending to interrupt the course of his argument. Indeed, it is almost too much to speak of an argument in this book at all. The reader must work that out for himself, aided, perhaps, by the author's summing up in the last chapter. So far as we can discern it, it is that the Renaissance was a time of vast intellectual stimulus, the starting-point of a multitude of ideas which were long in finding their realization—many of which, in fact, have not yet been realized. That this is a contribution worth the while of the thoughtful or moderately well-informed reader may be doubted.

We cannot refrain from calling attention to a practice (partly, perhaps, the fault of the publisher) of placing, at the top of the right-hand page, headings more worthy of a cheap newspaper than of a serious work of scholarship. It can add nothing whatever to one's understanding of the subject to meet at every turn such headings as these: "Dismay and Disgust," "What Might Have Been," "Good Advice," "A Dark Picture," and so on. Detail headings, to be valuable, should stand in a definite relation to the running heading on the opposite page, and give also some useful idea of the contents of the page beneath. If they are not worth the time necessary to show these connections, they are much better omitted.

Essays Theological and Literary. By Charles Carroll Everett, late Professor of Theology in Harvard University. Boston: Houghton, Mifflin & Co. 1901.

These essays have been chosen by Prof. C. H. Toy of the Harvard Divinity School from out an embarrassment of riches left by Professor Everett scattered about in various reviews and magazines. A large proportion of the round dozen appeared in the *New World*, which would have justified itself as a vehicle for Professor Everett's thought if on no other ground. No man was ever less a dogmatist, and his influence upon the young theologians of the Divinity School must have been such as to liberate them from the bondage of all special sects, and secure to them the freedom of the different world-religions; equally that of the wide range of philosophic thought. It is not that he was eclectic, but that he was independent, and pounced upon his own wherever he found it. It is remarkable that, with a mind so metaphysical in its dominant stress, he was perfectly at home in scientific studies, and in these not merely at second hand. The "Instinct and Reason" essay shows that his personal observation was extremely nice, and other essays contribute to this impression. He is the realistic, concrete idealist at every turn. At the same time he is a poet and a humorist, his humor always delicate—a fitful gleam which will bring back to many the voice and manner associated with those happy moments which relieved the strain of his most serious discourse.

Two essays deal with certain aspects of Christianity, "The Historic and the Ideal Christ" and "The Distinctive Mark of Christianity." The contention in the former is that the idealization of Jesus has been a process of abstraction rather than one of accretion; that the historic Christ has been formative of the ideal Christ to a very great extent. Where even the progressive orthodox dogmatize as to the sinlessness of Jesus, professor Everett, always inclining to the relative, pleads for abstention from dogma. "When we take a rule with which to draw a line, we do not ask whether under a microscope it would still show an unbroken edge." In the second of these essays the distinctive mark of Christianity is found to be the absence of any such, through its inclusion of those elements which appear in other great religions in a more isolated if not exaggerated form. "Naturalism and its Results" is remarkable for the frankness with which it discloses Professor Everett's views on matters of first-rate importance, as where, accepting the higher criticism of the Bible, he says that "to the mass of men much of the interest which formerly attached to it [the Bible] will more and more disappear." One of his most humorous illustrations is that where, speaking of heresy trials, he says, "It is as if a snow-bank in the spring should fancy that it could remain in undisturbed peace as soon as it could get rid of the few drops of water that are oozing out of it." The Devil has a chapter to himself, which does not seem too much. His evolution is set forth with great perspicuity. We do not seem to be getting far away from him when we come to Fr. Nietzsche, of whose philosophy there is a careful study. This has an excellent "improvement," as the Puritan preachers called the sting in the tail of a discourse. Professor Everett thinks Nietzsche ought to be a favorite philosopher with us, so many act upon the hard and brutal doctrine on which he unblushingly insists. "If we look at our politics—but I would rather not look at them."

In conclusion, there are four purely literary essays which are not inferior to the others. That upon Emerson's poems has particular felicities even more admirable than the generalizations. The essay upon Goethe's "Faust" is not inferior to the best of the many essays that have been written on this fruitful theme. The praise allotted to the second part of "Faust" is, however, cancelled by the account of it as at once a social and a personal allegory. In the eleventh essay Tennyson and Browning are compared; and in the twelfth ("Browning's Philosophy") the criticism of Henry Jones's treatment of the same subject is the more inter-

esting because it is the criticism of one Hegelian by another. So many have read Henry Jones's Browning book with interest and approval that Professor Everett's counter-criticism is a valuable contribution to the understanding of the poet.

It remains to say that Professor Everett's book is far less valuable for its particular opinions than for the opportunity which it affords to watch the play of an extremely beautiful and agile mind upon a range of subjects every one of which is suggestive and important. It is seldom that we find a book the reading of which gives so much pure delight as we have received from this.

Plant Life of Alabama: An Account of the Distribution, Modes of Association, and Adaptations of the Flora of Alabama. Together with a Systematic Catalogue of the Plants Growing in the State. By Charles Mohr, Ph.D. [Reprint of Vol. VI., "Contributions from the U. S. National Herbarium," published July 31, 1901, by the U. S. Department of Agriculture. "Alabama Edition," with Portrait and Biography of the Author. October, 1901.]

This interesting work was not issued until a week or two after the death of its lamented author, but it had received his anxious and loving care up to the very last. It embodies the chief results of a long life spent in earnest work divided between vocation and avocation. Dr. Mohr was a striking instance of the advantage to be derived from change of occupation along definite lines of energy. Professionally, he was a chemist, pharmacist, and botanist, but he had an excellent acquaintance with mineralogy, metallurgy, and mining. In short, he was an all-round naturalist, attracted by every phase of nature to its thorough and accurate investigation. When he was somewhat wearied by his too great assiduity in one line of research, he could turn to another line of activity for wholesome refreshment. It was natural, therefore, that he should become most deeply interested in the examination of the environment of plants, in the study of the relations of plants to their surroundings. He knew plants well; he knew their demands and caprices; and he knew also the climate, the soils, and the animals which must enter into every problem. Hand in hand with such studies would naturally go an investigation of the uses of plants to man, but this work, though carried far by him, he did not live to finish. That which he has left us in this volume is a suggestive guide for investigators in many fields, and will be sure to stimulate activity in a safe way. At the present time, when certain departments of botany are breaking with the old traditions, a work like this contribution by Mohr will be of great service in directing research along new lines and with methods which are not likely to mislead.

As every traveller and explorer knows, there are some guides to whom one becomes personally deeply attached. Mohr was one of these. His quiet life did not suggest romance, and yet there was in it a large share of what a less modest man would have viewed as extremely interesting adventure. At the age of twenty-one Mohr made a voyage to Surinam, where disappointment after disappointment met him. Then, as a Forty-niner, he found fresh disappointments in the Sacramento valley. He tried next his fortunes in the fickle Isthmus of Panama, and here, after a brief period of successful collecting and study, he was stripped of all his belongings by theft, and left well-nigh dead from Chagres fever. After various unpleasant experiences in the North, he found himself after a while in Mexico, from which he was ousted by a political revolution. In Mobile he found at last a pleasant home and such quiet as was obtainable in a civil war. His function now was to aid the Confederates by the manufacture of drugs from the native sources, and by testing the medicinal preparations which were smuggled into the country from Europe. His wide knowledge of the resources of Alabama made his services of great value during the war and the dreary period of reconstruction. Through all his discouragements he had a cheerful heart and a happy smile. When things at last settled down into something like quiet in the State, Mohr was able to devote much of his time and thought to the examination of botanical questions of the first order, and the results of these researches met with prompt recognition. His last years were fruitful and were crowded with happiness in his studies, so that, when the end came suddenly, he was able to say, in the midst of his intense suffering, "How beautiful is the world."

Erinnerungen aus meinem Leben. Von Ferdinand von Strantz. Hamburg: Aktien-Gesellschaft. 1901. Pp. 272.

This volume of reminiscences is a highly entertaining and very valuable contribution to the history of the dramatic and operatic stage in Germany during the last century. The author, now more than eighty years of age, records in the introductory chapter of his autobiography some interesting recollections of his father, who, as Prussian major and aide-de-camp of Blücher, took an active part in the decisive campaign of 1814. Many comical and characteristic incidents are narrated of this energetic and impetuous warrior, popularly known as "Marschall Vorwärts," who, although endowed with noble feeling and a lively sense of humor, was extremely gruff in his manners, and so utterly destitute of literary culture that he could not write his mother tongue correctly. After the battle of Waterloo, Blücher visited England, where his presence excited immense enthusiasm, especially among the women, who wished to welcome him as the American ladies did Hobson on his return from Cuba, surrounding his carriage to kiss his hand as he drove through the streets of London. But the blunt old soldier was not sufficiently sentimental to enjoy this sort of "lip-service," and ordered his adjutant to put his hand out of the carriage window and receive the osculations intended for himself. He could not even walk out without having bits of his uniform cut off as souvenirs. The same thing happened repeatedly to both his adjutants, who went to him and claimed compensation for losses incurred in his service; but their complaint was laughed at as a cunning device for getting new uniforms.

Ferdinand von Strantz began to prepare himself for a diplomatic career, but, before completing the prescribed course of study, yielded to the force of family tradition and entered the army. With the development of his mental faculties and artistic tastes, the life of an officer, with its monotonous military routine, ceased to satisfy him, and he resolved to become an actor and singer. For this purpose he went in 1845 to Paris, where he took lessons of Manuel Garcia, who was then also giving instruction to Christine Nilsson and Jenny Lind. He speaks in the highest terms of Garcia's skill in training the voice, and adds that the illustrious master is still pursuing the same vocation in London at the advanced age of ninety-seven. During his three years' sojourn on the Seine, Strantz became intimately acquainted with many musical and literary celebrities, of whom Auber, Chopin, Flotow, Offenbach, and Dumas *père* are now the most noted. As early as 1842 he enjoyed the friendship of Liszt, who was then giving concerts in Breslau, and always had two pianos on the platform, as his vigorous touch was quite certain to break the strings of one of them before the programme was finished. To-day the introduction of the stronger instruments constructed by Bechstein, Blüthner, Steinway, and others has rendered this precaution unnecessary.

Strantz was connected with the stage for nearly forty years, at first as singer and actor, then as *régisseur* and manager in Bremen, Dresden, Hamburg, Königsberg, Leipzig, and other German cities, and finally as director of the Royal Opera in Berlin from 1876 to 1887, when he retired to private life. During this period he came into contact with the most distinguished representatives of the dramatic and operatic art, as well as the most illustrious playwrights and musical composers of his time. In his relations with these persons, many of whom were extremely sensitive and somewhat eccentric, he showed practical common sense, keen observation, and thorough knowledge of human nature. Even events of minor importance in his intercourse with them are made to serve as striking illustrations of traits of character. Verdi, we are told, was so discouraged by the failure of his first opera that he resolved never to write another; but the impresario Merelli, who recognized his talent, urged him to continue, and one day thrust a new libretto into his hand through the crack of the door, which Verdi was rudely shutting in the persistent impresario's face. Finally, however, he read the text thus forced upon him, was greatly pleased with it, and soon afterwards brought out his opera "Nabucco," which established his reputation as a musical composer. The book is full of anecdotes of this kind, which not only are amusing, but also have a biographical and historical value. We may add that Strantz's statements in minor details are not always strictly accurate. Thus, Verdi's first opera, "Oberto, Conte di S. Bonifacio," given at the Scala in 1839, was a marked success; it was his second opera, "Un Giorno di Regno," written under extremely depressing circumstances, that was an utter failure and the cause of his despondency. But these slight errors do not affect the general truth of the narration, nor seriously detract from its essential worth.

Text-Book of Zoölogy. Treated from a Biological Standpoint. By Dr. Otto Schmeil. Translated from the German by

Rudolf Rosenstock, M.A. Edited by J. T. Cunningham, M.A. London: Adam & Charles Black; New York: Macmillan Co. 1901. Small 4to, pp. xvi, 493, with numerous illustrations.

There are few, if any, zoölogical text-books or introductions to zoölogy that are more satisfactory in plan and in execution than the present. Comprehensive as it is, it does not attempt to deal with the entire animal kingdom, but rather with the better known portions of it. By means of a type of each, it is sought to teach the habits and structures of the various groups, the information given being such as should be possessed by all grades of students. Because of judicious selection and arrangement, and of the interest of the text, the volume is well adapted for teachers' use. The classification approximates one on which most authorities might agree, and is carried far enough for the purposes of the work. The illustrations are very good; they give the animal, a note in the legend indicating the actual size, with details of anatomy and affinities. Bold-faced catchwords and thought-stimulating and directing questions and remarks in very few words, are efficient aids for reader or instructor. These, with the author's efforts to keep adaptation to surroundings and relations to other life constantly in mind, make his text more entertaining and lively, and his facts more easy to remember, than is usual in such books. The work was constructed for Germany; it is nearly as well suited for surrounding countries in which the fauna is almost the same. English students, having about them the same or closely allied species, may welcome it as if written by one of themselves. Americans, however, are likely to be confused by references to badgers, rabbits, buzzards, snakes, toads, etc., which, though familiar enough in Europe, are not the creatures to which the same common names are applied in America. Other faults are to be seen in the distribution—the wolf, the bear, the hare, and others being treated as if found only in Europe and Asia; or in an occasional but rare inaccuracy, as in the case of the Galapagos tortoises. Dr. Schmeil's book is one of unusual merit; its defects are neither many nor great.

India Old and New. With a Memorial Address. By E. Washburn Hopkins. (Yale Bicentennial Publications.) New York: Charles Scribner's Sons. Pp. viii, 342.

Professor Hopkins here provides an excellent companion-piece to his 'Great Epic of India,' recently published in the Yale Bicentennial Series. In the present volume, however, we have a work of a more general and much less technical character, full of interesting information and much good sense on questions relating to the past and present of this great country under British rule. It contains the views of a scholar who knows the ancient literature of India, and is familiar with its present conditions from a personal acquaintance with the land.

The literary side is represented by three essays on the Rig Veda and the early lyric and epic poetry of India; but the chapter which will at once attract attention is that on "Christ in India." This deals with the much mooted question as to the possibility of direct or indirect connection between Buddhism and Christianity historically. The writer presents the so-called "cogent parallels" between the two religions and weighs them carefully. In one of his arguments he adduces the accounts of Zoroaster's miraculous birth to show that likenesses are not confined to Buddhism. He might also have added, as another parallel from Iran, the description of Zoroaster's temptation, which would have strengthened his point still more. He then proceeds in critical manner to show that most of the Buddhist resemblances can actually be proved to be later than Christianity, and he concludes:

"We may, I think, as open-minded historical students, safely assert that the Christian religion, according to all the evidence, was not plagiarized but original. At the same time we must admit that there is historical possibility in the view that the Christian narrative may have been affected by Buddhistic tales, but we must just as decidedly maintain that no cogent proof of this view has yet been furnished."

The much exploited resemblances between Krishnaism and Christianity are similarly discussed. Strong enough evidence is brought forward to show that, instead of being influenced, Christianity must itself have exercised an influence at least upon the later developments of this great religious rival of Buddhism in India. On the whole question of presumed Indian influences on Christianity, the author concludes that the historical data furnish "no base for the belief that the original narrative of Christ's birth and teaching derives from Hindu sources."

Space is found for reproducing two economic papers, on Hindu guilds and land-tenure in India, which were previously published elsewhere, and there is an extensive discussion of "the cause and cure of famine." Drought and famine have been known in India from the earliest times, as the writer conclusively shows from the early literature; but in pointing out the familiar advantages of irrigation, he points out also that certain economic rules and methods of taxation, differing from the ordinary, were applied in famine years in ancient times. England to-day, as ruler, has perhaps something to learn from the Occident of the past, and a strong plea is made for "remitting the tax when there is a drought, leaving the peasant enough to live on, and seeing that his livelihood is not taken from him even by law."

The chapter which sketches the first year of plague in Bombay recalls many personal experiences that will be recognized by any one who has recently travelled in the East; and the closing essay, "New India," will be read with interest by the ruler and the ruled in this early Aryan land. It seems fitting that the introductory chapter of the volume should be a memorial address on the late Professor Salisbury of Yale, the teacher of Whitney, the founder of the American Oriental Society, and the Nestor of Sanskrit scholars in America.

Actes du Premier Congrès International d'Histoire des Religions, Paris, 1900. Première partie: Séances générales. Paris: Ernest Leroux. 1901.

If a little lightmindedness be ever permissible in drawing attention to the proceedings of so grave a body as a congress of the history of religions, it must surely be on finding enrolled among its members Mlle. Rev. Mary Baker G. Eddy. So it stands on page xiii. of this volume. The "Mlle." we can pass as due to French ignorance of our recent religious history, but how the lady in question could embark or assist in this *galère*—that is a question out of soundings for most of us. There are some things that a prophet—and, it may be presumed, a prophetess also—must not permit himself, and one is the luxury of uncertainty. He either has the truth or he hasn't; and if he has, what need of further words?

But, to return from such speculations as to the workings in illumined minds, the present volume is of much more than facetious interest. It is the first fruit of the movement, on the part of the professors of religious sciences at the École Pratique des Hautes-Études, entered upon in connection with the Exposition of 1900, and directed towards a periodical international congress for the history of religions. It may also be said to be, in a sense, an indirect result of the Chicago Parliament of Religions. Only a few years ago the time would not have been ripe for such an enterprise, but now the study of comparative religion has gone so far that a purely historic treatment is possible, and religious discussions between opposing confessions need no longer lead to unscientific brawling. Thirty years ago it would have been vain to seek a university chair devoted to this subject. To-day, under an influence which proceeded largely from Holland and Switzerland, these are to be found in almost every country. To this, it is true, there are the striking exceptions of Germany and England; but if the universities of these countries have not formally countenanced the new science, it has been in them fostered and advanced by private enterprise and individual labors. Finally, if any one institution may be singled out as having conspicuously contributed to this revolution, it is the Musée Guimet, founded by M. Émile Guimet in 1879, and transferred to Paris in 1888, and the *Revue de l'Histoire des Religions*, which is under its charge.

As is natural in the case of the first congress of the students of a still youthful science, the papers here are to a great extent of an introductory and descriptive nature. After the happy opening address by M. Albert Réville, there comes one, weighty and luminous, by Count A. de Gubernatis, on the future of the history of religions. Later follows a very clear statement of the actual situation with regard to instruction in the history of religions, by M. Jean Réville; later, again, a detailed paper on the statistics of religion at the end of the nineteenth century, by M. Fournier de Flaix, a revision of one published in 1890 in the Bulletin of the International Congress of Statistics. It is followed by an historical sketch of the Chicago Congress of Religions by Dr. C. C. Bonney. Along with these general papers come more special contributions, some of high importance. M. Émile Sénart discusses the relation of the Yoga philosophy to Buddhism with a learning that will be somewhat distracting to all but the Indianist. Prof. I. Goldziher illuminates with his peculiar simplicity and thoroughness the relation of Islam to Zoroastrianism. M. A. Sabatier treats of the relation of Biblical criticism, and M. L. Marillier of folk-lore to religious science; Count Goblet d'Alviella of the mutual relationships of religion and morals. Thus, the conception

of dependence and relativity holds a high place in almost all the papers, as is very natural in a congress of comparative religions.

From the *procès-verbaux* it is evident that among the papers read at the special sessions were several of very high interest. The second volume may therefore be expected to be at least equal in value to the present, and that is saying much. Perhaps it may even solve the problem of Mrs. Eddy's membership. But that we can hardly hope for.

BOOKS OF THE WEEK.

Arber, Edward. The Cowper Anthology. (Selections from the English Poets.) Henry Frowde.
Arnold, E. L. Lepidus the Centurion. Thomas Y. Crowell & Co. $1.50.
Bailey, L. H. Cyclopedia of American Horticulture. Fourth and last volume. Macmillan.
Bartlett, A. Le R. A Golden Way. Abbey Press. $1.50.
Bixby, J. T. The New World and the New Thought. Thomas Whittaker. $1.
Burrow, C. K. Patricia of the Hills. G. P. Putnam's Sons. $1.35.
Carson, W. H. Hester Blair. Boston: C. M. Clark Pub. Co. $1.50.
Chase, W. E. Poems. Madison (Wis.): Published by the Author.
Chatfield-Taylor, H. C. The Crimson Wing. Herbert S. Stone & Co.
Chittenden, H. M. The American Fur Trade of the Far West. 3 vols. Francis P. Harper. $10.
Crawley, Ernest. The Mystic Rose: A Study of Primitive Marriage. Macmillan. 12s.
Crosby, Ernest. Captain Jinks, Hero. Funk & Wagnalls Co. $1.50.
Dana, Francis. The Decoy. John Lane.
Davidson, Rev. T. Chambers's Twentieth Century Dictionary of the English Language. London: W. & R. Chambers; Philadelphia: J. B. Lippincott Co. $1.50 net.
Dickson, Harris. The Siege of Lady Resolute. Harpers. $1.50.
Dixon, R. W. History of the Church of England. Vols. V. and VI. Henry Frowde.
Dresser, H. W. A Book of Secrets. G. P. Putnam's Sons. $1.
Duignan, W. H. Notes on Staffordshire Place Names. Henry Frowde.
Eadie's Biblical Cyclopædia. New ed. London: Charles Griffin; Philadelphia: J. B. Lippincott Co. $3.75 net.
Fielde, Adele M. A Political Primer of New York City and State. The League for Political Education.
Fowler, Prof. H. N. History of Ancient Greek Literature. D. Appleton & Co.
Gordon, A. M. R. Hoch der Kaiser. New ed. Abbey Press. 50 cents.
Gower, Lord R. S. Sir David Wilkie. (Great Masters in Painting and Sculpture.) London: George Bell & Sons; New York: Macmillan. $1.75.
Green, E. T. The Church of Christ. London: Methuen & Co.; New York: Macmillan. $1.50.
Hargrave, W. L. Wallannah. Richmond (Va.): B. F. Johnson Pub. Co.
Harris, C. W. The Sectional Struggle. Philadelphia: J. B. Lippincott Co. $2.50.
Hopkins, M. The Fighting Bishop. Indianapolis: The Bowen-Merrill Co.
Jenks, Edward. Edward Plantagenet. (Heroes of the Nations.) G. P. Putnam's Sons.
Kraszewski, J. J. Memoirs of the Countess Cosel. London: Downey & Co.; New York: Brentano's. $2.
Lavy, A. L'Oeuvre de Millerand. Paris: Société Nouvelle de Librairie et d'Edition.
Loftie, W. J. London Afternoons. London: Cassell & Co.; New York: Brentano's.
McClelland, T. C. Verba Crucis. Thomas Y. Crowell & Co. 50 cents.

Two New Novels.

THE ASSASSINS.

By NEVILL M. MEAKIN. $1.50.

It has been left for a new author of decided power to take for his central theme "The Assassins" of the "Old Man of the Mountain," whom Sir Walter Scott and Mr. Hewlett have touched only in episode. The field for the imagination opened by their half legendary story has always been fascinating, and Mr. Meakin has worked it worthily. In any romance of the time of the Crusades, Sultan Saladin must, of course, be a prominent figure, and here he is treated most sympathetically and from a point of view not hitherto exploited.

THE WINDING ROAD.

By ELIZABETH GODFREY. $1.50.

Although the author has not yet reached a very wide public, she has reached the approval of a discriminating one, and the appeal of this book to that one is enough stronger than the appeal of her previous books to indicate progress in her art. The story is of the love between a half gypsy genius and a woman willing to go against her nature and experience for love of him. The character development is strong and the atmosphere one that makes the reader feel out of doors.

BRIGHTON BRANCH

The Nation

VOL. LXXIV—NO. 1915. THURSDAY, MARCH 13, 1902. PRICE TEN CENTS.

Mr. Stockton's Best Novel

KATE BONNET

The Romance of a Pirate's Daughter

By FRANK R. STOCKTON

AUTHOR OF

"Rudder Grange," "The Lady or the Tiger," Etc., Etc.

ILLUSTRATED BY

A. I. KELLER and H. S. POTTER

12mo, Cloth, $1.50

Mr. *GEORGE CARY EGGLESTON* says:

"Mr. Stockton's *Kate Bonnet* seems to me the very best example yet produced of historical romance. It has all of romance in it that history can anywhere afford. It has strenuous action without limit, human passion without stint, and picturesqueness far beyond anything that ordinary human history can rival. I do not know anywhere a book that better repays reading than 'Kate Bonnet.'"

The Only Comprehensive Year Book Published in the United States

Appletons' Annual Cyclopaedia for 1901

A HISTORY OF THE WORLD FOR THE YEAR.

Large 8vo. All Bindings, $5.00 up.

(By Subscription.)

The field occupied by *Appletons' Annual Cyclopaedia* is peculiarly its own. While there are many year-books, they all, to a greater or less degree, seek to specialize some class or classes of information. Appletons' is, in the true sense, a cyclopædia. It covers the whole ground, and is the record of human progress for a year. It includes in its scope those departures from the regular routine that require special mention, and on such subjects, expert writers in each branch have given the benefit of their experience. The 1901 edition of this incomparable work contains as a frontispiece a fine photogravure of President Roosevelt, and many full-page illustrations, including portraits of Li-Hung-Chang and President Hadley of Yale, and day and night views of the Pan-American Exposition, while numerous illustrations are interspersed through the text.

The THRALL of LEIF the LUCKY

A Story of Viking Days

With 6 full-page Illustrations in Color. 12mo. Cloth. $1.50

Messrs. A. C. McClurg & Co. announce for publication on March 19 a novel which they confidently believe will create widespread interest. It is a Viking romance of Leif Ericsson's voyage to America, and in addition to the charm of the story itself, which is most absorbing, the remarkable colored illustrations by Troy and Margaret Kinney are calculated to attract much attention.

Other New Spring Publications

THE PRINCE INCOGNITO. By ELIZABETH WORMELEY LATIMER, author of "The Last Years of the Nineteenth Century," etc., etc. With a cover design by F. BERKELEY SMITH. 12mo, *$1.50.*

Mrs. Latimer's first appearance in fiction is an absorbing romantic novel, dealing with Rinaldo d'Este, a cousin of Louis XV.

ALABAMA SKETCHES. By SAMUEL MINTURN PECK. 16mo, *$1.00.*

Mr. Peck has given some most characteristic studies of Alabama character, in the finished style acquired by his long experience. This is the fourth volume in Messrs. McClurg & Co.'s series of "Southern Sketches."

GERTRUDE DORRANCE. By MARY FISHER, author of "A Group of French Critics," etc. 12mo, *$1.50.*

The love story of an altogether fascinating young girl, whose musical genius lifts her above her surroundings.

FICTION

By Henry Harland

THE LADY PARAMOUNT

12mo. Price, $1.50

By the same author: **"The Cardinal's Snuff Box," "Grey Roses," "Comedies and Errors."** [*Ready early in April.*]

By Dolf Wyllarde

THE STORY OF EDEN. 12mo. Price, $1.50. With Decorative Cover, designed by T. Hanford Pond. [Just out.]

The Spectator: "A real feeling of brilliant sunshine and exhilarating air."

By Francis Dana

THE DECOY. 12mo. Price, $1.50. [Just out.]

Mr. Dana's New England tale, the plot of which turns on the subject of the fatal potency with country folk of quack spiritualists and their knaveries, contains such refreshing and strong delineation of indigenous American types in nature, both wild and human, that its work should surely reap the credit due to it.

Anonymous

COMMENTS OF A COUNTESS. 12mo. Price, $1.00 *net.* [Very shortly.]

This is a volume of light and amusing satirical sketches of society foibles—a book with many companions in current literature, but few equals. It is really a kind of "Guide to the Smart Set," and has such excellent humor and such breadth of charity, that its satire is heightened to wonderful and richly enjoyable effect.

By Richard Bagot

A ROMAN MYSTERY. 12mo. Price, $1.50. [In March.]

THE JUST AND THE UNJUST. 12mo. Price, $1.50. [In April.]

By the same author: **"Casting of Nets."**

Anonymous

AN ENGLISH GIRL IN PARIS: A novel. 12mo. Price, $1.50.

A book something in the manner of **"The Visits of Elizabeth,"** by Elinor Glyn, and of **"The Letters of Her Mother to Elizabeth."**

GARDENING

Anonymous

IN A TUSCAN GARDEN. With numerous illustrations reproduced from photographs. 12mo. Price, $1.50 *net.* [In April.]

By Francis Bacon

OF GARDENS: An Essay. With an introduction by Helen Milman (Mrs. Caldwell Crofton), author of **"From the Heart of the Rose," "In a Garden of Peace," "Outside the Garden,"** etc. With a frontispiece by Edmund H. New. 16mo. Price, 75 cts. *net.* [Just out.]

By Mrs. Leslie Williams

A GARDEN IN THE SUBURBS. With eight full-page illustrations. 12mo. Price, $1.25 *net.* [Just out.]

LONG'S WOOD FOLK SERIES

By WILLIAM J. LONG.

WAYS OF WOOD FOLK, in Special Binding..... .75
WILDERNESS WAYS, in Special Binding..... .75
SECRETS OF THE WOODS, in Special Binding. .75

BEASTS OF THE FIELD

A new and beautiful edition of all of Mr. Long's Animal Stories, published in one volume. Printed on heavy paper with wide margins. With full-page illustrations and marginal sketches by Charles Copeland throughout the book. Cloth, decorative, $2.00.

FOWLS OF THE AIR

A new and beautiful edition of all of Mr. Long's Bird Stories, published in one volume. Printed on heavy paper with wide margins. With full-page illustrations and marginal sketches throughout the book by Charles Copeland. Cloth, decorative, $2.00.

FIRST STUDIES OF PLANT LIFE

By GEORGE F. ATKINSON. A fascinating and original study of the life histories of plants. The illustrations in the book, which number more than 300, have been especially collected for these stories, and include many rare and beautiful photographs. Square, 12mo. Cloth. 266 pages. 85 cents *net*.

HANDBOOK of THE TREES of NEW ENGLAND

By LORIN L. DAME and HENRY BROOKS. A complete description, with full-page illustrations, of our native New England trees. In order to facilitate comparison of one tree with another, the text is arranged in paragraphs, such as Habit, Inflorescence, etc The illustrations cover every period of growth from bud to fruit and are of themselves sufficient in most cases for the identification of the species. Though the work was written specially for New England conditions, it is applicable to a much larger area north and south. Small 12mo. Cloth. $1.50.

NATURE STUDY AND LIFE

By CLIFTON F. HODGE. Concrete lessons on the animals and plants that form the natural environment of the home and group themselves most closely about the life and interests of the child. Each form is studied alive and at work, as a life story to be read at first hand in nature and especially in its relations to man. Very fully illustrated. Square 12mo. Cloth. (*Nearly ready.*)

BIRD PORTRAITS

By ERNEST THOMPSON SETON; described by RALPH HOFFMANN. Pictures by this distinguished artist of familiar birds, printed on heavy coated paper, 8½ x 12 inches in size. The entertaining descriptions by Ralph Hoffmann, who is a member of the Audubon Society and one of the authors of "Bird-World," make a delightful accompaniment to Mr. Thompson Seton's pictures. Quarto. Cloth. $1.50.

A LIST OF RECENT TEXT BOOKS.

FOR HIGH SCHOOLS.

Glück Auf

A First German Reader, by Margarethe Müller and Carla Wenckebach, Professors of German in Wellesley College. List price 75 cents.

A Course in Invertebrate Zoölogy

A Guide to the Dissection and Comparative Study of Invertebrate Animals. By Henry S. Pratt, Associate Professor of Biology in Haverford College, Haverford, Penn. List price $1.25.

Bergen's Foundations of Botany

By JOSEPH Y. BERGEN, recently Instructor in Biology in the English High School, Boston. Illustrated. List price $1.50.

Herbarium and Plant Description

With Directions for Collecting, Pressing, and Mounting Specimens. By W. H. D. Meier, Superintendent of Schools, Griggsville, Ill. Portfolio containing 25 sheets for description and preservation of specimens. List price 60 cents.

A History and Description of Roman Political Institutions

By Frank Frost Abbott, Professor of Latin in the University of Chicago. List price $1.50.

Myers' Rome: Its Rise and Fall

By Philip Van Ness Myers, author of "History of Greece," etc. With maps and illustrations. List price $1.25. A second edition, bringing the narrative down to A.D. 800, in accordance with the recommendations of the Committee of the American Historical Association.

Composition and Rhetoric

By Sara E. H. Lockwood and Mary Alice Emerson, Head of the Department of English in the State Normal School, Bridgewater, Mass. List price $1.00.

FOR COMMON SCHOOLS.

The Descriptive Speller

For Graded and Ungraded Schools. By George B. Aiton, State Inspector of High Schools for Minnesota. List price 25 cents.

The Cyr Readers

By Grades. An arrangement of these popular readers in a series of eight books corresponding to the grade below the high school. The fundamental idea of Cyr's Readers is to make children familiar with the works and personality of the great English and American writers, and to awaken a taste for good literature.

The Youth's Companion Series of Supplementary Readers

THE WIDE WORLD. 12mo, Cloth. 122 pages. Illustrated. List price 25 cents.

The *Wide World*, the first volume of the series, gives a brief, comprehensive survey of child life in Japan, Egypt, Holland, France, Switzerland, Sweden, South America, and Alaska. Among the interesting sketches are "Barbarian Babies," "Dining with a Mandarin," "Some Little Egyptians," "A Visit to Sweden," "An Eskimo Breakfast." It is attractive in binding, convenient in size, and low in price.

The work is particularly adapted for reading in the sixth and seventh grades.

NORTHERN EUROPE 12mo. Cloth. 122 pages. List price 25 cents.

This volume is composed of descriptions and stories which portray interesting aspects of the following subjects: The Faröe Islands, Life in Norway, Scenes in Holland and Belgium, Studies of French Life, Life in the Alps, and a Journey down the Moselle.

The Mother Tongue

By GEORGE LYMAN KITTREDGE, Professor of English in Harvard University, and SARAH LOUISE ARNOLD, Supervisor of Schools, Boston.

Book I. Lessons in Speaking, Reading and Writing English. Illustrated. List price 45 cents.

Book II. An Elementary English Grammar. List price 60 cents.

AUDREY

By MARY JOHNSTON

Author of "TO HAVE AND TO HOLD"

"Here at last an American woman has succeeded as George Eliot did, in living in the very soul and heart of the character which she creates."—*Philadelphia Times.*

"Miss Johnston lures her reader on, ever more and more interested."—*N. Y. Tribune.*

With six colored illustrations by F. C. YOHN. ($1.50.)

BOOKS TO BE PUBLISHED THIS SPRING

NEW FICTION BY AUTHORS OF DISTINCTION

The Diary of a Goose Girl

By KATE DOUGLAS WIGGIN. Fully illustrated. 12mo, $1.00.

A story of an American girl who played at being a goose girl.

Sparkling with Mrs. Wiggin's humor.

The Champion

By CHARLES EGBERT CRADDOCK. With a Frontispiece. 12mo, $1.20 *net.* *Postage extra.*

The narrative of a printer's devil in the office of a Southern newspaper. It has a dash and go which will appeal especially to the younger reader.

The Desert and the Sown

By MARY HALLOCK FOOTE. With a Frontispiece. 12mo, $1.50.

A novel of contrasts between the West and the East, rich in character study, in motive and in situation.

The Claybornes

By WILLIAM SAGE. With a Frontispiece. Crown 8vo, $1.50.

A stirring story of the Civil War. Richmond, the siege of Vicksburg, and Appomattox provide a background against which the characters of Lincoln, Grant and Sherman stand out vividly.

The Diary of a Saint

By ARLO BATES. Crown 8vo, $1.50.

A story told by the heroine, Ruth Privet, in her diary and contained in the entries of an eventful year.

AR medy fcr Love

By ELLEN OLNEY KIRK. 16mo.

A sweet, old-fashioned love story, full of happy surprises and told with the utmost vivacity and charm. With other novels by Mrs. Kirk it will be especially attractive to girls.

FICTION BY NEW AUTHORS

Roman Bisnet

By GEORGIA WOOD PANGBORN

With a frontispiece. Crown 8vo, $1.50.

The hero of this striking novel is the son of a French-Canadian half-breed and a German musician. These various strains of inheritance make him a most complex character. It is a novel of keen interest with a style as distinctive as is the plot.

John Kenadie

By RIPLEY D. SAUNDERS. 12mo, $1.50.

The story of John Kenadie's life is the story of a conflict in him of two natures and is told with rare mastery and with the sure touch of knowledge. The field—Arkansas—is a fresh one to novelists, with scenes and characters which have the charm of newness.

Bread and Wine

By MAUDE EGERTON KING. 12mo, $1.25.

An idyllic story of Swiss peasant life, with so much of the color and atmosphere of Swiss village life and so much sympathy with the characters that the book is a charming picture.

To the End of the Trail

By FRANK LEWIS NASON. 12mo, $1.50

A novel of the West, breathing the space and freedom of Colorado ranch and mining life. It is full of swift, significant action, thoroughly well written and increasing in interest up to its dramatic climax.

NEW BOOKS OF SPECIAL INTEREST

New France and New England

By JOHN FISKE. Crown 8vo.

This book forms the final link needed to complete the chain of Mr. Fiske's volumes of American history.

The Reminiscences of a Dramatic Critic

By HENRY AUSTIN CLAPP. With numerous portraits. 8vo. A review of the chief features of the stage during the past quarter century.

Lee at Appomattox, and Other Papers

By CHARLES FRANCIS ADAMS. Crown 8vo.

In this volume Mr. Adams has gathered some of the results of long and valuable experience gained by travel and the practice of great affairs.

An American at Oxford

By JOHN CORBIN. 12mo.

This book has unusual grace and charm of style, and is informed with exceptional knowledge of American as well as English universities.

Education and the Larger Life

By C. HANFORD HENDERSON. Crown 8vo, $1.30, *net.* *Postage extra.*

The author has succeeded in presenting education as a human enterprise of the greatest interest and importance.

Daniel Webster

By SAMUEL W. MCCALL.

Mr. McCall here recounts with brevity and point the chief incidents in Webster's career and the services to his country which best entitle him to the admiring memory of the American people.

HOUGHTON, MIFFLIN AND COMPANY, Boston and New York

"A BRILLIANT BOOK, GRAPHIC, PICTURESQUE . . . A WORK THAT EVERY THOUGHTFUL AMERICAN SHOULD READ."
—Brooklyn Eagle.

The Mastery of the Pacific

BY

A. R. COLQUHOUN, F.R.S.,

Author of "China in Transformation," etc. With over 100 illustrations.

Cloth, 8vo, $4.00 net.
(Postage 30 cts.)

THE MACMILLAN COMPANY, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, MARCH 13, 1902.

The Week.

Inasmuch as President Roosevelt had declared he would veto the bill for a permanent Census Bureau unless he could frustrate its underhand assault on the merit system, his signing it on Friday must mean that he had satisfied himself that he could, in fact, thwart the spoilsmen. Indeed, it is explicitly announced in Washington that the Attorney-General has advised him that the effect of the bill will not be, though Congress intended it, to transfer the clerks in the Census Office to the classified service, thus giving them the preference for appointment to vacancies over the names on the eligible list. As these clerks in the Census Office got their places purely as spoils for Congressmen, and underwent only a farcical examination, the injustice of advancing them over those who are eligible for office through merit is too obvious to require arguing. Mr. Roosevelt said he would not consent to it, and found a way to nullify this indecent attack upon reform principles by notifying the Director of the Census to appoint only so many clerks as he would need for the permanent bureau. The rest will be discharged, and so left out of, not in, the classified service. The net result has been to leave the heathen in Congress raging. They acceded to the President's recommendation of a permanent Census Bureau only on condition of reserving some spoils perquisites for themselves. Now he cuts off the perquisites, and keeps the permanent Bureau that reformers wanted.

It is most unfortunate that, at the very time when the Republicans in the House show such signs of incompetency, the Democrats in the Senate should throw away their opportunities. If there was any question on which the Opposition in the upper branch might have been expected to make a vigorous fight, it was the ship-subsidy scheme. Yet it is on this very scheme that the Senate Democrats have displayed a weakness which is as discreditable as it is surprising. The party managers appear to have made no objection to the Republican request for an early vote on the Frye-Hanna bill, and next Monday has been set as the day. The minority have not even presented a committee report embodying the objections to the scheme, and many Democrats seem to take no interest in the matter. Mr. Clay of Georgia has made an effective speech against the measure, and some of his associates are expected to take a similar stand this week, but for the most part the Opposition in the Senate behave as though they had no comprehension of the opportunities which the folly of the Republicans throws in their way.

The adjournment of the Republican caucus over reciprocity with Cuba on Tuesday evening without action will give a fresh impulse in both countries to the movement for annexation. While warning the Republican leaders against the inevitable consequences of their non-action, we have earnestly deprecated annexation. We are opposed to colonies altogether as a part of or an adjunct to the United States. We do not regard the Cuban people as a desirable addition to this country. They differ from us in language, religion, traditions, jurisprudence, and modes of thought. Annexation implies and necessitates equal rights eventually if not immediately. Sooner or later, Cubans must have the same political privileges as Americans. Annexation means that they must have representation in Congress in proportion to their numbers, and must accordingly help to govern us in that ratio. It is incumbent on Republicans to tell what they meant by the Platt amendment, which binds Cuba to our chariot, and prevents her from making commercial arrangements with any other country, or even from borrowing money abroad, without our consent. Did that mean annexation at the time when our Congress adopted it? One thing is certain, though the opponents of reciprocity may be blind to it, that annexation is gaining adherents in both political parties.

It cannot, perhaps, be said that the Trust problem, as a whole, is greatly cleared up by the two events of Monday —the filing of the Government's petition against the Northern Securities Company, and the Supreme Court's decision against the Illinois Anti-Trust Law. The one is merely the first gun of an important legal battle; the other, a ruling on what is really a side issue in the controversy. That the Illinois law would be thrown out when it reached the highest court, as it and kindred statutes had already been thrown out in the lower Federal courts, has been, among competent authorities, the quite unanimous expectation. The fatal defect in this law, as in recent anti-Trust laws of Texas and some other States, was the attempt of its promoters to carry water on both shoulders by allowing the farmer or wage-worker to do, in his good pleasure, acts which were severely punishable in the case of merchants or manufacturers. We said in 1897, in reviewing Judge Swayne's decision at Dallas against the Texas Anti-Trust Law, that the weakness of the act in question consisted in its exemption of at least 80 per cent. of the community, thus making "class legislation" of the most glaring sort. The Texas law of 1895, like the Illinois law of 1893, provided that the penalties against agreements to control commercial prices "shall not be held to apply to live stock and agricultural products in the hands of the producer or raiser." Of this exemption, the Supreme Court now remarks that the Fourteenth Amendment to the United States Constitution absolutely forbids it. No Legislature, the court declares, can "divide those in trade into two classes, and make criminals of those in one class . . . while allowing another and favored class engaged in trade to do the same thing with impunity."

Of the Attorney-General's petition, formally opening the case of the Government against the Northern Securities, it is to be said that a high degree of legal ingenuity is displayed. The two main points on which Mr. Knox elects to present his case are as follows: First, that the Northern Securities Company, by its absorption of the Great Northern and Northern Pacific Railways, has effected a combination in restraint of trade; second, that the Securities Company, having been organized solely as the machinery of a merger, and having given no consideration for the stocks acquired, beyond its own certificates, "was not organized in good faith to purchase and pay for the stocks." Whatever may be the judgment of the courts in the second of these contentions, its adroitness must be manifest. Resting on it, the Government's lawyers may at least evade the strong contention of the defendants, that to forbid any bona-fide investment purchases by a stock-holding corporation must logically be followed by moves to forbid, under similar circumstances, such purchases by private individuals. If the Attorney-General's second point were to be sustained, he would probably answer that the Securities Company's acquisitions could not be compared with purchases by an individual who draws bank checks for what he buys; that, in fact, the acquisitions were not purchases at all, but merely a voluntary merger. We do not, of course, profess to foreshadow the dictum of the court on this highly interesting point. We shall await with great interest, however, the rejoinder of the defence. For it is clear to every one familiar with recent moves in high finance, that the whole theory of corporate combinations, as at present practised or designed, is now in question.

The Washington report that Secretary Hay will formally remonstrate against German concessions in Shantung lacks inherent probability. Such a remonstrance is, in fact, already answered by the recent statement of the German Chancellor to the Reichstag. To pursue the matter further, unless Mr. Hay is prepared to present a fully elaborated case, would be a grave diplomatic indiscretion, equivalent to a denial of Von Bülow's veracity. The nature of such a protest as Mr. Hay made to Russia is frequently misunderstood. Such a note appeals not to a formal treaty, but to that "gentleman's agreement" for the open door in China which Mr. Hay induced the Powers to enter into, some two years ago. A protest of this kind is in the nature of a friendly remonstrance against the ill keeping of a promise, and not at all to be regarded as a legal process in the matter of a broken contract. Its effect is chiefly moral. If Mr. Hay were to raise the question of the Shantung concessions, he would, in effect, only say to Von Bülow: "You wrote me on February 19, 1900, that 'the Imperial Government has from the beginning not only asserted, but carried out to the fullest extent, in its Chinese possessions, absolute equality of treatment of all nations with regard to trade, navigation, and commerce. The Imperial Government entertains no thought of departing in the future from this principle.'" But the German Chancellor has virtually anticipated such a reminder by affirming that Germany has not departed from this principle. If Von Bülow's statement had been made in answer to a diplomatic note, Secretary Hay must have accepted the explanation; for the principle of a gentleman's agreement holds all around. He can hardly mean to repeat a reminder which, indirectly, has been made and answered already.

Gen. Hughes, testifying before the Senate Committee on the conduct of the war in the Philippines, not only declined to answer questions, on the ground that he might be criticising a superior officer, but from the first showed that he distinguished members of the Committee by their politics. If the other military witnesses to be called before the Committee should take the same attitude, and feel themselves bound to support the past acts of military commanders and of the Administration in the Philippines, the object for which the Committee is collecting evidence will be defeated. This is to obtain the facts as to the military situation and the conditions of warfare since 1898. If the War Department has not already made it plain to officers that they may testify freely and without hurt to themselves, it is time that Mr. Root should take such action at once. The questions which Senator Patterson put to Gen. Hughes may have been incited by purely partisan motives. They were none the less proper under the circumstances, and should have met with a prompt and cordial response, if only in the interest of history. The country, for instance, is entitled to know the truth about the unnecessary and inexcusable battle fought by the American troops on August 13, 1898, which resulted in the loss of a number of valuable American lives, as well as those of Spaniards and Filipinos. Manila was then hemmed in by the Filipinos, while Dewey's guns absolutely controlled the city on the waterfront. Resistance was impossible, but the Spaniards, in order to "save their faces," cooked up a sham battle with loaded cartridges, and the American military officers consented, with an eye to promotions, which were lavishly bestowed. Senator Patterson was eminently within his rights in probing into this early Philippine scandal.

The formation of a "General Education Board," as a sort of clearing-house for Southern education, marks another important step forward in the great work of building up the black and white institutions of the South. Although it is not to be limited in its activity to any one section of the country, it has primarily been called into being by the need of a general headquarters in this city for the representatives of Southern institutions, and of an information bureau for those who desire to give to the cause. As we understand it, there will be an office in this city, to which any one may apply who wishes to ascertain the facts in regard to any school or college which appeals for help. Advice will be given to all who desire it as to the places most needing assistance and development. The presence on the Board of such men as W. H. Baldwin, jr., George Foster Peabody, Dr. J. L. M. Curry, and Robert C. Ogden insures coöperation with the Peabody and Slater funds and the Southern Education Board. Indeed, the new movement is the outgrowth of the older ones, and is destined to supply a long-felt want. At present Mr. Washington of Tuskegee, Dr. Frissell of Hampton, President Bumstead of Atlanta University, and the heads of many other worthy institutions have to spend their time and substance in travelling to the North every winter to raise the funds they need. It would be a great thing if this new movement could do away with this necessity, and itself secure all the money desired. This is a kind of Trust which will appeal to every one. It is gratifying to know that the Board begins its work with one million dollars in hand, for nothing of greater moment has happened in the educational world for years than the incorporation of this group of experienced workers as a permanent "steering committee" for Northern sentiment interested in the educational advancement of the South.

The Mortgage Tax Bill has passed many vicissitudes at Albany, but seems to have reached such position and shape that it can command votes sufficient to pass it. Originally it was a bill to bring money to the State Treasury, and thus hasten the time when the State Government would have an independent income, and would be able to dispense with the general property tax. Later it was encumbered with a proposition to divide the proceeds equally between the State and the counties where the mortgages are recorded. On Friday, on the motion of Senator Stranahan, the father of the bill, it was amended so that the State receives no part of the proceeds, but the localities receive the whole. This looks like a complete inversion of the measure, but the change is immaterial so far as the taxpayers are concerned. The great merit of the bill consists not in the channel through which the proceeds of the tax pass, but in the principle of justice and equality embodied in it. The existing tax is collected from only a few holders of mortgages, and these the ones least able to pay it. All others avoid it, in one way or another. The proposed tax cannot be avoided. It will be light (only one-half of one per cent.), but it will be paid by all who ought to pay it. By lifting all doubt and uncertainty from the taxability of mortgages it is quite certain that a large amount of new capital will flow into mortgages, and that the rate of interest on that class of loans will be lowered, and the borrower thus benefited. These are the considerations of prime importance connected with the bill. Although they were not the ones which led to its introduction, they should be potent in securing its passage.

The New York Court of Appeals has rendered a decision in the Herlihy case which should make it easy hereafter to convict any police captain who is guilty of neglect of duty. In effect it says that when a police official is accused of neglect of duty, the more specifications the prosecution has to present, the better. This is the common-sense view of the matter, and it is refreshing to find that the highest judicial tribunal in the State approves common sense as good law—which does not always happen. Capt. Herlihy was charged, under a "blanket" indictment, with failure to suppress 110 disorderly houses in his precinct, but the lower court held that only one specific case could be used in a particular trial. The Court of Appeals, however, rules that the "blanket" indictment was a valid one, and consequently that a comprehensive complaint of this sort may be lodged against any derelict captain. This is a fine vindication of ex-District Attorney

Philbin, who stoutly maintained the propriety of proving that an official had been guilty of neglect of duty by citing scores of cases, rather than depending upon a single instance. Mr. Jerome does not exaggerate the importance of this decision when he says that "it is the greatest blow to the collection of blackmail by the police which could possibly have been given, and puts in the hands of my office powers of enormous importance."

The result of the February elections in Philadelphia has been another setback to the handful of reformers who stand for civic decency and honesty. The machine candidate for City Solicitor received an alleged majority of 120,000, and every machine Councilmanic candidate was elected, with one exception. Not one of the women candidates for school directorships was chosen. The bosses hailed the outcome as a triumph of the Republican party, and of "stalwart Republicanism," and at once left town for rest and recuperation in Florida. They have certainly earned their vacation, for the city is more firmly gagged and bound than ever before, the fusion candidate for City Solicitor receiving only 34,273 votes. The usual cheating at the polls went on openly, and with the same impunity to those responsible for it as in the past. We can well imagine the criticisms to which all this would give rise if it were the report of an election in Cuba or in the Philippines. In the eyes of Governor Taft and of many Republican Senators and Congressmen, it would constitute the best of evidence that Cubans and Filipinos were utterly incapable of self-government for a period which would put the discussion of representative institutions for them so far in the future as to make it "purely speculative."

The initiative and referendum are likely to have a crucial test in the adjoining provinces of Ontario and Manitoba. In both cases it is the same matter which is brought before the voters—namely, the Manitoba Prohibition Act. This drastic measure is now part of the law of Manitoba, but the Provincial Government will not enforce it without an express mandate from the people; it is to become the law of Ontario if the voters of the province so direct Parliament. Now it does not speak very highly for the law itself that one premier will not enforce it unless the people require him to do so, while another premier will not let it come before Parliament until he is assured of popular support. The Manitoba Prohibition Act is probably neither more nor less practical than the Maine law or the Kansas law. But the question of prohibitory legislation is being so vigorously agitated in these two provinces that the appeal to the people will be made under the most favorable conditions. The experience of Ontario and Manitoba should cast new light upon the whole question of referring issues to the voters.

It is easy to read between the lines of Kitchener's dispatch announcing the capture of Methuen, and to see that this reverse has peculiarly bitter features. Methuen was apparently manœuvring for a joint attack with Grenfell against his old enemy De la Rey, was surrounded by a force not greatly superior to his own, and completely routed. Until fuller accounts are received, it will be impossible to say whether the victory is fairly chargeable to De la Rey's brilliant strategy, or whether the defeat is another Magersfontein for Methuen, for which his own negligence is primarily responsible. In any case, the military importance of the affair might easily be exaggerated. The Boers cannot keep prisoners, and the horses, guns, and other supplies are for them the really important spoils of such a victory. The blow to English prestige is severe and humiliating. The capture of a major-general, which in the present case might possibly seem a blessing in disguise, is a minor disaster, when compared with the complete rout of a British detachment with artillery by a practically equal number of Boers—and this without any palliating circumstance. Add to this the fact that the war has long been declared at an end, while the part of the Transvaal in which the defeat occurred is reckoned as "territory partially cleared," and one has the measure of Methuen's discomfiture.

Despite the Emperor's belief that German women should confine themselves entirely to "church, children, and cooking," they show the same tendency to enter industrial life which has manifested itself in other countries. Their political and social activities were recently discussed at length in the Reichstag; the Social Democrats, as usual, acting as the champions of those of the fair sex who are eager to vote. Herr Bebel declared that his party asked nothing for men which it did not ask for women, and asserted that they were quite ready to have a woman as Chancellor. Any woman, he affirmed, would do as well as some of the incumbents the office has had. A new note in the discussion was the admission by the National Liberals that the question is one with which the Reichstag must expect to deal regularly from this time on, particularly in view of the growing intensity of the struggle for existence. As usual, most of the debate bore upon the educational facilities at the disposal of German women. Count Posadowsky, Minister of the Interior, announced that many of the difficulties in the way of their studying medicine had been removed. He counted it a misfortune that the greatest opposition in such matters came from men. He added that in a country where there are a million more women than men, and where many men refuse to marry, much would have to be done to widen the present industrial opportunities for women. He warned them, however, against expecting too much on this point from the lawgivers, because of his belief that the best way of obtaining new openings is through a public recognition of the necessities of the case, and not through legislative enactments.

Italian dispatches indicate that a prompt concession by the Government has averted a general railway strike. This must be taken to mean that Signor Zanardelli hopes to reorganize his Cabinet on the basis of the old alliance with the Socialists. The problem is this: Will the concessions in wages which have been made more than atone, in the eyes of the Socialists, for the recent order putting the railways under military law? It should be remembered that the Italian railways, though owned in great part by the Government, are largely operated by private companies. The operatives, or at least the influential classes of engineers, station masters, switchmen, and guards, form part of the army reserve, and may be assigned summarily to military duty. When the long agitation of the railway men for better terms of employment and higher pay was about to culminate in a general strike, the Government called out the railway reserves and kept them at work under military orders. The censorship of Italian news has been so complete that it is impossible to say what the effect of thus boldly thwarting a general strike has been. To the men at least there was the compensation of receiving, in addition to their regular wages, the pay of soldiers, while the Government has now put itself frankly on the laborers' side by promising to shoulder most of the large increase in pay demanded by the men from the railway companies. The action is extraordinary rather for its magnitude than for the principle involved. The Zanardelli Ministry has consistently maintained a *laisser-faire* attitude towards all strikes which do not seriously menace public order and convenience; and, as in the case of the Sardinian railways, for example, it has always leaned towards the strikers. It is this which has won it the support of the Socialists. The news that the credits for the increase of railroad wages are shortly to be brought to vote follows with significant promptness the report that the Socialists will desert the Government and return to the Opposition. Zanardelli has made a great concession to his fretful allies; a few days will tell whether it is enough.

MR. FOWLER'S BANK BILL.

The bill amendatory of the National Bank Act, prepared by Chairman Fowler and agreed to by the House Committee on Banking and Currency, embraces four features of great importance: (1) the gradual retirement of the greenbacks; (2) a simultaneous issue of banknotes based upon the general assets of banks plus a common guarantee fund equal to 5 per cent. of outstanding circulation; (3) permission to establish branch banks; (4) the interchangeability of silver dollars and gold dollars at the Treasury. All of these are desirable reforms, and all of them will be effected in time. The main question to be considered now is whether the methods proposed are the ones most conducive to the ends sought for, and whether public opinion is in a mood to accept them. Of course Congressmen will not vote for any measure which their constituents do not favor. Hence the prime consideration in all such enterprises is the preparedness of the public mind to accept the proposed changes. On the other hand, the true way to prepare the public mind for any reform is to bring it up for discussion in legislative halls, on the hustings, and in the press.

The reason why the greenbacks should be retired is that their existence is a menace to the stability of the currency, and consequently to the stability of business. Much has been done by the act of March 14, 1900, to put the legal-tender notes beyond the reach of accidents such as befell us in 1893-1896, yet the fact remains that it depends upon the political majority at any time to decide whether the greenbacks shall be redeemed or not. It depends upon the votes of all sorts of people to decide whether the amount of them shall be greater or less than now, or shall remain stationary. These are good reasons for the gradual retirement of the legal-tender notes, but we do not look for a beginning of that process until the lapse of some considerable time, after the passions of the fiat-money and silver controversies shall have been allayed by other issues. When that time comes—when the people shall be prepared to take an impartial view of the greenback currency—they will probably perceive that it is a debt of the United States, and that it ought to be paid and cancelled like any other past-due obligation. When they reach this remarkable conclusion, they will be prepared to pay off the legal-tender notes directly by applying to that purpose a portion of the surplus revenue. We do not believe that they will favor any roundabout measure for accomplishing the object.

If Mr. Fowler's plan for retiring the greenbacks and issuing national bank currency *pari passu* were passed by Congress, we believe that it would work well and accomplish the desirable ends sought, but we believe that it will fail to secure popular approval, because it is circuitous, indirect, and not easily understood by the masses. The bill provides that any national bank that shall assume the current redemption in gold of an amount of United States notes equal to 20 per cent, of its capital may, without depositing United States bonds, immediately issue an amount of banknotes equal to 10 per cent. of its capital. At the end of one year it may issue an additional 10 per cent., and on both issues it shall pay a tax at the rate of one-quarter of 1 per cent. a year. Banks that agree currently to redeem United States notes equal to 20 per cent. of their capital shall at the same time surrender to the United States Treasurer an additional amount of United States notes equal to 10 per cent. of their capital, which shall be at once redeemed from the gold in the general fund of the Treasury, and shall not be reissued, but shall be cancelled and destroyed. The "average man" will perceive that a process is going on for retiring the greenbacks and enlarging the circulation of the national banks. The ins and outs of the scheme he will not understand, but he will put the worst construction upon them, and will therefore refuse to sanction the measure. Such is our apprehension, but we shall be glad if we have underestimated popular intelligence, and if it turns out that the public are prepared for this step. At all events, it is desirable to begin the discussion of a question which must come on soon; for the retirement of the bonded debt of the nation will make it necessary ere long to consider some other method of issuing national banknotes.

A more hopeful part of the bill is that which authorizes branch banks in any part of the United States. No other reform would be so useful as this, although its full efficiency can be realized only by a freer system of note issues than we now have. The Canadian, the Scotch, the French, and the German bank systems find their greatest usefulness in their branches, which collect and distribute capital and lend aid to industry, as a well-contrived plan of irrigation lends aid to agriculture. The United States is fifty years behind the age in this particular.

PROFESSOR MEADE ON THE STEEL COMPANY.

The *Quarterly Journal of Economics* contains a noteworthy article by Prof. Edward Sherwood Meade, of the University of Pennsylvania, on the U. S. Steel Company's capitalization. The thoroughness with which the subject is examined, the exclusion of mere theoretical assumptions, and the originality of some of the conclusions reached, entitle it to careful consideration. We shall say, to begin with, that we are not prepared to go to the same length as Professor Meade in drawing inferences as to the corporation's future. His conclusions are highly unfavorable, but they are based on several premises which remain to be proved, and which will presumably be disputed. Chief among these is the assumption of fluctuations in the steel trade of the future as extreme as those of the last two decades, although Professor Meade admits that there is high authority against the recurrence of so wide a swing of prices. We wish first, however, to outline the ingenious reasoning of the article. Whatever the deductions, it is a valuable contribution to the literature of the Trust question.

In the beginning, Professor Meade makes the point that the Steel Corporation, owning not only its own mills, but its own sources of raw material, is what has been called an integrated industry—that is to say, it is not dependent, even for a portion of its profits, on the market for crude products. Iron ore may advance in price or may decline; the Steel Corporation, owning the ore-beds which supply its mills, can regard either movement with indifference. This fact has been officially pointed out as an element of great strength in the Trust's position, and so it unquestionably is. But Professor Meade draws attention to another consideration, namely, that while the Steel Corporation cannot suffer from exorbitant prices for raw materials, it will not, on the other hand, derive any compensating gain, when prices for finished steel decline, from a simultaneous fall in the price of ore. In short, as Professor Meade states the proposition, "the products of the Steel Trust to-day are produced at ultimate and fundamental cost—a cost . . . which represents only the bare expenses of producing and transporting the various materials." Profits will hereafter be increased or diminished only as economies in manufacture are introduced, or as total sales and average prices rise or fall.

The financial history of a blast-furnace company, vouched for as accurate and as typical of the highest efficiency, is next taken as a basis of comparison. The years reviewed are from 1890 to 1898 inclusive—the first year being the culmination of a "boom" in steel, the second the last of a seven-year period of reaction. To sum up briefly the figures of this table, the price of iron is shown to have fallen from $15.74 per ton in 1890 to $12.31 in 1893, and $9.79 in 1898. The profit per ton declined simultaneously from $2 in 1890 to $1 in 1893, and 76 cents in 1898. The upshot was that, in spite of greatly enlarged production, the annual net earnings, which were $67,928 in 1890, decreased to $25,787 in 1893, and, despite a subsequent fall of 25 per cent. in the cost of raw material, rose only to $32,319 in 1898.

Professor Meade's next effort is to ap-

ply to this company the capitalization of the Steel Corporation. That is to say, he allows the same relative appropriation of annual earnings for sinking fund and surplus as is allowed by the Steel Corporation, and next supposes bonds and preferred and common shares to be outstanding in the same ratio to the company's earnings of 1890 as the Steel Corporation's various forms of capital bore to its earnings of 1901. Reckoning then the 5 per cent. interest charge on the computed bond indebtedness, and 7 and 4 per cent. respectively on the two classes of stock, he finds that the blast-furnace company in question would have earned in the first year a surplus over dividends, charges, and surplus appropriation of $27,170, but would thenceforward have reported a deficit varying from $1,684 in the second year (1891) to $32,512 in 1892, and ending at $18,438 in 1898. Taking the company's capital as assigned, Professor Meade concludes that in 1892 no dividends could properly have been paid, and that thenceforward, to the last year on the list, the cumulative dividend on the preferred stock would have been heaped up as a future charge, without any actual payment on either class of shares.

The inferences drawn, as regards the future of the Steel Corporation's capital, are extremely interesting, but, as we have said already, not altogether conclusive. We have to consider, in the discussion, whether Mr. Meade's assumption that the blast-furnace company selected for his figures is fairly typical, is just. The bankruptcy, in the dark days of the early nineties, of numerous powerful steel-manufacturing companies (some of them now incorporated with the United States concern) gives a good deal of warrant for the comparison. This is at least what would have been the tendency of events ten years ago. The question of largest interest now is whether the steel trade is to witness again the violent fluctuations of the past decade.

Our own judgment is, that the period will not be exactly similar. We are led to this conclusion by examination of the causes which largely brought about the fall in steel and iron after 1890. The controlling influence in that movement was an extreme advance in prices, which called into existence a host of iron and steel mills incapable of producing except at the high prices then prevailing. Continued stimulation of prices by speculators multiplied both the number and output of these mills. When consumption slackened and prices fell, these mills continued to produce; they kept up the output even at a loss, rather than sacrifice their capital. Unsold stocks of iron rose from 247,679 tons at the close of 1889 to 608,921 at the end of 1890, and 711,649 at the end of 1896. All this time, prices, though lower than before, remained sufficiently above the foreign level to handicap the export trade, which made no real expansion in either iron or steel until 1897.

There was some possibility, a few months ago, that this experience might be repeated. The shrewdness of the Steel Corporation's managers, who set their faces resolutely against further rise in prices, prevented it. The truth is, as most people now can see, that the corporation's fight for steady prices meant something more than a mere move for the season's trade. The future stability of the company itself depended very largely on curbing speculative excesses—a truth to which Professor Meade's figures add the greatest emphasis. Ultra-conservatism is the one path to the successful working-out of this very remarkable experiment.

We have hitherto expressed our own regret that circumstances outside of trade considerations should have induced the Steel Corporation's managers to begin its history by paying dividends on the common stock. We have also stated our judgment that a company capitalized on the basis of the most prosperous trade year in a generation needs to be very liberal in its application of earnings to its surplus, and must in any case take its chances regarding dividend payments in the longer future. The Steel Corporation started with a heavy strain on its resources. It is very fortunate for the company that this year's market for its products should have developed demands far beyond what the most sanguine prophet could have foreseen. It is still more fortunate that this tidal wave of prosperity in the iron trade should have failed to sweep away the company's managers from their original position as to prices.

MUNICIPAL VS. NATIONAL PUBLIC LIFE.

Mayor Low's message is one more testimony to the immense appeal which modern municipal government makes to men with a talent for public affairs. Here are the greatest practical problems pressing for solution. The very difficulties are like a thrilling summons to civic patriotism. All the vast and complicated questions of finance and taxation, of transportation, of bridges and tunnels and docks, of water supply and sanitation, of engineering and architecture—the whole round of study and labor required to make New York a city where safety and comfort and beauty shall be as an atmosphere about its residents—what has American public life to offer more fascinating? The task is arduous, but for that reason all the more attractive to men conscious of power. It touches the life and welfare of millions. Success here will be a shot heard round the world. No condition of public service could seem better fitted to stir, as by a trumpet call, the heart of a strong man, ambitious of the general good.

Evidence, indeed, multiplies all over the United States that municipal public life is winning the larger attention and the higher honor which it deserves. The very growth of cities has forced a call for capacity in their administration, and ability is more and more responding to the demand for it. Better organization of city government has come, too, to give executive talent greater scope, and to yield it richer rewards. In definite and tangible result, in effort that tells immediately and that tells long, in direct contributions not only to the theory but to the practice of democratic government, it is really getting to be the case that the mayors and heads of departments of great cities have a field of usefulness opened to them far beyond that which lies, for example, before the average Congressman. Municipal public life is almost outbidding national public life.

Lord Rosebery tells us that such is the case in England also. In a recent speech at Swansea he deliberately asserted that, save in the case of a very few high officials at Westminster, "a man gets much more satisfaction out of municipal than out of Parliamentary work." Lord Rosebery, of course, is an expert in both kinds, his services on the London County Council having been fully as notable as his speeches in the House of Lords. He went on to ask, half banteringly, what pleasure any of his hearers would have got out of a membership in Parliament during the last session:

> "You would have walked a good many miles through the lobbies, breathed a great deal of bad air, you would have heard an indefinite number of bad speeches, you would have given a considerable number of votes dictated by your consciences or by your Parliamentary Whip, you would have voted after free discussion one-eighth, or less than one-eighth, of the expenditure of the country, and at the end of the session, in the middle of August, you would not be able to say what you had done beyond what I have suggested. You could not show one single tangible result of the precious summer months you had wasted in London. And what would you have to look forward to? Two or three addresses to your constituents, the opening of half-a-dozen bazaars, and, possibly, if you were a very popular character, a kick-off at a football match."

In contrast with this barren record, Lord Rosebery set the fruitful activities of even a municipal councillor at Swansea. There were the concrete matters of new streets and lighting and inspection and improving and beautifying the city—all this was not only useful to multitudes of men and women, and that in the directest way, but a most satisfying occupation, and one "worthy of any man's ambition."

We believe that very much the same comparison, to the same effect, could be made in this country. The usual Representative goes the same treadmill round as the average member of Parliament. He figures as one name more on roll-call. He gets his deluge of begging letters.

Offices he cannot secure for one in five hundred of his applicants, and so he trudges over to the Agricultural Department to send seeds or cuttings to his constituents—seeds being, as one cynical Congressman observed, "the only thing at Washington not in the classified service." The ordinary member of Congress is, in short, simply lost and whelmed at the national capital. He votes as his party leaders bid him, he makes his little speech on "pension-bill nights" to empty seats and drowsy galleries, he goes through the petty and weariful routine of the session, and has little to show for it. No wonder that an eager spirit chafes at the great waste of energy involved in all this, and sometimes confesses, as one of the most successful Representatives recently did, that he had grown infinitely tired of the whole vain show, and was about ready to "give up being a great man at Washington," for the sake of going to some busy city to practise law.

Contrast with this the concrete work which every day appeals to and absorbs the powers of the Mayor of New York, the Presidents of the Boroughs, and the heads of departments. Their chief business is not to discuss and vote, but to do things. When they do vote, they vote, not on a question of party policy, but on the tangible thing that shall take body in consequence. Under their touch, bridges leap over the rivers, and tunnels burrow under the streets, stately structures rise for school and hospital, and a noble water-front stretches its docks and piers north and south, while a water-supply is brought from afar. A municipal administrator, at the end of his term, has visible results like these to point to as the crown of his labors and his pride. Ask him where his monument is, and he has but to say, *Circumspice.*

It is, we say, only the exceptional and rare man in national public life to whom such opportunities and such worthy ambitions present themselves. The city bulks larger, in fact, than ever before in the appreciation of Americans. This is as it should be. It must always be more important to have good government at our doors than to attempt merely to direct national policy aright. And the increasing appeal which municipal public life makes to our best and strongest will call into the service of our cities a distinctly higher order of talent, provided only that the citizens show steadiness of purpose enough to make a career for it, both stable and rewarding, and sense enough to delight to honor him that cleanseth a city above one that merely taketh it. Even as it is, the attractions of high office in the municipalities have already drawn men who have done much to take away our old reproach. This has been lately repeated by the French writer, Émile Boutmy, who asserts that only the morally and intellectually inferior are found in our public service. He thinks that this is a result of our having been an "economic society" rather than a "political society," and that our ablest men have found too many prizes elsewhere to give their time to public administration. There is doubtless truth in this; but what we are concerned to remark now is that conditions are changing, that our cities are more and more able to command the abilities of their more capable sons, and that, as the case now stands, a man of parts and ambition need hope for no prouder distinction than to be able to say, "I have done some service to the city, and they know it."

"DOCTOR'S-DISSERTATION ENGLISH."

"Doctor's-dissertation English" is a phrase coined by Prof. J. Franklin Jameson of the University of Chicago. In his recent convocation address, "The Influence of Universities upon Historical Writing," he said:

> "I have read a good many doctoral dissertations, and a good many historical articles offered by young *Gelehrten* to an historical review. Almost always these are written in a style 'that would have made Quintilian stare and gasp.' Indeed, the experienced observer is aware of a distinct dialect, doctor's-dissertation English, a compound made up as are Chinook and Pidgin English, insufficiently studied as yet, but apparently composed of good English, the scholastic jargon of a specialty, and undergraduate slang. It may be that the years will work upon these minds a clarifying process like that mysterious alchemy which, I am informed, takes medical students mostly wicked and transforms them into doctors mostly good."

It is to be hoped that Professor Jameson himself will find time to expand this *obiter dictum* into an adequate discussion. During his editorship of the *American Historical Review* he must have drunk deep at wells of English impure and much defiled.

His statement, just quoted, leaves untouched the principal reasons for the astounding futility of the average doctor's dissertation. No mere compound of scholastic jargon and slang can ever exert such soporific power. Indeed, the vocabulary which Professor Jameson describes may entertain by its very vivacity and novelty. No, the trouble lies deeper than words; it permeates every part of the structure. When the young *Gelehrte* writes, his sentences are vast, tangled, and unwieldy, so that reading them is like cutting through a tropic jungle; his paragraphs are equally shapeless, without beginning, middle, or end—conglomerate heaps of half-related ideas. Indeed, throughout his whole dissertation he sets down one fact after another, sometimes without arrangement, often without proportion and without emphasis. If he takes such a vital question as "Shaksperian Criticism from Thomas Rymer to Hamilton W. Mabie," he solemnly and painfully crawls from critic to critic, and after he is done he apparently understands as little of the whole trend of criticism as the worm which eats from elm-leaf to elm-leaf understands of the structure of the tree.

The truth is that these glaring faults are simply the sign of trouble within. The *Gelehrte* has nothing whatever to say, and, of course, he is completely gravelled in his attempt to keep up false appearances. He presents the most piteous spectacle known to the learned world, as he wanders helplessly up and down in the blank and trackless desert of his dissertation. His hopeless bewilderment is a result of his being crushed between two millstones. He finds the heads of colleges and schools more and more insistent that their teachers shall have the doctor's degree, partly for the sake of the higher training, and partly for the sake of a pretentious show in the faculty list. On the other hand, he must meet the demands of colleges that the little doctors whom they are grinding out by the dozen shall each make a "contribution" to the knowledge of his subject. The job of advancing the limits of knowledge in these days of extreme specialization is a heavy one; and when the average commonplace young candidate for a doctorate attacks it, he must either fail wretchedly, or his professors must exercise extraordinary charity in interpreting the word "contribution."

Take a case in point. As a subject for a doctor's dissertation, "Descriptions of Natural Scenery by Nineteenth Century Novelists" is fairly suitable. Suppose a student who laboriously draws through the leading novels a fine-tooth comb, notes all the descriptions, monotonously enumerates them under such headings as "Dickens," "Thackeray," and "Meredith," and then is so muddle-headed that he cannot make any clear or interesting inference from his mass of facts. To be sure, he has shown abundant good will, and has performed an eye-reddening and back-breaking task; but his zeal hardly warrants his amiable professors in dubbing the monument of his wasted energy a "contribution," in bestowing the degree, and in urging him to inflict the dreary section about Meredith on the editor of the *Nation.* True, Columbia and one or two other universities are trying hard to make the dissertations like books in style and substance, as well as in size, and Harvard sets the example of placing the master's degree for work done as a half-way post at which all but the most promising runners are stopped; but these are voices crying in the wilderness. In short, the competition to manufacture paper scholars is so keen that scores of colleges are swept into it; whereas, everybody knows that the American universities which invariably enforce a proper requirement for the doctor's degree may be counted

on the fingers of a single hand which has suffered considerably from amputation.

There are two paths of escape from present evils. If school authorities will be less eager to make a gaudy display of goods in their shop windows, they will not drive young men who are respectable teachers, but who are by no means original investigators, to desperate assaults upon the doctor's degree. If college authorities will weigh their degrees, instead of counting them, they will not encourage foolhardy and feeble endeavor and bestow diplomas as a reward for it. But both these paths are blocked by the present state of public opinion in and out of college—by our fierce hankering for show, for empty titles. Therefore, until we are all of a saner mind, we shall probably continue to ask our hapless young *Gelehrten* to write contributions that do not contribute, and that are original only because no one else has descended to such depths of folly. They will obediently continue to produce doctors' dissertations that are miracles of dulness and inconsequence, and will receive in return certificates for the most distinguished scholarship.

GERMAN DRAMATIC ART.

CLEVELAND, March 6, 1902.

It is, indeed, surprising to read in the *Nation* of February 27 that Prof. Kuno Francke thinks Björnson's "Beyond Our Strength" "should point the way toward the goal of the German drama"; that in this way it will " free itself from the shackles of sentimentality and conventional formality." Professor Francke has given us, in his 'German Literature as Determined by Social Forces,' by far the most incisive study and lucid statement of the subject that we have in English. The question naturally arises, Has he not allowed the great social force of the two parts of Björnson's "Ueber unsre Kraft" to bias him unconsciously as to their artistic and dramatic standard?

Both parts of "Ueber unsre Kraft" are very deficient in poetic conception, dramatic form, and artistic exposition. It would be hard to find two more poorly constructed plays; they are so lacking in the essential characteristic of the drama, unity of action, as not to merit the designation of dramas. The first part is in two acts, one of which consists of little more than the monologue of a woman lying ill in bed; other persons are around her, but as mere foils. The second part is in four acts, the fourth of which is a mere moral tag after the extremely melodramatic catastrophe at the real end of the play, where forty people are blown up by a revengeful servant in a palatial mansion. The first part is very sentimental, and the second very conventional; these are just the two things which modern German drama has suffered from, and must seek to avoid. Why, then, commend them as beacon-lights on the road to its goal? At the celebration of the fiftieth production of the first part, as well as at the *première* of the second part, in the Berliner Theater last winter, many dissenting hisses were heard amid the plaudits of approbation. Of course, the plays still draw large crowds, for they both contain vital problems expressed in such a sentimental and sensational way that they must ever appeal to the mob. But Professor Francke will remember, from his own excellent essay on "Bismarck as a National Type" ('Glimpses of Modern German Culture'), that the great artist in statecraft was wont to say that he felt doubtful about himself whenever he met with popular applause.

Fortunately for the German drama, no German dramatist of merit has been led astray by the religious fanaticism of the first part of Björnson's play, nor the social sentimentalism of the second. Even more fortunately, the gospel of Tolstoy has found but little favor among the German dramatists, with the exception of Arno Holz, Johannes Schlaf, and Karl Hauptmann, who have proved incapable of developing their palpably borrowed ideas. Tolstoy's 'Die Macht der Finsternis' contains but a scanty message for any country except Russia.

Neither Sudermann nor Hauptmann has attained as yet the artistic excellence of which they both gave promise. The latter seems too weak, the former too strong for real artistic expression of ideas; the one has too little to say, the other too much. Since the "Versunkene Glocke," Hauptmann has produced nothing of either intrinsic or artistic worth. "Fuhrmann Henschel" was a fall from the superb heights of real poetry to the lowlands of prosaic commonplace. "Schluck und Jan" was an ineffectual attempt to unite Shakspere's fancy and Grillparzer's technique in a dream-play; "Michael Kramer," a gruesome and rather trite monologue on the significance of art and death. "Der rote Hahn" is a mere continuation of "Der Biberpelz," with all its exquisite irony diluted into insipidity. Hauptmann is weak mentally and physically. Never shall I forget his appearance at the *première* of "Michael Kramer," at the Deutsches Theater, last winter, in Berlin. A tall, thin man, clad almost like a priest; the face pale and worn, the eyes intensely sad and always cast down. A shrinking timidity and a feminine spirituality were his characteristics of manner and appearance. He seems to have exhausted himself in the passionate travail of producing his masterpiece, the "Versunkene Glocke," which is, indeed, exquisite art.

Sudermann has developed into the most skilful playwright in Germany; withal he brings forth in each new play much thought, more or less deep. But he has descended artistically from the heights attained in "Johannes" and "Die drei Reiherfedern." "Johannisfeuer" is a fine study of heredity and environment in Ibsen's best manner, but contains several scenes rather more theatrical than dramatic. "Es lebe das Leben" is really a *Todtentanz*, for grim death lurks in almost every line; it is most intense and most improbable. In it Sudermann actually solves his problem by the inevitable realistic sole solution for all evils—suicide—against which he himself so energetically protested in "Die Ehre." Sudermann is a very strong man mentally and physically. He is a giant of strength, with a massive head and heavy beard. When he delivered his oration on the censorship of the press last winter before the Goetheverein in the Berlin Philharmonie, his manner was most bold, and his voice simply thundered around the vast auditorium. From him we may yet expect great things.

But the real dramatic artists in Germany to-day are neither Sudermann nor Hauptmann; neither Max Halbe, whose "Jugend" and "Mutter Erde" are true pictures of modern life, but lack artistic finish, nor Hartleben, whose popular "Rosenmontag" is dangerously near melodrama, nor Otto Ernst, whose "Flachsmann als Erzieher" is almost farcical in places, nor Wilbrandt, with his hybrid style, vacillating between realism and symbolism, nor Wildenbruch, with all his noble figures and brilliant pageants—but they are Ludwig Fulda and Arthur Schnitzler. Neither has the strength of Sudermann nor the poetic insight of Hauptmann, but both are artists to their finger-tips.

Fulda began his dramatic career with all the realism of the "youngest Germans," with modern social dramas, "Das verlorene Paradies" and "Die Sklavin." His success was assured, but, evidently disgusted with this prostitution of his genius, he turned to his true forte, the romantic Märchendrama of which Raimund had been the chief exponent, and which reached its apotheosis in Grillparzer's remarkable "Der Traum ein Leben." Fulda's "Talisman" is a Märchendrama in verse, containing some of the finest dramatic poetry since Grillparzer, and also the keenest political satire in any drama of to-day. Had Kaiser Wilhelm II. ever read the play, he would certainly forbid its performance. And all this bold exposition and deep thought is given us in a work of exquisite art. It was Fulda, with his "Talisman" (1893), who first started the healthy return to modern Romanticism; Hauptmann followed his lead with the "Versunkene Glocke" (1896), and Sudermann with "Die drei Reiherfedern" (1898). But to do Fulda justice in so short a sketch as this is impossible. Suffice it to say that by far the most artistic drama brought out in Berlin last winter was his comedy, "Die Zwillingschwester," with Agnes Sorma in the double rôle at the Lessing Theater. Those who were present will never forget that *première*. After all the socialistic rant of Tolstoy's "Macht der Finsternis," the depressing gloom of Hauptmann's "Michael Kramer," the tedious horror of Schlaf's "Meister Oelze," the sensational sentimentalism of Björnson's "Ueber unsre Kraft"—here at last was a work of art refreshing and inspiring.

Arthur Schnitzler is as yet almost unknown, but whoever has read and studied his latest work, "Der Schleier der Beatrice," a tragedy in verse of the Italian cinquecento, must agree that he is an artist, as the Germans say, "von Gottes Gnaden," by the grace of God. To arouse interest in him, let me cite the two concluding lines of his great drama, which sum up the spirit of the Italian Renaissance better than most long-winded histories of that fascinating time:

"Das Leben ist die Fülle, nicht die Zeit,
Und noch der nächste Augenblick ist weit."

"Life is the fulness thereof, not the time, and even the nearest moment is far away."

EDWARD STOCKTON MEYER.

Correspondence.

OUR DUTY TO CUBA.

TO THE EDITOR OF THE NATION:

SIR: The debt of satisfaction and instruction due the *Nation* for many years of entertainment is not to be discharged or repudiated for any slight cause, and yet it seems to me that the strength of language in this week's second editorial (first page) cannot be justified by any real facts. Is it a slip of the pen or a burst of enthusiasm that prompts you to say that the "dilatory House [of Representatives] is doing its best to bring bankruptcy and misery upon the island [of Cuba]"?

The proposition which I understand you to support with so much vigor is, in effect, to levy or maintain a sugar-tax of many annual millions on seventy millions of Americans, and hand over a third or half of it, as a rebate, subsidy, or gift, to the eight million Cuban aliens—in other words, to present them with the means of avoiding work, attaining wealth, and supporting their Government at our sole expense, we having already expended some lives and a few hundred millions in conquering for them their independence from Spain, after they had demonstrated their inability to get it for themselves. If your proposition is not here stated correctly, then the alternative must be to give up to them many millions of the best and surest public revenue we have, and maintain in its place taxes at war rates upon ourselves. Whatever the details proposed, the gist of the scheme is the support of a so-called Cuban Government of negroes and mulattoes for an indefinite period by the United States.

Your severity of statement falls upon all those Americans—whether in or out of Congress—who object to the scheme; that is, who see neither duty nor advantage in pampering alien peoples or paying for foreign governments in which they have no share, with taxes wrung from their own earnings. It appears to me that neither Lord North, nor George III., nor any other reckless tyrant ever devised a more predaceous scheme of "taxation without representation." If Congress can lawfully tax us, directly or indirectly, for the support of a foreign people, there cannot be one shred remaining of constitutional restriction on the fiscal powers of a Government falsely pretending to be representative and constitutional. At all events, it is a scheme respecting which honest differences of opinion must prevail that are entitled to respectful treatment.

I have no interest in sugar, except as a domestic consumer, and, like you, am no protectionist; but the project of taxing ourselves to support a foreign people of different race is protectionism in its most obnoxious form, and would be but stupidly disguised by the fraudulent device of tax manipulation in place of openly collecting the money and paying it over. If I decline to contribute alms to a street beggar, I might be stigmatized with more or less justice, but without absurdity, as mean or unfeeling; but surely it would be an abuse of words to charge me—as you substantially charge Congressional conservatives—with "doing my best to bring bankruptcy and misery upon the" beggar.

Not merely soundness of judgment, but fairness and precision of statement, have ever distinguished the *Nation* from the vulgar irresponsibility of the political press, and you must have many readers who, like me, appreciate such distinction, and would feel it as a severe personal misfortune if those sober qualities should come to be sacrificed or impaired, even in the strain and din of public discussion. I. J. W.

PHILADELPHIA, MARCH 8, 1902.

[The foregoing would be sound enough, on general principles, but the particular modifying facts are that, as President Roosevelt says, we have "inherited" the whole Cuban difficulty from the McKinley Administration, including the definite promise to grant tariff reductions on Cuban products; also, that a *quid pro quo* is to be had in the shape of tariff favors for our exports to Cuba. In other words, the "beggar" is, in reality, a peddler seeking to swap goods, to mutual advantage.—ED. NATION.]

YALE AT THE FORE.

TO THE EDITOR OF THE NATION:

SIR: Your excellent and discriminating notice of the Johns Hopkins celebration, in the *Nation* for February 27, contains the following sentence:

"President Gilman, then, was free to found an institution, unique in its day in America, of which productive scholarship should be the informing idea—free to take immediately the step which President Eliot, inspired even then by the same ambition, has since been able to take in the Harvard Graduate School."

Harvard University and President Eliot may rightly claim the position of general educational leadership during the quarter-century just past, but it is none the less fair to give due emphasis to the services of other institutions. The first American university to offer systematic non-professional instruction for graduates was undoubtedly Yale, where, under the inspiring influence of President Woolsey, the degree of doctor of philosophy was conferred, "upon examination," as early as 1861 (at Harvard not till 1870). The names of some of the earliest Yale doctors, Eugene Schuyler, James M. Whiton, and Arthur W. Wright, in 1861, Josiah W. Gibbs and Lewis R. Packard in 1863, are a sufficient guarantee of the character of the work then done at Yale. President Gilman himself was a professor at Yale from 1863 to 1872, and the splendid institution which he created at Baltimore may well be called the child of the earlier movement at New Haven. I may add that, in spite of hampering poverty and of troublesome administrative scruples during the years 1871-1886, the Yale Graduate School has grown and broadened, till in the present year Yale enrolls a larger number of graduate students than any of our older universities, save only metropolitan Columbia. PH.D.

BERKELEY, CAL., March 5, 1902.

LORD DURHAM'S REPORT.

TO THE EDITOR OF THE NATION:

SIR: In your issue for February 27 Mr. J. Davis Barnett of Stratford, Ontario, asks for confirmation of a Canadian legend that "the writing of Lord Durham's Report was in the main by Christopher Dunkin, a teacher in Greek at Harvard in 1837." In reply, permit me to say that I remember hearing, many years ago, while a young man living in the city of Quebec, that the late Mr. Justice Dunkin (who died at Knowlton, in that province, January 6, 1881), had had something to do with the preparation of that famous document. Other names were also mentioned, including that of the late Mr. Stewart Derbishire, afterwards a member of the Canadian Parliament, and, at the period of his death, Queen's Printer for Canada. But I do not think that either of these gentlemen, or any other, apart from Lord Durham himself and his chief official secretary, Charles Buller, had any considerable share in the undertaking; my reason being, in Mr. Dunkin's case, that, having been appointed Secretary of the Education Commission called into being by Lord Durham, his whole time would have been taken up with that branch of inquiry during the five months that his Lordship remained in the country. Moreover, in a memorandum of his public services which he supplied to me, as editor of the 'Canadian Parliamentary Companion,' while he was still in active public life, he made no mention of the circumstance; and as he was known in official circles as the "Demon of Detail," it would be very unlike him not to mention it, supposing that any foundation had existed for the story.

On the whole, it may, I think, be taken for granted that to the master hand of Charles Buller is to be attributed the credit for the framing and putting together of the major portion of what we must rightly regard as the Magna Charta of Canadian liberty and freedom. In fact, there never was any doubt expressed on the subject among the many with whom I conversed in the old days on this and kindred topics, including such well-informed statesmen and public men as the late Hon. Henry Black, C.B. (who was offered a seat in Lord Durham's Special Council), the late Stewart Derbishire, the late William Bristow, the late Hon. Joseph Howe, and the late Sir John A. Macdonald. All were of one mind, and most emphatic in their declarations.—Yours faithfully,

HENRY J. MORGAN.

483 BANK ST., OTTAWA, March 6, 1902.

THE TRUST OF GIRARD COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: In the matter of "Perpetual Educational Trusts," about which you have written, and in relation to which Prof. Ewald Flügel of Stanford University, California, wrote you on February 12, I beg to send in this mail a copy of the proceedings in connection with the fiftieth anniversary of the opening of Girard College.

This institution, provided for in Mr. Girard's will, was formally opened in 1848, and has been in successful operation since then. Examining the will, page 118, etc., you will find exceeding great detail, not only in the matter of the construction of the several buildings, but also in connection with the organization and future management of the College. Having, on page 137, etc., indicated the purposes of his endowment, and the details for its management, he adds, on page 140, "In relation to the organization of the College and its

appendages, I leave, necessarily, many details to the Mayor, Aldermen, and citizens of Philadelphia and their successors." Under this clause material modifications have been made in the curriculum and in the general administration of affairs, so that the graduates of the institution might be prepared to meet the changed conditions of modern life. Strict adherence to the literal provisions of Mr. Girard's will would have minimized the advantages flowing from his endowment, and the clause leaving many details to the managers of the institution has been of great advantage.

Permit me also to call your attention to the fact that, while this, perhaps the most magnificent endowment in the United States, is called a "college," we receive boys as young as six years of age, but not older than ten years of age, and that they graduate as young as fourteen years of age, and that all of them must leave the institution when they become eighteen years of age.

By legislative enactment passed in 1869 (see page 158, etc.) the management of the College was placed in the control of a board called the "Board of Directors of City Trusts," thereby securing greater permanency of administration.

Yours truly,

LOUIS WAGNER, President.

BOARD OF DIRECTORS OF CITY TRUSTS,
PHILADELPHIA, March 5, 1902.

Notes.

Charles Scribner's Sons will publish shortly 'Music in the History of the Western Church,' with an introduction on religious music among primitive and ancient peoples, by Prof. Edward Dickinson of Oberlin College.

'The True Aaron Burr,' by Charles Burr Todd, is announced by A. S. Barnes & Co.

'A Grand-Duchess and her Court,' by Frances Gerard, which E. P. Dutton & Co. will presently bring out, is a biography of Anna Amalie of Saxe-Weimar.

A volume of short stories by Maxim Gorky, 'Twenty-Six and One,' is in the press of J. F. Taylor & Co.

The Brown-Merrill Co. will issue 'Forces in Fiction,' by Richard Burton.

The Grafton Press have nearly ready 'The Mobile Boer,' by Capts. John A. Hassell and A. R. I. Hiley; 'The Land of Nome,' of gold-seeking fame, by Lanier McKee; 'The Worth of Words,' by Dr. Ralcy Husted Bell; and 'Love Songs and Other Poems,' by Owen Innsley.

Prince Henry's cramming for his visit to this country having embraced Mr. J. F. Muirhead's 'America the Land of Contrasts,' the publisher, Mr. John Lane, has thought a third edition of this genial but not fulsome work timely. Mr. Muirhead's penultimate chapter, we remark, is styled "Baedekeriana," as dealing with "subjects related to the tourist and the guidebook," and reflects the competent observation of the compiler of 'Baedeker's Handbook to the United States.' It is a comparison of the traveller's creature comforts here and in the Old World, not always to our advantage. Mr. Lane has just ready 'The Book of the Apple,' by H. H. Thomas, and 'Of Gardens: An Essay,' by Mrs. Caldwell Crofton.

Immediately forthcoming from D. Appleton & Co. are 'Deep-Sea Plunderings,' by Frank T. Bullen; 'The Nearer East,' by D. G. Hogarth; 'The History of the Louisiana Purchase,' by James K. Hosmer; 'The Living Races of Mankind,' by H. N. Hutchinson; 'General Forrest,' by J. Harvey Mather; 'The Earth's Beginning,' by Sir R. S. Ball; and 'Practical Forestry,' by Prof. John Gifford.

A paper by Thoreau, "The Service," declined for the *Dial* by Margaret Fuller, and never published, is to be handsomely printed at the Merrymount Press for Charles E. Goodspeed, Boston, in limited editions. Mr. F. B. Sanborn will furnish an introduction.

L. C. Page & Co., Boston, are now bringing out the second series of John Heneage Jesse's Memoirs, the first having already been published by them in a popular form.

A new edition of Lewis and Clark's Journals, following the Philadelphia edition of 1814, supervised by Dr. James K. Hosmer, who will provide an introduction and an index, and of Hennepin's Travels, edited by Reuben Gold Thwaites, after the edition of 1698, are fall enterprises of A. C. McClurg & Co., Chicago.

Houghton, Mifflin & Co. add to their limited "special editions" a reprint of Lowell's remarkable Birmingham address on Democracy. The long Elzevir form of the little volume is attractive, but the page is too narrow to display properly the really beautiful old-style font which has been cut especially for this reprint. Otherwise the making of the volume is in every way tasteful. The handsome letter-press has and needs no other enhancement than that which a sparing use of printer's ornaments and of rubrication affords. The binding is of sober gray boards, with a fawn back, and the edition is limited to 500 numbered copies. The prefatory note is by the late Horace E. Scudder, and recalls vividly that constant grace and scholarly amenity which he never failed to lend to his routine editorial tasks.

The two latest additions to the Dent-Macmillan "Temple Classics" are Goldsmith's Plays in a single volume, with brief but excellent notes; and Bunyan's 'The Holy War Made by Shaddai upon Diabolus,' best of the aftermath of the 'Pilgrim's Progress.' In both cases, the reprint is from first, or virtually first, editions. Bunyan's portrait accompanies his allegory.

The trade catalogues of J. Pearson & Co., London, are of the kind worth cherishing as books in and for themselves, in view of their elegant appearance and bibliographical information. Such is that newly issued entitled 'Very Choice Books,' remarkable for its illustrations of fine bindings, along with facsimiles of title-pages and MSS. We may not particularize the contents, but No. 197 is the original MS. of R. L. Stevenson's "The Feast of Famine," composed in Tahiti; while No. 205 is the (bound) proof-sheets of Voltaire's poem, "La Bataille de Fontenoy" (Paris, 1745).

Dr. Dennis's 'Centennial Survey of Foreign Missions' (Revell Co.) is an elaborate statistical supplement, with illustrations and maps, to his 'Christian Missions and Social Progress,' and gives in tabular form a really admirable statement of the present situation in Protestant missions. It is unfortunate only in that the large fact of Roman Catholic foreign missions is ignored, and the word "evangelical" used for "Protestant." The Roman Church certainly shows little courtesy or respect to other organizations, but that is no reason why Protestants should retort, and unchurch it in turn.

Mr. F. E. Kidder, C. E., known to all persons engaged in building as the author of the 'Architects' and Builders' Pocket-Book' and a two-volume work on 'Building Construction and Superintendence,' has made for William T. Comstock's publishing house a practical sort of book on 'Churches and Chapels.' It deals with the planning of such buildings and their construction, the hanging of visible roofs from the real roof, or the supporting of them upon the walls (with at least one most extraordinary drawing, a curiosity of false perspective), with seating, heating, the hanging of bells, the placing of clocks and of pulpits. With these and the very bold suggestions as to novel plans of Sunday-school and church, the reader should be satisfied. It has been thought right, however, to introduce in chapter ii. an appeal to him to deal with churches in a churchmanlike spirit; as well as to give special though brief notice to the supposed requirements of the Protestant Episcopal Church in the way of interior design.

'A First Book upon the Birds of Oregon and Washington,' by William Rogers Lord (Office of the J. K. Gill Co., Portland, Oregon), gives untechnical brief descriptions of 148 birds. The size, song, habitat, and color of each species are noted, and some little account of feeding and nesting habits is added. In conclusion there are a chapter on domesticating and taming birds, a key for identifying species, and an outline for a course in bird study. The book has been introduced into the Oregon public schools for supplementary reading, and appears in a second and improved edition. As the only handbook for the region, it will doubtless be of great value to the enthusiastic bird student; but because of its inadequacy of illustration, bareness of description, and lack of order in the arrangement of species, it does not appear likely to hold the attention of the average school child.

The new 'Lehrbuch der Meteorologie,' by Dr. Julius Hann of Vienna (Leipzig: Tauchnitz), is one of those excellent treatises to which the reviewer can give only the heartiest praise. It presents a conservative and philosophical treatment of all departments of meteorology, and an epitome of its progress during the last forty years. Abundant extracts and citations make the book a most serviceable guide to original sources. Like Bartholomew's 'Atlas of Meteorology' (the first part of his projected Physical Atlas), published a few years ago, Hann's 'Lehrbuch' at once takes rank as indispensable to all who seriously pursue the scientific study of the atmosphere.

Malwida von Meysenbug's recently published volume entitled 'Individualitäten' (Berlin and Leipzig: Schuster & Loeffler), consists of five studies of distinguished men and women, embodying personal recollections or the results of historical investigations. The first paper, on "Nietzsche," is by far the most successful of the many attempts to trace the moral and intellectual development of this remarkable character, leading to the gradual derangement and final eclipse of his brilliant faculties. It is

a proof of her keen psychological insight that neither warm friendship nor the thorough appreciation of his powers blinded our author to foretokens of the impending evil long before it was generally anticipated by his admirers. Indeed, the idiosyncrasies which excited the enthusiasm of his disciples filled her with alarm as premonitions of insanity. The second and longest chapter, "Frauen," is a most interesting and instructive account of the artistic and scholarly achievements of women centuries ago, especially in Italy, beginning in the twelfth century with the Medical School of Salerno (the famous Schola Salernitana), of which some of the most distinguished professors and many of the students were women, and which was the nursery of medical science and the model of medical instruction for all Europe, and ending with the epoch of the Renaissance at the close of the sixteenth century. The gallery of portraits includes also several celebrities of the nineteenth century, and is followed by delineations of the grandnephew of Cardinal Mazarin, Louis Mancini Mazarini, a diplomatist of the eighteenth century, now quite forgotten; Prince Kropotkin, and other Russian revolutionists; and Joseph Mazzini. It is to be regretted that a book with so rich and varied contents should have been published without an index.

A large quarto volume of 290 pages, 'Pétrarque,' by Prince D'Essling and Eugène Müntz, has just been published by the *Gazette des Beaux-Arts*, in Paris. It treats Petrarch chiefly from an artistic point of view, and aims to show his influence upon the artists of his time, and the impulse given by him to artistic production. The illustrations consist of twenty-one full-page plates and 181 engravings in the text, those of the "Trionfi" being especially fine. The edition comprises 260 numbered copies, 10 on Japanese paper.

The extraordinary dustfall in Europe a year ago (March 9-12, 1901) has been studied by Hellmann and Meinardus, whose memoir has lately appeared in the *Abhandlungen* of the Royal Prussian Meteorological Institute. It is shown beyond dispute that the dust came from the Sahara, and not from South America, as the famous Ehrenberg concluded for similar dustfalls many years ago. Dust storms were observed in the Algerian Sahara during the days immediately preceding the dustfall in Europe. South of the Alps there was a stormy sirocco; further north, the lower air was relatively quiet, but the higher currents were strong from the south, their velocity of seventy kilometres an hour agreeing with the rate at which the dusty area was extended northward. The microscopic analysis of the dust showed it to be of a mineral composition such as the Sahara could furnish. Around the Mediterranean the dust fell during the dry sirocco, but further north, especially in northern Germany, the dust came down with rain and snow. Most of it fell south of the Alps. Further north the size and the specific gravity of the particles were reduced. The average weight of a grain of quartz dust in northern Germany was 1:3,200,000,000 gramme. The total fall is estimated to have weighed 2,000,000 tons.

The Copenhagen *Politiken* reports that the only one of the five proposed Nobel Institutes now in operation is the Literary, and this consists as yet chiefly of a large library, purchased recently in various parts of Europe by Professor Warburg, at a cost of four hundred thousand kronen, and embracing almost exclusively belles-lettres, especially of modern times. In this department the collection is the most complete in the world. The new library has been deposited in a new and massive building, modelled after structures of the Middle Ages and the Wasa period. The library is in charge of eight men of letters, who are appointed by the Swedish Academy.

Although the year 1909 is still far distant, two of the leading universities of Germany are preparing to celebrate centennial anniversaries on an extensive scale at that time. These are Berlin, which, the youngest of the universities of the Fatherland with the exception of Bonn, will be one hundred years old, and Leipzig, which, the oldest with the sole exception of Heidelberg, will have passed its semi-millennial milestone. Both had interesting beginnings, Berlin being the child of hope in the darkest days of the Napoleonic era, and Leipzig, in 1409, the result of the emigration of two thousand German students from Prague, on account of difficulties with the Bohemian section of the institution in that city. In Berlin a special committee has been appointed, with representatives from all the four faculties, with the understanding that their chief work shall be the preparation of a history of the University, and the Leipzig budget for 1902 and 1903 sets aside a good sum for the coming jubilee. In reality, the University of Halle might celebrate its fourth centennial during the current twelvemonth, as the University of Wittenberg, of which the Halle institution is the continuation, was founded in 1502. However, no special celebration is contemplated.

The Linguistic Survey of India has been mainly occupied during the past year on the languages of Assam, Eastern Bengal, and Upper Burma. "Grammars and vocabularies have been prepared, and specimens edited, of some ninety languages, of most of which little but the names have hitherto been known." Among the new dialects unearthed is one in which conjugation is partly carried out by infixes instead of by the customary prefixes. The results of the survey strongly corroborate the theory, maintained by Dr. Hoernle, of a second Aryan invasion of India, the language of the newcomers being the "main parent of the classical Sanskrit." The extraordinarily complex character of the linguistic condition of the country is revealed by the fact that the list of the known dialects of India, compiled for the purposes of the Survey, contains 721 entries!

The thirteenth session of the International Congress of Americanists will be held in the halls of the American Museum of Natural History, New York city, October 20-25, 1902. Communications on the archæology, ethnology, and early history of the two Americas may be oral or written, and in French, German, Spanish, Italian, or English. All persons interested to become members of the Congress may do so by signifying their desire to Mr. Marshall H. Saville, General Secretary of the Commission of Organization, American Museum of Natural History, New York, and remitting either direct to the Treasurer (Mr. Harlan I. Smith, American Museum of Natural History), or through the General Secretary, the sum of three dollars.

—Mr. William Roscoe Thayer contributes to the March *Atlantic* an eminently readable paper on "Dante as a Lyric Poet," somewhat strenuous in its polemic against the idea of scholarship which would have the would-be scholar read "not the originals, but the reviews of critiques of commentaries on the originals," though, perhaps, not without sufficient provocation. Dante's power and range as a lyrist Mr. Thayer would account for largely by his intense interest and participation in the life about him, during the years when the commentators would have us believe that his passion for Beatrice had shut him out from all other thoughts, "now plunged in gloom, now fainting or seeing visions, for ever sighing and weeping, and more than once stark mad." The paper is valuable for the emphasis which it throws upon a side of Dante's life and work too apt to be neglected, and still more valuable for its timely plea in behalf of direct study and enjoyment of great art, as against the misplaced erudition which "continually thrusts upon us irrelevancies whose only excuse is that they are facts." In the "Confessions of a Provincial Editor" we have a lively setting forth of the alleged impossibility of any such thing as even a moderate degree of independence in the press of a city of ordinary size and character; but the picture would be more convincing if the writer were not obliged to confess that he hauled down the flag of his ideals at the very first shot from the enemy, without anything worthy the name of resistance. Mr. William C. Dreher's "Letter from Germany" gives a suggestive description of the feeling produced in that country by our refusal to make any material tariff concessions, displaying an attitude on the part of Americans "so incomprehensible to the German mind that the conclusion is general here that our tariff policy is swayed by selfish interests outside the Government." Goldwin Smith contributes his recollections of the feeling in England during our civil war, and puts matters in a more favorable light than the customary view of the past would admit, so far as British official circles are concerned.

—'The Teaching of History' (Macmillan) is a thin but weighty volume, which contains essays by nine graduates of Oxford and Cambridge. As most of the writers are still engaged in lecturing at their own universities, their opinions on pedagogical matters are likely to have been formed by recent practical experience. Not only are they themselves products of the historical revival in England, but they are now carrying forward by their own efforts the good work which was begun at Oxford and Cambridge a generation ago. Lord Acton was to have been the editor of the series, in co-operation with Mr. W. A. J. Archbold. However, as ill-health prevented him from contributing any word of his own, the task of writing a general introduction was placed in the hands of Professor Maitland, who discharged it, as Mr. Archbold says, "under circumstances which make our obligations to him the greater." This introductory essay, though largely occupied with an account of historical studies in the past, contains some pithy observations concerning the difference between good history and bad, the need of training a young

historian properly, and the expansion of the historical field. "To make Gibbons or Macaulays may be impossible; but it cannot be beyond the power of able teachers to set in the right path many of those who, say what we will, are going to write history well or are going to write it ill." Professor Maitland lays no special stress upon his own subject of Constitutional law. Indeed, one is chiefly impressed by the catholicity of his utterances. "And history," he concludes, "is deepening. We could not, if we would, be satisfied with the battles and the protocols, the alliances, and the intrigues. Literature and art, religion and law, rents and prices, creeds and superstitions, have burst the political barrier, and are no longer to be expelled. The study of interactions and interdependencies is but just beginning, and no one can foresee the end. There is much to be done by schools of history; there will be more to be done every year." Several of the contributors, besides Professor Maitland, are widely known in this country. Professor Gwatkin of Cambridge writes on ecclesiastical history; Mr. R. L. Poole of Oxford on palæography and diplomatic; Dr. William Cunningham of Cambridge on economic history, and Prof. W. J. Ashley on the teaching of history in America. There are also essays by Mr. Heitland, Mr. Tanner, Mr. Woodward, and Mr. Marten. It is a book which abounds with useful suggestions, and much of its doctrine will prove serviceable to teachers in America as well as in England.

—'Chronicles of the House of Borgia,' by Frederick Baron Corvo (Dutton), deals with a variegated subject, and is one of the most highly colored books ever written on that subject. Pope Alexander VI. is bound to be the central figure in any historical work that takes up the career of his family, for although St. Francis Borgia is among the most eminent of the Jesuits, he left no deep mark upon the course of human affairs. Alexander VI., on the contrary, lived and reigned at a critical period. For centuries he has been taken as a type of the Renaissance pontiff, and, whatever his traits of character may have been, no one can dispute the importance of his place in the annals of the papacy. Thus, while Mr. Corvo makes his 'Chronicles' include the name of Don Alessandro Borgia, born 1898, and concludes with the aspiration "ad multos annos," most readers, whether historians or others, will fix their attention chiefly upon what he says of Alexander VI. In brief, Mr. Corvo thinks that this celebrated pontiff has been badly treated, and numerous attacks are made upon those who have attacked him. Still, the book professes not to be one of vindication. "The writer," it is said, "does not write with the simple object of 'whitewashing' the House of Borgia; his present opinion being that all men are too vile for words to tell." But if there is no conscious design of rehabilitation, the incidental effect of the volume is to put forth a plea on behalf of one who has been maligned. Like other historical problems, the character of Alexander VI. demands a study of evidence, and Mr. Corvo does not handle evidence well. Indeed, we have met with few authors of equal reading who show so little capacity for keeping to the essential points of an argument. To begin with, his style is wholly unsuited to the task of separating truth from fiction. "In his manner, the present writer has endeavored to rush from mood to mood, in consonance with the subject under consideration, with something of the flippant breathless masterful versatility which Nature uses. For men were very natural in the Borgian Era." Mr. Corvo has certainly succeeded in becoming flippant and breathless, but that he has done much for the reputation of Alexander VI. we cannot agree. It is by no means impossible that something may yet be said on behalf of that pontiff which will carry weight. If so, a totally different method from that of Mr. Corvo must be adopted. Yet, while this book abounds with exaggerated mannerisms and euphuistic drolleries, it is marked in many ways by literary talent. The strongest impression which one derives from it is that of contradiction. The author has read widely in the history and literature of the Italian Renaissance, but he is often guilty of making the most singular slips. His manner of approaching the difficulties which are presented by a conflict of testimony is altogether wrong; but scattered here and there may be found passages which are clever and entertaining. The book is handsomely printed and illustrated.

—Readers of Victor Cucheval's entertaining and useful 'Histoire de l'Éloquence Romaine,' from the death of Cicero to the accession of Hadrian, will feel a certain sense of disappointment in his 'Cicéron Orateur' (Paris: Belin Frères), given to the public some eight years after it was announced by the author as in preparation. According to the first announcement, it was to deal with Cicero and the Eloquence of his Times, but the twenty-five pages of the closing chapter hardly constitute a fulfilment of the latter part of this promise. Nor is the body of the book just what one would have looked for. One must be a pretty enthusiastic Ciceronian to follow without a sense of monotony several hundred pages held down quite closely to a mere résumé in French of Cicero's extant orations; and if one be so enthusiastic, he will do better to devote his attention directly to the original text. We must not do the author the injustice of leaving the impression that his analyses are entirely bare of critical comment—a Frenchman would be incapable of that; but there is certainly not the vivacious flow of appreciative criticism which the French temperament plus classic scholarship so easily engenders. Nor does one find anything materially original in the few critical suggestions which are offered. Unhappily, Mr. Cucheval is not original even in attempting to establish Cicero's claim to rank as a poet of real importance, since Voltaire did the same thing, and more recently Prof. Tyrrell. The critics of a period when there was a better basis for criticism than the fragments which have survived, evidently thought of Cicero's poetry just about what M. Patin exclaims of his having written five hundred lines in a single night: "Tour de force malheureux!" And there is no better solution of the problem than to drop it there. Material for a popular setting forth of the great orator of the expiring Roman republic has accumulated in great abundance during the present generation; one must regret that M. Cucheval has not so used it as to give to the general reader in attractive form what scholarly research has made available to the few.

GOODWIN'S DEMOSTHENES.

Demosthenes on the Crown. With critical and explanatory notes, an historical sketch and essays, by William Watson Goodwin, Hon. LL.D. and D.C.L., Eliot Professor of Greek Literature in Harvard University. Cambridge, Eng.: The University Press; New York: Macmillan. 1901.

Harvard Studies in Classical Philology: Goodwin Volume. Cambridge, Mass.: Harvard University Press. 1901.

The aim of Professor Goodwin's compact edition of 'Demosthenes on the Crown' is, in the editor's words, to supply students with what he deems most essential to a thorough understanding of this masterpiece of oratory. This aim is accomplished by a revision of the text, by a judicious commentary, and by a series of essays on the manuscripts, the argument of the oration, on legal questions and the history of the period, in which it is safe to say that no word is wasted, and that every statement has the freshness, the weight, and the authority which derive directly from a resort to the ultimate sources. Hence this edition will hereafter become as indispensable to the scholar as it is to the students for whom it is primarily designed.

The critical notes are based on ten selected manuscripts, but they reveal chiefly the superiority of that which is known as Σ, a parchment of the tenth century, brought into Europe by Lascaris and now belonging to the National Library of Paris. This, together with L (S of the Laurentian Library in Florence), probably represented the class known as "the manuscripts of Atticus," who was, according to Usener, the friend of Cicero. In most passages the authority of these two outweighs that of all others combined. Professor Goodwin has made use of the facsimile of Σ, published in Paris, and in doing so has corrected a dozen or more errors or omissions in Voemel's report of the manuscript. It is a curious fact that two brief fragments of the Oxyrhyncus Papyrus (of the first or second century A. D.) confirm certain important readings of these two manuscripts, besides furnishing several unique and suggestive readings worthy of consideration. This is a rich yield in fragments which represent about one-fortieth of the whole oration. Professor Goodwin's notes constitute a storehouse of commentary on nice and delicate points of Greek usage. The clearness of these logical analyses gives them the beauty of a geometrical demonstration; and the result is occasionally to settle questions of fact, as in §63, or questions of history, as in §23, where Demosthenes affirms not that "no embassy had ever been sent," but that "there was then no embassy out on its mission."

A very satisfactory and practical use to which the editor has applied his studies of codex Σ is a contribution towards settling the genuineness of the documents cited in the Orations on the Crown. These documents, purporting to be decrees of the Senate, letters from Philip, and verbatim transcripts of laws, would possess an almost

unique value if genuine, and there was a time when certain scholars, among them the industrious Voemel, accepted their genuineness. Since then there have been fluctuations of opinion; but Professor Goodwin sums up the situation when he says, "It is now universally admitted, on internal evidence, that the documents are most transparent forgeries." This conclusion is strongly reinforced in the essay on "Stichometry of the MSS." The MS. of Σ gives at the end a number (2768), which has been shown by Christ to indicate the number of lines (*στίχοι*) contained in some standard text, probably of the Alexandrian Library. The actual number in Σ is 4963. Professor Goodwin finds that, if we exclude the documents, the standard divisions marked in Σ correspond in numbers varying little from 154 lines. If we include the documents, the standard 100 lines correspond erratically to anywhere from 215 to 165 lines of Σ. This is a tell-tale variation, which proves, as might be expected, that there is in all cases an excess, and in some cases a great excess, according to the length of the documents. However, the standard lines in different orations were of different length. Those in the Third Philippic were shorter than in the Crown.

The commentary, as a whole, is a model of reserve, precision, and completeness; it is exactly to the point and there is no surplusage. It is a conscientious endeavor to reach accurate interpretation, to attain the exact meaning of the orator, the precise force of his words, and to follow the course of his argument. While the editor disclaims novelty and makes general acknowledgment to his predecessors, a minute examination will show that in many cases new light has been thrown on passages that needed it, and will reveal many useful details and pertinent illustrations which are original. As a matter of curiosity, he notes that the passage containing the famous oath has no less than fifty sigmas in sixty-seven words—which may console us for the sibilance of our own anserine tongue. Apropos of the spirited sentence in the peroration, "I do not walk about the market-place beaming and delighted at Alexander's successes and offering my congratulations to the people whom I think most likely to report them at Court," he reminds us strikingly that the greatest of these personages living in Athens at that epoch was Aristotle himself, the friend and correspondent of "the great Emathian Conqueror." "It would be interesting, but not quite pleasant," he remarks, "to find here an allusion to the great philosopher."

In all legal points and questions this volume is particularly strong. Nothing could be neater, for example, than the concise paragraph on "The Principles of Unwritten Law," *τοῖς ἀγράφοις νόμοις* (§275[3]). A special study in the same direction is the Excursus on the Athenian *γραφὴ παρανόμων*, or indictment for proposing illegal measures. In discussing this procedure Mr. Goodwin draws a parallel with the function of our Supreme Court so pertinent and interesting that it deserves a few lines of summary. The Oration on the Crown was technically and primarily a plea in an action against Ctesiphon for proposing an unconstitutional measure. It is a remarkable instance of the Athenian genius for politics that, at a stage so early in their democratic experiment, they had contrived this device to impose a wholesome conservatism on the law-making power of the Assembly. They had the same temptation which besets our own State Legislatures to multiply casual and superfluous enactments. This tendency they restricted by developing a distinction between current legislation and a certain fixed body of written laws, which they called Solonian, and which roughly corresponded to our own Constitution. If any new statute could be shown before a special court to conflict with any portion of this code, it became *ipso facto* null and void. Without going into details, we may add that the procedure assumed the form of a criminal suit against the mover of the objectionable statute, and that the inquiry was held before a bench of 501 or 1,001 jurors, or judges, composed of ordinary citizens. Such a bench, extraordinary as it may seem to the modern mind, was by no means unfitted for its purpose; for the code was simple and limited, and the ordinary citizen, as Aristophanes humorously testifies, was well versed in litigation and in law. The differences between this procedure and that of our own Supreme Court are evident; but each procedure had essentially the same object, namely, the conservation, through deliberate process, of a stable fundamental code, which might serve as a check on rash or capricious or revolutionary legislation of the Assembly. As a matter of fact, when revolution was attempted in 411 B.C., the first step of the conspirators was to repeal the "action for unconstitutionality." Without such a check, as Aristotle acutely remarks, "the multitude is supreme, but not the laws; the rule of the people becomes despotic." But the check, which was wholesome and necessary at Athens—which suited an inchoate, unstable, and experimental democracy, destitute of deep roots and of complex organization—might not be required under a well-balanced and broad-based Constitution, rooted in ancient precedent and in the political aptitudes of the citizens. In Great Britain, as is well known, there is no such check on the House of Commons and no such distinction in the Constitutional law. "The Commons are absolute; they can make or unmake any institution of the country." They can disestablish the Church, or abolish the House of Lords or the Crown itself. But if such a change were brought to pass, it would infallibly be voted by a house elected on that express issue, and therefore commissioned by the country to work out such a revolution.

The question of rhythm in the language of Demosthenes Professor Goodwin avoids discussing, and refers the inquirer to Blass's "Attische Beredsamkeit." Blass's treatment of the subject is very interesting because it is the work of a scholar who has specially trained his ear to a perception of longs and shorts, because he thinks that he feels the rhythm of a Greek period somewhat as an ancient Greek felt it, and because, finally, he has reached conclusions as to the characteristics of Demosthenic prose rhythm which are in conflict with the prevailing opinion of what constitutes the charm and excellence of prose rhythm in general. He concedes that in many passages, and perhaps in certain orations, Demosthenes apparently did not aim at this rhetorical ornament, or did not fall into it; on the other hand, where it does occur, he maintains that the rhythm is so definite and deliberate that it borders on the forms and domain of poetry, it follows some of the metrical laws of quantity, it lapses into familiar metrical lines and balanced clauses of metrical equivalence. It is consequently susceptible even of being made a touchstone to determine or to restore correct readings, in some cases, just as the metre might serve that purpose in Aeschylus or Sophocles. He prints in his appendix the exordium of the Oration on the Crown divided into *kola* according to the scheme of Lachares, an Athenian rhetor of the fifth century A.D. The general effect of this scheme to the eye is that of the strophes or stanzas of a Pindaric ode; and Blass goes so far even as to point out metrical equivalences between certain *kola*, or lines, such as occur in the structure of the strophe and antistrophe in choral odes. He grants that there is great freedom in the composition, just as there is in the more complex melic poetry; and yet he points out the duplication, for example, of anapæstic dimeters and trochaic dimeters. There is, of course, no doubt that Demosthenes studied rhythmical effects with great nicety and care; he did not like to be caught extemporizing, and his speeches "smelt of the lamp"; there is even a tradition handed down of certain ancient manuscripts which preserved the orator's own colometry. Yet the question naturally arises, Is it likely that Demosthenes deliberately and with *malice prepense* composed these strophes, or would he himself have been astonished at the discoveries and the rhythmical arrangements of the rhetoricians? Are these, indeed, to a certain extent illusory—a mould imposed by their own ingenious fancy—and is it possible that the ancient canons of the best prose usage differed so widely from our own?

It is quite possible to take certain paragraphs from 'Atala' or from the 'Modern Painters,' and to arrange them into plausible *kola* with here and there even a fairly plausible metrical correspondence between the clauses. The rhetorical mechanism in these compositions is very much in evidence, and lends itself without much violence to such treatment; but who imagines that such *kola* were consciously designed, and who would venture to emend Rousseau or Chateaubriand or Ruskin or De Quincey upon considerations of rhythm? In our English version of the Psalms it would be easy to point out exact correspondences such as Blass detects, and occasionally, indeed, a distinct echo of the monotonous movement of Sternhold and Hopkins. In all rhythmical utterance and expression there is a strong unconscious tendency to repeat or imitate familiar rhythmical clauses, which may happen to be metrical. Whether such rhythms will be pleasing will depend largely on association, and chiefly, of course, on literary association. The Latin ear, for instance, was offended by the cadence of *esse videntur* at the end of a prose period, probably because, being the close of a hexameter line, it jarred upon the Latin conceptions of prose rhythm. The Greeks, as Longinus tells us, felt a similar incongruity when the movement of the language fell into a dance measure. "The hearer of an over-rhythmical passage," he says, "feels inclined to beat time with the speaker; he gives his attention to the cadence rather than to the meaning

of the words." An English audience would never think of this. The Greeks were connoisseurs and sophisticated in such niceties. This curious bit of testimony reminds us, indeed, that a certain school of oratory in its beginnings experimented with the rhythms proper to poetry; but the great critic comes round to the very point which we are making, and our point is this: The proper beauty and essence of prose rhythm in all the great stylists is its freedom, its variety, its complexity, its avoidance of the strict forms of metre and repetition of metre; its effects, in short, are secured by a violation of metrical regularity, by an elaborate combination of movement and of numbers which evade scientific analysis, of which the writer himself could give no account, and in which he is guarded solely by a trained and delicate ear. Probably the very same was the practice of a stylist like Plato and of the Greek orators; for this we have the evidence of Aristotle in his 'Rhetoric': "The composition should be neither metrical nor unrhythmical; the former characteristic awakens mistrust, for it seems artificial; at the same time it puts one out, since it makes one look for the like and ask when it will recur. Hence prose should contain rhythm, but not metre, else it will be verse; and this rhythm should not be too exact, but carried only to a certain extent."

It would be hard to better this definition. It fits exactly with all we know of modern artistic prose, and it proves that the ancient sense in this matter was not widely different from ours. It is an anchor to which we may hold fast with a certain satisfaction and confidence. Professor Goodwin has tacitly given an opinion which coincides with this conservative view. In §72 Blass gives an example of how he ventures to restore rhythm whose existence he suspects; and he explains the methods and authorities by which he rescues two *kola* terminating in corresponding trochaic dimeters. This rearrangement Professor Goodwin quietly ignores, confining himself exclusively to questions of meaning and of manuscript authority. How, indeed, could he do otherwise? Our knowledge of rhythm must come chiefly from the MSS. The MSS. depart widely, as the best editors admit, from the true original Demosthenic text; and nothing vanishes more quickly by slight corruptions than the traces of rhythm. Amid this flux and these quicksands the search for a lost rhythm, where not expressly attested by the rhetoricians, seems like hunting for the vanished contours of the breakers on the beach; while the colon, or yardstick of the oratorical period, has the wilful, wavering flexibility of an eel. Yet at the moment we venture this rash opinion we observe that a distinguished French savant (M. Louis Havet) has been systematically applying a similar test to the establishment of a true Ciceronian text of the 'Cato Major de Senectute.'

The value of Professor Goodwin's work is greatly increased by the editor's clear and compact historical sketch of the events from the accession of Philip to the battle of Chæronea, with its constant references to the sources. Among these he has included recent inscriptions shedding light on the period, and especially those lately discovered by the French explorers at Delphi. We seem to come close to the pulse of the time when, in reading the list of delegates to the "Board of Temple-builders," we light upon the first mention of the name Philip of Macedon, and note at the same time the ominous omission of the Phocians. This single contemporary slab attests the results of the peace of Philocrates. In the editor's summary, as well as in the notes, the presumption in all doubtful matters is in favor of Demosthenes and rather against Aeschines. "I have made no attempt," says Professor Goodwin, "to be neutral on the question of the patriotism and the statesmanship of Demosthenes in his policy of uncompromising resistance to Philip. . . . No one can read the final attack of Aeschines and the reply of Demosthenes without feeling that Demosthenes always stands forth as a true patriot and statesman—while Aeschines appears first as a trimmer and later as an intentional, if not corrupt, ally of Philip in his contest with Athens." The layman will sympathize with this bias, and will be glad to have the support of one more distinguished scholar in his traditional enthusiasms. Such partiality is legitimate and unavoidable to one who reads the two speeches side by side. It is created on the whole by the general tone of Demosthenes, by his lofty strain of sentiment, by that air of passionate sincerity which Aeschines never succeeds in assuming, and which is indeed impossible to imitate. The closing argument is so well marshalled that it seems irresistible. It appealed to the noblest sentiments, it became at once a pæan and an apology for the lost causes of all time, it carried and captivated the audience to which it was addressed, and it met with a generous response which was as creditable to their feelings as it was to the orator himself. Their verdict was, in a way, all that he desired and his sufficient vindication.

A casual note, page 344, shows that the editor was critically examining the manuscripts of his author as early as 1854, and reminds us that this edition is the crowning fruit of his mature study. The 12th volume of the Harvard Studies in Classical Philology commemorates "the happy completion of fifty years since he [Professor Goodwin] received his first degree in Arts from Harvard College, and of forty-one years since he became Eliot Professor." During this period he has applied a singular combination of hard-headed, practical sense and of subtle logical acumen—the natural outfit of a good jurist—to disentangling the forms of expression of the most refined vehicle of thought that mankind has ever developed. In our country, at least, he was a pioneer in such investigations, and how much has he done to clear up this particular wilderness! Forty or fifty years ago our schoolboys were furnished with certain misty formulas on the uses of the Greek moods, which shared in their minds the same corner as the theological mysteries of the shorter and longer catechisms. The author of 'The Greek Moods and Tenses' has taken a large share in changing all this. He has brought down this subject of syntax, as Professor Greenough remarks, from the clouds of metaphysics, and has placed it in a familiar region perfectly accessible to any country schoolmistress or schoolboy—not merely to Macaulay's miraculous youngster. "He has made dark things plain and hard things easy," to quote from the Greek Salutation of this memorial volume. There is something so rounded and complete in the quiet triumphs of this long experience that the soul of an Odysseus, shrewdly searching about for modern castaways, might perhaps choose out for himself such a lot, neglecting the shooting-star of the iron-master or the railroad president; and a new Solon might add such a life to his samples of the modest beatitudes. Here, at least, "the jealous divinity" has made amends, if he has not altogether missed his mark. Here is no broken shaft, no occasion to quote the *Sunt lacrymæ rerum*. The master sees his apprentices grown up and some of them, in turn, become masters of their craft. They bring their affectionate tribute to the serene spirit which has never condescended to strive or cry, which has shown a life-long superiority to the vanities and jealousies and petty quarrels that sometimes beset and tempt the scholar—the spirit, in fine, that has simply pursued pure scientific truth, "caring little in comparison for Socrates." In the transparent and dispassionate annotations of this latest work, it is a satisfaction to encounter the mere scientific fact, τὸ εἰλικρινές, uncolored by the ego and freed from the personal equation. It is a delight to think of the high and disinterested example the author has set to the younger generation of scholars, which he helped create and develop; it is a thought to stir the soul that, after all the service he has rendered, at an age when he had earned the right to retire to the ease of "the lean and slippered pantaloon," he has chosen to give the world a mature work, which shows meridian strength and definition. If his sun is declining, it gives no sign. We shall still look for its illumination—ἡλιός ἐστιν ἔτι.

RECENT NOVELS.

The Second Generation. By James Weber Linn. The Macmillan Co.

Widow Wiley and Some Other Old Folk. By Brown Linnet. E. P. Dutton & Co.

My Island. By Eilian Hughes. London: J. M. Dent & Co.; New York: E. P. Dutton & Co.

Eve Triumphant. Translated from the French of Pierre de Coulevain. By Alys Hallard. G. P. Putnam's Sons.

Audrey. By Mary Johnston. Boston: Houghton, Mifflin & Co.

Mr. Linn's story concerns itself with a wrong done one man by another, and with the vengeance sought by the victim's son. Far from being of the madding Mafia or Camorra, the son is a young journalist who goes up from Scannell County to Chicago, pursuing at once his own profession and his father's enemy. The latter is a gas magnate, franchise-grabber, and briber of legislators. And thus out of retribution and the career of a newspaper reporter, with loves and friendships in due proportions, is compounded a very creditable little novel, a good example within its limits of what a journalistic novel can do. It speaks with evident acquaintance of life and its works as they flourish in the office of a large daily paper, and if it reflects plainly the limits set on cultivation by the nature of the soil, yet modern slang and manners and the modern passion for the modern rightly find ex-

pression in a novel of to-day's newspaper and to-day's Chicago. These do not bar out a happy showing of cleanliness and delicate feeling. Dealing perhaps too sympathetically for æsthetic comfort with the unloveliness of life's whirling machinery, it has yet its idyllic touches, and its broad strokes, too, of a grim fatefulness that lends force and fibre. The journalistic abhorrence of what is superfluous marks the style, making the book read realistically and, for the most part, simply. All in all, this small novel tells a good story, and is conspicuous for a restrained and tasteful handling often absent from stories of its latter-day plan and scope.

The Widow Wiley and her compeers from their English lanes, yards, and almshouses are faintly reminiscent of Mary Wilkins's old folk tending their flowers in New England dooryards or chafing in the poor-house. We seem to have met before this succinctness of personal description, this seizing on a crowning incident in the life of a lowly actor and presenting it with stenographic accuracy. But, given the subject, the method is inevitable. Wilkinsism, like Wagnerism, is in the air, and village literature must breathe of it more or less. For variant we have here the Vicar, the Rector, the Squire's lady, whom the English poor have always with them, at once levelling and sophisticating the situation. The incidents are often of a gossamer texture, but are tastefully interwoven, and the portraits stand out distinctly through an enveloping shimmer of humor and sentiment.

'My Island' is a collection of short sketches of Anglesey. They are rich in local color of a kind not often set before the reading world. The Anglesey motive has its own marked character, combining the religiousness, melancholy, superstitiousness, and hospitality that form the Welsh note with the sombre, fantastic quality belonging always and everywhere to the sea island. A breath of the uncanny besides stirs throughout. There is very little about ghosts, but, reading, one seems to hear a rustling at the elbow. Without being powerful, the stories are weird and impressive. Intensity of affection for Anglesey colors them all; but when the day of wheeling over one's pet island has come, one should forswear such mystic description as smears the pages of the opening and closing papers. The bicycle speeds ill through purple patches; the plainest of the stories read the best. The head- and tail-pieces, by Lady Stanley, are attractive—more so than her full-page illustrations.

Yet new international episodes are set forth in M. de Coulevain's novel, well translated into English, with due and not slavish regard to idiom. (To write of brown and light-colored "pupils" of the eye is not a fault of translation, we take it.) We have here the ideas on American women of a French writer who seems rather more than half in sympathy with the Anglo-Saxon temperament, reserving his worst slurs for Latin idiosyncrasies in a novel where pros and cons are fairly evenly distributed. On the whole, however, the Americans have it. The temptations which came to the New York married heroine, when she went to Europe, mainly sprang, it appears, from tendencies handed down by a far-away Latin ancestor. It was by American integrity that she overcame them, although it was that same integrity which justified her to herself in visiting the questionable places of Paris and the gambling-rooms of Monte Carlo, with her young niece, an American of equal integrity, but more frivolity. The American Eve, though she fights down temptation, does not succeed in resisting curiosity. Her strong, pure nature needs frequent toning by travel (leaving husband at home deep in scientific investigation), by Catholicism (taken in a highly Pickwickian sense with ulterior views to the American market); by Buddhism, and the forces of hypnotic suggestion. The right-minded niece is possessed by a similar curiosity. Indeed, in spite of seeing the responsibility laid on Latin heredity, the reader finds that it is curiosity rather than Latinity that leads these ladies into doubtful scenes and positions. They are curious about sights, and even more so about feelings, and court temptations that do not really tempt them, but only pique their inquisitiveness. A question may here suggest itself: Does it prove the white-souledness of the Eves, or does it make them the more answerable, that they are found inventing their own Satan and apple? But if stories are to be written about this species, we can hardly imagine gentler treatment than M. de Coulevain uses. His familiarity with the purely hotel phases of New York life, and with the Franco-Italian view of American women, their right-mindedness and their dollars, gives his book the quite original merit of moderation. Even his Italian demon, however devilish at times, is not strongly persistent in his pursuit of crime, but becomes a languishing bore, while his American wife finds her greatest tribulation in her more and more unapproachable Roman relations-in-law. We leave all the characters fairly comfortable or dead, and can only hope that Mrs. Ronald remained true to hypnotic grace and stayed henceforth at home. Something there is in the handling of the story that wakens the query, Is M. de Coulevain a nom de plume for (let us say) Mme. de Coulevain?

To the reader not sated with colonial Virginia fiction, 'Audrey' prominently commends itself. It is interesting even to those who feel that they have had a genteel sufficiency of novels of the "God wot" and "Odso" school, in which one hath a pretty wit and another a garment vastly fine, and in which yet another hath cracked a bottle with Mr. Colley Cibber. In whichever way these traits affect the reader, whether as a sop or a red rag, he cannot fail to follow with interest the story of the loves of Marmaduke Haward, Evelyn Byrd, and Audrey. We cannot give Audrey's last name for she did not remember it herself. This was curious, because at the time she lost her family in an Indian massacre she was old enough to be able to say such sentences as this: "Are you a prince? and is the grand gentleman with the long hair and the purple coat the King?" But no matter. A heroine without a surname is just as sweet when she is as sweet as Audrey, and when she is so clever that, in the space of one winter, she learns the whole art of acting and becomes a tragedian whose fame reaches from Virginia to London. This is not the only tinge of drama in the story. The whole form of the book suggests the footlights. We can already see on the stage this hero, cool under all circumstances, except the discovery of his love for Audrey, defying his enemies with a smile and a pinch of snuff, first pinking, then pardoning. The Huguenot-Monacan, wearing a peruke on his head and in his heart the bloodthirstiness of an Indian, is a foregone stage figure. As much so is the Highlander, taken prisoner at Preston and transported to Virginia; his speeches are fully written, and brim over with good Scottish names and sentiments. His little ladylove, the dove-like Quakeress, has a small rôle, but a useful one, affording the principals time to draw breath and change their brocades and marcasite; helpful, too, in this way are the drunken minister, the ex-convict schoolmaster, the theatrical manager, the old witch, and the negro Juba. Col. Esmond's is a non-speaking part, but he may be seen once at the play within the play. The incidents and scenery too take naturally to the boards, and even the grouping is more than indicated. In fact, the dramatization does itself while the reader doesn't wait. It is with a mental thump that in all this eighteenth-century surrounding one comes upon such a twentieth-century phrase—in the narrative though it be—as this: "the slightly drawling tones which with him spelled irritation"; and again, "the milestones of whose pilgrimage spelled love, ruin, despair, and death." Split infinitives hold up their yawning wounds to be healed, and the wonder grows that a pen so skilfully saturated in the style of its period—an era, surely, of stout verbs, hardy nouns, and peppery interjections—should so wallow in adjectives, using more than would have furnished forth the reigns of Anne and two Georges. The historic background is faithfully and understandingly laid in; a deal of research must have gone to it, but it is modest as becomes a background, and points no student finger at itself. The story, if artificial, is engrossing, as has been said, and insists on being read—a great charm in a story.

ABOUT SHAKSPERE.

What is Shakspere? An Introduction to the Great Plays. By L. A. Sherman. Macmillan. 1902. Pp. xii, 414.

Shakspere as a Dramatic Artist: With an Account of his Reputation at Various Periods. Shaksperean Wars I. By Thomas R. Lounsbury. Charles Scribner's Sons. 1901. (Yale Bicentennial Publications.) Pp. xx, 449.

The English Chronicle Play: A Study in the Popular Historical Literature Environing Shakspere. By F. E. Schelling. The Macmillan Co. 1902. Pp. xi, 310.

There are so many books about Shakspere that a mind of modern habits instinctively seeks for a classification for them. And certain books stand as types of their class. Thus, Sidney Lee's book is characteristically that of the biographer and literary historian; Barrett Wendell's, that of the unconventional scholar-critic, seeking to get the contemporary point of view and to stimulate ideas; Boas's, that of the accomplished manual-maker, safe and conservative; Dowden's, that of the essayist; Brandes's, that of the cosmopolitan littérateur; Snider's, that of the Hegelian and theorist; and Moulton's, that of the popular interpreter. So Professor Sherman's book is nearer the last in type, although it is also a schoolmaster's book, and the book of the leader of a popular literary cult.

It is so good a book in many respects that

we have to regret that it is not better. Undertaken, as the author tells us, at the solicitation of his publishers, and, perhaps, hurriedly thrown together, it does not seem to be written *con amore*, nor thoroughly ripened and wrought out. Although it is a marked improvement on the author's previous way of writing, it still has too many defects, too many remediable defects. Here and there one remarks too much fondness for and display of big ideas. Perfect simplicity of exposition is not attained. The style is at times difficult and labored. Imposing and cryptic phrases, as well as bold neologisms, forming a sort of dialect, too often recur. Such are "units of approach," "the verities" (almost never the truth, or truths), "persistingly," "comedial" (a form which may take its chances with obsolete comedian, comedic, and comedical), "inaugurate," "embracingly," "potent," and the like; or such a sentence as this: "The Venus [and Adonis] is . . . an interpretation, with considerable Renaissance freedom, of the Goddess consciousness on its human side toward a Galahad ideal of the Greek mind." Most of the passages quoted from Shakspere are nearly throughout mangled by obtrusive and excessive underscoring or italicizing of words and phrases.

On the other hand, as a Shaksperian interpreter, Professor Sherman is sympathetic, subtle, vivid, and humane. He is not writing a book for the scholar, but for the beginner in Shakspere. The scholar, however, may find his account in some of the chapters, and refresh his fagged and worn perceptions from the author's store of fertile and sometimes penetrating suggestions. Only four plays are discussed in detail and at length—"Cymbeline," "The Winter's Tale," "Romeo and Juliet," and "Macbeth." The method adopted is a running commentary presenting the story in the way of a modern novel, with explanation of the action and dialogue, and abundant character comment. The author is conscious of the dangers of this method, and does not recommend carrying the use of it too far. The exposition of "Cymbeline" amounts to a fervent critical eulogy upon the character of Imogen, and furnishes one of the most stimulating critical studies of Shakspere's women that have ever been written. The author is a woman-worshipper, and exalts throughout the *Ewig-Weibliche*. Indeed, in its more original portions, this work is a study of some of Shakspere's women—a study full of suggestiveness and charm. We wish that Professor Sherman had written the whole book frankly from this point of view, and not, as it is on the face of it, as a publisher's book, and as a schoolmaster's introduction to the great plays. For the latter purpose, aside from its stimulating quality, it cannot be recommended. The outline questions presented in the appendix are valuable, but otherwise the general apparatus and material necessary for the beginner are better presented in other books. There is good incidental comment on some of the plays in chapter vii., which deals with the groupings of the plays, but the chapter as a whole is not adapted to the uses of the student. Not that we hold the chronological method to be the only method for the grouping and study of the plays, but that the author's proposed substitute for that method (pp. 287-8), dividing the plays for study into the three groups of "Incident Plays, Personal Plays, and Moral Plays," is fantastic, profitless, and inadequate.

Professor Sherman will not please the æsthetic critics; he writes too insistently as a moralist (he sometimes wrestles hard with his moral categories), and has developed too far his ethical consciousness, for that. He somewhat over-interprets—perhaps generally, and certainly in specific instances, as in the character of Hermione and in those of Romeo and Juliet. He depreciates the Sonnets, and shows personal and peculiar favoritism among the plays. And there are many points of detail in his interpretation, here unmentioned, which are fairly open to question. Nevertheless, there is here material for a noteworthy book of Shaksperian criticism, if properly digested and recast.

Professor Lounsbury has written a good book in a field still unexhausted—good in style and phrasing, and more readable, almost, than the subject permits. It is obviously the result of wide research, and it constitutes a valuable contribution to literary history. It exhibits sane judgments and presents sound conclusions. A vast mass of evidence has been consulted, and has been read with sagacity and discrimination. The material has been thoroughly digested and synthetically presented. Nevertheless, the *advocatus diaboli* must be permitted to enter his exceptions in certain points of manner and mode, if not of essence. In the first place, the title is misleading. For although the evidence adduced results in the end in the demonstration of the fact, nowadays not contested, that Shakspere works throughout as a conscious dramatic artist, the real matter of the book is indicated only in the sub-title. The work is, in effect, a history of Shakspere's reputation down to the nineteenth century. It is to be hoped that Professor Lounsbury will some day extend his investigation to cover the nineteenth century also. In passing, we may note that other chapters of this sort in the history of criticism remain to be written. Professor Lounsbury himself has already traced in outline the history of Chaucer's reputation. The history of the reputations of Spenser (recently outlined for the eighteenth century by Professors Beers and Phelps), of Milton, and of Pope, are still open subjects.

Our second exception in this case is to a point of detail in the author's plan. The book is a university *Festschrift*, and, by virtue both of its subject and of the circumstances of its publication, addresses a special and (at least in the wider sense of the term) learned audience. Why, therefore, the anxious avoidance of the appearance of pedantry by such careful economy of footnote, citation, and reference? The bibliography at the end is a boon, but it is not full enough for the subject, and it does not entirely meet the needs of the case. And why expand to four hundred pages of elaborate exposition that which, with the judicious use of footnotes, could have been sufficiently expressed, for the readers whom Professor Lounsbury will reach, in two hundred pages? The author should have given us either results with less of the process diffused and artistically concealed in the text, or results with more or all of the process laid open for students of the subject in footnotes and appendices. Incidentally, while we agree with the author's conclusions as to Shakspere's reputation in the seventeenth century, we wish he had paid his respects to and answered (at least in a footnote) the views of the editors of 'Shakespeare's Centurie of Prayse' on this theme. Again, the passages in chapters iv. and x. concerned with the testimony to Shakspere's reputation borne by editions of his works and by performances of them are insufficient. More should be made of this evidence, which should be exhibited in greater detail.

We have testified to our admiration for the author's fluent and adequate style. We regret that we find less to admire in his manner. For a monograph in the field of literary history, the treatment is too jaunty, superior, and unsympathetic. The nineteenth-century point of view is incessantly obtruded. The author enters only scoffingly or ironically into the eighteenth-century spirit. There is doubtless much that is artificial, crude, and limited in the best of eighteenth-century criticism, and much that is absurd and ridiculous in the worst of it. But it is not the business of the historian, even of the historian who holds a brief for Shakspere's reputation, perpetually to emphasize and reiterate this fact. It is rather his business to connect the critical modes of thinking with the other modes of thinking of the age. Eighteenth-century criticism, in part at least and implicitly, was the expression of an ethical system or code of conduct whose keynote was the idealization and exaltation of correctness and propriety, in manners as in art. The author enters only very imperfectly into this spirit. He fails to enter because he refuses to abandon even for the moment his own point of view. He prefers to be frankly personal, and to indulge his subjective humor and wit. But animation may be purchased at too great a cost, and wit and scorn without intermission end in becoming irksome. Nevertheless, these are matters not of substance.

Shakspere furnishes the central point in Professor Schelling's excellent monograph. What precedes or follows him in time is preparation or *Nachtrag*. The gist of the study is found in the valuable classified lists of historical plays in the appendix. The rest is a discussion of these groups and of single plays. The work, as a whole, is a good specimen of honest, straightforward, and scholarly investigation. The style is perhaps somewhat timid and dull, but it is free from vagaries, and the book is a safe guide. We wish that the author had given us more of the sort of illuminating criticism which is bestowed in the discussion of "Bonduca" (pp. 203-4), and less of the inconclusive æsthetic and general criticism found in the detailed discussion of many of the other plays. Much is made, but we feel that more could be made, of the literary history of the subject. We had expected, also, to hear more regarding the relations of the historical plays to the epical treatment of history in Warner, Daniel, Drayton, and the rest. But these are personal preferences. What Professor Schelling has chosen to do has been well done.

Commercial Trusts. By J. R. Dos Passos. G. P. Putnam's Sons. 1901.

This book, published as one of the "Questions of the Day" series, is a reprint, corrected and revised, of the author's argu-

ment in December, 1899, before the Industrial Commission. The field of discussion is necessarily somewhat narrowed by the special purpose of the argument, which was, to dissuade the Commission from hasty or sweeping recommendations regarding Federal regulation of the so-called Trusts. But Mr. Dos Passos makes, nevertheless, a pretty thorough examination of his subject, which has certainly lost nothing of interest through the recent course of events.

Our author frankly champions the Trust, though objecting, as a lawyer is apt to do, to the name popularly applied to it. He believes opposition to the present combinations of capital to be futile, and holds that the necessity of legislation to regulate them has not been shown. "Can you," Mr. Dos Passos asks the Commission, "in the face of the extraordinary commercial development of this country, . . . say that you are convinced that there are evils which spring from these industrials?" Our own answer would be, that when the question arises of shaping the law to meet absolutely new and untried conditions in finance or commerce, potential evils must be weighed as carefully as present evils. The absence of the one certainly does not guarantee non-existence of the other. It was the United States Supreme Court itself which said, in applying the Anti-Trust Law of 1890 in the "Trans-Missouri" railway case, that it was not requisite even to submit evidence of intent of "maintaining rates above what was reasonable." So long as the agreement vests in a combination the power of restraining free exercise of competition, the Court declared that its "necessary effect is to restrain trade and commerce." In other words, the question at stake is not alone what a combination is doing or has done, but what, in virtue of its new industrial powers, it may do. The importance of this distinction may be seen from the fact that the whole pending case of the United States against the Northern Securities Company rests upon it. That company has in point of fact performed as yet no overt act whatever.

Mr. Dos Passos takes bold ground in the matter of enforced publicity. He objects *in toto* to such requirements. Since his argument was first submitted, the Industrial Commission itself has unanimously advised that directors of a "Trust" "be required to report to the members thereof its financial condition in reasonable detail, verified by a competent auditor, at least once a year." This would, of course, be equivalent to informing the general public. Since that time, also, the largest industrial combination in this country has voluntarily elected to give out for absolute publicity not merely annual, but monthly statements, in far greater detail than the Commission ventured to advise. Other industrial combinations are falling into line with the United States Steel. These well-known facts throw interesting light on the following remarks of Mr. Dos Passos:

"I take issue with the advocates of publicity, and I deny that it is necessary in the broad sense in which it is demanded. I say that no man who is not interested in a corporation has a right to know anything about it. It is none of his business. . . . If you guard the rights of stockholders and persons who have contractual relations with corporations, . . . then the public has no more business in its private concerns than it has in the private affairs of your household, or your fortune, or your own commercial affairs."

It hardly need be said that we disagree entirely with this contention. Mr. Dos Passos bases his argument largely on the fact that a stockholder, under present laws, has the absolute right to open a corporation's books. But he has to admit that the powers of the courts must frequently be invoked to enforce the right. This procedure is costly; the small shareholder will rarely undertake it, and the results, even if the request is granted, are usually futile. But we do not base our opinion on these facts alone. We contend, as boldly as Mr. Dos Passos submits his proposition, that a company which undertakes to distribute its shares through the medium of stock exchanges; which becomes an important element in the great investment markets; whose financial prosperity or adversity is bound to affect the plans and purposes of the financial public generally—cannot claim the immunity from public inspection to which a small private business, in the hands of a dozen men, might be entitled.

The two past generations have witnessed a more or less continuous struggle between the public and the corporations in this matter, and the public, on the whole, has won. Mr. Dos Passos's theory certainly must apply to a railway, as well as to a combination of sugar-refineries or steel-mills. Yet the railways have surrendered absolutely, and in most cases very willingly, to the demand for complete publicity. State Governments have required and received the quarterly returns of earnings; but, as a matter of fact, the companies have gone further, and placed freely in the public's hands their monthly and weekly traffic showings. What the investment situation would be if these facilities for knowledge were to be withdrawn, we leave to the reader to imagine. We do not think Mr. Dos Passos would, if he could, turn back to this extent the hands of the financial clock. But we are equally convinced that the time will come when publicity of the so-called "industrials," whether freely granted, or, in default of that, required by law, will be such that even the present state of things will seem as anomalous as the popular ignorance of railway finance, thirty or forty years ago, seems to the present investor.

Lives of the Hunted; Containing a True Account of the Doings of Five Quadrupeds and Three Birds, and, in elucidation of the same, over 200 drawings. By Ernest Seton-Thompson. Charles Scribner's Sons.

Mr. Seton-Thompson uses again the methods of former books. He writes thus in his Note to the Reader:

"In my previous books I have tried to emphasize our kinship with the animals by showing that in them we can find the virtues most admired in Man. Lobo stands for Dignity and Love-constancy; Silverspot, for Sagacity; . . . Wahb, for Physical Force; and the Pacing Mustang, for the Love of Liberty. In this volume Majesty, Grace, the Power of Wisdom, the sweet Uses of Adversity, and the two-edged Sorrows of Rebellion are similarly set forth."

Krag, the Kootenay Ram, embodiment of grace and majesty, is the dominating figure of this group, as Lobo, the Timber Wolf, is of 'Wild Animals.' The story of his life is well wrought. Like 'The Trail of the Sandhill Stag,' it is a story of the hunter and the hunted, but here the long trail ends in a tragedy. Krag was born at the foot of the Gunder Peak with Scotty MacDougall, hunter of mountain sheep, close on his mother's track; and his first hour of life was marked by a race for freedom. When his years of education and growth were over, he was a matchless creature.

"As he bounded up the jagged cliffs, barely touching each successive point with his clawed and padded hoofs, floating up like a bird, . . . he was more like a spirit thing, that had no weight and knew no fear of falling, than a great three-hundred-pound Ram with five year-rings on his horns.

"And such horns! The bachelors that owned his guidance had various horns, reflecting each the owner's life and gifts; some rough half-moons, some thick, some thin. But Krag's curled in one great sweep, three-quarters of a circle. . . ."

A battle with his rivals, which gave him possession of a flock of ewes, opened his splendid prime. Then for five years his band had only hunger and beasts of prey and chance riflemen to fear, for Scotty MacDougall was hunting gold in Colorado. Krag became a Wise One among his kind. He taught them to choose safer haunts and shrewder devices for protection; and his descendants were healthier and much wiser than the mountain sheep of former days; therefore they steadily increased in numbers.

At last old Scotty, "the curse of the Yak-in-i-Kak," returned to his shanty, sighted through his glass the great Gunder ram and his bands upon the distant benches, wondered at the unequalled horns, and marked them for his own. They swept now the full circle and even a quarter more, but Krag bore them "as lightly as a lady bears her ear-rings." He sighted Scotty, too, and for months gave him only distant glimpses to pay for hours of stalking. Then a sportsman came to the shanty, and one day, in working over an upland above the cañon of the Yak-in-i-Kak, his dogs drove Krag and a flock of ewes out of cover. A wild chase by the hounds, and the men rounded up the ewes on a point above the narrow river-gorge, five hundred feet deep. On the brink they huddled terror-stricken for an instant, while old Krag, their rear-guard, dashing up, turned to stand at bay. But whistling bullets showed him that defence would be in vain.

"There was one chance left. The granite walls of the Yak-in-i-kak could prove no harder than the human foe. . . . He wheeled to the edge and leaped down—down, not to the bottom, not blindly. Thirty feet downwards, across the dizzy chasm, was a little jut of rock, no bigger than his nose—the only one in sight, all the rest smooth, sheer, or overhanging. But Krag landed fairly, poised just a heart-beat. In a flash his blazing eyes took in another point, his only hope, on the other side, hidden under the overhanging rocks he had leaped from. His supple loins and corded limbs bent, pulsed, and floated him across . . . then back, sometimes to a mere roughness of the rock on which his hoofs, of horn and rubber built, gripped for an instant and took fresh ricochet to another point . . . down, down, down, with modulated impact from point to point, till, with a final drop of twenty feet, he reached a ledge of safety far below.

"And the others, inspired by his example, followed fast—a long cascade of sheep. Had he failed at one point, all must have failed. But now they came down headlong . . . with masterly command of thew and hoof, with marvellous poise and absolute success."

Years afterwards, however, there came a time when Krag's perfect body and wise and valiant heart could not command his safety. Scotty MacDougall, baffled again and again, took the trail with dogged pertinacity to win the little fortune that Krag's horns would bring. Over the slopes of ten mountain ranges the chase stretched out; five hundred miles, twelve winter weeks, of flight and pursuit. After a little, the man and the ram were never out of each other's sight. Krag could not speed away, for hunger pinched, and he must spend hours daily in seeking scanty herbage under the snow; but he kept out of range, and guarded his life with such watchfulness and patient acceptance of this harassing fear and famine that a generous hunter might have spared him. But Scotty, with the vigor of half a lifetime wasted in the hardships of this trail, lived now only for his purpose; he took Krag's life, and won a prize that cursed him to his death.

The other stories are simpler. "Tito" is the history of a coyote that, through adversity, learned more than coyote wisdom; "The Kangaroo Rat" is a fanciful study; "Johnny Bear" is, in the main, the amusing sketch with which the author has pleased many audiences; "Chink" tells how a timid pup became a hero through loyalty; "A Street Troubadour," a somewhat ragged story, relates the adventures of sparrows in Fifth Avenue and Madison Square; and "The Mother Teal," most simple and charming of all, describes the overland journey of a young brood forced by drought to seek water.

Missions Catholiques Françaises au XIXe Siècle. Avec la collaboration de toutes les Sociétés de Missions. Paris: Armand Colin. 1901. Vols. I., II., III.

Under the editorship of Father J. B. Piolet, S. J., there is being published a really valuable history and description of the French Roman Catholic missions of the present day. The work, which will be completed in six volumes of more than 500 pages each, already covers the nearer East—Turkey in Europe and Asia, Armenia, Persia, Mesopotamia, Syria, and Egypt—Abyssinia, India, Further India, China, Korea, and Japan. The describers and historians of each field are evidently thoroughly competent and well informed; and though their attitudes and (it may be) prejudices may strike us sometimes rather strangely, yet it is for us to use their narratives and spirit to rub down our own angles. The point of view throughout is openly French and Jesuit. Protestant missionaries, especially Anglo-Americans, are emissaries of evil, sowing tares and misleading youth; between the Greek Church and the English occupation of Egypt there is not much to choose; as, in the legend, Marcus Whitman saved Oregon for the Union, so a Jesuit missionary saved Cochin China and Tonkin for France. "La France," it is true, becomes at times a little oppressive, and stories of the national aggressiveness of French missionaries become more credible. A different type of missionary, more chauvinistic, more one-ideaed, perhaps also more absolutely devoted, than our Yankees, shows itself to us. And behind it all rises the tremendous fabric of the Roman Curia, the same for centuries, watching empires and kingdoms grow and dwindle. France, the oldest daughter of the Church, the Holy See, the Society of Jesus, begin to ride the imagination as these pages are turned. The same power which treated with Kubla Khan treats with the modern Mantchus in the same city of Pekin.

Especially weighty and instructive is the hundred-page general introduction by M. Étienne Lamy on "L'Apostolat." It is a Jesuit philosophy of the history of Europe. For M. Lamy the history of missions is the history of the Church, and the Church means, or should mean, mankind. Through his whole *essai* the French hold the centre of the stage. As the Franks, they save the Papacy from the Arians, and Europe from the Muslims; as emperors, Charlemagne and his descendants uphold the papal power, and it is only when the temporal rule has slipped to the undutiful Germans that the long conflict of emperors and popes begins. Yet with all this there is great candor towards the growing Protestant schism. It had its excellent reasons, social and political; reform was clearly called for. The Albigenses, and Wiclif, Huss, and Luther had to come like offences into the world. But it was things civil which brought them, just as the civil arm crushed some of them out in blood, of which civil arm M. Lamy highly disapproves. Worst of all, the Dominican traffic in indulgences raised undoubted scandal, the existing monastic orders generally had degenerated, and gave much good ground for cavil. Then the Jesuits appeared, and with them the new life. There is a dangerous passage describing how even this order, "through its obedience" to the papacy, was led away for a time to aid Philip II. of Spain and plot the spread of the faith by force of arms. The Jesuits obeyed Rome unwillingly; now appeal to the secular arm is abandoned, and they are proved to have been right. Thus M. Lamy is a Jesuit first and a Romanist second. Even in passages where he speaks elaborately of the wisdom of Rome, as on the destruction of the Jesuit systems in India and China, there is a ring to his words that hints of satire. Last came the fatal eighteenth century, when France and the Society both went down. For the triumphant record of the nineteenth century M. Lamy refers to the narratives which follow. That he may do with justice and pride. They will shake many of us out of our ignorant provincialism, and lay bare that other side in religion, sociology, and politics which is so hard to reach.

American Duck Shooting. By George Bird Grinnell. Forest and Stream Publishing Co.

This comprehensive treatise is another addition to the literature of wild-fowl shooting, which now assumes such large proportions. While the author does not, with one exception, advance any novel theories in regard to this form of sport, yet under a single cover he brings together a mass of information, and his conclusions may be said to be final. He gives a complete history of the duck family from swans to fish-ducks, each species accompanied by an accurate portrait by Mr. Edwin Sheppard, than whom no one is more competent, technically, to undertake the task. This is followed by an account of the various methods employed in wild-fowl shooting, with a dissertation on duck-guns and the mechanical devices used in the pursuit.

In the last section of his book Mr. Grinnell devotes a chapter to an unexpected peril which menaces some of the members of the duck family. This discovery dates only from 1894; consequently, alarm has not as yet developed into a panic among gunners of shallow-feeding wild fowl, to which it particularly refers. According to Mr. Grinnell, on certain feeding-grounds of swan, geese and ducks, where they are decoyed,

> "each season great quantities of shot are fired. . . . Much of it falls on the feeding-grounds of the wild fowl. In feeding, geese, ducks, and swans—whether by accident or design—take into the stomach, with sand, gravel, and food, more or less of this shot. When the shot has passed into the gizzard it is subjected to the same grinding process as grain, grass or other food, and, being softer than the sand, it is ground into minute particles. These fine particles, acted on by the acid of the digestive organs, yield a soluble lead salt, which, being absorbed into the general system, causes death."

Heretofore those who have shot wild fowl have been under the impression that the only form of lead poisoning to which the birds are subject comes from a well-aimed gun, and is usually fatal. If Mr. Grinnell's theory, however, is correct, the most inaccurate shot, by firing pellets of lead over the feeding-grounds of wild fowl, may create as much havoc as does the most skilful gunner.

Elementary Treatise on Navigation and Nautical Astronomy. By Eugene L. Richards. New York: American Book Company. 1901.

With the growing maritime interests of our country, the proportion of college and university students who will desire a knowledge of navigation must also increase. Some of our institutions of learning have long offered courses in this very practical science; others have recently added such a course, and there may now be said to be an American demand for a brief but lucid textbook. The English market has been flooded with such books, none of which seem fully to meet the needs of teachers here; and out of the Yale course, among the first established, has now arisen this clearly written and finely printed text, the outcome of the author's own teaching. Naturally, Professor Richards has drawn largely upon Bowditch's 'Navigator,' and Martin's 'Navigation,' and his brief text forms a very competent introduction to either of these standard treatises. The non-mathematical student, however, can scarcely take up the work to advantage, as a knowledge of geometry and trigonometry, both plane and spherical, is prerequisite. All colleges might advantageously offer navigation as a junior or senior elective.

The astronomy of navigation occupies a necessarily large part of Professor Richards's treatment, and he does not at all touch upon the practical handling of vessels at sea, that being rather a separate art by itself, better known as seamanship. His chapters on "Great Circle Sailing" and on "Courses" are perhaps the most satisfactory, and the teacher who approves of abundant numerical examples will enter no complaint of their paucity here. A supplementary chapter on Sumner's method would hardly have extended the book beyond due limits, and an index to such a

volume, even if small, is still worth the while. A useful section is appended, defining the terms of nautical astronomy concisely; also, a very few serviceable tables.

Touring Alaska and the Yellowstone. By Charles M. Taylor, jr. Philadelphia: George W. Jacobs & Co. 1901. 8vo, pp. 388. Ills.

This book is the consequence of a journey over the Canadian Pacific Railway from Montreal to Puget Sound, thence over the usual Alaskan tourist steamer route, including a side trip to Lake Bennett over the Yukon and White Pass Railway, and eastward again over the Northern Pacific to the Yellowstone Park. It is neatly printed, with a number of "process" illustrations from photographs taken by the author, many of which repeat very familiar scenes common to numerous publications on the region, while a minority, less hackneyed, are more interesting. The text contains not so much a description of the scenes visited, or an account of the details of the journey, as a record of the author's emotions, with streaks of platitudinous moralizing. This, doubtless, has an interest for the author's family and friends, but why it should have been offered to the public in so pretentious a form we cannot imagine. Such a record bears to a real work of travel or recital of experience by a writer of taste very much such a relation as the verses of Martin Farquhar Tupper do to those of a real poet. Yet we remember that Tupper attained a wide popularity, and doubtless for readers who like this sort of thing it is just the kind of thing that they will like. At any rate, it cannot properly be regarded as literature, as a contribution to geographic science, or even as a compilation of useful facts.

BOOKS OF THE WEEK.

Bain, R. N. Peter III., Emperor of Russia. E. P. Dutton & Co. $3.50.
Boardman, G. D. Our Risen King's Forty Days. Philadelphia: J. B. Lippincott Co. $1.25.
Clifford, Mrs. W. K. A Long Duel: A Serious Comedy. John Lane. $1.25.
Fargo, Kate M. Songs Not Set to Music. Abbey Press. $1.
Godfrey, Elizabeth. The Winding Road. H. Holt & Co. $1.50.
Harris, H. E. The King of Andorra. Abbey Press. $1.25.
Johnston, J. W. The Riddle of Life. Cincinnati: Jennings & Pye; New York: Eaton & Mains. $1.50.
Kemp, E. L. History of Education. Philadelphia: J. B. Lippincott Co.
Lowell, J. R. Democracy. Houghton, Mifflin & Co. $2.
Meakin, N. M. The Assassins. H. Holt & Co. $1.50.
Nicolls, W. J. Graystone. Philadelphia: J. B. Lippincott Co. $1.50.
Parker, Arnold. Ping-Pong. G. P. Putnam's Sons. 75 cents.
Rideal, Samuel. Water and its Purification. London: Crosby Lockwood & Son; Philadelphia: J. B. Lippincott Co.
Thackeray, W. M. Barry Lyndon. London: J. M. Dent & Co.; New York: Macmillan.
Wheeler, Jeannette. Josephine Grahame, a Romance, and Other Stories. Abbey Press. $1.50.
Young, D. F. Behind the Grill. Abbey Press. 25 cents.

Henry Holt & Co., 29 West 23d St., New York,

HAVE RECENTLY PUBLISHED

THE ASSASSINS. By N. M. MEAKIN. $1.50.

A Romance of the Crusades with the "Old Man of the Mountain" and his "Assassins" and Sultan Saladin among the leading characters. Sir Walter Scott and Mr. Hewlett have used these characters only episodically.

THE WINDING ROAD. By ELIZABETH GODFREY. $1.50.

In this novel the author shows a distinct progress in her art. She describes the adventures of a half Gypsy fiddler and the woman who loved him and followed him through rare by-ways of Europe. A story full of the spirit of the open.

THE WOOING OF SHEILA. By GRACE RHYS. 2d Impression. $1.50.

Nation: "A sweet wholesome story. . . . Melodrama, but none the worse for that. . . . We love Sheila."

THYRA. A Romance of the Polar Pit. By ROBERT AMES BENNET. Illustrations by E. L. BLUMENSCHEIN. $1.50.

A MANUAL OF THE FLORA of the Northern States and Canada.

By Director N. L. BRITTON of the New York Botanical Garden. 2d Impression. 1080 pp. 8vo. $2.25 *net.*

This Manual contains 4,500 descriptions, probably one-third more than any other.

LITERATURE AND ART, being a new volume of Champlin's Young Folks' Cyclopædia. With 270 illustrations. $2.50.

ENGLISH ROMANTICISM. XIX CENTURY. By Prof. H. A. BEERS. $1.75 *net.* (Postage 15c.)

SCHILLER'S LIFE AND WORKS. By Prof. CALVIN THOMAS. With photogravure illustrations. $3.25 *net.* (Postage 21 cts.)

NEW NOVEL BY MRS. WALFORD.

Charlotte

By L. B. WALFORD, author of "Mr. Smith," "Leddy Marget." Crown 8vo, $1.50.

"A bright, rapid story of modern life. The interest centres round Charlotte, who will be voted one of the most attractive of Mrs. Walford's heroines."—ACADEMY, London.

The Works of Theodore Roosevelt

Standard Library Edition

8 vols. 8vo. Illustrated. Large clear type. Bound in green cloth, with gold lettering. $2.50 per volume. The set, $20.00. Half-calf, the set, $40.00.

This fine edition brings together in uniform binding works hitherto obtainable only in varying forms. It includes some of the most valuable and characteristic writings of the President. No author has produced more readable hunting books; while the two histories are able and authoritative accounts of times concerning which no American should be ignorant.

TITLES

The Winning of the West (4 vols.)
The Wilderness Hunter (1 vol.)
Hunting Trips of a Ranchman (1 vol.)
The Naval War of 1812 (1 vol.)
American Ideals, and Other Essays (1 vol.)

THE SOCIAL EVIL

With Special Reference to Conditions Existing in the City of New York. A Report Prepared Under the Direction of the Committee of Fifteen. 12mo, *net*, $1.25 (by mail, $1.40).

A careful study of conditions and of the remedies attempted in European cities, together with suggestions for remedying the evil.

LABOR AND CAPITAL

A Discussion of the Relations of Employer and Employed. A collection of forty-five papers by eminent authorities. Edited with an introduction by JOHN P. PETERS, D.D. (Ready in April.)

A BOOK OF SECRETS

With Studies in the Art of Self-Control. By HORATIO W. DRESSER, author of "Living by the Spirit," "The Christ Ideal," etc. 12mo. *Net*, $1.00. (By mail $1.10.)

The essays, each a message from a concrete experience, are epigrammatic in style, and form the most condensed and yet the most helpful and advanced of this author's works.

FIELD BOOK OF AMERICAN WILD FLOWERS

By F. SCHUYLER MATHEWS. Long 16mo. With 24 colored plates and 200 illustrations from nature by the author. Any botanical book by Mr. Mathews is valuable, but this has the unique merit of being a *pocket botany*. Its illustrations have never been excelled. (Ready in April.)

MONSIEUR MARTIN

A ROMANCE OF THE GREAT SWEDISH WAR

By WYMOND CAREY. 12mo. Net $1.20. (By mail, $1.35).

A stirring tale of the opening years of the great Swedish War. As befits the times, the plot moves rapidly, and the pages are filled with intrigue, adventure violence, and the love of woman.

PING PONG

(Table Tennis.) The Game and How to Play It. By ARNOLD PARKER, Champion of England. 16mo. Many illustrations. 75 cents.

Sixth Edition in Three Months

The Man from Glengarry

By RALPH CONNOR.

"The material is magnificent in its contrasts and opportunities. Ralph Connor is a man to keep in mind as one of the most virile, faithful, and wholesome writers of the day."—*Public Ledger, Philadelphia.*

125TH THOUSAND *$1.50*

A Thrilling Tale of a Thrilling Time

DEBORAH

By JAMES M. LUDLOW.

THE STRONGEST ROMANCE OF ITS TYPE SINCE "BEN HUR"

"The author has the wealth and vigor of the oriental imagination. Characters are in this book with fibre like some of Shakespeare's best. The ambition of Deborah is as daring as that of Macbeth."—*Book News.*

25TH THOUSAND *$1.50*

By Dr. W. C. GRAY of the "Chicago Interior."

Musings by Campfire and Wayside

Illustrated. 12mo. Cloth, $1.50 net

"*Dr. Gray is everywhere genial, wise, hearty, inspiring.* He loves God with the love of a child, and he loves his works and his ways. All nature is full of voices for him—the trees, the wind, the rain, the lake, the hills, the sunshine, as well as the children and animals about him—and he knows how to interpret them."—*The Examiner.*

By Dr. ARTHUR H. SMITH.

CHINA IN CONVULSION

2 vols., Copiously Illustrated, $5.00 net

"Throughout this great and unique work is vividly portrayed a wonderful combination of interests, old and new, national and international, provincial and racial, political and social, commercial and educational. This graphic, masterly, and admirably judicial presentation of the whole situation will be everywhere accepted as eminently authoritative."—*N. Y. Tribune.*

"The final authority on the most significant epoch in Eastern history."

Dr. W. A. P. Martin on the Intellect of China

THE LORE OF CATHAY

Illustrated. 8vo. Cloth, $2.50 net.

"Of China's Intellectual Life no one has more qualifications to write. It summarizes the scholarship, philosophy, and thought of an empire."—*The Dial.*

AN ESSENTIAL COMPLEMENT TO "A CYCLE OF CATHAY."

By Hugh Black, M.A., Author of "Friendship"

Culture and Restraint

8vo. Cloth, Gilt Top, $1.50 net

". . . . . This is a fragmentary suggestion of Dr. Black's philosophy. He maintains it with a gentleness and dignity in beautiful accord with his central idea of Aristotelian moderation. He meets on their own plane writers of standing and power. He elaborates his thought without wordiness and with potency."—*N. Y. Times.*

FLEMING H. REVELL COMPANY

New York: 158 Fifth Ave. Chicago: 63 Washington St.
Toronto: 27 Richmond St., West.

THE LAUREL SONG BOOK

Edited by WM. L. TOMLINS

327 pp. Cloth, $1.50. 327 pp. Boards, $1.00.

"The Laurel Song Book" contains the most remarkable collection of music for schools and classes that has ever been made, and undoubtedly marks an epoch in the musical history of this country.—W. S. B. MATHEWS.

No collection of songs ever published has ever met with so wide and instantaneous a recognition from our foremost musicians and teachers.

LYRICS

By JOHN VANCE CHENEY

Cloth, $1.25

The first complete edition of Mr. Cheney's best verse.

In type and binding the book is worthy of its excellent contents.

"A Poet who can unquestioningly be admitted within the sacred circle of genius."—*Boston Transcript.*

"A Poet in attune with nature, with life as it is."—*Chicago Tribune.*

PIERRE LOTI'S

STORY OF A CHILD

Translated from the French by CAROLINE F. SMITH, with an Introduction by Edward Howard Griggs.

306 pp. Cloth, $1.25.

"One of the most delightful of books; its charm cannot be described in a few words of brief notice. It represents the subtle, permeating poetic imageries of a mind that has retained enough of the ideal to enter with zest into all its childish outlook upon life and the familiar aspect of daily happenings. A sympathetic reading of it should serve as a refreshing draught to any jaded adult."—*The Outlook, New York.*

"The publishers of Loti's Story of a Child have been especially fortunate in securing a translator able to match and convey the charm of Loti's literary style."—*Brooklyn Eagle.*

Travel.

YOUR SUMMER OUTING

THE railroads have decided to sell tickets to Colorado next summer at *very* low rates, so that people in moderate circumstances can go there at moderate cost for their vacations.

There is no place where one can derive so much benefit in a given time as in Colorado.

The climate is delightful, the mountain scenery is famous the world over.

As to the hotels and boarding houses, they are excellent and not expensive.

Ask me to send you a copy of our hand-book of Colorado. It tells all about places and prices. Gives a lot of useful information and has a good map of the state.

DR. GRAY'S "Nature's Miracles."

Great in simplicity, lucidity, and captivating interest. Appeals to both youthful and mature readers. (20th thousand.) Send for "*Critical Opinions*," 3 vols., singly or sets, 60 cents each, net. All Booksellers, or

Fords, Howard & Hulbert, Bible House, New York.

AN EDUCATIONAL DIRECTORY

I.—The NATION stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in the NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

CHARLES SCRIBNER'S SONS, New York

The Nation

VOL. LXXIV—NO. 1916. THURSDAY, MARCH 20, 1902. PRICE TEN CENTS.

When the New York **MAIL and EXPRESS** declared that "The Valley of Decision" revealed its author "ONE OF THE GREAT NOVELISTS OF THE DAY," it simply sounded the advance note of the great chorus of opinion now rising from the press of the United States.

EDITH WHARTON'S

The VALLEY of DECISION

Is now recognized as an important event in the development of American literature, an event disclosing the existence of a new Master.

THE PROOF:

The EAST:

BOSTON TRANSCRIPT: "Coming in the midst of an epoch overcrowded with works of fiction, 'The Valley of Decision' *stands out giant-like above its surroundings.* It stands, indeed, almost without a rival in the modern literary world, and there can be little doubt that it *places Mrs. Wharton at once side by side with the greatest novelists* of the day."

NEW YORK TIMES SATURDAY REVIEW—(HAMILTON W. MABIE, reviewer). "It is individual and original to a high degree. . . . It is rare and fine and *full of distinction.* . . . A novel of notable charm and ability. . . . A study of temperament of a very artistic kind, admirable in its poise."

NEW YORK MAIL AND EXPRESS: "Demonstrates once for all that *she is a great novelist* as well as an exquisite artist . . . . the American artist whom we can place unhesitatingly beside Mrs. Humphry Ward at her fullest and best."

NEW YORK EVENING SUN: "Those who predicted great things of Mrs. Wharton here find plenty of evidence that they prophesied because they knew. . . . Even in those respects in which she has not quite hit it off, her failure is *a finer thing than other people's successes.*"

The MIDDLE WEST:

CHICAGO EVENING POST: "A magnificent achievement. . . . The writer is unable to conceal his belief that of all the makers of fiction now active in America Edith Wharton is *first and foremost,* and that her 'Valley of Decision' *is the most distinguished literary performance yet accomplished on this continent.*"

KANSAS CITY STAR: "In seeking comparisons for it, one can name *only the masters in fiction.* It leaves one eager for Mrs. Wharton's next work. . . . There is much beauty in the book, precious beauty, of pictures and gems and gardens; of Renaissance palaces; of rain washed hillsides; of springs; of flowers; of mountains; of men and women; of character; of principles."

The SOUTH:

BALTIMORE SUN: "It is sure to greatly add to the reputation of its author, who has now *proved her title to take place among the foremost novelists* now living."

ST. LOUIS GLOBE-DEMOCRAT: "The greatest novel of the year—equal *to the best* that has come from the pen of Mrs. Humphry Ward.'

LOUISVILLE COURIER-JOURNAL: "At a single bound Mrs. Edith Wharton has achieved a most conspicuous place as an American fiction writer. . . . To the thoughtful, to the watchful, the hopeful advocate of an American literature, this novel takes on a meaning as *the most splendid achievement of any American man or woman in fiction.* It is *in a class by itself,* and he who reads will understand this assertion."

In two volumes, $2.00

Back Numbers of the Nation.

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., or Mr. A. S. Clark, 174 Fulton St., New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LXXIII. comprising the last half year of 1901.]

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

CONTENTS: The Grattan Parliament and Ulster—The Earl-Bishop of Derry—Lord Clare—Castlereagh and Ireland in 1798—Plunket and Roman Catholic Emancipation—Sir Boyle Roche—Thomas Steele—The French Invasion of Ireland in 1798.

"We congratulate Mr Falkiner on having written a highly useful and interesting book at a very opportune time."—DAILY NEWS, LONDON.

"The volume is a substantial contribution to Irish history, and is, moreover, of good literary quality."—SCOTSMAN.

With the Royal Tour

A Narrative of the Recent Tour of the Duke and Duchess of Cornwall and York through Greater Britain, including his Royal Highness's Speech delivered at the Guildhall on December 5, 1901.

By E. F. KNIGHT, Special Correspondent of the *Morning Post* accompanying the Royal Tour; Author of "Where Three Empires Meet," etc. With Maps and 16 Illustrations. Crown 8vo, $2.00. [*Just ready*

"Mr. Knight is a very vivid writer, and his account of the tour and of what he saw and heard in its course makes excellent reading. No reader, indeed, will begin the book without going right through it."—ABERDEEN FREE PRESS.

China and the Powers

A NARRATIVE OF THE OUTBREAK OF 1900

By H. C. THOMSON, Author of "The Chitral Campaign," etc. With 30 Illustrations and 2 Maps. 8vo, $4.00 [*Just ready*

*** This work gives no account of the Siege of Peking, and only a mere epitome of the Seymour Expedition, inasmuch as there have already been full narratives of both; but the investment and bombardment of the foreign settlements at Tientsin, and the assault and capture of the Tientsin native city are described at considerable length, as they were of great interest; nor has there yet been, to the author's knowledge, any detailed description of them. An effort has been made throughout to present the Chinese view of the different matters in dispute equally with that of the Powers.

Ordination Addresses

BY

The Right Rev. W. STUBBS, D.D.,

ARTHUR HENRY PIERCE, Ph.D.

Professor of Psychology in Smith College, Late Kellogg Fellow at Amherst College.

With over 50 Illustrations. Crown 8vo, pp. viii+361. Price, $2.00 *net*. By mail, $2.12.

". . . It deals in a technical way with a set of problems of special interest to experimental psychologists. Makes distinctly valuable contributions to the topic."—THE DIAL.

LONGMANS, GREEN, & CO., 91-93 Fifth Avenue, New York

THERE is no need to tell the regular reader of The Evening Post that it is a thorough newspaper, printing all the news that interests persons of intelligence. Besides the news service of the Associated Press, it has special correspondents in all important news centres.

Its complete news service, combined with numerous special and exclusive features of general interest, makes it an eminently satisfactory newspaper.

The Evening Post

devotes considerable space to matters of interest to women. Its "Suggestions for the Household" and "Women and Their Work" cover a wide range of subjects that appeal to the wives and daughters of the household. The articles on Fashions, Art Needlework, Home Decorations, and kindred topics are particularly interesting. The high character of The Evening Post and the fact that nothing is ever printed in its columns which would offend the most pronounced moralist makes it essentially

BRIGHTON BRANCH.

The Nation.

NEW YORK, THURSDAY, MARCH 20, 1902.

The Week.

The Senate passed the Ship Subsidy Bill on Monday by a vote of 42 to 31. All the Republicans voted for it except the six from Vermont, Wisconsin, and Iowa. All the Democrats voted against it. Mr. McLaurin of South Carolina, who is not acknowledged as a member of either party, voted for it. Thus the Republican party is committed, so far as the Senate can commit it, to the policy of making gifts of public money to prosperous citizens engaged in trades already flourishing. It is a measure fraught with the weightiest consequences, social and political, and one before which the House of Representatives may well pause. As to the prospects of the measure in the House, it should be observed that, if the same proportion of Republicans should vote against it there as in the Senate (*i. e.*, one-seventh), and if all the Democrats should vote against it, the bill would yet fail to become a law. We think that it will fail to become a law at this session, and that its supporters will not risk a vote upon it on the eve of a Congressional election. That the ship-building industry is flourishing and prosperous, independent of subsidies, has been shown repeatedly in the course of the debate on the subsidy scheme, which has been going on during the past four years. We have before us a list of the ocean-going ships now under construction in the various yards on the Atlantic and the Pacific coasts, compiled and published by the *Marine Review* of Cleveland, O. The list fills eight closely printed columns of the names and description of ships now on the stocks in sixty-nine shipyards, not counting any on the great lakes or any under construction for the United States navy. Naval vessels, however, should be counted, in any estimate of the needs of American capital and labor in the ship-building trade. It is therefore worth mention that there are now fifty-one war-ships under construction for the navy, with a total displacement of 264,987 tons, and costing for hulls and machinery $74,731,666.

When Senator Hanna's attention was called, in the course of the debate last Saturday, to the crowded condition of all our ship-yards, he thought that it was a sufficient answer to say that the ships were nearly all for the coasting trade. Naturally and necessarily so. Foreign-built ships are not allowed to engage in the coasting trade. Therefore, if the coasting trade is carried on at all, the ships for replacement of those that are used up or out of date, and to meet the increase of traffic, must be built in our own yards. They have the preferred place, and it may easily happen that there is little room in the yards at present for any work except that of coasting and naval vessels. Yet it was made clear to Senator Hanna that there are eight or ten large steamships for the foreign trade now under construction by American builders. He thought, however, that these were built here in the prospect of getting a subsidy, and that if the Subsidy Bill should not pass, they would be operated under foreign flags as soon as they were ready for business. It is strange that somebody did not ask him whether putting them under foreign flags would cause the freight and passenger money to go to foreigners. The theory of the bill, all the way through, has been that all steamship earnings made by foreign ships are a dead loss to Americans, and that the registration of the ship is the sign and proof of ownership.

A bill to limit the meaning of the word "conspiracy" has been under consideration by the Judiciary Committee of the United States Senate, which threatened to make a radical change in the treatment of the matter by the courts. But an amendment to the bill was adopted by the Committee on Monday, which takes the life out of the measure. In its original form the bill provided that no act of a trade combination should be deemed criminal, "if such act committed by one person would not be punishable as a crime." This act would have put all concerted actions of striking bodies beyond the jurisdiction of the Federal courts, unless such action were accompanied by violence. Thus, no injunction could stand against a boycott or against picketing as such. In its amended form, the bill leaves the courts full discretion in every case where "the purpose or effect of such conspiracy shall be to create intimidation by a show of physical force . . . or the occasioning of injury to the property or business of the complainant, *or is likely to result in such injury.*" It is plain that in its present form the bill makes judicial injunctions against strikes easier rather than more difficult to obtain. We cannot believe that the powers of the courts need any extension in this matter. Practically the courts of all degrees have shown a disposition to strain their powers to the limit of legal warrant, and frequently beyond that of expediency. We observe, in this connection, that the Court of Errors and Appeals of New Jersey has confirmed the sentences which the Court of Chancery imposed upon the picketers in the Paterson strike last summer, although these sentences carried the unusual feature of imprisonment for contempt.

The House of Representatives "broke the record" last Friday by passing 229 private pension bills. This was the largest number ever "put through" at one sitting. Nearly all of these bills were for increase of pension in cases where an increase had been disallowed by the Commissioner of Pensions. The total amount of the pension to be allowed in each case was stated in the bill, but the amount that the pensioner was previously receiving was not stated, nor was any mention made of the reason for the increase. Mr. Sims of Tennessee, a member of the Pension Committee, said that the average increase in these bills "was 200 per cent. over and above what the Bureau allows." This means that, after establishing a Pension Bureau and providing a large and expensive force to administer the very liberal laws relating to the subject, Congress takes the job out of the hands of the Commissioner and his medical men, and doubles or trebles the pensions by passing bills which the members themselves cannot possibly understand. The excuse or pretence for this reckless and demoralizing policy is that the Commissioner of Pensions is doing injustice to the soldiers. Congressman Gaines of Tennessee ironically asked the question, "Why does not the distinguished President turn that Commissioner out and put in one who will do justice?" That is just what the pension-claim agents are trying to accomplish. They are as fierce against Commissioner Evans as they were during the McKinley Administration.

It is not surprising that the Chinese Government has officially protested against the reënactment of the Chinese Exclusion Law, particularly with reference to the Philippines and Hawaii. It is less than two years ago that American troops were fighting their way to Pekin, primarily to save the legations, but secondarily to keep the Chinese empire open to Americans and American trade; and Secretary Hay's able diplomacy has steadily kept the latter end in view, despite Chinese hostility. Now the Chinese feel that there is quite as much justice in their claim for admission to the United States as in the American desire to exploit the Celestial Empire. Particularly in regard to the Philippines is their case a strong one. The Filipinos not only have never objected to their presence, but have welcomed them. The Americans, however, have carried all their race prejudices with them, and would exclude the Chinese lest the islands prove an open door

to the United States. As for the Americans resident in Manila, they disagree, as the doctors in charge of a serious case are apt to. Some believe that we owe it to the Filipinos to exclude all Chinese, and others are of the opinion that the islands simply cannot get on without them. It is plain that here is another difficult question, which has been rendered more than ever trying and vexatious by that very policy of Expansion which, we used to be assured, would prove the cure-all for most of our national problems.

The Secretary of the Treasury has decided to discontinue for the present the purchase of bonds as a means of disposing of his surplus, and to adopt the alternative method of depositing the money in national banks, and preferably in banks which are not retiring their circulation. The purpose of this discrimination is to "overcome the tendency to retire national bank circulation." This is not the first time that the Department has been compelled by the advancing price of bonds to withdraw as a purchaser from the market. When the 2 per cents are selling at 110 and 4s are close to 140, the strain should not be increased by Government purchases, for there is really no limit to the advance when there is one buyer in the market whose means and whose necessities are practically unlimited. Such a buyer can easily corner the market against himself. The Secretary is, therefore, fully justified in discontinuing his purchases. Whether he can thus overcome the tendency to retire national bank circulation is not so clear. Depositing the surplus in the banks requires bonds as security. The bank which applies for deposits must either use bonds which it already owns or buy others in the market. Those which it owns are presumably pledged for circulation, and, under the terms of the Secretary's order, cannot be withdrawn and repledged for Government deposits. Therefore, the purchase of bonds for the latter purpose will probably sustain the market at the present high price, which constitutes the temptation to retire circulating notes and realize the premium on the bonds. So the Treasury and the banks are travelling in a circle, and the only way out of it is the passage of a law to enable the Secretary to deposit the money without requiring bond security.

In the absence of any reform in the disposition of the surplus, it is not quite fair to accuse banks of unpatriotic behavior in retiring their circulation and selling the security bonds. As the country is not engaged in any war, and has none in prospect, and even the Monroe Doctrine is comatose, the element of patriotism as a factor in the money market seems rather uncalled for. Bankers are not in the business for their health or to win the admiration of the community. They are moved solely by the idea of profit. It was the intention of the National Bank Act to make note-issuing profitable, but it has to a large extent ceased to be so. According to the last report of the Comptroller of the Currency, the annual profit on $100,000 of circulation secured by 2 per cent. bonds is only $796.84 over and above what could be obtained by lending at 6 per cent. the money that the bonds would cost. This is only seven-tenths of 1 per cent. to pay for all the trouble of maintaining the circulation. Even this small profit is liable to further deduction unless the circulation is kept out all the time, since bank-notes in the vaults of the issuing bank bring no return. If circulation is secured by 4 per cent. bonds of 1925, which sell at about 139, there is a loss on note issues of $125.08 per annum on each $100,000, as compared with a loan of the purchase money at 6 per cent. If a bank has $100,000 of circulation outstanding secured by that class of bonds, its pecuniary interests require it to deposit greenbacks in the Treasury to secure its circulation, and to withdraw and sell the bonds and pocket the premium of $39,000. No blame can attach to a bank officer who takes that course, nor could he justify himself to his shareholders if he should fail to do so.

The denial by the War Department of Lieut.-Gen. Miles's request to let him end the Philippine war by using Indian methods was only to be expected. The General's application was tactless enough in view of the many times the war has already been ended. But, waiving that, the Department is quite excusable in rejecting such a plan from one who has never been in the Philippines, and the memory of whose extraordinary two-wheeled, chariot-like invention for protecting American soldiers in battle is still green. On the theory of letting well alone, the Department is content to have Gens. Chaffee and Bell continue their efforts, which appear to be bearing fruit and to be diminishing the Filipino activity. The incident merely emphasizes again the strained relations between the Commanding-General and the War Department, which would be intolerable in any other country, and which would certainly lead to the retirement or dismissal of Gen. Miles from any European army.

The status of Gen. Miles illustrates afresh the difficulty Secretary Root is having in finding officers of high rank to aid him in putting through his plans for the reorganization and higher education of the army, which he again urged upon Congress last week. Of the six major-generals, three—Brooke, Otis, and Wheaton—are on the verge of retirement, Chaffee is in the Philippines, and MacArthur is tired and anxious to rest at the head of a department. Gen. Young, the only remaining major-general, has been selected for the head of the new War College, and is the only one at all interested in its future. Of the brigadier-generals, Grant, Leonard Wood, and Funston are plainly unqualified, having been without any adequate military training, and having been pitchforked into their present places by President McKinley for political reasons. Gen. J. Franklin Bell, the only young and progressive brigadier, has been selected for the command of the Cavalry and Infantry School at Fort Riley. The others are in the Philippines, or are, for one reason or other, too little fitted by age and character of their service to help in the modernization of the army. It is no wonder that Secretary Root is anxious to create a general staff school for the making of generals.

Mr. Herbert Welsh has written an open letter to Secretary Root upon the use of torture by the United States troops in the Philippines. Mr. Welsh has but one object in view—the clearing of the good name of our soldiers, or, if this cannot be done, the rigorous punishment of those guilty of acts which Mr. Root admits are contrary to the articles of war. He cites the case of Lieut. Hagedorn, who tortured three Filipinos by giving them only salt fish and no water to drink for forty-eight hours. This "mistake of judgment" was excused by his commanding officer, so that the Lieutenant went scot free. But not for long, since, almost as Mr. Welsh was writing his letter, this flower of American chivalry was put under arrest and imprisoned in Manila for embezzling the funds of his regiment. Mr. Welsh has yet to hear of any attempt to start an official inquiry into the acts of Major O'Connell, also cited by him. When the War Department did get hold of a clear case, the shooting of a Filipino in the back by Lieut. Preston Brown, Second Infantry, as the Filipino was walking away, it commuted Brown's sentence from dismissal and imprisonment to a reduction in rank which will delay his impending promotion to captain only for a matter of eight months or so.

From Chicago, where Gen. Funston has been repeating his speech about hanging those Americans who dare to breathe so much as the words Filipino independence, comes the report that he is in danger of a reprimand from the War Department. If he is not, he ought to be. Nothing could be more nicely calculated to bring the service into contempt than his breathing out of threatenings and slaughter. Gen. Miles's breach of discipline was a very model of propriety compared with this lawless

talk of Funston's. That doughty warrior should heed the poet's advice, and show us more of that modest stillness and humility which best becomes even a hero-soldier in time of peace. He now explains to the reporter that his motion to hang all home traitors was intended only as an "abstract proposition." Very well, let Secretary Root make the corresponding rebuke also abstract. Let him address a letter to Gen. Funston saying that any officer who goes about prating of civil rights about which he knows nothing, and with which he has no concern, is acting like a fool, and had better take his own advice to "keep still." If Funston prefers a reprimand in this Joseph Surface style, of "a man who, etc.," by all means let him have it in that way. We remark, by the way, that he does exceedingly well to make his hanging "abstract." The first move of his to make it concrete would result in his capture by the officers of the law, and there wouldn't be any "dirty Irish trick" about it either, as he proudly says there was about his capture of Aguinaldo.

There are various points of view from which the Steel Corporation's tentative proposition to turn one-fifth of its billion-dollar share capital into bonds, and borrow $50,000,000 in addition, may be considered. At present we wish to call attention to one phase of the matter which, though affecting only a part of the proposed bond issue, is really vital to the discussion of industrial finance. We pointed out, in the earlier months of this momentous experiment, first, that in view of the immense and inevitable expenses for improvements or renewals, the most liberal possible surplus fund ought to be accumulated; second, that to provide a surplus large enough, dividend payments on the common stock at the outset would be unwise. The trustees thought otherwise, however. Quarterly dividends, at the annual rate of 4 per cent., have been paid on the half-billion dollars in common shares, total disbursements thus far, for the purpose, footing up $15,000,000. Now it appears, from unofficial statements of the proposed bond issue's purposes, that from twenty-five to fifty millions of the capital to be borrowed is needed for improvements. This will strike most students of the situation as pretty clear proof that our own position regarding dividend policy was sound. It is doubtless true that the projected improvements will make feasible very great economies, and that, with due attention to the sinking fund, the debt may be conservatively redeemed. But it is reasonable to ask, if borrowing is the wisest means of providing for needed improvements and renewals now, at the absolute high tide of steel trade prosperity and profits, how is the capitalization problem to be solved when we have fallen on other times?

The English Government is again finding that the Irish question will not down. What to do with the United Irish League is the problem now tormenting the Cabinet, and the dispatches say that divided counsels on that subject are threatening a rupture of the Ministry. It is all, we suppose, a part of the political manœuvring in connection with choosing a successor to Lord Salisbury. His speedy retirement from public life is on all hands reckoned a certainty, but who is to be the next leader of the Conservative party? Some say Chamberlain; others, Balfour. The latter is for moderation and conciliation in Ireland; the old Birmingham radical is for harsh measures. Mr. Wyndham, Secretary for Ireland, put himself squarely on record the other day against reviving the Crimes Act, for the suppression of the Irish League, maintaining that the ordinary law is sufficient to punish real crimes, and that the Government could not again expose itself to the reproach of "using the law to strike down political opposition in Ireland." Obviously, he could not stay in office if Chamberlain's policy of Thorough were to be adopted. This sharp difference of opinion between the two factions of the Cabinet is one more indication of the party embarrassments which will follow Salisbury's retirement. As for the Irish, their new League is rapidly becoming as formidable a power as the old Land League. Through the machinery provided by the Irish Local Government Act, it is getting almost complete control of local affairs. "Please, sir," said the Irish school-boy to the inspector asking the class in geography to define "latitude"—"please, sir, we have no latitude in Ireland. The Government won't allow us any." But the new Irish League is showing how they will take it, with or without permission.

The Italian Ministry took a new lease of life by gaining a handsome vote of confidence last Saturday, but the Premier, in reknitting the old alliance with the Socialists, is probably only putting off the evil day. Signor Giolitti, the political manager—the Joseph Chamberlain, one might say, of the present Ministry—has lately reiterated the principle that the strikes are "part of a great social movement of all classes of the proletariat to secure better conditions of life"; that, hence, they are a sign of social health, not of disease, and that, finally, the Government should maintain an impartial, if not a friendly, attitude towards all strikes which do not threaten violence or anarchy. Meanwhile the Ministry promises to contribute $6,500,000, being three-quarters of the entire amount, towards the increase in wages demanded by the railway employees. The Premier alleges precedent for such action in France and elsewhere, but every serious observer will feel that this temporary expedient to avoid an imminent peril may some time react disastrously upon the whole body politic. This huge appropriation for the benefit of the class of railway officials was in large part wrung from the farming classes, whose distress is notorious. Now the cultivators have their Socialist leagues, too, and their strikes. The Ministry, if the experience of a year ago should be renewed, might tell the Agrarian leagues that Agrarian strikers can claim no subsidy because such strikes do not, like strikes on the railways, imperil public order and inconvenience the entire nation; but the argument will not be received favorably by those who have seen their money voted away for the railway men. Signor Zanardelli has thoroughly committed himself to the Socialists, and, without imputation as to the character of his allies, is likely to learn the force of the proverb, "Needs must when the devil drives."

A curious parallel to the flouting of the reciprocity treaties which President McKinley negotiated is seen to-day in Germany, where the Agrarians stand stubbornly in the way of all commercial negotiations with foreign Powers. On Thursday Von Richthofen, the Foreign Secretary, declared in the Reichstag that the passage of the tariff schedules demanded by the Agrarians would put it out of his power to conclude the pending reciprocity treaty with Italy, and he might have added that the Agrarian policy is equally incompatible with all the efforts which the Government is making to secure new outlets for German trade. Here the German Foreign Office finds itself exceptionally in the situation which is constant with our own State Department—that of being obliged to square its well-considered policies for the entire nation with the selfish demands of a local group. The Foreign Secretary threatened to complete the negotiations with Italy, in the face of Agrarian opposition. One may doubt that such a threat will be carried into effect, at the risk of a reversal by the Reichstag. The incident shows, however, that the clash of Agrarian and industrial interests in Germany is as sharp as ever; that the Government's canal project is no nearer realization; and that the whole matter of tariff revision is likely to be postponed indefinitely. The comparatively novel feature of the situation is to find the foreign policy of the Empire seriously hampered by these internal dissensions. A war might be made or a military alliance contracted without a word to the Reichstag. But foreign policy concerns itself to-day less with war than with commerce, and here, even in an empire, the people who vote credits and tariffs hold the whip hand.

ELECTING SENATORS BY POPULAR VOTE.

There was a short but interesting discussion of a very important question in the Senate, the other day—whether there ought to be a radical change in the method of electing members of that body. Mr. Berry of Arkansas brought the matter up by asking that the Committee on Privileges and Elections allow a vote upon a resolution sent over from the House, proposing to amend the Constitution so that Senators shall be chosen by direct vote of the people. Chairman Burrows of Michigan disavowed any disposition on the part of the Committee to smother the question, but Mr. Hoar of Massachusetts, one of its members, declared that he would "not be hurried," and showed his purpose to delay action as long as possible.

The Massachusetts Senator went briefly into the arguments against the proposed change, and laid most stress on one point which appears to be conclusive in his mind. He maintains that the innovation suggested would violate a fundamental condition upon which the Constitution was founded—that the equality of the States in the upper branch of Congress should never be destroyed without the consent of every one. Mr. Hoar thinks that, if the Senate should be chosen by popular vote, like the lower branch, we should have two Houses of Representatives, differing only in the size of their constituencies, and that New York, Pennsylvania, and the other large States would then refuse long to allow the equality in the Senate of Rhode Island, Nevada, and other small States. "I believe," he says, "that what is left of that whole promise will be swept away like a leaf before the wind." This seems purely fanciful. The prohibition against interference with the rights of the smaller States will remain as binding, if the people elect Senators directly at the polls, as when they elect them indirectly through their Legislatures, and it is hard to see any reason why a movement against equal Senatorial representation should have any more chance of success in the one case than in the other.

One thing is certain—no theoretic argument of this sort will carry much weight with the public. Senator Hoar evidently does not at all appreciate the condition of public sentiment on the question of changing the method of election. He sneered at the recent action of the House of Representatives in passing unanimously the resolution for a Constitutional amendment as "half a joke," and intimated that all the signs of popular support represent only the activity of "some one man or some few men somewhere." The truth is, that the feeling in favor of the change has been growing steadily among intelligent and thoughtful men during the past dozen years, until a great many who at first opposed the innovation have come to favor it.

The success of unfit men in securing election to the Senate through Legislatures by wirepulling or corruption, when they might not have succeeded if they had been forced to go before the people, influences some, though unfit men are often elected Governors by the use of the same methods. Others are impressed by the injustice of a system which enables a party that is in the minority on the popular vote, to secure the Senatorship through its control of the Legislature, as has repeatedly happened in Connecticut; that State having more than once gone for a Democrat for President, and yet on the same day, under the town system of representation, elected a Legislature which chose a Republican Senator. Another argument for the proposed change is, that it would always result in an immediate choice, whereas the old system often delays one for weeks and months, and sometimes prevents it altogether, while practically wrecking the session of the Legislature. Delaware has now no Senator, because neither in 1898 nor in 1900 could the Legislature reach a choice. Three years ago the Legislatures of Pennsylvania, Utah, and California also balloted for Senator without result until their terms expired, and one seat from each of those States was vacant in the following session of Congress. The Legislatures of Montana and Oregon used up nearly two months in filling vacancies, a year ago, and the Legislature of Nebraska almost three months. Five years ago, not only did the Oregon Legislature fail to elect a Senator, but the controversy over the matter prevented the organization of the body and action of any sort. This was an extreme case of legislative paralysis from the mixing of State and Federal functions in the members, but there is never a Senatorial deadlock that does not harm the interests of the commonwealth which its lawmakers are chosen to guard. As the tendency towards deadlocks has grown steadily of late years, it is no wonder that relief is sought in a removal of the cause.

The abandonment of the machinery devised by the framers of the Constitution for giving a peculiar and superior complexion to the Senate is, however, a change quite as fundamental as Senator Hoar asserts, in a direction not contemplated by him. The provision by which the State Legislatures were empowered to elect United States Senators insured the subordination of State to Federal politics; maintained party divisions that were natural in the national field in a field (municipal as well as State) where they were uncalled-for and mischievous; made the "final end" of a Legislature not the proper affairs of the State, but the election of State Senators in the interest of national party supremacy; constrained the consciences of men to vote for unworthy candidates to the Legislature lest the party at Washington should be imperilled; and, in a word, prepared the way for the absolute domination of the machine, as we see it today in Pennsylvania, for a flagrant example, where the aspiring Senator creates his own Legislature, not merely for his own election, but for an instrument of local plunder and patronage in absolute subserviency to his assent to every species of enactments. Various causes have worked together to keep men of training and probity out of public life, and to precipitate that decay of our Legislatures which every patriotic thinker deplores; but we are persuaded that nothing has contributed so powerfully and so inevitably to the debasement of these bodies as the principle imbedded in the Constitution which is now being assailed. The contrivance has not only not worked as the founders intended, it has worked in the opposite way.

We have never actively favored the complete democratization of Congress as is now proposed. Our hope has been that some recovery might, by unforeseen agencies, qualify the Legislatures once more to pick out the flower of the commonwealth to represent Statehood in Congress. We are aware that popular election is no safeguard against Quays and Platts. Nevertheless, we cannot share Senator Hoar's alarm at a change in the old order which may, for the reasons just hinted at, prove to be a blessing in disguise.

CONNECTICUT'S UNDEMOCRATIC GOVERNMENT.

The anomaly of an undemocratic form of government in a State which claims the glory of the first written democratic Constitution is likely to continue, the Connecticut Constitutional Convention having rejected in committee of the whole an acceptable substitute for the present inequitable system of legislative representation. Only a faint hope remains that this verdict can be changed in the Convention proper. As a better result was only wished for, not really expected, this outcome of a half-century of agitation is not altogether discouraging. In fact, considering that membership in the Convention was based on acres, and not on people, the action is logical. As well ask the Connecticut House of Representatives to reform itself. That body had built the Convention on its own distorted model; had transferred to it its partisanship and its prejudice, and imbued it with the tradition that Connecticut is a federation of towns with vested and reserved rights, and that the town-unit system of legislative representation is an inheritance from the revered Thomas Hooker.

This Connecticut article of faith is pure tradition, as has been proved by judicial inquiry. It was not the settle-

ments of Windsor, Hartford, and Wethersfield—typified to this day in the three vines on the State seal—which adopted the famous Constitution of 1639, but "the inhabitants and residents" of those towns; and the only right they reserved was the one of home rule in local affairs—the cherished New England town meeting. Some little solace for the town-rulers is found in the fact that this first Constitution provided for equal representation in the Assembly of the three towns mentioned, but they conveniently overlook the further fact that it contained also an express recognition of the principle of popular representation. Delegates from any towns thereafter organized were to be "a reasonable portion to the number of freemen that are in the said towns." That was democratic and American. It was through the King Charles Charter, obtained by Gov. Winthrop in 1662, that the town-unit idea crept in. That English and aristocratic document limited representation in the Assembly to "not exceeding twoe Persons from each place, Towne or Citty," and this system, with slight modification, is retained in the existing Constitution.

This King Charles plan of legislative representation, though undemocratic in its basis, was not radically unfair at the date of its renewal in 1818. Then all the towns were small and agricultural. New Haven, with about 7,000 souls, and Hartford, with 6,000, were hardly more important than the hill-town of Litchfield, with its 4,600 people. But, with the decay of the agricultural communities and the rapid growth of the industrial centres, the disparity in population of the towns has widened by leaps and bounds until now one-sixth of the population of the State, dwelling in the little towns, controls the Legislature, determines the taxes, robs the cities of revenue, and chooses the United States Senators. Political revolutions—the remedy elsewhere for similar injustices—have never gone far enough in Connecticut. When, some ten years ago, the Democrats chose the Governor and a majority of the State Senate, the House of Representatives remained Republican—rock-ribbed as the hills from which a majority of its members come. It is even probable that, in a pinch, many Democrats in the small towns would join forces with their political opponents in defence of the town-unit idea, so strong is the rural worship of this Connecticut fetish.

Despite these handicaps, however, the cause of representative reform has slowly but steadily gained ground in the past fifty years, and has won many friends even in a Convention packed to oppose it. On the part of the reformers the contest has been largely non-partisan. In their ranks are many Republicans of prominence, some influenced purely by motives of justice, but the larger number—believers themselves in town representation—moved by a desire to persuade the little towns to concede something to the cities, lest in the coming greater storm the whole fabric of town unity in representation be swept away. The pleadings of these Republicans, more especially the Governor's, wrung from the Legislature a consent to submit to the people the question of calling a Convention, but did not avail to make that body a representative one; while their warnings of the party danger involved in rejecting all the proposals from the cities fell for the most part on dull ears.

Yet very little was asked of the towns. Morally bound by the provision in the call for the Convention that no town should be deprived of representation as a town, and recognizing the force of tradition and sentiment, the city delegates asked only that limited popular representation for the cities, somewhat commensurate with the number and importance of their legislative interests, be grafted upon the town-representation plan. Acceptance of such a proposition would have stilled the agitation, insured the adoption of the new Constitution, preserved the town-unit system, and continued the little towns in legislative control. Instead, with unimpeachable logic from their standpoint, the majority has voted to make town representation uniform, giving each town one Representative, and annulling the amendments adopted in 1874 and 1876, which recognized popularity to the extent of apportioning two Representatives to towns of over 5,000 population, and denying a new town separate representation unless it contained more than 2,500 people. The eighty-four delegates who so voted represent a smaller aggregate constituency than the two delegates from Hartford and New Haven, and no more graphic illustration could be given of the unrepresentative character of the Convention.

It is not conceivable that the people will accept this mockery of representative government, which is not bettered materially by the concession of increased city membership in an enlarged and popularized State Senate. That little gain for the cities, besides being in the wrong place, is no make-weight for the restricted representation in the House. It is an altogether unfair and undemocratic arrangement, popular confirmation of which would weaken the cause of real representative reform. Far better will it be, if the Convention will not reverse its decision, to continue the contest, and, taking a lesson in logic from the town-rulers, to abandon the mongrel plan of part-town and part-popular representation, and contrast the town-unit idea with a clean-cut democratic scheme of representation based on population alone. On that issue the State, aside from the House of Representatives, might be carried, and the town-rulers be thus despoiled of much of their power and patronage. There is just a possibility that this result, coupled with the educational influence of the Convention and of the campaign to follow, might bring the legislative majority to their senses, and open the way to another and a more representative Convention. The only alternative is revolution, not to be expected in "the land of steady habits," though certainly many justified revolutions have had less provocation than the insolent attitude of the Connecticut oligarchy.

OUR TIRED IMPERIALISM.

Chancellor von Bülow alluded deprecatingly, the other day, to what he called the "China-fatigue," which he said had become almost epidemic in Germany. There are signs that our own Imperialistic Titans are in like manner growing weary. They are "tired" of the Philippines. To talk to them about Cuba makes them look around for a spring tonic. Ask them how their permanent army of 200,000 men is getting along, where their big navy is that was going to be able to whip Germany with one hand, just how much of the Nicaragua Canal is dug, in what seas are the subsidized American steamers that were to invade all markets with American goods and bring back the spoils of the ends of the earth through the open doors of our custom-houses—and "that tired feeling" is painfully visible on their faces. They may be a World-Power, but they look uncommonly like a World-Weariness.

Such reaction and disappointment after a gorgeous paper programme of Imperialism were inevitable. The dreams which our old men dreamed, and the visions of our young men, immediately at the close and in consequence of the Spanish war, were truly grandiose, but to translate them into reality—there was the rub. We have now been more than three years about it, and what have we to show? We think that an honest and observant foreigner, taking a survey of the United States now, and comparing it with his estimate of five years ago, would say that the more we had changed, the more we had remained the same old thing. We talked, indeed, he would say, of having entered upon a "new era," and cast off our "swaddling clothes," but there we were, in fact, just the busy and argumentative democracy we ever had been—disputing over every new step; standing up vehemently for local against Imperialistic interests; and offering a dead weight of inertia in the shape of long and jealous discussion and infinite delays, for an impetuous Imperialism to dash itself against vainly and in despair.

There is nothing strange or vexing about this except to those who did not foresee that it would be impossible to

commit the American democracy to the new policy in a year. In reality, a decade will not suffice, nor a lifetime. Some philosopher has said that it is the common "solecism of power" to think to attain an end without employing the necessary means. Exactly that was the blunder of the creators of our new world of Imperialism. They had magnificent conceptions. Did not their stump-orators and their editors and platform-designers construct for us a splendid course of Empire? Why, we could already see the *Oregon* bursting through the Isthmus, Manila an entrepôt greater than Liverpool, and our happy colonists sending their products into the wide and free market of the United States! But they reckoned ill who left out the conflicting interests, the many Congressmen of many minds, only by whose appeasing and harmonizing could the star of Empire move at all. Schiller said that he could write a drama in five acts more easily than he could keep house for one day; and our Imperial playwrights have found out that it is easy to sketch the plot and plan the setting of a grand production of "Uncle Sam Imperator," but that the drudgery of the necessary governmental housekeeping is far harder.

No one need regret that the wheels of the Imperial chariot have thus driven heavily. We speak not as Anti-Imperialists, but as plain American citizens. No matter what the sweeping new policy proposed to our people, it is a good thing to know that it takes a long time to instruct and persuade them; that they are very inquisitive, and will insist upon having their questions answered; very cautious, and will desire to wait to see whereto this thing may grow; yes, and are very selfish, too, and will want to know where John Smith out in Ashtabula is going to be advantaged by a splendid scheme of world-empire at Washington. While we have only condemnation for the obstinate attitude of the beet-sugar Representatives to-day, we cannot fail to see in it a wholesome reminder to our empire-mongers. All their large and easy plans of greatness have got to satisfy the great mass of the people, the veriest "country witlings and chaw-bacons," before they can come to enactment. It is all very well for the American orator or statesman to urge the launching of our ship of state upon proud new seas, but there will always come to him the troublesome inquiry from each of a hundred exigent local interests, in the words of the tailor to Cowper:

> "Say, shall *my* little bark attendant sail,
> Pursue the triumph and partake the gale?"

It is not surprising that our extemporized Imperialists are growing weary of this continued rising of the petty interests of locality to thwart their noble schemes for the nation. Their chosen instrument, the Republican party, has been for many months little more than an organization to show how not to do it, "doing nothing reduced to a system." One reason for this cooling after the first flush, this stagnation after the early energy bent on doing all in a day, is that the whole Imperialistic policy now suffers from the misfortune—it has been said to be one of the greatest misfortunes of a statesman—of having appeared only "temporarily magnetic." If an orator makes only a first pleasing impression, but cannot command a long hearing, nor endure the test of meditation on his words, he can never be a leader of men. For a few months Imperialism seemed to cast a glamour over the minds of Americans; but its charm diminished on examination, and its feeble and discredited operation has now well-nigh completed the disillusionment. From being weary of it, the people will soon come to think the best thing to do will be simply to "write off" the losses incurred by that folly, and begin a fresh account.

A BRITISH ACADEMY.

A number of British scholars have recently petitioned the Crown for the incorporation of "The British Academy for the Promotion of Historical, Philosophical, and Philological Sciences." The aim of the petitioners is clearly to do for the historical sciences what the Royal Society does for the natural sciences. The immediate occasion of renewing a project which has slumbered quietly since Matthew Arnold's essay "On the Influence of Academies," was the fact that English history, philosophy, and philology were quite unrepresented at a recent international convention of the principal literary and scientific academies of the world, while, through the lack of any representative literary body, no English candidates were put forward in competition for the Nobel prizes in literature.

The plan is a conservative one, and it looks forward to a more ambitious career than that of a dozen existing societies only in so far as the names of the petitioners carry unusual weight. It is somewhat curious, then, that the whole project has met with no little disfavor, while its discussion has shown that there is in the English temperament a latent hostility to academies in any form. This feeling was particularly marked when it was suggested that the new institution might eventually include literary men. The idea of a literary academy was abhorrent. The petitioners themselves remark "the recognized difficulty, if not impossibility, of dealing adequately with belles-lettres, poetry, and fiction," and quite exclude these subjects from the purview of the proposed academy. It is admitted on all hands that the right men would rarely be elected to an academy of literature, while the wrong men would be chosen in numbers. Mr. Gosse, in connection with a former scheme of this nature, imagines the filling of a vacant chair; an archbishop quite unknown to the world of letters and a great historian being the rival candidates. Needless to say, the archbishop is triumphantly elected, and the press generally declares that "great honor has been done to literature." While the mood of persiflage is most common, criticism often assumes the more serious tone. Mr. Edward Dicey, in the *Nineteenth Century*, for example, appeals to "the common-sense view of common people," and concludes, with a certain emotion:

> "I think, whatever superior persons may hold to the contrary, it will be found that the British public does not wish for a British Academy, would much sooner be without it, and is of opinion that it would be either a mischievous or a useless institution, and would most probably prove both useless and mischievous."

Now, it is not incumbent on us to champion the idea of an academy; that has been done frequently and ably. But it may be well to point out the inferences which may be drawn from Mr. Dicey's very characteristic utterance. It is safe to say that no scholar but a British scholar would for a moment have referred the question of the utility of academies to "the common people." An academy, if it means anything at all, means a recognized seat of authority, to which the common people instinctively defer, or, as Renan puts it, an academy has especial facilities for "creating a form of intellectual culture which shall impose itself on all around." One may imagine the ironical shade of Matthew Arnold studying the appeal of a British scholar to the "Philistines"—that they in their wisdom may condemn the designs of the merely learned and "superior"; and taking a melancholy pleasure in recalling his prediction that the British will always "cry down criticism as the voice of an insignificant, overfastidious minority."

But the whole discussion brings out at least this noteworthy fact, that the average Englishman does not fully believe in the reality of literary as compared with scientific achievement. Successes in literature have been of an individualistic character. It is a question if the "common people," for whom Mr. Dicey chooses to speak, really discriminate in their reading, for instance, between the good and the bad. It is highly probable that Tupper and Tennyson passed for peers with those who read them for their doctrine, and it is certain that the average English reader of to-day could follow up George Eliot with Mr. Hall Caine without any feeling of an abrupt descent. Taste is "what a fellow likes." The difference in France is not that better books are read, but that the bad books are read with a sense of their inferiority. The English mind is capable of all imaginative flights, but it remains

half-ashamed of them. The English writers of any power have been a shy sort, little given to contact with their kind; and the exceptions, such as Browning, only emphasize the truth that the shamefacedness which afflicts the Englishman in the expression of any deeply felt emotion generally leads the English author to minimize his differences from other men, and to seek not public rewards, but the fit audience, though few, of readers whose appreciation is quite as discreetly veiled as was his own creative impulse. It is probably the feeling that for literary men as a class to seek publicity is in some way un-English—a kind of wearing their hearts on their sleeves—that accounts for the hostility to this modest plan for the academy.

Some might say that it is merely another instance of the trend towards science, with its concrete standards of achievement, and it is indeed notable that organizations like the Royal Society of Literature have, on the whole, languished. The Royal Society itself, which was founded in 1662, was to have included the eminent "in every kind of learning and good letters," but it was from the first distinctly devoted to natural sciences, and for years past has elected no literary man as such. Literature, as the present petitioners say, is "difficult, if not impossible, to deal with." This will always be true in a country which lacks standards for literature; and we cannot believe that for years to come a non-scientific academy will gain any real prestige, either in England or in America.

PIERRE LOTI IN CHINA.

PARIS, February 26, 1902.

It seems natural that the life of a sailor, the long days and months spent in the solitude of the sea, should contribute to develop the powers of observation. These powers have certainly attained the highest degree in an officer of the French navy, M. Viaud, who writes under the name of Pierre Loti. He first came into notice in a very remarkable book, 'Pêcheur d'Islande,' in which he painted, with an intensity of vision truly surprising, the northern seas where so many French sailors spend month after month every year. I am not personally very partial to mere description, and the abundance and choice of mere epithets do not reconcile me to a work which is wanting in dramatic interest. Pierre Loti is, however, so exceptional that he succeeds in commanding attention and admiration by mere description. He may be called a photographer in words; he struggles with nature without the marvellous help which color gives to the painter. As a true photographer, he sinks his own personality in his work; he belongs to no literary, philosophical, or political school; he has no special object, he is not viewy; he is merely a mirror, but what an admirable mirror—how sincere, how brilliant!

The list of his works is already very long. I think that I could name as many as twenty. The adventurous life which he has led has given him occasion to visit Morocco, Japan, Asia Minor, Galilee, Jerusalem, the Pyrenees, etc. These twenty-two volumes can all be read with pleasure. The writer who will some day (as late a day as possible) pronounce the eulogy of Pierre Loti in the French Academy, of which he is a member, will, we hope and we are sure, have read all these descriptive works, and will not coolly say, as did Pierre Loti when he was received into the Academy, that he never reads anything. This extraordinary confession, which made quite a sensation at the time, ought not to have surprised Loti's readers. He is evidently afraid to read, to merge his own personality in other personalities; he is original, he feels it, and preserves his originality as a woman tries to preserve her beauty.

His latest work is the collection of letters which he sent from China, where he took part in the operations of the recent war. This circumstance gives unusual interest to these letters. The dramatic element is perforce involved with the descriptive part of the work; and was there ever a more extraordinary drama, more horrible in many respects, more mysterious in others, than this joint expedition of the Great Powers of Europe against the oldest and most impenetrable Asiatic Power? When Pierre Loti arrived in the Yellow Sea with Vice-Admiral Pottier, the Commander-in-chief of the squadron of the Far East, Pekin had already been taken, the battles had nearly come to an end. His first letter is dated Monday, September 24, 1900, from the Gulf of Petchili. He finds there an astonishing squadron, representing Europe, "Europe armed against old and dark China." Guns are firing from all the ships; foreign bands receive the French with the "Marseillaise." The last of the military chiefs expected at this great meeting of the allies arrives, Field Marshal von Waldersee; and the cannon fire again, and the ships' bands receive him with the German national air. The landing takes place at Ning-hai, at the end of the Gulf of Petchili, "and on this shore there is a confusion and a Babel such as has never been seen in former epochs of history." Cossacks, Austrians, Germans, English midshipmen, are to be seen among the French sailors; little Japanese soldiers, astonishing in their new European uniforms; fair ladies of the Red Cross; bersaglieri of Naples, with cock's feathers in their colonial helmets. The flags of the seven allied Powers follow each in alphabetical order, at various distances, on the landing: Allemagne [Germany], Austria, France, Great Britain, Italy, Japan, Russia. After visiting what may be called the ruins of Taku ("Takou n'existe plus"), Loti takes the train as far as Tientsin. The Boxers having destroyed the railway between Tientsin and Pekin, he is obliged to continue his journey in a boat on the Pei-ho. He has time to make at Tientsin a visit to what he calls two goddesses of the Boxers, two prisoners kept in a corner of the palace of the Viceroys of Petchili.

"In the midst of a lamentable disorder, in a half-dark room where the evening sun cannot enter, two poor women, two sisters resembling each other, are sitting, with their heads down, in a pose of supreme consternation—one on a chair, the other on the edge of an ebony bed on which they both sleep at night. They wear humble black gowns, but here and there, on the floor, lie shining silks thrown about like lost objects, tunics embroidered with great flowers and golden dragons. They are, both, sorts of Jeannes d'Arc—if it be not blasphemous to pronounce with regard to them this ideally pure name; they were fetish girls placed in the pagodas riddled with shells in order to protect the altars; inspired women who marched to the firing line in order to encourage the soldiers. They were the goddesses of these incomprehensible Boxers, alike atrocious and admirable, hysterical defenders of Chinese fatherland, maddened by hatred and terror of the foreigner, who one day ran away without fighting, and the next, with demoniac shrieks, threw themselves with swords against a rain of shells, against troops ten times more numerous than themselves."

These extraordinary prisoners had become the property, the curious *bibelot*, says Loti, of the seven allied Powers. They were not maltreated, only shut up; they tried to commit suicide. Loti speaks of them with a sort of respect; he cannot help being moved by their despair; he feels that he is almost guilty of an impropriety in looking so long at them. "There are," he says," such abysses of incomprehension between European officers and the Boxers' goddesses that even our compassion cannot be explained to them. We had come to be amused by a curious spectacle, and we go away silently, cherishing with heart pang the image of the two poor forlorn creatures, imprisoned in the room where the night enters."

On the river, Loti has much to observe. He passes by Tong-Chow, the "city of celestial purity." The approach to it was rather frightful. "Out of a junk hangs a long dead arm with a bluish tint; dead cows are brought down by the current, swollen and stinking. A cemetery must have been violated close by, for on the mud of the shore are seen broken coffins." Tong-Chow was one of those immense Chinese cities, more populous than many capitals of Europe, whose name is hardly known to us. "To-day it is a phantom city; on drawing near, you are not long in seeing that all is now ruin—nothing but soldiers, invaders, guns. Cossacks, riding captured horses, are galloping furiously, like madmen, with savage screams." The "city of celestial purity" received the first shock of the allies, of the Japanese, "heroic little soldiers, of whom I would not speak ill, but who destroy and kill as in old times did the barbarian armies." "I would even less," Loti says, "speak ill of our friends the Russians, but they have sent here Cossacks from the neighborhood of Tartary; Siberians, half-Mongols, all admirable under fire, but who still understand war in the Asiatic fashion."

Loti arrives at last before Pekin. "The wall of Pekin stupefies us; it is gigantic, of Babylonian aspect, black under the dead light of the autumnal and snowy morning. It rises against the sky like the cathedrals, but it extends far, far away, for leagues, always the same." The city is entered through double, triple, tunnel-like gates, surmounted by donjons of five stories, with strange curved roofs, black and colossal. In the partition of the mysterious "Yellow City" made by the chiefs of the allies, a palace of the Empress was given to the French General, and Loti receives his hospitality. As the General has to go for a fortnight to Tientsin, Loti remains for two weeks alone, with his aide-de-camp, in this fairy residence, and we owe to this circumstance descriptions of which I despair of giving an idea, and which must be read

in the text. Imagine Loti, with his extraordinary powers of observation, in a sort of temple, impenetrable to all before the war, "where only the Emperors used to go once a year, for a week, to prepare themselves for a solemn sacrifice by rites and purifications."

Everything is extraordinary in the Imperial City. Loti has, however, such a keen faculty of adaptation that everything becomes almost natural to him. Writing from the palace, which has become for a while his headquarters, he says:

"In this inaccessible place, where it would once have seemed folly to think that I should come to live, everything seems already familiar. The presence of the great alabaster goddess in the obscure temple, the daily visit of a cat, the silence of the surroundings, the dull light of the October sun, the agony of the last butterflies on the windows, the sparrows which have their nest on the enamelled roofs, the flying of the dead leaves, the falling of the little balsamic needles of the cedars—what a strange destiny, when you reflect, has made me for a few days the master here."

The most impressive chapter is on Loti's visit to the tombs of the Emperors. "Here is the sacred wood, with its quietness and mystery. . . . What marvellous poets of death are these Chinese, who prepare such asylums for it." There are, it seems, in the vaults of the four tombs visited by Loti, treasures, precious stones, accumulations of gold and silver. "Those," says Loti, "who are authorities in matters of Chinese curiosities, tell our generals that round the corpse of a single Emperor one could find the value of the ransom claimed by Europe. Fortunately for our Occidental honor, none of the allies wished to employ these means." The tombs were respected. "The old Emperors, behind their eternal walls, heard not far from them the trumpets and the drums of the 'barbarian armies'; but they went to sleep again in their night, as quiet as before, in the midst of the inanity of their fabulous wealth."

Correspondence.

THE LAW AGAINST PRESIDENTIAL ASSASSINS.

To the Editor of The Nation:

Sir: In support of Senator Bacon's argument against the Constitutional validity of a Congressional law punishing attempts on the life of the President or of any officer in the line of succession, I beg to submit a few remarks.

The power of Congress to make such a law can be derived only from the words at the end of article i., section 8: "To make all laws which shall be necessary and proper for carrying into execution . . . powers vested by this Constitution in the Government of the United States or in any department or officer thereof." If Congress cannot make a law punishing attempts on the life of the President, Vice-President, etc., with death, it is debarred by this clause in article iii., section 3:

"Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason, except on the testimony of two witnesses to the same overt act, or on confession in open court."

To understand the object of this clause, we must look back to the English law of treason, as it stood at the time of the Revolution under the statute of 25 Edward III. There were five sorts of treason: two of these were acts against the King's wife or his eldest daughter, wholly inapplicable in a republic; the other three were: "Compassing or imagining the death of the King; levying war against him; adhering to his enemies [meaning foreign enemies], giving them aid and comfort." The statute of Edward III. also required two witnesses, though not to the same overt act. The plain object and effect of putting the above clause into our Constitution seems to have been to deny that any one person's life represents the life of the American Commonwealth in the sense in which that of the English King represents the public life of England. Of course, when war is going on between the United States and a force of rebels, an attempt on the life of the President in aid of the rebellion would be an act of war, and treasonable as such; or, if there was a war with a foreign Power, such an attempt in the interest of the foreign enemy would be an act of "adhering to the enemies of the United States, giving them aid and comfort," and the courts would so decide. But Congress has no power to define treason; the courts alone can construe the words of the Constitution which define it. If the acts of Czolgosz and Guiteau were acts of war, the Federal courts could hold them to be such without any assistance from an act of Congress; if they were not acts of war, a Congressional law cannot stamp them as such.

To say that such acts, whether the attempt be successful or not, are not treason, but shall nevertheless be punished with death, would make the safeguards which the Constitution throws around persons charged with treason a mockery, a delusion, and a snare. For if the crime is a mere felony, and not treason, the accused man may be convicted upon the testimony of a single witness, or upon the proof of an admission not made in open court. In fact, the bill now before Congress does not contain the safeguards against hasty convictions which English and American law has, ever since 1352, thrown around those accused of the highest crime known to the law. L. N. D.

Louisville, Ky., March 14, 1902.

THE TRUST OF GIRARD COLLEGE.

To the Editor of The Nation:

Sir: The endowment of Girard College has, I think, usually been considered by those who know its provisions as an unfortunate example of tying the hands of administrators. Here was a man, grown rich by dealing in negro slaves and liquor, who specifically excluded from the benefits of his benevolence to Philadelphia the descendants of those slaves whom his rum had bought and his ships had transported.

If, however, as President Louis Wagner asserts, a considerable discretion is left to his board to make "material modifications" in the original terms of this great gift, would it not be a most excellent step for the directors to cease to limit the benefits of this institution to white orphans? Surely a city with the third largest negro population in the Union owes as much to its black folk as to its Irish, Russians, and Italians. Consider, too, the "poetic justice"!—Very respectfully,

W. E. B. Du Bois.

Atlanta University, Ga., March 15, 1902.

Notes.

Lewis, Scribner & Co., New York, are to publish for the Arctic Club of America 'The Wide World,' a collection of papers on personal experiences within the Arctic Circle by Admiral Schley, Walter Wellman, and others, with profuse photographic illustrations. They have also in preparation 'Opportunities in the Colonies and in Cuba,' with an introduction by Gen. Leonard Wood and a section on Porto Rico by ex-Gov. Allen.

"Lewis and Clark" is certainly in the air, as we can now announce the third reprint (second from the edition of 1814) contemplated this year. It will initiate the "Commonwealth Library," projected by the New Amsterdam Book Company to "preserve in popular form a wealth of valuable history of early American exploration," and to "cover works in almost every department of literature excepting fiction."

Mr. Nathan Haskell Dole, 18 Tremont Street, Boston, purposes issuing ten volumes entitled "Breviary Treasures," including Anacreon's Odes, selections from the 'Gesta Romanorum,' Virgil's Eclogues, the 'Thoughts of Marcus Aurelius,' etc. The issues (one large-paper) will be for subscribers only.

T. Y. Crowell & Co.'s edition of Poe's complete works, under the supervision of Prof. James A. Harrison of the University of Virginia, is nearly ready.

'The Empire of Business,' by Andrew Carnegie, and 'Nature Portraits,' choice camera shots, reproduced in photogravure, with 48 pages of text, are in the press of Doubleday, Page & Co.

A third of the twelve crown octavo volumes constituting the "Oriental Series" of the J. B. Millet Co., Boston, is just appearing. 'Japan and China; Their History, Arts, Sciences, Manners, Customs, Laws, Religions, and Literatures,' is the real title. The author is Capt. F. Brinkley of Tokyo.

James Pott & Co. will issue directly 'Authors of Our Day in Their Homes,' from President Roosevelt to Winston Churchill, edited by Francis W. Halsey.

An artistic edition of the 'Song of Songs,' with an introduction by FitzRoy Carrington, and with Burne-Jones's illustrations, and 'The True Napoleon,' by Charles Josselyn, are in the press of R. H. Russell.

The Rev. Thomas Davidson bespeaks for 'Chambers's Twentieth Century Dictionary of the English Language,' which he has edited in one volume (Philadelphia: Lippincott), the consideration that may be assumed to be due to his third experience in this sort of work. It is, in fact, a handy and serviceable compilation in 2,400 columns of not too fine type. Pronunciation and etymology are both looked after. Where there was so much need of condensation, it is observable, in the editor's peculiar province, how much space is allowed to minor religious sects, such as Muggletonian and Mormon (eight lines each), Glassite or Sandemanian (seven lines), Plymouth Brethren (five). The better known are dismissed in two or three lines,

with a slight inconsistency in attaching the definition now to the denomination (Methodism, Universalism), now to the member (Unitarian). Phrases are well cared for, but we miss either "lie" or "lay of the land." The Oxford Dictionary has been followed in its remarkable omission of "anti-slavery," certainly one of the best-worked of the *anti* epithets of the nineteenth century. The "reader's handbook" feature is exemplified under Seven—seven sleepers, seven wonders, seven wise masters, Seven Years' War, etc. The dictionary is judiciously illustrated, and there are the usual appendixes, including (for British latitudes) correct ceremonious forms of address, and a table of equivalents of French and English measures.

An old favorite, and, except for the late Henry Morley's books of selections, alone in its field—'Chambers's Cyclopædia of English Literature'—is to be reissued in three large volumes, of which the first, covering the period from the "Wanderer's Song" to Dryden, is at hand. The work has undergone a very thorough revision, under the general editorial supervision of Dr. David Patrick. The sections on Old and Middle English literature have been greatly expanded, through the care of Dr. Stopford Brooke and Mr. A. W. Pollard, respectively. Other new collaborators are Messrs. Edmund Gosse, Sidney Lee, Andrew Lang, A. H. Bullen, George Saintsbury, and the late S. R. Gardiner and Francis Hindes Groome. The bibliographies have been brought up to date, and numerous portraits and facsimiles of manuscripts added. Just what course has been taken with the text of the extracts is not fully explained. A certain inconsistency in orthography was here inevitable, but a student would wish to know just how far the Cyclopædia text may safely be cited. The old awkward arrangement by which the same author might be distributed among widely separated parts of the work—as poet, dramatist, and prose-writer, for example—has been done away with in favor of the biographical plan; an obvious improvement. American and British colonial writers will find their appropriate places in the succeeding volumes, beside their home-keeping brethren. In this rejuvenated form this sixty-year-old work need not fear the competition of the various libraries of the world's best literature. A cyclopædia is not for light reading, so one need not deplore the unduly great weight of this large octavo. The Chambers of Edinburgh and Lippincotts of Philadelphia unite in the publication.

A. C. McClurg & Co. have gathered a pretty nosegay of 'Right Reading: Words of Good Counsel' drawn from ten authorities—Sir A. Helps, Carlyle, I. Disraeli, Emerson, Schopenhauer, Ruskin, J. C. Hare, Morley, Lowell, and Frederic Harrison. These names are an assurance of good reading, and something in so much advice will leave a profitable mark upon the mind of almost any one. Pithy and plausible as Emerson is (the passage is from his "Society and Solitude"), what protest might be raised—must be raised—to each one of his "three practical rules," viz., "Never read any book that is not a year old; Never read any but famed books; Never read any but what you like." "For instance," says John Morley, on a later page, "it is a mistake to think that every book that has a great name in the history of books or of thought is worth reading. Some of the most famous books are least worth reading. Their fame was due to their doing something that needed in their day to be done."

R. L. Stevenson's 'Aes Triplex, and Other Essays' has been issued by Thomas B. Mosher, Portland, in a side-pocket (almost vest-pocket) edition that will commend itself to lovers of the tasteful as well as of Stevenson.

Procter's 'History of the Book of Common Prayer' has passed through three editions, and been reprinted twenty times since its first publication, in 1855, a testimony to its popularity. A fourth edition, by Mr. Walter Howard Frere (Macmillan) has been considerably enlarged, and it is manifest that Mr. Frere has taken great pains to give full and accurate information, his list of principal authorities containing more than fifty titles. It is also plain that he prefers the first Prayer-Book of King Edward VI., of 1549, to the second, of 1552, and, wherever there is room for difference of opinion, he leans decidedly to so-called "High Church" if not ritualistic views. All of Part II., on "The Sources and Rationale of the Offices," has been recast. Its five chapters have been increased to nine, numbered continuously with those of Part 1. We miss sundry tables in the former appendix, and the glossarial index, which might have been retained as needful for certain terms. The section dealing with hymns and metrical psalms has been omitted, as full information can be obtained from the 'Dictionary of Hymnology.' Omitted, further, is the account of the adaptations made from the Prayer-Book for the use of Nonconformist congregations, as it was incomplete and space was lacking for a fuller treatment. Mr. Frere has traced the origin of much of the Prayer-Book to the old Service-Books, "of which," as he says, "it was the lineal descendant." The curious reader might supplement his account, especially of the Hampton Court Conference and the Savoy Conference, from Cardwell's 'History of Conferences on the Book of Common Prayer, from 1558 to 1690,' and, for the details of the successive revisions, from Parker's 'Introduction to the Revisions of the Book of Common Prayer,' not overlooking Bishop Dowden's recent compendious 'Workmanship of the Prayer-Book.'

'Hochelaga Depicta' is a sketch of the early history of Montreal, and a description of its actual state some sixty years ago. The volume was prepared by the Rev. Newton Bosworth, a Baptist clergyman, and first saw the light in 1839. It has long been out of print, and usually brings at auction more than ten times the price which it originally cost. We have received a reprint of this book from a Toronto firm (Congdon & Britnell), and it would appear from a fly-leaf announcement that other rare items of Canadiana are to be likewise reproduced. At least, the heading runs, "Facsimile Reprints of Early Canadian Books, No. 1." Canadian incunabula of all sorts are beginning to creep up in value, and a project to reproduce some of the most valuable pieces of early historical literature should receive encouragement. Typographically, this new edition of 'Hochelaga Depicta' is well executed, but the plates are decidedly inferior to those of the first edition. We have also noticed one or two things which might call down the wrath of that fastidious person, the expert bibliographer. For instance, the map which, in the original, faces page 58, is placed opposite page 91 in the reprint. Similarly, at pages 100 and 177, the plates are made to face the wrong way. These are simply changes of arrangement, and have no bearing whatever upon the value of the contents. We mention them because a reprint is tested by comparison with the original. As a work on local topography 'Hochelaga Depicta' is a classic, and we are glad that it has once more been made available at a reasonable price. The edition is limited to 500 copies.

In covers of Quaker drab, adorned with a whaler and a gull, comes a second, enlarged and well-illustrated edition of Lydia S. Hinchman's 'Early Settlers of Nantucket' (Philadelphia: Ferris & Leech). In this day of D. R.'s and D. A. R.'s, proving by their works their inheritance of belligerency, it is pleasant to know that there are some present-day Americans who come of peace-loving Quakers and are proud to claim their lineage. This book is, in fact, chiefly a genealogy, but carries enough of "customs, documents, and incidents" to give it a general interest. The little island has had a monotonous and yet a strenuous history. Its whaling voyages were a perpetual strain on sailors and families alike, and attempted neutrality in the Revolution brought by no means peace and quiet. Those who believe in heredity should keep an eye on the ladies of to-day mentioned in the index of this book, for they all come of Nantucket ancestry. When the men were gone a-whaling for years at a time, the women, says an old writer here quoted, managed their husbands' business with dexterity. "This ripens their judgment and justly entitles them to a rank superior to other wives." The genealogies given are careful and elaborate, and the errors evident on our cursory examination are few and unimportant. We foresee some heart-burnings among those who can claim only three descents from Tristram Coffin, for some there be who have four or five. The stranger to Nantucket ancestry will be spared these anxieties, and will read of the early settlers and the rise and fall of the Quaker power with sheer pleasure in sea breeze and Friends' calm. The island has now become little more than an old homestead, whose children are scattered far and wide. The last Indian died in 1854, and now, we are told, the last Quaker is gone, and apparently the last whaler also.

Noyes, Platt & Co., Boston, send us 'American Mural Painting: A Study of the Important Decorations by Distinguished Artists in the United States,' by Pauline King. From their close relations with Curtis & Cameron, owners of the right of reproduction of most of the important mural paintings in this country, Noyes, Platt & Co. had unusual facilities for the production of such a book as this, while Miss King's wide acquaintanceship among artists has given her a similar advantage. In a work which owes so much to the courtesy of the artists written of, one could hardly expect much criticism, and the text is naturally rather colorless. There is, however, considerable discrimination in the bestowal of praise, and the statements of fact seem generally correct. The illustrations are fairly successful half-tone reproductions of photographs, and

their selection covers the ground pretty thoroughly. The book makes an acceptable record of an important movement in American art.

The first number of *Les Arts*, published by Goupil & Co., Paris and New York, gives a fairly favorable impression of the enterprise. This new monthly is to cover the whole range of the plastic and graphic arts, with especial attention to private collections, current exhibitions, and additions to the museums. In the present number M. André Michel describes the proper use of works of art, their chief end in his estimation being the public museums; Paul Villars begins an account of Mr. Alfred de Rothschild's collections of eighteenth-century painting; Gaston Migeon describes recent accessions to the Louvre; the veteran curator, M. E. Moliner, comments upon remarkable examples of eighteenth-century French furniture in foreign possession; the great Delacroix is M. Maurice Hamel's subject, and the late J.-C. Cazin is M. Thiébault-Sisson's; Roger Marx writes on the renaissance of the decorative arts, chiefly of goldsmithry, and a department of news notes on sales and matters of current art interest completes the table of contents. All the articles are of exemplary brevity, and the magazine, in spite of its notable list of contributors, will evidently depend chiefly upon its pictorial features. The illustrations of the present number are well chosen, and, from their large scale, useful, but all of them are in half-tone of very ordinary execution. An English version, too obviously "made in France," is appended.

The promise of a really authoritative periodical of English genealogy and family history will be received with general satisfaction. This is given us in the announcement of the *Ancestor*, a quarterly to be edited by Mr. Oswald Barron and published by Archibald Constable & Co., London, who have recently distinguished themselves by similar undertakings, notably by the Victoria County Histories. Mr. Barron's unusual knowledge in the field to be covered is well known to many who are interested in it. The first number of the new periodical, which will be illustrated, is announced for March 25, and the list of contributors, including among others Sir George Sitwell, Sir H. Maxwell-Lyte, Mr. J. Horace Round, and Mr. St. John Hope, besides the editor, certainly supports the promise of accuracy and authority.

The latest number of the *Litterarhistorische Forschungen* is a study of 'Luigi Pulci and the Morgante Maggiore,' by Lewis Einstein (Berlin: Felber). The definitive monograph on Pulci is still to be written, but, as an introductory survey of the subject, Mr. Einstein's work is not without merit. Two introductory chapters deal with the life and minor works of Pulci, and give a succinct account of his gifted but less celebrated brothers, Luca and Bernardo; the succeeding chapters are devoted to the 'Morgante Maggiore,' its sources and its general influence; and the volume closes with an interesting study of Pulci's mind and art. Though published abroad, this essay was evidently written for the master's degree at an American university, and, while showing some of the crudities which usually characterize such productions, it has a literary flavor too often lacking in German dissertations. Pulci has been so generally ignored by the literary specialist that a brief monograph devoted to his life and works cannot fail to receive a welcome from the student of the Renaissance.

Petermann's *Mitteilungen*, number two, opens with an appreciative review, by Dr. K. Sapper, of the report by Dr. Charles W. Hayes on the geology and topography of the Nicaragua Canal route. He characterizes it as containing "the most exact and reliable information which has ever been given of a portion of Central America." Other articles are a description of the Landes in southwestern France, and an account, by Professor von Drygalski, of the equipment of the German Antarctic expedition and the incidents of the voyage to Cape Town.

"The *momentary* government of Florida, for *temporary* is too strong a term," is the happy phrase with which President Monroe described the political condition of our new territory in a manuscript letter preserved in the Boston Public Library and now printed in the March Bulletin. It was written immediately after we took possession, and refers to a conflict of authority which had already arisen between Gen. Jackson and the Federal Judge Fromentin. The President says that his idea is that, "under the law of the last session," the United States jurisdiction extended "to revenue and the slave trade only; . . . that until the next meeting of Congress, and further provision being made, the laws of Spain were to govern there." Among the other documents printed is a letter from Aaron Burr to Gov. Alston, denouncing the proposed nomination of Monroe for the Presidency by a "Congressional caucus," dominated by a "certain Junto of Actual and factitious Virginians [who] having had possession of the Govt for 24 years consider the U. S. as their property, and by bawling 'Support the Admn' have so long succeeded in duping the republican public." Burr's characterization of Monroe is a remarkable piece of invective. He recommends the independent nomination of Jackson, not because of any "exclusive attachment" to him, but "to break down this Vile combination which rules & degrades the U. S." Monroe's Secretary of State, John Quincy Adams, writes of the great difficulty in securing ministers to the principal European Courts, because of the meagreness of the salary attached to the office. Referring to the declining of the missions to England and Russia by men of great ability, he adds: "The state of things will be felt in consequences which may cost the Nation Millions for every thousand saved by their parsimony in this instance."

The crime of personation is one of the most serious difficulties with which the Government of northern Nigeria has to contend. Sir F. Lugard, the Imperial High Commissioner, says that, throughout the protectorate, it frequently happens that "a man wearing a fez and a pair of trousers comes to a village and announces that he has been sent by the white men. He may remain there for months, levying blackmail from the ignorant natives," threatening, in case of their refusal to comply with his demands, their extermination by the forces of the protectorate. It is his conviction that, in both East and West Africa, "much injustice and oppression has been unwittingly done by our forces," acting on false accusations by these personators—an evil which can be checked only by "patient and unwearying investigation by properly trained political officers with good interpreters." The appointment of such able and experienced men he strongly urges. The whole protectorate is being organized under *native* government, a white civil resident being placed with each important chief. He simply sees that there is no flagrant abuse of power, and reports in case of an utterly incompetent chief. This is absolutely different from the Russian way in Mantchuria and the German way in China, and is characteristic of the English. A great extension of the railway system is advocated in the interest of the peaceful development of the country.

Mr. Max Williams of No. 397 Fifth Avenue sends us four large color prints, in which Mr. Stuart Travis has touched with real humor some of the extravagant possibilities of the automobile craze. Perhaps the most amusing is "The Interrupted Hunt": the fox is proudly seated in a runaway (or is it an abandoned?) motor-carriage, while the hunt is thrown into dire confusion by the crossing automobiles. Other titles are "The Luncheon," "The Return from the Links," and "The Meet at the Black Swan"—a chapter of ludicrous accidents. Mr. Travis shows a genuine comic sense, which is not common among our illustrators, and his clever renewal of the style of the old sporting prints will decorate tastefully any room for which they are appropriate.

—The Fifth Annual Report of the Commissioners of Fisheries, Game, and Forests of the State of New York, covering the year ending September 30, 1899, and now published, comes as a posthumous work, for the Commission reporting is no more. Their account of the last year of their labors has travelled slowly through the press, and appears simultaneously with the Report of their successors for the year 1901. The latter, the Seventh Report, is a businesslike pamphlet of 93 pages. The Fifth Report is, like its predecessors, a quarto of nearly 500 pages, expensively presented in a limited edition, and adorned with numerous illustrations, mostly relevant, including the usual colored plates of fish and birds. Among the more valuable articles accompanying the Report, we note "Timber Product of the Adirondacks," by the Superintendent of State Forests; "Shad Culture in the Hudson River," by A. N. Cheney; and "The Commercial Fisheries of Lake Erie, Lake Ontario, and the Niagara and St. Lawrence Rivers," by John N. Cobb. The value of the Report itself is minimized by the delay and manner of issuing it. This accords, however, with the general unwisdom with which the State administers the Forest Preserve. It would be difficult to find a more striking example of waste of a valuable property. The Constitution of the State, lest what remains should be destroyed, forbids the use of the axe in the decrepit forests which the State has acquired, and thus prevents both the gaining of a revenue from the woods and their proper care. It is as if the Constitution should direct that the Capitol should be kept closed for fear the legislators

should make way with the staircase. In the Adirondacks the pine has been a rare tree for decades, and now the spruce is rapidly disappearing. The hard woods which remain are to some extent a hindrance to the restoration of the soft woods, while the hard woods themselves have neither the economic nor the hygienic value of the evergreens which they repress. Hence the removal of a portion of the hard woods is important in forestry work. Yet it appears that, though many inhabitants of the Adirondacks have no other resource for fuel, they may not use the beech and maple which cumber the ground, and of which the removal would be an advantage to the State.

—The proper care of the forests, and the financial interests of the State, alike demand the introduction of modern forestry methods in the Adirondacks; and these methods include the removal of ripe and worthless trees, and the planting of young trees of the valuable species in their place. There is probably some truth in the argument that the axe of the woodcutter would be subject to the axe of the politician. Yet, since the State will probably continue its present form of government, the remedy should be sought not in a non-possumus, but in educating the people to a knowledge of and an interest in this great property of theirs. To this end, the State Reports should be practical in their nature, prompt in their publication, and disseminated among the people as widely as possible, even though the expense of such distribution should require the omission of colored plates and of the names of some of the persons who three years ago paid a dollar apiece for the privilege of catching minnows with a net in Lake Ontario.

—'Napoleon's Letters to Josephine, 1796-1812,' have been collected and translated with notes from contemporary sources by Mr. Henry Foljambe Hall (Dutton). The bulk of the correspondence as it is now printed comes from the Collection Didot, which has been available ever since 1833, and which was largely drawn upon under the Second Empire by the commission that edited the 'Correspondance de Napoléon I.' Mr. Hall also accepts as authentic the love-letters of 1796 as they were published by Charles Tennant in 1824. A few other letters have been brought together from various sources, but none of them are very important even if one were willing to admit that they are genuine. The Didot series seems by far the most authentic, and it is certainly the most colorless. Mr. Hall is an ardent admirer of Napoleon, and in his introduction, which must be styled too discursive, he collects praises of him by all sorts of persons, ranging from Wieland and Johann von Müller to the present Archbishop of Canterbury. In this way he prepares his readers for disappointment because the Emperor's genius, however colossal in other respects, does not reveal itself in the letters which follow. The fervid epistles published by Tennant are commonplace in both their sentiment and their diction. If we rule them out as being under suspicion, little remains save hurried notes from the seat of war. Here is a fair example, in Mr. Hall's translation: "I am at Posen [1806], capital of Great Poland. The cold weather has set in; I am in good health. I am about to take a circuit round Poland. My troops are at the gates of Warsaw. Adieu, dear; very kindest regards, and a hearty embrace." Taken one with another, the letters of the Marengo campaign and succeeding years will average hardly ten lines in length. The general nature of the relations between Napoleon and Josephine at different periods is so well understood that there is no need to dwell upon it here. However affectionate Napoleon may have been in his early married life and however considerate afterwards, he did not belong to his family but to the public. As he once said to Gallois: "Je suis tout à fait un être politique." Mr. Hall's translations are not remarkably good, but his numerous notes may prove useful to those who are beyond the reach of the 'Correspondance de Napoléon I.' There is a singular slip in the introduction where Mr. Hall says: "Of Napoleon's goodness we have the well-weighed verdict of Lord Acton, that it was 'the most splendid that has appeared on earth.'" This is apparently a misprint, but it needs to be corrected. Lord Acton at the close of that remarkable article in which he reviewed Ropes and Seeley side by side, actually did term Napoleon "the most splendid genius that has appeared on earth."

—The interests of political and social reform in England have lost a devoted friend by the death, in his seventy-fifth year, of Peter W. Clayden, formerly a distinguished member of the editorial staff of the London *Daily News*. The services rendered by Mr. Clayden to the cause of the North deserve especially to be held in remembrance in America. When the civil war broke out, he was holding a pastorate in a provincial town, but had contributed occasionally to the press. Miss Harriet Martineau, whose friendship he had gained through his literary work, had been invited to contribute an article on the war to the *Edinburgh Review*. Knowing Mr. Clayden's enthusiasm and ability, she suggested that he should write it instead. "But how do I know," asked Mr. Henry Reeve, the editor, "that a young Unitarian minister at Nottingham can write an article for the *Edinburgh Review?*" Harriet Martineau replied: "Mr. Clayden shall do it, and get it done in very good time. If, when you come to read it, you do not like his work, I will write an article for you myself." The article was ready a month before it was wanted, and led Mr. Reeve to thank Miss Martineau for giving him a new writer. His appointment as an editorial writer on the *Daily News* was in succession to Miss Martineau and on her recommendation. The first articles he wrote for that paper also dealt with the American crisis. From 1868 to 1887 Mr. Clayden wrote leading articles for the *Daily News*, and held the post of assistant editor. As an indication of his industry, it may be mentioned that one year his contributions amounted to 453, and that for part of that period he went three days a week to Reading to edit a Liberal paper, which he successfully established in that town, returning without fail to London in time to be at the *Daily News* office at four o'clock. From 1887 until his retirement in 1896 he was night editor of the latter paper, and directed its policy. During the last years of his life, Mr. Clayden was by no means idle, having been Secretary of the "Liberal Forwards"—an association formed to promote the fulfilment of British responsibilities toward Armenia—and having been still actively engaged in many other Liberal movements.

—No problem in the government of uncivilized races is so difficult, now that slavery is out of the question, as how to induce the native to work. He has learned only to fight and to hunt, while the women have worked. But when he is prevented from fighting, and the game has disappeared before civilization, and his new rulers provide for his few wants, as is the case with our Indians and the South African natives, the whole male race sinks inevitably into confirmed idleness. There is practically no agriculture in South Africa because the native will not work upon the land. The natives employed in the Rand mines, some 100,000 in number, come almost wholly from the Portuguese territory. They are willing to brave all the hardships and dangers of the long journey from their homes for the sake of high wages, which offer no inducement to the neighboring British native. As the mines will soon require a much larger number of workmen (the London *Times* correspondent says 250,000), the Government has devised a plan by which it is hoped this labor will be obtained regularly and under favorable conditions. A Department of Native Affairs has been created, and a man of great experience in ruling Africans, Sir Godfrey Lagden, placed in control. The employers have formed a Native Labor Association, authorized to speak and act for the entire mining industry, which will send out recruiting agents having Government licenses. An agreement has been made with the Portuguese Government for the regulation of this recruitment, as well as for the collection, protection, registration, and transport by train of the native gangs. The Association also appoints licensed overseers of the native quarters, over whom is a corps of Government inspectors. Natives may apply to these personally in any case of abuse, and it will be their business to investigate and report upon all causes of complaint. The absolute possession of his wages without deductions will also be guaranteed to the native workman. It is hoped that by this system a steady supply of labor will be gained, and, gradually, that the knowledge of the easier and safer conditions under which work is done may spread through the British tribes and encourage them to come out to work.

—The recent celebration of the centenary of the Danish Vaccination Institute deserves notice, if for nothing else, because of the valuable sketch of vaccination in Denmark, published by the present director, Dr. Bondesen. Five years after Jenner had made his first successful experiment, and while his countrymen were still skeptical, a royal commission was appointed in Denmark to investigate the whole subject, and the result was the establishment of the Institute and the introduction of free vaccination in Denmark. The movement spread rapidly, and met everywhere with the greatest enthusiasm, many laymen acting as vaccinators. Among these was the wealthy and influential Count Ahlefeldt-Laurvigen, who vaccinated no fewer than three hundred persons. The most remarkable Danish vaccinator, however, was the public executioner in Odense,

who probably thought that his professional work would serve him in good stead for preparation. He was a regularly authorized agent, and a facsimile of one of his certificates of vaccination is given in the sketch. Many of the country clergy and their wives, and even peasants, were among the active followers of Jenner. Not the least striking feature of the history of vaccination in Denmark is the apparently universal favor with which it was received and has ever since been held. If there have been opponents, they have not made themselves felt. From an early period, however, the Danish medical profession, from business motives, opposed vaccination by laymen, and since 1823 the work has been confined to physicians. Between 1810 and 1824 no cases of smallpox occurred in Denmark. The smallpox epidemic of 1833 led to the introduction of revaccination. The last important improvement in the Danish system of vaccination was the substitution of animal lymph, the preparation of which is intrusted to the Institute, in Copenhagen, from which it is sent all over Denmark. Heavy penalties are provided for the use of any other lymph. The annual budget of the Copenhagen Institute, which provides for a population of more than two millions, is less than $3,000.

MRS. FAWCETT'S LIFE OF MOLESWORTH.

Life of the Right Hon. Sir William Molesworth, Bart., M.P., F.R.S. By Mrs. Fawcett, LL.D. Macmillan Co. 1901.

Mrs. Fawcett's book raises two questions: First, Was it worth while to draw a literary portrait of Sir William Molesworth?

To this inquiry a critic may return an unhesitating and an affirmative answer. Molesworth's name is well-nigh forgotten, and it never at any time made any great impression on the general public; he was never known to English electors as was Brougham, or Palmerston, or Gladstone, or Bright, or Cobden. Even in the world of philosophic literature he did not fill a very large space; he never came near to the position of a thinker like Bentham, he was never known to thoughtful readers as was such a successful exponent of the ideas of a school as John Mill. In truth, the amount of his actual achievement in the sphere, either of politics or of letters, was small. But, for all that, Molesworth exhibited a peculiarity, or even an originality, of character which gives him a right to a portrait in any gallery of English worthies. He united qualities which have hardly ever been found in combination; he had the merits and demerits of a country gentleman, and at the same time the virtues and the defects of a fanatical Benthamite. He was at once a squire and a philosophic radical. It is this combination which gives the flavor of originality to his acts, his words, and his thoughts.

Let the reader think for a moment how unprecedented was, in 1830, a turn of mind which strikes one as strange even in 1902. The English squire was, at the beginning of the nineteenth century, a natural-born Tory; his interests were of necessity the pleasures and duties of a country landowner. He might, indeed, under the stress of circumstances (though this was rare), become a Whig, but even then he was occupied in the enjoyments and pursuits of country life, and never a bookworm, a philosopher, or a radical. Now if you look at Molesworth's life from one side, and especially if you dwell upon the anecdotes, only too few, which Mrs. Fawcett has collected of his youth, you perceive at once that he inherited the tastes and showed the traditions of a country gentleman. He was, it is true, turbulent and pugnacious. So was Bismarck, who owed half his strength to his possessing the qualities of a Prussian squire. Molesworth was also, like other young gentlemen of his age, determined to enjoy life. The one striking feature of his early manhood is the vigor with which he threw himself into any pursuit whatever that roused his feelings or excited his interest. He was at any moment ready to fight a duel, and challenged and fought his college tutor. No one was killed, but the duel was a very serious matter, and a Highland servant devoted to Sir William had made up his mind that, if his master fell, he, McLean, would slay Sir William's antagonist. While fighting his tutor, Molesworth, whose father was dead, kindly patronized his mother, and wrote to her the assurance of his being highly satisfied with her conduct throughout the whole affair. She well deserved this praise, for she had entered into the spirit of the fray, and, when asked to interpose, replied that she never could advise what hereafter might be deemed injurious to her son's honor. Twice, or even thrice, he was again on the verge of a duel. This, the reader should note, was all in keeping with the code then adopted by gentlemen. Both Scott and Macaulay—much more pacific persons than Molesworth—were prepared, when honor required it, to go out and kill, or, at any rate, try to kill, their man.

But Sir William was no mere fighter; he mixed in society, foreign and English; he delighted in social intercourse; he went to balls and dinners; he enjoyed all the pleasures of life. Above all, he felt keenly the dignity and the responsibilities attaching to a country gentleman of good lineage and to the heir of a good estate. But Molesworth was also a philosophic radical; and adopting, as he did, with all his natural vehemence, the dogmas of the sect which he had joined, he was, from many points of view, everything which a country gentleman was then most certain to condemn. He was a democrat; he wished to destroy the state of society in which English squires delighted. He revelled in argument, and his logical training supplied him with arms for an assault on all the institutions which an English country gentleman held in honor. He was a bookworm, but he had no love for literature; he might be called a scholar, but he thought little or nothing of the sort of scholarship which English gentlemen, imbued with prejudices or principles, picked up at Oxford or Cambridge.

Then, too, the future editor of Hobbes, the admirer of Grote, and the disciple of James Mill, was a freethinker. It is hardly possible for a modern reader to understand the unpopularity which Molesworth's type of radicalism was certain to excite among the gentlemen of Cornwall. How deep was the prejudice against the philosophic radicals may be best understood by recalling to our minds the attitude towards them of men as fair and liberal-minded as Macaulay and Frederick Denison Maurice. The author of the celebrated articles on Utilitarianism, who was himself at bottom a utilitarian, derides Bentham's disciples as the foes of polite literature and the advocates of logical pedantry; and Maurice, in his unread and almost unreadable novel, 'Eustace Conway,' betrays the belief that a utilitarian was likely to be a scoundrel. The truth is, that the philosophic radicals, with all their great merits, were doctrinaires. They were at once advocates of popular rights and yet themselves unpopular. They, moreover, suffered under the imputation, not altogether unfounded, of a skepticism which the outspoken brutality of 1830 called atheism, and the milder and fairer language of 1902 would term agnosticism; and Molesworth, on this point, as on every other, shared the unpopularity of his associates. He adopted all the political ideas which were then most unpopular in the English gentry. He was an advocate of the ballot, he favored free trade; he desired democratic changes which went far beyond the Reform Act of 1832; he detested and abused the Whigs, he founded the *Westminster Review*, and, from his vigorous and successful attempts to secure for the colonies something like practical independence as well as immunity from the importation of convicts, appeared to most of his contemporaries, and certainly to his political opponents, to be hostile to the greatness of the empire. A modern Liberal, indeed, may hold that Molesworth, in common with the philosophic radicals, was, as regards many political doctrines, in advance of his age.

But an observer who is more interested in human nature than in politics will care less to determine whether Molesworth was politically right or wrong than to understand and note the trick of fate by which a Cornish squire became a Benthamite radical. Nor will such an observer fail to note that it is the combination of incongruous qualities which gives an interest to Molesworth's character, and even to his statesmanship. He was a philosophic radical, but a philosophic radical with a difference. He shared sentiments which James Mill would have condemned as prejudices, and which John Mill, in spite of all his desire to give and receive sympathy, would never have been able to understand. Molesworth, from the beginning to the end of his life, when his last directions were that his funeral, though plain and unostentatious, should be "like a gentleman's," remained the Cornish squire. His portrait was well worth drawing, and Mrs. Fawcett's picture of the man as an individual is, if not exactly powerful, at least full of sympathy and interest.

Secondly—Has Mrs. Fawcett given us a just estimate of her hero? The fact that Molesworth is her "hero" makes it all but impossible to return to this inquiry a favorable reply. Hero-worship is in itself the negation of fairness; the worshipper is sure to fall into one at least of two errors—he either erects too high a pedestal for his idol, or tries to exalt the object of his admiration by unduly depreciating every possible competitor for fame. Mrs. Fawcett falls into both these errors. She assuredly gives to Molesworth a higher place than he would have claimed for himself or than would be assigned to him by any impartial critic. Even as a thinker

and writer, he did not stand in the first rank among the men of his school. He attracts little if any attention from inquirers who, like Leslie Stephen, have made a special study of Utilitarianism. He published a meritorious edition of Hobbes's work. He meant to publish a life of Hobbes, but he died without accomplishing his intention. He never exerted anything like the influence of John Mill, and he never accomplished in the world of letters anything equivalent to the work of Grote. In politics he did not become a leader. He did good work in the improvement of Britain's colonial system, and might have done more had he not died comparatively young. But with speculations about what might have been, a wise man will not greatly trouble himself.

It would be folly and ingratitude to depreciate Molesworth's labors; he did a great deal more for the good of the country than do most M. Ps. But to suppose that his efforts on behalf, for instance, of free trade can be placed side by side with the labors of Bright or of Cobden, would argue on the part of a critic a lack of all sense of proportion. The Corn Laws might have remained unrepealed till to-day if the academical arguments of the philosophic radicals had not been reinforced or superseded by the enthusiasm, the harangues, and the noisy agitation of the Anti-Corn-Law League. But Molesworth, Mrs. Fawcett is obviously convinced, is not to be confounded with the Manchester school, whose services to the country she does not at all fully appreciate. The distinction which she obviously draws, and insists upon far too strongly, between the principles of Molesworth and the political doctrines with which the Manchester school is identified, is, in a very limited sense, real, but Mrs. Fawcett makes far too much of it. The distinction, such as it is, lies in the fact that Molesworth did not, at any rate in the later part of his career, share Cobden's belief in the lasting reign of peace, and, further, that he entertained a certain sympathy with the imperial greatness of England. But when you look at the matter dispassionately, it is extremely difficult to believe that Molesworth was, as we gather his biographer believes, an Imperialist born before his time.

We doubt very much whether he himself would have drawn, and whether either his critics or his admirers did in fact draw, the distinction, which seems so important to Mrs. Fawcett, between Molesworth and other radicals. He, it is true, separated from Cobden and Bright on the question of the Crimean War, and, though that war meets fewer defenders now than it did when it was undertaken, it is quite arguable that Molesworth was in the right. What is certain is that many radicals were supporters of a war which seemed to them to be resistance to Russian aggression. On any other point it is a little difficult to see where it was that Molesworth differed fundamentally from Cobden and Bright. He attacked the Colonial Office, and wished that the English colonies should as soon as possible receive responsible government and be allowed to manage their own local affairs. So did Cobden and Bright. He clearly believed, as appears from the well-known speech of April 10, 1851, to which Mrs. Fawcett makes constant reference, that the colonies cost England much useless expense; he was firmly convinced that England's Colonial Empire ought not to be extended, and especially that it ought not to be extended in South Africa. In all this he occupied exactly the same position, whether we hold the position right or wrong, as the Manchester radicals. He no doubt entertained a vague hope that the colonies, if left to themselves, might come to the aid of the mother country in any just and necessary war; and in this hope he differed, let us admit, from the Manchester School. But, after all, we must not attach too much importance to a hope supported, as it happens, by a fallacious argument which was obviously meant to conciliate opponents. The great speech of 1851 might in its general tone have been endorsed by Cobden or Bright; and, after all, Molesworth's views as to South Africa in 1852 and 1854 are decisive as to his whole position. It is vain to deny that he showed himself at that time precisely what is, in the slang of to-day, called a "Little Englander." His attack on Sir Harry Smith cannot be overlooked. It is exactly the kind of attack which is now directed against Sir Alfred Milner. Whether the attack can be held in either case or in both cases justifiable, is a point which we have not the least intention of arguing. All that we insist upon is that Mrs. Fawcett's honest statement of Molesworth's attitude about South Africa is fatal to her general estimate of his statesmanship. He published in May, 1854, the notes of a speech never delivered in defence of the abandonment of the Orange River territory. In 1878 Kruger was in England to protest against the annexation of the Transvaal; he obtained from Molesworth's widow leave to republish the Notes. Certainly Kruger did not believe that Molesworth was an advocate of Imperialism, and in this matter we agree rather with Kruger than with Mrs. Fawcett.

MORE FICTION.

The New Americans. By Alfred Hodder. The Macmillan Co.

Under the Skylights. By Henry B. Fuller. D. Appleton & Co.

Circumstance. By S. Weir Mitchell, M.D. The Century Co.

The Marrow of Tradition. By Charles W. Chesnutt. Houghton, Mifflin & Co.

In Great Waters. By Thomas A. Janvier. Harper & Brothers.

Orloff and his Wife. By Maxim Gorky. Translated from the Russian by Isabel F. Hapgood. Charles Scribner's Sons.

In 'The New Americans,' nationality is rather over-emphasized. The people sometimes appear more like pilgrims from a remote planet than like children of the race that calls earth its mother. Richardson classified human beings as "men, women, and Italians," and Mr. Hodder seems to accept the classification, substituting Americans for Italians. The Americanism of those citizens of Cincinnati who are selected for representation is not external, a thing obvious and objectionable to the eye and ear; it is a mental attitude, an air of rejecting experience and of individual capacity to adjust the disordered Universe; it is a sort of predominating egotism of the intelligence, which plays havoc with human relations and rather crowds out human instincts. Such characterization, so far as it goes, is not unjust, but it does not go far enough; it creates a false impression as to fact, and it represents people so artificially that it is impossible to like or dislike them, or to care a straw about them. A fair inference from the book is that the author has been inspired more by critical than by creative purpose, and that his first intention has been to free his mind of a load of observation. His eye is particularly and sternly fixed on American women. Early in the work he sounds the censorious note. Mrs. Windet, the mother of the hero, Alan Windet, had managed (one is not definitely told how) to fall short of her husband's ideal of a wife. Since Mr. Windet had expected her to be "an embodied counsel of perfection," the author, we think, treats her failure with undue severity. "She had undertaken that function readily enough," he says; "all women undertake it with a readiness that is amazing, if one considers the sheer ignorance in which they contrive to live. They seem to assume that freedom from error is a quality of sex, like an absence of beard."

Mr. Windet never forgave his wife for disappointing him. The poor woman tried to run away, but he captured her and kept her henceforth as closely a prisoner as if she were chained to a stake. Dealing with a new generation, Mr. Hodder continues to testify; neither youth nor beauty nor talent can bribe him to equivocate. Thus does he introduce his heroine, Miss Cecily Elderlin, a young woman on whom the gods had showered gifts: "She was young and 'paid with her person' [a frequent phrase on New American lips]. She paid presumably as little as she could. She was one of the 'nice girls' who make it a point of honor to go through life quietly demanding everything and giving nothing. She was a prodigious egoist, who fancied she had earned the kingdom of heaven if she consented reluctantly to be adored." When Miss Elderlin rejects Alan Windet it is explained that "she possessed the current American conception that a woman is by birthright something for some one else to dedicate himself to and to do things for." When she resents a commonplace remark, we are informed that "she was always offended by an accent on a difference in sex: it was as if she thought the Deity had made a blunder in creating them male and female, though she was not averse to accepting the advantages of being a woman."

This kind of criticism is unquestionably animated, and we quote it neither to agree nor to dissent, but to show Mr. Hodder's indifference to the generally accepted canon of fiction which prescribes for the author an impartial attitude towards his characters. But his whole conception of the art of fiction is mistaken. The characterization is one-sided, and therefore inadequate; the story is involved, and the motives of action are so obscure that it is almost hopeless to find out what any one is driving at. Everybody and everything is over-analyzed, over-described, and, after all, we have no impression of life, only an elaborate statement of the author's opinions about life. So many of these opinions are worth expression that one may overlook Mr. Hodder's error about the form in which they should be cast. If he has failed to write a good novel, he has

succeeded in writing an interesting and frequently amusing book.

Mr. Fuller's critical spirit is as keen as Mr. Hodder's, but far more genial, sympathetic, and retiring. It knows that in fiction it is entitled only to indirect expression, and that one of its most becoming garments is a cheerful and kindly satire. In the art of impersonal representation of life, Mr. Fuller has, indeed, very great skill, which he uses with a freedom, variety, and assurance most uncommon and enjoyable. That rage for culture which testifies at once pathetically and humorously to America's newness provides a motive for the tales collected in the volume entitled 'Under the Skylights.' The motive is developed through comedy which has just enough seriousness to intimate that the author has no intention of sneering at his people or belittling their aims and aspirations. It is, however, clear that he takes a lightly cynical view of the earnest literary movement, the home-art movement, the higher-life movement—every popular movement except that towards the palatial residence of Mrs. Palmer Pence, when that sumptuous person deigned to proffer tea to a thirsting mob about five o'clock in the afternoon. Even Abner Joyce, the son of the soil, the impassioned denouncer of the "unearned increment," the uncompromising "veritist" in life and letters, at last conforms. It is true that he stuck out, that he had his price. A cup of tea and a handshake could not undermine his principles, but a dinner, a dinner given with special reference to the author of 'This Weary World,' fetched him, and ranged him for ever on the side of Mammon. Such a climax must offend idealists, but no one who has looked the world in the face detects any glaring improbability. The characters of the first tale reappear in the second, which is too long and diffuse, and not justified by the central incident. The third tale, "Dr. Gowdy and the Squash," is well known. The satire is extravagant, and so the story passes for innocent farce.

In his novel 'Circumstance,' Dr. Mitchell's philosophical purpose is to illustrate the effect of circumstance on character. It may be that in working out an exciting plot he has lost sight of this purpose; at all events, its presence does not distract attention from the intrigues and manœuvres of a very competent adventuress called Mrs. Hunter. The lady's character appears to have been formed to control circumstances, indeed to mould them to her will. In the end she was partially defeated, but it took all the energy and intelligence of a large family, a Philadelphian family, to check her career of triumphant crime. The Philadelphians are depicted as very nice, moral, domestic people, constitutionally unfitted to do battle with such a circumstance as Mrs. Hunter. Two maiden ladies, combating pride and poverty, are delicately drawn, and the love affair of Miss Clementina is managed with great discretion.

The medium of fiction is used by the author of 'The Marrow of Tradition' to make a statement of existing relations between negroes and whites in several of the Southern States. Plot, characters, and situations are all conceived with this object in view. The combination of fiction and fact is not perfect, but it is closer and smoother than in most of the current purpose novels. The characterization of both races is excellent, and to many of the scenes the author has given a genuine dramatic touch, the touch that thrills and convinces. In statement of conditions and in criticism Mr. Chesnutt is calm, acute, and just—surprisingly so when he discusses lynch law and disfranchisement by the "grandfather clause" and other ingenious methods. The tone of his argument throughout is admirable, and the expression often eloquent. While his novel is inferior to his short stories in form and method, it shows more vigorously than they do the capacity for cool observation and reflection.

Mr. Janvier is not a too prolific writer; therefore, perhaps, his work suggests by its careful finish leisure for doing it and a personal pleasure derived from doing it well. Throughout his volume of tales of Great Waters, the predominating note is sombre, melancholy, tragic. One, "A Duluth Tragedy," is a pearl of price among stories. The tragedy of event develops itself naturally, inevitably, from the contrast and contact of the inexperienced, passionate, self-reliant Ulrica Ashley and George Maltham, a man not wicked, but weak, and rash enough to suppose that he might play with fire and escape being burned. It would be hard to find in fiction a situation more finely rendered than that where Ulrica steers her boat into the jaws of death. Any one might show the propriety, even righteousness, of Maltham's doom; but in letting Ulrica share it, in making the reader feel that she must share it, Mr. Janvier justifies a bold experiment. Maltham, when, at last, he knew what Ulrica meant to do, grasped the tiller and tried to shift the helm. Ulrica struck him down; he fell backward and lay in a heap miserably whining. "The complaining noise that he made annoyed her. For the last time she looked at him, burning him for an instant with her glowing eyes. Then her look was fixed on the great oncoming waves again, and she cast him out from her mind."

It is not very long since, in popular conception, imaginative literature was a form of expression from which pleasure of one kind or another could be extracted. Gradually this conception has been modified, and we have come to accept it as a very doubtful contributor to the sum of human happiness. It has been left for the Russian, Maxim Gorky, to convert it into an instrument of torture. The life represented in his tales of the "Barefoot Brigade" is at best degraded and painful; at worst, indecent and hideous. To read it is to be overcome with a disgust for life, for any scheme of existence that admits such possibilities. The representation has no appearance of exaggeration, of an unscrupulous desire for effect; it gives the impression of literal truth; it creates a positive belief in the fact. No doubt this is what Gorky means to do, and, if to do it is to be a great force in literature, let none dispute his greatness. Fortunately for us, at least, who cherish the English tradition, there is still room and time to protest. For us, in the estimation of greatness, there are still to be considered the quality of the subject, the ideas and the ideals presented to us. The day has not yet come for us to crown the vivid reporter of the filthy lives of more or less professional tramps. On first acquaintance, Gorky's tramps are rather interesting, because of their curiosity about the mystery of life, which suggests a spirituality trying to escape and to rise above their wretched material condition. But it never does rise, and what seems an interesting and redeeming individual attribute is nothing but a national trait that makes itself an excuse for vice. Gorky may or may not think it an excuse; one cannot tell. He is almost perfectly the impersonal artist or reporter, who tells what he sees and knows, adding neither judgment nor apology. It is not to be predicted that he may never apply this art to the rendering of the more hopeful and beautiful aspects of life; but in his translated work, at least, limitations are distinctly hinted. His occasional sketches of presumably refined persons with civilized habits are awkward, imperfect, sometimes not quite intelligible. He does not understand, probably does not perceive, emotions in which the intellect and what we call character are involved. He really grasps nothing in men and women except animalism, sensuality, materialism. He appears, indeed, chiefly as a born captain of the "Barefoot Brigade."

Financial Crises. By Theodore E. Burton. D. Appleton & Co. 1902.

Mr. Burton has written a very interesting book. His table of bibliography shows that, in collecting his facts, he has examined a great number of authorities; and while it is not to be expected that his theories based on these facts should prove acceptable to all who have studied the subject, it must be admitted that they are in the main reasonable and plausible. The case is a difficult one, and from time immemorial financial doctors have disagreed as to the diagnosis and as to the proper remedies. It is not even possible to get all authorities to agree as to the fact that certain years were prosperous, and other years the reverse. But Mr. Burton is able to show pretty clearly that in many historic crises, such as those of 1825, 1837, 1847, 1857, 1866, 1873, 1884, and 1893, the sequence of phenomena was practically identical: first, a wild speculation, continuing in some cases for several years, followed by a panic due to a serious failure or defalcation, and that again followed by several years of depression. The earlier stages have been well described by Walter Bagehot: "A great many stupid people have a great deal of stupid money, and at intervals this blind capital is particularly large and craving; it seeks for some one to devour it and there is plethora; it finds some one and there is speculation; it is devoured and there is panic." This is probably as good an explanation as can be given of that extraordinary speculative mania which at certain times takes possession of a whole people, and, if unchecked, leads them headlong over the financial precipice. In the opinion of many good judges, the Northern Pacific corner of May, 1901, was a blessing in disguise, because it ended abruptly a wild speculation which would otherwise have ended in serious and widespread disaster.

One of the best-known periods of excessive speculation was that of 1720, which produced the South Sea bubble. Day after

day new companies were organized for every imaginable purpose—companies to make salt water fresh, companies to import jackasses from Spain, companies to make wheels of perpetual motion, and so on. But the climax was reached by an ingenious gentleman who one morning secured a thousand subscribers at two guineas apiece "for an undertaking which shall in due time be revealed." Here we have the original of the blind pool, not unknown to Wall Street, and it seems scarcely necessary to add that the projectors decamped with the two thousand guineas the same afternoon. Financial history repeats itself continually, because the son rarely profits by the experience of the father; and so we read that in the similar speculative period of 1825 a prospectus was issued of a company to be formed for the draining of the Red Sea, and the recovery of the gold and jewels left by Pharaoh's army.

"Black Friday" is connected in many minds with the idea of financial panic, and the connection is one of long standing. The original Black Friday was December 6, 1745, when the advance of the Young Pretender's army towards London caused a serious panic. Then there was another Black Friday in London on May 11, 1866, not, as Mr. Burton says, the day of the failure of Overend, Gurney & Co., but the day after. That important firm failed on Thursday afternoon, and, the fact being telegraphed everywhere, caused a terrible panic and many other failures the next day. Soon after came New York's Black Friday, September 24, 1869, when Jay Gould's attempt to corner gold caused acute distress in Wall Street.

In comparing earlier and later panics, Mr. Burton takes the ground that the coöperation of banking institutions, the greater quantity and mobility of capital and superior means of communication, have diminished the force of crises; but it is doubtful if this theory can be maintained. The most recent crisis in this country—that of 1893—was as long-continued and probably as disastrous from every point of view as any of its predecessors, and the enormous volume of modern transactions certainly tends to increased liabilities on the part of the firms and corporations which fail.

We have said that Mr. Burton's theory of crises is in the main a reasonable and plausible one, but we cannot admit the soundness of all his arguments. For instance, on page 155, he makes the statement that "the United States is not a debtor country, as formerly." If he means by this that it is not a debtor country to the same extent as formerly, no exception can be taken; but if he means, as we imagine he does, that it is not a debtor country in the sense that it holds the obligations of other countries to the same extent that other countries hold its obligations, then the statement is very misleading. The best authorities are of the opinion that, although the amount has been largely reduced of late years, there still remains a European investment in American securities of at least a billion of dollars over and above the small amount of American money which has been invested in European securities. The accuracy of this estimate can easily be verified by an examination of the stock ledgers of railroad companies, and by the amount of coupons received from abroad for collection. Again, at page 219, he speaks of an export of gold for investment abroad *contemporaneously with a low rate of exchange;* but surely this is a contradiction in terms. No export of gold can take place contemporaneously with a low rate of exchange unless the country receiving the gold is willing to pay a premium for it sufficiently high to convert an apparently low rate of exchange into an actually high rate; and such a premium corresponds to the expenditure of power required to force water up hill.

After describing the different crises that have occurred in the United States, Mr. Burton gives his opinion of the present outlook, or rather of the outlook at the time he was writing last summer. Among the unfavorable indications, he mentions the gross over-capitalization of new companies, the absorption of capital for increase of production or future profits, and the diminished activity and purchasing power in other countries with which we have close business relations; all of which conditions have been noted prior to the advent of crises in the past. On the other hand, he considers our financial position excellent, and adds that "large balances abroad furnish a valuable reserve upon which to draw in case of danger." Our financial position to-day can hardly be considered excellent, in view of the diminishing reserves which the banks hold against the greatest volume of deposits ever recorded; and as to the large balances abroad, they did not exist last summer, and they do not exist to-day, except in the imagination of writers of Wall Street news items whose interests lead them to take a cheerful view of the stock market. A much more important point in our favor is the increasing domestic production of gold. This has enabled us, without serious embarrassment, to pay Europe for the vast mass of American securities returned in the last few years, and may enable us to continue business on the present extended scale, in spite of the narrow banking margin, *provided no accident happens.* But, as M. Leroy-Beaulieu has well said, "Every machine moving at great pace and at the maximum of its speed runs the risk of derangement," and there are many thoughtful people, here and elsewhere, who are watching the rapid movement of the American financial machine with growing apprehension.

We have to thank Mr. Burton for an index and for a number of valuable statistical tables, in one of which, on page 345, we note a misprint; the United States wheat crop of 1893 being given as 896 millions of bushels instead of 396 millions.

Cecil Rhodes: A Study of a Career. By Howard Hensman. Harper & Bros. 1902.

The author of this biography informs us that he is indebted to a sister of Mr. Rhodes for some of his information; but the debt is not a large one. Nothing of consequence is told which has not already appeared in print, nor is the matter very interesting. If Mr. Rhodes directed the preparation of this sketch, he did not in selecting a biographer display the business sagacity with which he is credited. Mr. Hensman seems to be unpractised in literary composition, and he does not understand the art of drawing a character. Boswell achieved a great success by chronicling the particulars of the daily life of his hero, but such a success cannot easily be repeated, for modern life is less picturesque than in Dr. Johnson's day, and there are few characters so strongly marked as his.

Regarded in his private capacity, Mr. Rhodes seems to have been a boy like other boys and to be a man like other men. Thus, we are told that at school he was weak in mathematics, but strong in religion, French, the classics, history, and geography. Many such boys have existed. On several occasions he took part in the school sports—a not unparalleled occurrence. He had a disinclination to be behind any of his rivals—a disposition observable in many boys. "His temper was, in the main, genial and sunny; but at times he had outbursts of that imperiousness of will which has marked his later career, and was wont to chafe somewhat at the admonitions of his masters." On one occasion he went so far as to make a motion to throw a book at a teacher, but thought better of it. There is nothing remarkable in all this.

Mr. Hensman attends his hero through later life with similar inept assiduity. Those who are curious concerning his habits and belongings may read of them here, and may listen to many assertions of his greatness. But when it comes to a really critical attempt to characterize the man, his biographer collapses. "The truth is," he confesses, "that Rhodes is a bundle of inconsistencies, and that we no sooner feel that at length we have estimated his character correctly and fathomed all its depths, than he does something which upsets the whole of our calculations, and it is necessary to begin all over again."

We do not think the case quite so bad as this. So far from being inscrutable, Mr. Rhodes is easily comprehended. His distinction is that of a man who got rich through acquiring a diamond mine by methods quite familiar in our own financial world, and described as "cornering," "freezing out," "getting the cinch," and by other expressive epithets. Having secured the continuance of his prosperity by developing a system of slave labor, he conceived the ambitious design of exploiting the continent of Africa, for which undertaking he naturally thought the assistance of the British Government would be indispensable. As Sir William Harcourt said of his schemes, "All he asks us to do is to give up free trade and restore slavery." So far, he has got only half what he asked, but he may yet have the whole. In order to attain his purpose, he projected a telegraph line and a railway "from the Cape to Cairo," obtained title to the vast desert known by his name, and instigated the notorious Jameson raid. His "Chartered Company" has been a failure, and his attack on the Transvaal Republic has cost his country a thousand millions of dollars, untold numbers of lives, and the regard of England's truest friends. She has incurred the enmity of Europe and the undying hatred of the Dutch people of South Africa. These are very considerable achievements, but it does not yet appear that they will win Mr. Rhodes the gratitude of posterity.

Little doubt exists that if Africa is to be successfully exploited, it must be done by slave labor. Mr. Rhodes's plan is simple. Let a hut-tax or a poll-tax be enforced, and the natives will discover the advantages of working. They will not work unless forced; therefore, let them be forced.

Even Mr. Hensman recoils at the pitiful reluctance of the natives to work under ground; they have a childish fear of the dark, it seems. But as diamonds cannot be mined without slave labor, their scruples must be disregarded. Naturally enough, Mr. Rhodes considers that alcoholic drinks should be kept from the natives; no slaveholder in our own country would have tolerated drinking on his plantation. But whatever credit belongs to Mr. Rhodes for prohibiting the sale of drink to the natives we cheerfully accord him. He needs all the entries to his credit that he can get.

The investigation into the Jameson raid, it will be remembered, was suddenly interrupted. It was whispered, whether truly or falsely, that if it had not been stopped, revelations would have been made which would have shaken the very institution of royalty. At all events, we do not know, and probably shall not know, all that Mr. Rhodes did. The Select Committee of the House of Commons found that "he deceived the High Commissioner representing the Imperial Government, he concealed his views from his colleagues in the Colonial Ministry and from the Board of the British South Africa Company, and led his subordinates to believe that his plans were approved by his superiors." On this Mr. Hensman comments as follows: "No little surprise was occasioned by the remark of Mr. Chamberlain, during his speech, that, however much Mr. Rhodes might have failed in his duties as a public man, there was nothing in the whole affair which redounded to his private dishonor. Certain small and unimportant sections professed astonishment at this statement. It is so easy to astonish some people."

The Passing and the Permanent in Religion. By Minot Judson Savage, D.D. (Harvard). G. P. Putnam's Sons. 1900.

Dr. Savage's title is probably a conscious variant of Theodore Parker's "Transient and Permanent in Christianity," the title of Parker's epoch-making sermon of May 19, 1841. The sub-title has a quaint, old-fashioned air: "A plain treatment of the great essentials of religion, being a sifting from these of such things as cannot outlive the results of scientific, historical, and critical study, so making more clearly seen the things that cannot be shaken." Many will think Dr. Savage too confident in his persuasion that without scientific, historical, and critical justification certain things cannot survive. The view of Macaulay's New Zealander from the broken arch of London bridge is likelier to be true. The indolent reviewer could not do better than to borrow from Dr. Savage's preface a description of the matter and the manner of his book. As we turn its pages, we find it easy to understand why the author's preaching should be so attractive. It could not be more simple than it is. The presentation of the preacher's thought is level with his apprehension of reality. He never attempts to say anything that he cannot say comprehensibly. Nothing is painfully suggested. The reader or hearer gets all there is, or all the preacher has himself acquired, as to one subject or another. Moreover, the tone is genial, optimistic, to a remarkable degree. To Dr. Savage, the whole business of life, death, and immortality is a very simple one. If there are mysteries, they can be easily explored. If difficulties are presented, it is for the fun of bringing them to naught; that is what they are for. The sermons are well calculated for a congregation of multi-millionaires. They are full to overflowing with the confident self-satisfaction of the time. We are a great people. There was never so much goodness or so much happiness before. Everything is very much as it should be, except the traditional theology, and that is on its last legs. In his last chapter, Dr. Savage pictures the heaven of his ideal as a still greater New York.

Each sermon-chapter follows the same general plan, which is to set aside the traditional form in deference to some higher, which is assumed to be the permanent reality. There is ample recognition of the traditional systems as feeling after God, if haply they might find him. The text of the first sermon might well have been Schiller's epigram—

"Which my religion? None of those you name;
'Tis so, in fact, because I have religion."

The leading thought—that religion is inescapable—is presented in an impressive manner. In the second chapter Dr. Savage does not make the common liberal antithesis between theology and religion, but regards theology, equally with religion, as something necessary and permanent—religion's intellectual form.

The chapters on worship and prayer are two of the worthiest in the book. That called "Hells" spends too much time on the hells that have burned out, and not enough on the very real and present hell of Swedenborg's conception, when he said, "They that are in sin are in the punishment of sin." In general, there is more emphasis upon the negative than on the positive side. In "The Resurrection Life"—a strange misnomer for the persistence of a spiritual self—Dr. Savage's confident spiritualism helps him to no detail. He simply projects upon the void his personal ideal of an agreeable and happy life; not perfectly happy—here the best touch—so long as there is anywhere unhappiness. But where we can know nothing, a more restrained imagination would, perhaps, be more reverent. There is an appendix which gives horrible examples in proof that Dr. Savage, when describing the traditional hell, was not using the worst words he knew by a good deal.

A Treatise on International Public Law. By Hannis Taylor. Chicago: Callaghan & Co. 1901.

During the last fifty years, in the view of this author, international law has passed through a more marked and rapid development than in any other single epoch in its entire history. To understand this development, however, it is necessary to regard the existing state system in the light furnished by an examination of its three predecessors—Greek, Roman, and Mediæval—"whose individual histories constitute only distinct stages in one unbroken and progressive development." Such an examination is made by Mr. Taylor in a summary statement of the early history of international usages; but we do not observe that any definite principles of development are deduced from this history, or applied to the elucidation of its later stages. We know, in a general way, that the rules of diplomatic intercourse have been formulated, that sovereignty and jurisdiction in relation to persons and things have been defined, that the rights and duties of neutrals have been particularized. But we get little new light from this treatise on the causes which have produced these effects, their origin and future operation; and the really valuable results of the author's scholarly labors are rather concealed than displayed by his pompous platitudes.

Let us take, for example, his comments on the extraordinary performance of President Cleveland in regard to the question of the boundary of Venezuela. The principle governing the action of our Government here seems to be derived from the proposition that "our marvellous national development entitled us to rank as a world-power." Most writers on international law have assumed that the United States has long been as much of a "world-power" as any other state; but they have not included among the doctrines of their science the proposition that the United States is the only sovereign state in the western hemisphere. Mr. Cleveland said, "Practically the principle for which we contend has peculiar, if not exclusive, relation to the United States," which would remove it from the category of law. For the essence of law is its application to a class of persons or phenomena; and a principle applying exclusively to one case is subversive of this notion. According to Mr. Cleveland's theory, every nation to the south of us is subject to our "overlordship," and maintains its existence only by our consent. As this author explicitly admits, our Government has the right of final judgment concerning intervention, and "intervention is a hostile act, which the state interfered with may treat as an act of war." This may or may not be called the "Monroe Doctrine," and it may or may not be recognized as a fact by other nations; but it illustrates the principle that might makes right, and is inconsistent with every definition of justice.

In accordance with this theory of the development of international law, no reference is made to the war with Mexico, beyond a suggestion that it was undertaken by our Government in "self-defence." We find that the burning of the palace of the Emperor of China in 1860 was unjustifiable, but we observe no allusion to recent events in that country, or to the principles of international law which they involve. As to resistance prolonged unreasonably, it is intimated that quarter should be granted to those finally captured, and that "the better opinion" forbids inhumanity when a civilized Power makes reprisals on barbarians. Curiously enough, the name of Aguinaldo is mentioned in a paragraph wherein it is laid down that "it is unlawful to bribe or otherwise seduce generals, soldiers, or people of the opposing belligerent." This follows a statement that injury by treachery is never permissible, and that gaining admission within the enemy's lines by false pretences or disguises is forbidden. But the capture of Aguinaldo is not mentioned; and if our Government is to do whatever is right in its own judgment, by virtue of its might, we know not why it may not change the laws of war. Another omission which we have noted is that of the case of the *Itata*, important for several reasons. We may add that it is creditable to the author that he justifies Lincoln's threat to execute

Southern prisoners in retaliation for the refusal of quarter to black soldiers, although he disapproves of the arming of the slaves.

The comments on the *Alabama* case are of peculiar interest because of Mr. Taylor's personal acquaintance with Capt. Semmes, whom he describes as one of the most astute and accomplished lawyers of his time. His criticism of this case and of the development of international law concerning the duties of neutrals toward belligerents is intelligent and thorough, and contains perhaps the best condensed review of the subject available. In general, we may say that the treatise covers the ground pretty completely, its pages numbering nearly 800. The authorities are conveniently cited in footnotes. The index is unusually full, covering 115 pages, and there is also a list of authorities cited. The treatise will no doubt prove a useful manual, especially for reference, although the author's opinions may not always command respect.

Early Renaissance Architecture in England: A Historical and Descriptive Account of the Tudor, Elizabethan, and Jacobean Periods, 1500-1625. For the Use of Students and Others. By J. Alfred Gotch, F.S.A. With 87 collotype and other plates, and 230 illustrations in the text. London: B. T. Batsford; New York: Charles Scribner's Sons. 1901. Pp. xxii, 281.

Although it has been disputed whether there ever was a true Renaissance of the arts in England, the English writers who are the most accurate and the most enthusiastic of our time, are accepting the term Renaissance architecture for all the buildings and their details—all the tombs, garden terraces, and decorative art generally—which come in date after the first introduction of classical forms from Italy into England. As with Mr. Blomfield, so with Messrs. Belcher and Macartney, and with the author of the work before us. What we have to consider is, whether the term Renaissance has been properly applied in these cases. About this it is evident that there must be differences of opinion.

The true Renaissance is the Italian movement dating from 1420 to about the beginning of the sixteenth century, and losing itself then in the completed cinquecento style which cannot in strictness be associated with the "revival," being an ultimate result. The appearance of classical details, with the change in general design in the north—that is to say, in the countries which we now know as France, Germany, Belgium, Holland, Sweden—is about eighty-five years later than in Italy; but the term Renaissance is with great propriety extended to cover it because it was inspired by almost exactly the same motives as in Italy. It is not possible to detect in the history of English art any such universal change; the Gothic taste held on and influenced all the buildings of the British Isles down to the time of the outbreak of the Civil War, when the few designs made by Inigo Jones and by one or two men of his time who were "Italianate" in their feelings and experience, are to be compared, if at all, with the classically inspired buildings of the Continent. If, so far as style is concerned, the term Renaissance were to be applied to anything English, it should be applied to these—to designs like that for Whitehall Palace, of which only the "Banqueting House" was ever built; but this design was not made until after the middle of the seventeenth century. On the other hand, if the term Renaissance is to be applied not to the style of any given building but to a changing spirit in the significance of design, then the Renaissance begins in England in sculptured detail, as early as 1520, while the first piece of non-Gothic design in general forms as well as in detail is, as selected and given by Mr. Gotch, the screen in King's College Chapel, Cambridge (plate viii.); this screen being dated by him 1532-36. It is evident that the term should be applied rather to this and its contemporary buildings, and that we are driven to accept, as the time of the Renaissance, a long historical period, during which Gothic details were used side by side with those of very positive non-Gothic character; during which the proportion and the grouping of country houses were still mediæval, while the horizontal cornice, the flat roof, and the classical order came into royal palace and London front; during which mediæval feeling and mediæval methods of work held their own successfully against the invading taste for neo-classic design. This is the Renaissance in England; and it covers the whole space between the accession of Henry VIII., 1509, and the beginning of the serious struggle between Charles and his Parliament, about 1635, or between 1500 and 1625, as the title-page will have it. Mr. Gotch stops with the end of the reign of James I.; and to make even dates covering exactly a century and a quarter, he begins with the year 1500. Nothing can be said against these limits given for the early Renaissance, but it must be remarked that what the English writers call the early Renaissance should, in our opinion, be called the Renaissance alone, without qualifying term, while the art of the epoch following the Civil War should be called by some other name. The term Renaissance expresses the single idea of a rejuvenation of art, of a commencement on new lines, of a fresh start; and there is no reason in the world for extending it, as is too common in English writing, to cover the periods of decline and even of decay.

Mr. Gotch is the author of a folio work entitled 'The Architecture of the Renaissance in England,' devoted to large photographic views of English buildings, exteriors and interiors, general views, and details, with descriptive text and an introductory essay. The present work is altogether different in character, and the assurance given in the preface can be taken literally; namely, that the two works have nothing in common beyond the fact that they cover nearly the same period. The more recent is an historical handbook, and one of extraordinary value for its thorough examination into the true history of the time, unswayed more than is reasonable by the dignified or pretentious character of buildings which still exist in their entirety. Thus, it is easy to trace the development of Elizabethan architecture in the pages beginning with "The Invasion of the Foreign Style" (page 10) through the next chapter, which deals with "The Development of the House Plan," and then through a series of chapters which deal with the details until chapter xi. takes up afresh the subject of the plan in connection with the work of John Thorpe and the later sixteenth century. The book is of necessity devoted mainly to domestic architecture. It is plainly stated on page 215 that there is no ecclesiastical architecture of early Renaissance character in England; nor is this the first occurrence of this statement. In fact, the disposition which the English show to this day to build churches in some modification of mediæval style, while the domestic and civic buildings near at hand are neo-classic in some form, took its origin in the early days. Moreover, the full classical treatment even of civic buildings was never accepted during all this Renaissance period. As is stated on page 95, "An Elizabethan house could no more have been designed by Palladio or Du Cerceau or Vriese than a play like those which Shakspere gave us could have been written by one of the novelists, essayists, or dramatists of Italy, France, or Germany." In this fact, however, in this very impurity of style, this mingling of different and even hostile elements, is found the true charm of the Elizabethan and Jacobean architecture. This architecture, taken altogether, is the latest instance in which Europeans have allowed themselves to work according to accepted traditions of cutting stone and wood and fitting parts together. It is the latest workman's style in Europe.

The book can be read continuously by any person interested in history as a narrative. Students who ask for synopses and tables of facts only, and abhor the idea of story-telling even if the story be true and well told, are not the readers we have now in mind. Here is one side of the life of one small European nation, and the history of this for 125 years is made to cover 266 pages—although, indeed, one-fifth, or perhaps one-fourth, of this space is occupied by text illustrations. It recommends itself to no one to whom the solid object, the tangible, ponderable, and visible work of art is indifferent—for there are many such men, and some of them are found to write about matters of graphic and plastic art. By readers for whom it is intended it can be laid down with a feeling of perfect content with the use they have made of their time.

The Works of Thomas Kyd. Edited from the Original Texts with Introduction, Notes, and Facsimiles, by Frederick S. Boas, M.A., Balliol College, Oxford, Professor of History and English Literature in Queen's College, Belfast; Author of 'Shakspere and his Predecessors,' etc. Oxford: Clarendon Press; New York: H. Frowde. 1901. Pp. cxvi, 470.

When Klein, some twenty-five years ago, wrote his two volumes on the English Drama in his 'Geschichte des Dramas,' he spoke of Kyd as the "most impersonal of all poets." Since that time, however, our knowledge not only of Kyd but of his fellow-dramatists has been appreciably increased. Mr. Lee's 'Life of Shakspere' has brushed aside the imaginative inferences from the plays which tried to pass as biography, and from authenticated facts has given us a real and living man. And the same scholar, with Goodwin, Schick, and others, has brought to light much that was hidden in the life of Kyd. The results of these investigations are embodied by Professor Boas, together with his own, in the Introduction to his edition of the Works of Kyd. There are still twenty-three years

of the dramatist's life which remain a blank, and these Professor Boas seeks to fill in by tracing the course of his poetic development as inferable from his works. At best, this is fragmentary and cannot be regarded as conclusive. Thus, to infer from the evidence of his plays and translations that he was not college-bred is certainly perilous. A college course does not always make a man a perfect construer, and Kyd's mistakes in translation from Latin, French, and Italian may be paralleled without great difficulty in the works of equally brilliant men who are college graduates. Even if he does speak of Thrasymene as "so dezart," and translates "Marius, l'honneur d'Arpin" as "Marius, Arpin's friend," we should not necessarily infer with Professor Boas that he did not graduate from either of the Universities.

In any case, Kyd's learning, or lack of it, seems to have made him the butt of one bitter writer of invective, the fiery Nash, who, it is generally agreed, was striking at Kyd in his Preface to Greene's "Menaphon" and incidentally furnishing some biography. Nash, as Professor Boas says, was correct enough when he sneered at Kyd as one of those who "intermeddle with Italian translations: wherein how poorelie they have plodded . . . let all indifferent Gentlemen that have travailed in that tongue discerne by their twopenie pamphlets"; but Nash gives too loose a rein to his satirical fancy when he says Kyd "could scarcelie latinize [his] necke verse if [he] should have neede." Accurate scholarship, fortunately, was not a prerequisite to dramatic excellence, though some of the University wits would have had it so; nor was every University wit a perfect Latinist.

The editor of Kyd is beset from the beginning of his work with perplexing problems. As soon as he has gathered together the fragments of his author's life, he meets various disturbing questions about his known works and about those which are to be admitted into the canon. Happily, we know that the "Spanish Tragedy" is by Kyd, but we have to determine its date by internal evidence. Over this seemingly insignificant question much ink has been spilt. Was the play written before or after the Armada? The subtleties of those who fix its date at 1589-90 must, however, vanish, as Professor Boas contends, before the argument that no play dealing with Spanish affairs and written by an Englishman would be likely to contain only trivial references to vague and semi-mythical victories of English arms in the days of John of Gaunt, when the Armada was still fresh in the memory of all England. The date 1585-7, fixed upon by Professor Boas, makes more manifest the influence of Kyd on the development of English tragedy, and it is this which gives importance to the question.

Besides the "Spanish Tragedy," only one other play is known to be Kyd's, and it is his translation of Garnier's "Cornélie." By means of these two plays, accordingly, the canon of his dramas has to be determined. There are, in all, four plays which appear for examination: "Titus Andronicus," "Jeronimo," "Soliman and Perseda," and the suppositional "Ur-Hamlet," the original of Shakspere's play. The first two Professor Boas believes not to be Kyd's; the last two undoubtedly his. The problem is complicated in the case of "Titus" by the admission that we probably have not the earliest form in the present version—and the former alone is attributed to Kyd; and, in the case of the "Ur-Hamlet," by the loss of this play, which is most closely represented by the 1603 Shakspere quarto. There are striking resemblances between all these plays and the "Spanish Tragedy," and also differences. The greatest care must, accordingly, be taken in estimating the relative values of these points of similarity and difference, if from them we are to determine a common or a divided authorship.

In the case of "Jeronimo" the resemblances to the "Spanish Tragedy" are largely suggested by the latter work, to which the former was intended as a forepiece; and the play might readily be composed by a fifth-rate dramatist who wished to profit by the revived popularity of the greater work. Disregarding conventional and accidental correspondences, there are no resemblances between the two plays too subtle to be explained as imitative. The lack of conformity, on the other hand, between certain events in the forepiece and the record of them in the "Spanish Tragedy" might easily be overlooked by a careless imitator, but not by the common author of the two plays.

In his discussion of the authorship of the "Ur-Hamlet," Professor Boas should rest his main argument on the striking similarities of dramatic technique between the 1603 quarto and the "Spanish Tragedy," as supplementary, of course, to the strong evidence of Nash's "Preface." The variations of "Hamlet" from its ultimate source in Belleforest correspond so closely to leading features in the plot of the "Spanish Tragedy" as to be strongly corroborative of the common authorship of these plays. On the whole, Professor Boas presents these arguments forcibly; some of his correspondences are, however, too trivial to carry weight. But it is in the resemblances of phrase between the 1603 quarto and the known works of Kyd that our editor believes he has "practically irresistible internal tests" of Kyd's authorship of the "Ur-Hamlet." To us they do not seem convincing. They might easily be the product of imitation. Such exist in the case of "Jeronimo" and the "Spanish Tragedy," of the 1604 quarto of "Hamlet" and the "Spanish Tragedy." Indeed, Professor Boas himself, in discussing the authorship of "Titus," points out just such resemblances in phrase between this play and the "Spanish Tragedy," but is content to disregard them without explanation as evidence of common authorship. There are, too, resemblances in technique between "Titus" and the "Spanish Tragedy" which are more significant than some of those Professor Boas mentions between the 1603 quarto and the same play, and these, also, he disregards. These smaller matters should be given very little weight in determining authorship. It is the mere jugglery of criticism when they are classed as corroborative evidence in the case of probable common authorship, and as mere imitation in that of probable divided authorship. That which determines us in accepting Kyd as the author of the "Ur-Hamlet" and questioning his complicity in "Titus" is the radical difference between the two plays. "Titus" surpasses in its orgy of horrors and its ingenuity of ferociousness anything in Kyd's accredited works or what we can conceive the "Ur-Hamlet" to have been. This, with the total absence of the comic, would seem to argue most strongly against Kyd's authorship of the play.

In the matter of the text, Professor Boas has left very little to be desired. He has given us the first complete edition of Kyd's works. Hitherto, with the exception of the "Spanish Tragedy," his plays were accessible only in the collections. Of his pamphlets, the "Householder's Philosophy" existed only in the quarto of 1588, and the "Murder of John Brewen" had been reprinted in Collier's "Illustrations of Early English Popular Literature" (1863), and was out of print. The text follows the best quarto in the case of each work, and varies only when necessary. All needless emendations (for which see Fleischer's 'Bemerkungen') are rigidly excluded. The notes are neither too full nor too scanty. There are remarkably few typographical errors. The following have been noted: On p. xciv, line 12, the reference to the "Spanish Tragedy" should be III., xi, *43;* on p. 31, line 60, for "ambituous" read "ambitious"; the footnote on page 69 to line 148 reads; "See Note," but there is no corresponding note; the reference in the note to "Spanish Tragedy" III., vi, 16, should read "52" for "51"; on page 322 the page-heading should be "Act II.," not "Act I."

Musings by Campfire and Wayside. By William Cunningham Gray. Fleming H. Revell Co. 1902. 8vo, pp. 337. Illustrated.

This volume of *causerie* by the late editor of the *Interior* contains some chapters enlarged from an earlier output of 'Musings,' though much of the contents is now first printed. A portion of the book failed to receive the author's revision, as one may notice by a few misspelled proper names and one misplaced paragraph. These defects are, however, of slight importance. The book has what many of our young Western critics mistake for evidences of culture—a simple, unaffected flow of words, as of chat on a veranda in the twilight between old friends; evidences of good taste, native rather than acquired, of homely common sense, of a genuine love of outdoor life, of latent fires of indignation ready to blaze at the puff of injustice. Some of it is charming, nearly all is pleasant reading, and there is little of the newspaper flavor. It is the apotheosis of the literary column in the Saturday evening edition, a development in words of musings, whimsies quaint or kindly, speculations of a dandelion about the pine tops, of a log-cabin builder about the universe. As a self-revelation of an earnest, kindly nature, free from pedantry yet innocent of training, reverent yet audacious, but without the undertones of strength which are the indications of real power, the book will find a welcome, and doubtless a wide audience. But it is of those which open the door to literature rather than exemplify it, which sound the note of aspiration rather than the pæan of one who stands already on the heights. Of literary finish or the assured confidence of style it has and claims nothing.

It is elegantly printed and tastefully bound; and the illustrations, from photographs by the author, are well reproduced and of a quality akin to the text.

François de Fénelon. By Viscount St. Cyres. E. P. Dutton & Co. 1901.

The life of a great aristocratic prelate of the seventeenth century might easily have tempted a less judicious biographer than Lord St. Cyres into long intrusive disquisition on the great fundamentals implied by Fénelon in successive declarations or acts of conduct. We should then have been presented with an elaborate treatise on questions of state and religion during the *grand siècle*, instead of with the present compact and admirably balanced Life. Its explanatory paragraphs and chapters, though amply detailed, are all designed to aid in the elucidation of a character hitherto treated in altogether too partial a fashion. For, as the author says, the conventional Fénelon, as described either by admirers or by opponents, invariably obscures the real man. Thus (chap. ii.) the eighteenth-century tradition, which placed Fénelon among the great supporters of religious toleration, becomes manifestly ill-founded when one examines, with the assistance of Lord St. Cyres, the essentially clerical character of the Archbishop. Yet we cannot agree with the biographer in attributing freedom of conscience wholly "to men to whom liberty of Prophesying was as the very breath of God," and thus tacitly ruling out the slowly disintegrating effect which the skepticism of such men as Bayle handed as a heritage to the still more destructive and tolerant indifferentism of the age of pure reason (p. 17).

It is in connection with the hackneyed Bossuet-Fénelon quarrel that the writer's analysis is most complete, dealing out even-handed justice to both contestants with an almost sardonic imperturbability of judicial humor; the reader is at first puzzled to guess to which side his sympathies are expected to lean. In the main, however, Lord St. Cyres tends to favor Bossuet, the "dogmatist, not, indeed, in the world's most vulgar sense, but as one who saw in creeds an institution rather than an idea, a measuring-rod rather than a lever, an abstract of all human duties, not their bare beginning" (p. 152). Such a character needs no reading between the lines; it falls, consequently, into natural and immediate antagonism with the "quelquechose d'inachevé, composé de contrastes qui n'ont pu se fondre et s'amalgamer," of which the picture here presented takes the place, possibly for many years, of the conventional portrait, so often drawn in unbroken flowing outline, of the persecuted saint at Cambrai. And the special merit of the biographer's discussion lies in its demonstration of the rigorously logical fashion in which the contrast and hostility grew out of a simple difference in the diagnosing of an elementary pathological case.

In dealing with Fénelon's theory of education, his present biographer easily exposes its leading weakness. Parallels between 'Télémaque' and 'Émile' have often been established; but comparatively few critics dwell with insistence on their common fallacy of bringing up the child in large measure with a view to the subjective gratification in the result to be enjoyed by the preceptor; and an average healthy boy should chafe under a system of scrutiny which reduces the pupil almost to the condition of the prisoners in Bentham's Panopticon scheme. This community of view in Fénelon and Rousseau, we may add, was in the one case derived from the practice of the confessional, while in the other it was a persistent survival of the inquisitorial methods of Geneva. The Swiss theorist was the more fortunate of the two in not seeing the wreck of his endeavors through their failure in a concrete example. Lord St. Cyres goes further in tracing the dependence of Rousseau on Fénelon by representing the latter as, in some respects, a forerunner of Romanticism (pp. 200-202), which restores to Nature something of her primal rights. While joining with the critic in holding that Fénelon's conception of Nature is at bottom in harmony neither with Rousseau nor with Wordsworth, one must also note that an equally wide gulf divides the observer of urban and court life from the man to whom a mere touch of color on the hillside signified a revelation of supreme importance towards the discovery of philosophic truth. Fénelon was one of the least likely of men to become "enslaved to the optic nerve."

In the preface of this volume the general reader is forewarned against the possible aridity of certain chapters devoted to the examination of the abstract principles at stake during the crisis of Fénelon's life. It is precisely in connection with these questions that the scholar will find his chief interest, for Lord St. Cyres has evidently examined not only the great treatises, but in some cases a mass of ephemeral contemporary pamphlets, bearing on such topics as Mme. Guyon and the Mystics, Jansenism and Cartesianism. It is thus that he succeeds in deepening the impression that he seeks to make of the complexity in a nature capable of allying itself now with Mystic, now with Jesuit, and consequently, at a later time, of supplying authoritative foundation for the widely differing contention of Joseph de Maistre and Lamennais.

The style of this volume is not the least of its merits. Possibly, in dealing with the more serious questions, the glitter of sustained wit or epigram might have given way to the glow of genuine interest or fervor; the academic tone of slightly supercilious aloofness suggests comparative coldness to the issues in a country which is not the writer's own. But this also rendered it possible for Lord St. Cyres to give practical fulfilment to the recently expressed wish of another commentator: "Il semble que l'heure de l'impartialité devrait être venue pour la mémoire de Fénelon."

Life of Charles Robinson, the First State Governor of Kansas. By Frank W. Blackmar, Ph.D., Professor of Sociology and Economics in the University of Kansas. Topeka: Crane & Co.

It is an unfortunate aspect of early Kansas history that works on the subject are still being written with greater and greater amplitude of detail, and the time of contraction and condensation has not yet begun. Redpath's 'Life of John Brown' filled 408 pages, Sanborn's 645, Hinton's 752. After some delay, the special admirers of Gov. Robinson are taking their innings, and Professor Blackmar's biography of him mounts up to 438 pages. Like all his predecessors, this new author at once plunges into the petty and somewhat parochial gossip, so often reiterated, as to who is the real hero of Kansas. He says, in the very introduction (p. 17): "As to the Brown-Lane-Robinson controversy, it is not easy to get at the whole truth and cause each man to stand forth in his true light." Nevertheless, he finds it easy, three pages after, like all special advocates, to say that "the verdict of history cannot fail" to make his own hero incomparably the greatest. Having thus stated the case and pronounced the verdict in the very introduction, he proceeds for many pages to multiply details, finding Brown and Lane wrong in everything, and yet presenting them in no really new light.

The essential point of the controversy has been from the beginning the alleged fact that Gov. Robinson did at the time approve of John Brown's part in the so-called "Pottawatomie Massacre," in 1856, on which the whole course of events seemed for a time to turn, and that he held that view of it for twenty-two years, after which he turned upon John Brown and vigorously denounced him for the rest of his own life. Professor Blackmar now concedes (p. 321), that Gov. Robinson wrote to James Hanway as follows, in 1878: "I never had much doubt that Capt. Brown was the author of the blow at Pottawatomie [twenty-two years before], for the reason that he was the only man that comprehended the situation and saw the absolute necessity of some such blow and had the nerve to strike it." Professor Blackmar's vindication of this seeming inconsistency is based on the ground that certain testimony, given by a Mr. Townsley (p. 322), caused the change of Robinson's opinion. The peculiarity is that, while thus relying on Mr. Townsley's evidence for the vindication of his friend, Professor Blackmar does not tell us one word as to who the witness was, when he testified, what his statements were; and does not consider him important enough to be mentioned in his index.

As a matter of fact, Mr. Townsley was simply the wagoner who was employed to drive the party. John Brown himself had spent the winter in that region (Connelley's 'John Brown,' p. 212), and did not need any one to show him who and what his neighbors were; he plainly did not intend to "sweep the creek," because two pro-slavery men were returned unharmed as having taken no part in any outrages. Furthermore, we have it on the authority of John Brown, jr., a man of high character as to truthfulness, that Townsley "volunteered to return with the team, and offered to point out the abodes of such as he thought should be disposed of" (Sanborn, p. 264; Connelley, p. 210). Townsley himself stated at a later period: "I did not then approve the killing of those men. . . . In after-years my opinion changed as to the wisdom of the massacre. I became, and am, satisfied that it resulted in good to the Free-State cause. . . . The pro-slavery men were dreadfully terrified, and large numbers of them soon left the Territory" (Connelly, p. 224). It is to be remembered that Governor Robinson himself was one of those held as prisoner by the Slave-State men, and, immediately after the Pottawatomie affair, was released; and that even Prof. L. W. Spring, author of a 'History of Kansas,' while disapproving the massacre itself, admits that its effect was "marvellous," and that it probably saved Governor Robinson and the other prisoners from death (*Lippincott's Magazine*, January 18,

1883). Considering how constantly the affair was discussed in the Territory, and how well the details had been gone over again and again at every street corner, it seems in the highest degree improbable that Governor Robinson's views of the whole matter should have been seriously changed, after nearly a quarter of a century, by any testimony of such uncertain value as that coming from a man like Townsley.

If we have seemed to dwell upon the matter disproportionately, it is because Professor Blackmar throughout the book leads up to it, thus recognizing it as the weak point in Governor Robinson's career. This career doubtless began in great services to Kansas, but was afterwards marred by the distorted action of the mind which characterized Kansas public sentiment on both sides in those days, and whose effects still remain among her historians. Having had occasion not long since to point out the very unsatisfactory construction of Mr. Connelley's book, written from the John Brown point of view, we cannot be censured as one-sided for finding the same and still greater defects in the work now in our hands. Like so many of its predecessors, it has simply confused the Kansas muddle and made it worse than before. It is to be remembered that Theodore Parker said in 1856, at the anniversary of the Anti-Slavery Society, speaking of Kansas annals up to that time, "I know of no transaction in human history which has been covered up with such abundant lying from the days of Ananias and Sapphira down to the first nomination of Governor Gardner."

The Spoken Arabic of Egypt. By J. Selden Willmore. London: David Nutt. 1901. Pp. xviii+394.

Not since Spitta's epoch-making 'Grammatik' have we had so detailed an examination and so complete a statement of the actual facts of the dialects of Egypt, and especially Cairo, as spoken at the present day. Curiously enough, Mr. Willmore makes no mention of Vollers, his more immediate, if much less painstaking, predecessor; and the work done by Socin, Sobernheim, and Kern on the translations from Molière into Cairene Arabic by Muhammad Osman Galal is also left unnoticed. In fact, the whole recent movement in Germany towards elaborate study of the different modern dialects of Arabic—a movement so extensive as to have almost pushed aside for the time all thoughts of classical Arabic—seems to have escaped his attention. So his book has been produced independently by the same causes which have produced that movement in Germany—the great awakening among Muslims, and the interest in Europe in the again living East. Mr. Willmore hopes, like Spitta and all others who know the East face to face, for a time when the Arabic colloquials will become literary languages, and when the educated Muslim, speaking in public or writing, will no longer have to express himself in a so-called classical idiom which is not classical at all, but a product of the schools. The language of the voice will be the language of the pen, and the new literature will be accessible to the mass of the people. This is a hope which we may easily see realized, and the present book will do much towards that realization, as showing that it deals with no patois, but with a language which can endure the bonds of grammar and live. Yet it is to be remembered that the few attempts so far made towards writing in this tongue understanded of the people have enlisted far higher interest in Europe than in Egypt, and that plays which have been edited, published, and translated by German philologians have with difficulty pushed themselves against popular prejudice on to the Egyptian stage. A second hope, that the new literature may be written in some form of the Latin alphabet and not in the unhappy, if picturesque, Arabic script, must remain much dimmer and farther off. If it were not for the wise English policy of meddling in no way with native prejudices, something might be done with the high hand in the new schools. But that is impossible; the Egyptians must save themselves, and they will probably do it in some way that we have never dreamed of. Education they are now getting; it is theirs to make use of it.

Mr. Willmore has equipped his book with an extensive and well-graduated set of exercises; but it is essentially a grammatical study and not an introductory manual. To have marked the accent throughout might have added much to the expense, but it would certainly have added still more to the value.

Youth's Companion Series: (1) The Wide World; (2) Northern Europe. Boston: Ginn & Co. 25 cents each.

"From the novel of modern life, however skilfully written it may happen to be, it is sometimes a pleasure to turn to some book which is so remote in its theme and so fantastic in its atmosphere as to seem to have no relation to the actual life of any period in the history of the world. 'The Assassins' is such a story, as extraordinary in its incidents as a tale out of the Arabian Nights, but, perhaps for that very reason, unusually entertaining. . . . From beginning to end Mr. Meakin crowds his pages with spectacular and grim occurrences. The last chapter, one is sure, will contain just the climax for which one has been looking; but, as a matter of fact, the author here gives his narrative a turn which is as surprising as it is artistic."

YOUR SUMMER OUTING

THE railroads have decided to sell tickets to Colorado next summer at *very* low rates, so that people in moderate circumstances can go there at moderate cost for their vacations.

There is no place where one can derive so much benefit in a given time as in Colorado.

The climate is delightful, the mountain scenery is famous the world over.

As to the hotels and boarding houses, they are excellent and not expensive.

Ask me to send you a copy of our hand-book of Colorado. It tells all about places and prices. Gives a lot of useful information and has a good map of the state.

Comparative Administrative Law

An Analysis of the Administrative System of the United States, England, France, and Germany. By F. J. GOODNOW, Professor of Administrative Law in Columbia University.

Students' edition. Two vols. in one, net, $3.00.

"His volumes are remarkable alike for analytical power and lucidity of method. His style is as luminous as that of Sir Henry Maine, and his general literary method not unlike that great author's—and there can be no higher praise—in its orderliness of arrangement, precision of statement, and true scientific spirit. The work is unique and of permanent excellence. It fills a vacant place in the library shelves, and is a permanent addition of very great value to the science of comparative law."—*N. Y. Tribune.*

SEND FOR THE MONTHLY BULLETINS OF

THE MACMILLAN COMPANY, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, MARCH 27, 1902.

The Week.

Gen. Leonard Wood, en route to Washington, set forth the Cuban situation, as Congress has left it, with soldierly bluntness. We are ready to turn over the government to the Cubans, he says, on short notice. But what is it that we shall turn over, as the case stands? Why, simply "a crisis," declares Gen. Wood. That is what will surely follow unless a tariff reduction of more than 20 per cent. on Cuban imports be voted by Congress. Here are the words of our Military Governor of Cuba:

> "It is absolutely necessary to the welfare of the island that the tariff on sugar be reduced not less than thirty-three and one-third per cent. We may as well make up our minds to that if the island is to prosper, and we are responsible for the future of the island and its prosperity. We have promised to see the people through, and we must do it."

What is the Republican party going to do about it? Can it afford to go into the fall campaign, can it stand before the people of the country, can it expose itself to the world, as a party so terror-stricken at the threats of tariff-beneficiaries that it falsifies the promises of two of its own Presidents? The next few days at Washington must decide.

Cubans may be proud of the sentences given to the three American postal thieves, Neely, Reeves, and Rathbone, in Havana on Monday. We have heard much about the inability of the Cubans to govern themselves according to our own high standards, and have even had to listen to many doubts as to the possibility of establishing a workable judicial system in the island. But here we have at least one court which has had the courage and the wisdom to punish exemplarily men who belonged to the dominating nation, and who were known to have most powerful political backing in the United States. Only the other day the Governor of Indiana, accompanied by his staff in full uniform, called in the prison upon Mr. Neely, that "grand confidential man" so highly recommended by Perry Heath, and who confidentially aided Mr. Rathbone to plunder and steal from the Cuban revenues. We do not know whether it is the custom in Indianapolis for the Governor and his staff to make ceremonial visits to accused criminals, but, whatever the motive, it had no effect whatever upon the court. Neely, Rathbone, and Reeves will now "rot in Cuban dungeons," as their friends have characterized imprisonment in the island.

Our contented wards in Cuba should not make us forget the happy family we have in Hawaii. President Roosevelt is not allowed to forget it. The various brothers that compose it are filling his ears with pleasing tales about each other. Brother Parker declares that Brother Dole, the Governor, is a frightful tyrant, besides being a fussy old slow-coach anyhow, quite out of touch with the alert Americanism of the younger immigrants who had gone to the island for the good, and also for the goods, of the native. Brother Carter, however, comes on to tell the President that Brother Dole is the only bulwark against the anarchy of the half-breed faction, in alliance with the baser Americans. What is poor Mr. Roosevelt to do? He probably will not content himself with imitating the method of his predecessor, placing a kind hand on the shoulder of each tale-bearer, and telling him to go back to Hawaii and remember that the starry folds of the flag are above him. The quarrelling Hawaiians have no trouble about going in for the old flag; it is only the division of the appropriations and the offices which go with them that bothers them. But the American public distinctly does not care for any of these things. If it is a question between "parochial" squabbles over offices and Imperialistic disputes about the spoils, there can be no doubt which will be found the more interesting and inspiring, despite the prophets of three years ago. Honolulu may stew in its own palm oil, provided Oshkosh gets the right postmaster.

On Thursday last the country was called upon to witness the extraordinary spectacle of the General Commanding the United States Army making a personal and semi-public attack upon the Adjutant-General of the Army, the Secretary of War, and the President of the United States, and charging them with the desire to reorganize the military service solely for the improper purpose of rewarding officers towards whom they are well disposed. It is only three months since Gen. Miles received the severest reprimand ever given to an American army officer for his insubordinate expressions of opinion upon the Schley case. Within a week his scheme for the immediate pacification of the Philippines according to methods of Indian warfare, which amounted, among other things, to a grave reflection upon the officers now in the islands, was disapproved by the President and the Secretary of War. With men of ordinary sensibility and true personal pride, such rebukes would have at least led to a dignified silence. In Gen. Miles's case it has simply stirred him to further insubordination, which should have only one result—his prompt retirement from active service at an early date. It must be evident even to his most ardent partisans that his usefulness in his present position has come to an end. The right and duty of an officer to testify before a Senate committee is unquestioned. Before the Philippine Inquiry Committee, moreover, it is most desirable that officers should speak their minds freely in regard to the past conduct of the war in the islands, even to the extent of criticising their superior officers. The present case is entirely different. The subject under discussion is simply the merits of the bill providing a general staff for the army, which was drawn by the Secretary of War, and which has the hearty approval of every progressive officer in the service. For Gen. Miles to make this the excuse for a bitter attack upon his superior officers, and for the charge that they are influenced only by scandalous motives, is to transcend absolutely not only the bounds of gentlemanly conduct, but also the limits imposed by military discipline, without which no army can exist.

The question whether Senator Hoar's speeches have stirred up, or have protracted, "rebellion" in the Philippines did not go into the record of the Senate investigating committee on Thursday. During the examination of Gen. Otis, Senator Beveridge was moved by curiosity to inquire what had been the effect on the Filipinos of Anti-Imperialist literature sent from the United States. The witness said that when the patriot (or rebel) Mabini was "brought in," he had a pile of New York papers. The inference was plain that he had been seduced from his allegiance or confirmed in his rebellion by reading them. Senator Patterson innocently asked whether any of Senator Hoar's speeches were found in the package. "Oh, yes," was the answer, "those speeches were all over the islands." Senator Allison, who was temporarily in the chair, promptly ruled out everything relating to Senators not members of the Committee. This was a prudent move, but must have been prompted by a desire to shield Senator Beveridge rather than Senator Hoar from harmful consequences, for the former at once withdrew the question which led to the dénouement. The colloquy, however, enabled Senator Carmack of Tennessee to express the opinion that the war in the Philippines is "utterly and absolutely infamous and criminal." So much of the record we hope may remain, so that it may serve as a companion-piece to some of the favorite Fourth of July quotations of our ancestors from Lord Chatham, Charles James Fox, Edmund Burke, Patrick Henry, and Thomas Jefferson.

Senator Morgan's report on the Panama title is filled with that high moral indignation which always sways him when he contemplates a canal by any other route than Nicaragua. He starts back in horror at the thought of "compounding crime," as we should be doing, in his opinion, if we bought out the Panama Company, and the spectacle of the "defrauded and despoiled" stockholders who would appeal to us for their vanished millions fills him with dismay. It is of no use to tell Mr. Morgan that these wronged stockholders have had their rights passed upon by their own courts. That only starts him off with a fresh blast against the "despotism of French courts," from which the soul of every free-born American recoils in loathing. After all this sound and fury, the minority report falls rather flat. It does, indeed, set forth the facts. It shows that the Panama title is absolutely clear in law, and that Colombia stands ready to make every reasonable concession. These are the facts, but, of course, Senator Morgan will only cry out, "So much the worse for them!" and go on with his frenzied warnings against so much as touching the Panama unclean thing.

The Secretary of Agriculture is said to have given instructions to the chemist of the Department to prepare a list of all imported articles which are prepared with any admixture or superficial covering of boracic acid or other preservative acids, with a view to barring out all such products through the coöperation of the State Department. The reason for this extraordinary step is not that articles of the kind are injurious to health, but because one European Government has seen fit to exclude meats so prepared. The American contention is that boracic acid is no more hurtful to fresh beef than the yellow coloring matter used in our creameries is to butter; but that if Germany thinks that it is, and excludes our beef on account of it, then we will abandon our own contention, and adopt hers, and, although we know it to be false, apply it to imports from all countries. It is doubtful whether any imported articles of consequence fall within the category prescribed, although it is hinted that certain kinds of sausages may be "hit" by the proposed interdict; but it will be pleasing to a certain order of intellect to show what we can do under strong provocation, and how we can punish the importers of sausage to avenge the exporters of beefsteak.

The comments of the press on Mr. Fowler's Bank Bill are very favorable. While they do not warrant the belief that the measure will be enacted, or even be voted on by Congress very soon, they show an awakening interest in the subject which is most encouraging. Probably the retirement of national bank circulation which is now in progress has had much influence in drawing attention to the need of some measure for a bank-note currency based upon other security than that of Government bonds. Banks are allowed to retire their circulation at a rate not exceeding in the aggregate $3,000,000 per month. Nearly $18,000,000 has been retired during the past six months. This movement is accounted for by the selling price of Government bonds, which ranges from 106½ for the 5s of 1904 to 139½ for the 4s of 1925. In the case of the former, the premium ($6,500 on $100,000) will be wiped out in two years. The profit to be realized on $100,000 of circulation so secured may be computed at less than three-tenths of one per cent., making no allowance for loss of interest on circulating notes while in transit from the redemption bureau to the bank, or for the time that notes remain unused. If there is any profit at all in circulation, it is hardly worth the trouble of looking after.

It may be assumed, also, that within a comparatively brief period the security bonds will have been wholly redeemed and cancelled. It is not probable that the nation will continue for an indefinite period to pay interest on a debt of which it might easily pay the principal. Such a policy would be unjust to the taxpayers, and could not fail to meet public condemnation. So the problem is not merely how to make note-issuing under the present system a little more profitable, but how to keep the system going at all. It cannot be done except by using other securities than United States bonds. To use inferior securities like municipal, or railroad, or manufacturing bonds, would require the exercise of discrimination on the part of public officers in the selection of them, and this would open the door to political influence in making the selection. Moreover, the best judgment of the most impartial Comptroller of the Currency would at times be at fault, as was frequently the case under the system of bond-secured currency before the war. For these reasons the bankers and the public must set their faces towards a system of note issues different from the one we now have, and it will be a notable success for Mr. Fowler if his bill gives direction and impetus to this movement, even though his plan should fail of enactment, or should be shorn of some of its distinctive features.

Details of the famous "Northern Pacific deal" of a year ago are coming to light with rather unusual distinctness in the pending Powers suit. The immediate motives under which two great banking-houses made their lavish purchases; the amount of such purchases made in the week preceding the corner in the stock; the relations of the purchasing bankers to the railway companies whose credit was ultimately to be used to pay for the purchased stock; and the manner in which the securities involved are still distributed—these four questions have been discussed, since last summer, with considerable lack of authentic information. Monday's testimony by Mr. Schiff established first one fact, pretty generally understood beforehand, that the Union Pacific interests, last spring, formally asked the Morgan-Hill interest to be allowed a share in the joint control of the Burlington and Quincy, and that the request was refused. The testimony of Mr. Steele, of J. P. Morgan & Co., showed that the purchasers of the Burlington also supposed themselves to control the Northern Pacific; that in May they "had reason to fear that some of our friends had not held on to their stock," and that, in view of the earlier phases of the Burlington-Northern Pacific deal, the bankers believed themselves to have "an implied and moral duty to perform in protecting the stockholders" from loss of control through purchases by rival interests.

The house of Morgan & Co., this testimony further showed, bought $15,000,000 of Northern Pacific stock in a single week—the week before the panic of May 9. Both Mr. Schiff and Mr. Steele testified that their respective firms were buying the stock on their own account. Neither would admit acting under orders from a railroad company. Both, however, showed where the safeguard to their venture lay, by describing the readiness with which accommodating corporations were found to take the stock off their hands. Messrs. Kuhn, Loeb & Co., Mr. Schiff testified, "turned over" its stock to one of the Union Pacific companies "within a few weeks after we purchased it," having had "no previous understanding that such a disposition would be made of it." The Messrs. Morgan, according to Mr. Steele, sold $10,000,000 of their Northern Pacific to Mr. Hill and his friends, and the balance ($9,000,000 in all) to the newly organized Northern Securities Company. The Union Pacific also, Mr. Schiff explained, sold its stock to that new concern. In payment, the Messrs. Morgan took $9,000,000 in new Northern Securities stock, the Union Pacific received $80,000,000 stock and nine to ten millions cash. It was not stated whether this $89,000,000 of Northern Securities stock, or any of it, has changed hands since January 1, nor to whom was allotted the balance of Northern Securities shares. The Union Pacific, it appears, turned in $41,000,000 Northern Pacific common stock and $37,000,000 preferred; the Messrs. Morgan, $9,000,000, presumably in the common. As there was, in all, $155,000,000 in Northern Pacific shares

outstanding, it follows that $68,000,000 was delivered to the Northern Securities Company from other quarters than the two already named.

German editors are not a little jealous of their American brethren since Prince Henry's announcement that the Emperor considered them the equals in rank of his "commanding generals." The *Frankfurter-Zeitung* hastens to say that it trusts the Emperor to honor German editors similarly at a very early date, since it is certain that they are not the inferiors of American journalists, so far as moral qualities are concerned. "Up to this time," it admits, "the opinion had prevailed with us that in Government circles editors were considered to be not even on the same footing with corporals and sergeants, much less commanding generals. Particularly in Prussia it would be thought an unworthy act if a non-commissioned officer should be led through the streets handcuffed, as has again and again happened in the case of editors of newspapers." The recent sentencing of a Charlottenburg editor to three months in jail for stating in his journal that the Emperor had rebuked a regiment's officers for their attitude towards duelling, makes the *Frankfurter-Zeitung's* sarcasm the more biting. The German press would, however, be astonished to know how utterly the American editors at the *Staats-Zeitung* banquet, and the newspapers throughout the country, failed to appreciate the significance of the compliment expressed by Prince Henry. This was perhaps not only due to ignorance of the great powers and high social position of commanding generals in the German army, but to familiarity with certain kinds of political and militia generals with which this country abounds.

What passed between Kitchener and the representatives of the Boers at Pretoria is only a matter of speculation. Every one must hope that the preliminary negotiations for an honorable peace were made. In any case, Acting President Schalkburger and his two commandants chose their time well, for while De la Rey's brilliant capture of Methuen has shown unexpected military resources among the belligerents, his chivalric release of the wounded captive has done much to mollify British hatred of the Boers. The time was never more favorable for a settlement on terms honorable to all concerned. Even Mr. Chamberlain would probably hesitate to hold again to unconditional surrender, and Kitchener would never again be ordered to proclaim the followers of De Wet and De la Rey to be outlaws. The Boers in the field, too, are never likely to have a better basis for dealing with the English. It is this feeling which must have made the Boer representatives seek the conference with Kitchener. The universal hope of peace should not blind one to the delicacy of the negotiations. It is not certain, even, that the committee which visited Kitchener spoke for the Boer Generals. At the best, a mere nothing would change the momentarily reasonable attitude of England into the old stupid and dogged resolution "to see the thing through," while any failure in tact might throw the Boers back upon their policy of heroic but ultimately hopeless resistance. Considerations of humanity aside, the responsibility upon the British negotiators is a heavy one, for England has no glory to gain, and possibly some prestige to lose, through the prolonging of the war.

The sharp debate last week in the House of Commons on Sir Henry Campbell-Bannerman's motion for an investigation of the business side of the war in South Africa, merely proved again the hopelessness of any attempt to consider rationally the events of the last two or three years, as long as the war is on. Behind the firing in South Africa the Government took refuge; Mr. Balfour declaring, in the familiar language of Imperialism, that it would "encourage the enemy" to probe into the remount and supply scandals. Just how an investigation of the horse frauds in Hungary or Spain or the United States would give comfort to the enemy or hamper Kitchener's operations, is hard to understand, but the House rallied to the support of the Government by the exceptional majority of 155, and thus gave the Ministry permission to continue its mismanagement without let or hindrance. This outcome was the more striking in view of the union of the Liberal forces in the attack upon the Government. Mr. Asquith, for once, earnestly supported Campbell-Bannerman, and there can be no doubt that a large body of public opinion was with them in their desire to know the truth about the charges which have so seriously affected England's good name. There could be no plainer illustration of the demoralizing effect of the war spirit than this crushing out of all criticism. Ministers may blunder as they choose, squander the public funds, and permit incompetent and dishonest subordinates to remain in office, but as long as a shot is fired 12,000 miles away, no one must lift up his voice in protest. Fortunate it is that the right of free speech and the freedom of the press remain, however mitigated by ostracism and occasional mob violence.

The unseemly quarrel in the Commons on Thursday chiefly illustrated Mr. Joseph Chamberlain's proficiency in the art of Parliamentary fence. He is a past-master of going to the very verge of insult and maintaining an exasperating calm, while the hot-headed Irishmen, goaded beyond endurance, explode in censurable abuse. Now it is no very great art to get a rise out of an Irishman. Mr. Chamberlain was abusive in cold blood and cautiously, Mr. Dillon was abusive in right Irish fashion and against the custom of Parliament. The latter's offence and his punishment falling in the interval between the old rules of the House and the application of Mr. Balfour's new rules, he has been allowed to resume his seat in a week. Of course, from a parliamentary point of view, Mr. Dillon's attack upon the Colonial Secretary was unpardonable; but it appears that, in all the debates of that stormy session, it was the Government which showed the more ugly spirit. It was irritating, no doubt, to hear the free lance Mr. Bowles caustically asking why countries had been annexed before they were conquered, hostile leaders banished before they were caught, the Government powerless to end a war which it had officially ended six months ago; but it is the business of a Government to answer such questions without calling traitor. This art Mr. Chamberlain should learn if he is indeed to succeed Lord Salisbury.

While the Franco-Russian note in reference to the Anglo-Japanese alliance is cautiously phrased and friendly in tone, it is not the less a virtual warning to England and Japan that, in certain contingencies, Russia and France will stand together in the Far East. The fact that the parties to the Dual Alliance have seen fit to enter their protest is in itself most significant. It would have been easy to pass the Anglo-Japanese alliance in silence, or to make some such general expression of sympathy with its aims as the Russian Foreign Office made to Secretary Hay's recent note on the Mantchurian concessions. As it is, the joint note of France and Russia is potentially a challenge, to this extent, that the offensive and defensive alliance between England and Japan becomes effective when two or more Powers menace the integrity of the Chinese Empire, or the special interests in the Far East of these two allied Powers. The appearance of France and Russia in the matter is practically equivalent to their saying, "Here are your 'two Powers.'" England and Japan will remain neutral until two enemies to China appear; France and Russia, when one appears, will consider "means of assuring their protection." It would be foolish to let the conventional expressions of sympathy with the purposes of the Anglo-Japanese alliance in which the Franco-Russian note abounds, conceal the real fact that France and Russia refuse to countenance the principle which England, Japan, and the United States have made their own —namely, that the integrity of the Chinese Empire must be maintained.

THE PRESIDENT AND CUBA.

In our judgment, the time has come when President Roosevelt should let Congress and the country know in the plainest terms what he thinks it necessary to do for Cuba. His message of last December spoke emphatically of the duty of doing something, but left that something vague. We have since been assured from time to time that Mr. Roosevelt was standing like a rock against party pressure; that he continued to believe and to assert to all comers that we are morally bound to come to Cuba's relief; and that he would never yield or retreat. This has been highly gratifying. But now the situation approaches a crisis. The time is near for the setting up of a Cuban Government, yet this will be impossible with Cuban commerce ruined. Congress loiters as if it had an eternity before it, though every day's delay is one more blow to Cuba's prosperity. The bill which the Republican majority of the House has agreed upon—though when or how they will pass it no man undertakes to say—is pronounced by our own Governor of Cuba to be wholly inadequate. Naturally, the result is to leave Congress at loggerheads, the country confused, and Cuba in despair.

In these circumstances, we maintain, the Presidential trumpet ought to be blown, and that with no uncertain sound. What does the President think of the halting and shuffling bill agreed upon by the Republican majority? Is he or is he not embarrassed and alarmed by the indefinite delays of Congress? Does he think it possible to withdraw our troops from Cuba, and keep our engagements made in the eyes of the world, without a full and prompt measure of Cuban reciprocity? These are the questions to which it seems to us most important that Mr. Roosevelt should give a public and explicit answer. It is no longer a case to be left to the vague and not necessarily authentic reports of newspaper correspondents. We ourselves have no doubt that the President is, as they represent him, straining every nerve to carry through his Cuban policy; but the people are not clearly convinced of this, and the way to convince them and to set them to putting pressure upon Congress, is for Mr. Roosevelt to take them into his confidence, and by message, or other public announcement, appeal courageously to those in and out of Congress who wish to see justice done to Cuba.

We are aware of the arguments by which the President has, thus far, been persuaded to keep back his special Cuban message. They are, in their way, and for their time, good arguments. The first one is that he must work in and through the Republican party. Certainly that is what a Republican President can but desire to do. Mr. Roosevelt has been, therefore, justified in staying his hand, as he has done, and waiting patiently for the party managers to harmonize the various factions on a proper bill in aid of Cuba. But this thing cannot go on, world without end, and nothing done. The question is only primarily a party one. In its large and ultimate aspects it is a national question. Party obstinacy or selfishness cannot be allowed to defeat the national purpose or stain the national honor. And if the President finds, as he is now finding, that the party staff breaks in his hand, it is his duty to appeal to honorable men of all parties, or of no party, to come forward and protest against allowing what is our declared policy as a nation towards Cuba to fall down in a heap.

Another consideration that has been operative with the President is the natural desire to take warning by the example of his predecessors. Mr. Roosevelt has not wished to get into such a deadlock with Congress as made Mr. Cleveland's second term so awkward. On the other hand, he has shrunk from exposing himself to such humiliation as Mr. McKinley incurred in the matter of the Porto Rican tariff. But how if there is no middle term? Is not President Roosevelt, in fact, coming to look very much, in this Cuban tariff affair, as President McKinley did in the Porto Rican question? It is all very well to say that you have not "retreated," and that you never will budge. But if the other fellows have their way; if they give *you* a 20 per cent. tariff as they gave McKinley; if they fix a time limit even on this grudging concession, and do it in the teeth of your objection; and if they dawdle away precious weeks so as practically to defeat you, and then you keep still—why, you might as well have retreated and done with it.

It is this sense of the very mortifying position in which President Roosevelt is rapidly coming to stand, and of the great urgency of the whole matter, which makes us hope that he will not long delay in speaking his mind with the vigor and directness of which he is a master. He does not need to be so mortally afraid of imitating Grover Cleveland. If that President had waited to "harmonize" the Democratic party in the support of the bill to repeal the silver law, it would never have been repealed. He boldly threw himself upon the country, and upon both parties in Congress, and secured his imperatively needed law by the aid of Republican votes. Mr. Roosevelt should seek Democratic votes in Congress, if they are necessary to pass a measure which he himself has asserted to be demanded by the highest consideration of national morality and honor. If party fails him, to the people let him go. They undoubtedly desire, in their great majority, to deal fairly with Cuba. But public opinion on the subject needs to be consolidated and directed. The President is the man to do it. He is the natural leader to whom the people look. It is for him to meet their just expectations. He can prevent the insincere House leaders from putting him off from week to week and month to month, and yet save us from a national disgrace in our treatment of Cuba, by taking his stand fearlessly and publicly for a speedy and honorable fulfilment of our promises.

"OPENING" THE TARIFF.

"In politics," said that sound scholar and statesman, Sir George Cornewall Lewis, "cure is, nine times out of ten, better than prevention." It would have been well for President Roosevelt and the Republican party if they had kept this maxim in mind in all their dealings with the irrepressible tariff question. They have bent all their efforts to the side of prevention; and what they have striven to prevent is the "opening" of the tariff. To "open" the tariff has been the chief deadly sin in the Republican calendar. Point out inequalities, injustices, absurdities, monstrosities, self-destructive clauses in the Dingley law as much as you pleased; the invariable answer has been, "Yes, we admit them all, but don't you see that to attempt to correct them would be to open up the whole tariff question; and how could the country endure that calamity?" In other words, the conjuring up of remote and merely possible evils has held the hand of the Republican party from trying to cure present and undeniable ills. That was bad judgment, from the beginning, and it is now coming to be seen to have been also bad politics.

The truth is that this endeavor to keep the tariff question closed has been not only a mistake, but a failure. The tariff is "opened." Its revision is pressed upon the country. Does any man suppose that the bold utterances of Congressmen Dick and Babcock and Littlefield—good Republicans all—are to have no reverberation on the stump in the fall elections? They declared that they should not dare face their constituents, after voting for tariff favors for the Cubans, without having made exertions to vote some tariff favors for Americans—to prune away those flagrant abuses against which both consumers and manufacturers in so many parts of the country are crying out. Mr. Littlefield asserts that American steel material is sold in England for 95 cents the 100 pounds, though American shipbuilders are forced to pay $1.65. One of the largest manufacturers in Boston declares that "in some lines I have no doubt the difference is fully as great as Mr. Littlefield names, and perhaps greater." How can Congress, in the face of these facts and the protests founded upon them, refuse to revise the steel schedules, while changing the duties on sugar and tobacco, of which there is no complaint in this country?

Mr. Roosevelt, it is now clear, was ill-advised when he urged Congress last December to undertake no tariff revision. He said that there was "general acquiescence in our present tariff system." This statement was of doubtful validity at the time, and is certainly, today, ludicrously wide of the fact. Even Speaker Henderson has opened his eyes, and writes, "That there could be, wisely, revision of certain parts of the tariff laws, and that reductions can be wisely made in some matters, no sane man will attempt to deny." This is exactly what many of the minority Republicans affirm, and they profess their eagerness to prove their sanity, not only by agreeing with the Speaker about the wisdom of tariff revision, but by undertaking it at once. No fair man can say that all of the opposition to the project of Cuban relief was the mere selfishness of beet-sugar representatives. Several of the protesting Republicans based their objections on the folly of "doing something for Cuba," in the way of tariff revision, but nothing for the United States.

In not foreseeing their attitude, and in failing to weigh the tariff-reform sentiment within the Republican party, President Roosevelt and the House managers began their Cuban campaign bunglingly. "No tariff changes," said the President, yet he urged "a substantial reduction in the tariff duties on Cuban imports." Was that, then, no tariff change? Ah, but Mr. Roosevelt said that there were "weighty reasons of morality" and "considerations of honor" which required us to reduce the duties for the behoof of the Cubans. But he might well have been asked, What have morality and honor to do with the protective tariff? Very little, historically. And if moral reasons are to be imported into the argument, was the President to say nothing of the crying injustice of the steel and glass schedules?

What might have been done, what should have been done, was to unite the various interests, and put through a moderate measure of tariff reform along with a bill for Cuban relief. The stoutest opponents of the latter are the warm friends of the former. Congressman Babcock, for example, has identified his name with the bill to prevent the steel duties from becoming an ambush from behind which the American consumer may be shot down. Yet he votes with the beet-sugar men. The latter, in fact, come principally from the States where the demand for tariff revision is most imperative. Now, a really skilful management would have made one hand wash the other. To the beet-sugar growers the President might have said: "We can't all have everything. You do not wish any cut in the sugar duties, but the Cubans need it and must have it. On the other hand, you do strongly desire the duties on steel and glass and hides reduced or abolished. Take the latter and concede the former." There was the obvious line of union of policy and harmony of party; but, alas, the President had walked away from it with his message of "no tariff change," and the insensate fear of the Republican managers about "opening" the tariff, plunged them into the pickle where they now find themselves.

It may not be too late for them to retrace their steps. Weeks and months must apparently pass before a Cuban bill is enacted. As far as this year's sugar crop is concerned, we fear that the Cuban planter will get no relief. In fact, our information is that the small planters have already been forced to sell their sugar at a loss, and that the bulk of the crop is now owned by the large *centrales*. The argument for great haste being thus weakened, there is now no good reason why a little adjustment might not give us, in the end, a Cuban bill with some needed and wholesome tariff revision of our own added to it. The President would not be averse to it. In fact, we are told that when a horrified protectionist tried to alarm him with the prospect of tariff amendments to the Cuban bill, he quietly said, "The more of them the merrier." Certainly no wise Executive could object to doing a good turn to the Cubans and to Americans at one stroke. At any rate, he and all men can now see that the tariff door is open, and that no man can shut it.

LEGISLATING AGAINST ANARCHISTS.

Our law-makers, both at Washington and Albany, have discovered that an effective measure, directed specifically against anarchism, is as hard to frame as a law compelling men to like summer better than winter. The root of the trouble is that you cannot legislate against a state of mind. When the assassination of President McKinley made the question of dealing with anarchists acute, there was a wild outcry for drastic legislation. We then took the position that our general laws against all forms of violence and incitement to violence are fairly adequate; that a special act, however well intended, can at best but slightly increase the efficacy of the present statutes, while it may either level a blow at freedom of speech or make martyrs of feeble and silly agitators.

The bill which passed the United States Senate on Friday gives Federal jurisdiction over criminal assaults upon the President, or upon any officer in the legal succession to the Presidency. This may be very well, but all the machinery of the Federal courts, and the death penalty itself for an unsuccessful attempt to murder, can have no more practical effect than our laws against suicide. The anarchist who tries to shoot a President hopes to kill, expects punishment, and is wholly indifferent to nice distinctions between State and Federal jurisdiction. Provisions against those who aid, abet, incite, or conspire cannot go beyond our present laws against accomplices, except in severity of penalty. The evidence necessary for conviction must be as clear as ever, and degrees of punishment are trifles to the fanatical mind of an anarchist.

Furthermore, measures to exclude from the country or to refuse to naturalize a man who, from the point of view of pure theory, disbelieves in all organized government, are wholly futile. The anarchist bears on his person no badge of his faith, and surely he would not stick at a lie if he were questioned. Indeed, there is no valid reason why we should keep out "philosophical" anarchists, non-resistants who are victims of the delusion that the world can get along without laws or magistrates. For all practical purposes we might just as well bar out those happy, harmless visionaries who imagine that Bacon wrote Shakspere's plays.

The old bill, drawn by Senator Hill, which Senator Bacon has reintroduced and supported, also fails at the critical point. It gives no clear, working definition of anarchist, simply because no such definition is possible. The bill contains a number of vicious features of administration, but those are really minor objections because the measure in its essentials is unenforceable. In short, the general attitude of Congress was summed up by Senator Hawley on Thursday, when he exclaimed with a fine frenzy: "I have an utter abhorrence of anarchy, and would give a thousand dollars to get a good shot at an anarchist!" If Senator Hawley's hand is no steadier than his mind was at that moment, any anarchist would be glad to earn one thousand dollars by offering himself as a target; for the Senator's bullet and his bill would both go wide of the mark.

The act now before the New York State Legislature is also weak in the vital spot. The report of the Senate Committee on Judiciary expressly says that against the crime of killing or attempting to kill the President, or any other official, we need no additional statutes. Nor do we need a new statute in order to reach those who, without committing an overt act themselves, incite others. Such persons are now made principals under section 29 of the Penal Code. The Committee further admits that the "problem of reaching those who profess and teach the doctrines of anarchy, without themselves attempting or committing or inciting others to attempt or commit any particular crime, is a difficult one." As a matter of fact, the problem is not merely difficult, but hopeless; for you can as easily imprison or hang men for discussing the tariff on su-

gar, as for professing and teaching anarchism as a merely speculative doctrine. The utter hopelessness of the problem is shown by the Committee's final solution of it in the following definition, which really gives us nothing new:

"Criminal anarchy is the doctrine that organized government should be overthrown by violence or force, or by assassination of the executive head or of any of the executive officials of government, or by any unlawful means. The advocacy of such doctrine either by word of mouth or writing is a felony."

The rest of the bill prescribes pains and penalties for those who by word of mouth or writing advocate the forcible destruction of government and the assassination of rulers; and it declares a gathering of two criminal anarchists an "unlawful assemblage." In practical operation, however, the act can accomplish nothing more than is now accomplished under section 29 of the Penal Code and under section 451, as follows:

"Whenever three or more persons assemble with intent to commit any unlawful act by force; or assemble with intent to carry out any purpose in such a manner as to disturb the public peace; or, being assembled, attempt or threaten any act tending toward a breach of the peace, or any injury to person or property, or any unlawful act, such an assembly is unlawful, and every person participating therein by his presence, aid, or instigation, is guilty of a misdemeanor. But this section shall not be so construed as to prevent the peaceable assembling of persons for lawful purposes of protest or petition."

Under these existing laws, John Most and Emma Goldman have served terms in the penitentiary. Puttering over the petty changes by which two persons instead of three may constitute an unlawful assemblage, and by which the offence is made a felony instead of a misdemeanor, is as useless as stretching out your hand to stop the wind.

No—the malady, like many others of the body politic, cannot be driven off by any purgative of law. Drastic punishments are impotent to restrain; they will serve only to spread the propaganda of anarchism. We must remember that courts and prisons, judges and jailers are not, after all, the great securities of our property and lives. In the maintenance of a just government, our writs, subpœnas, and decisions are dead instruments compared with the force of an active and intelligent public opinion; and although there can be no absolute protection against the vagaries of an anarchist, a just government is our strongest safeguard.

MR. HEPBURN ON CURRENCY REFORM.

At a meeting of the Academy of Political Science at Columbia University last week, Mr. A. B. Hepburn, ex-Comptroller of the Currency, spoke on the monetary problems of the present day. The address was notable in two points, upon which Mr. Hepburn holds views somewhat at variance with those of other currency-reformers. He maintains that the system of clearing-house loan certificates, by which the consequences of monetary stringency are more or less mitigated by the banks in times of panic, cannot be depended upon as a means of relief in such emergencies, and hence must be replaced by some other system. He holds also that the retirement of the greenbacks, however desirable as a step toward a reform of the currency, is not necessary to such reform, and may well be postponed until a better system of banknote issues shall have been devised. In the debate which followed Mr. Hepburn's address, Professor Seligman concurred with the speaker in the opinion that the business community, in depending upon clearing-house loan certificates in times of crisis, is leaning upon a broken reed, and that some better and more legal method of relief should be devised before the next financial cyclone strikes the country.

Banks are required by law, and still more by the rules of business prudence, to keep on hand a certain percentage of cash to meet the demands of depositors. This may consist of anything which passes current and which everybody accepts without question. In times of severe stringency, some banks are likely to be caught short of currency and exposed to failure. In such cases, the failure of one bank will create public alarm and lead to extraordinary demands for currency upon all the banks. The ingredients of a panic thus accumulate with great rapidity, and may within a short time close all the banks except the very strongest, and cause widespread disaster throughout the business community.

On five different occasions the Clearing-house bankers of New York have "pooled their reserves," and have thus checked the prevailing panic. They have put all their cash into one heap, and appointed a committee to parcel it out by means of loan certificates among the banks, according to their indispensable needs, taking as security for the loans the bills receivable of the banks which required such assistance. Virtually, the Clearing-house Loan Committee discounts the paper of the weaker banks. This process can go on legally as long as the common heap of currency lasts. When it is exhausted, however, or is pretty near exhaustion, the banks, even the strong ones, will make difficulties about paying checks, will certify them as "Good through the Clearing-house," and hand them back to the drawer. If the drawer is content with this kind of payment, well and good; but if he is not, the bank must either pay or incontinently "go to protest."

In the panic of 1893 most of the banks of the United States were in a state of virtual suspension for some weeks. Currency was bought and sold at a premium over certified bank checks in Wall Street, while in many places it could not be obtained at all. Numerous substitutes for currency were devised and used —some as small as twenty-five cents —all of which were illegal and were liable to a Federal tax of 10 per cent. Now Mr. Hepburn's thesis is that the country cannot depend upon an illegal method of warding off the effects of a commercial crisis. A time will come —may come any day—when the public will not accept checks stamped "Good through the Clearing-house" in lieu of the cash which they have the right to demand. They may not agree to take these certified checks to brokers' offices and pay from 1 to 5 per cent. for the currency which the checks call for. The business community may be so hard pressed at some future time as to make simultaneous demands on the banks, as was done in 1857, whereby all the banks in New York were closed except one. Moreover, the credit of New York as a financial centre is impaired, both at home and abroad, by the frequent resort to Clearing-house loan certificates, which is another name for bank-suspension either general or partial.

What then shall be done? Mr. Hepburn points to the example of Germany, where the law authorizes banks to issue an emergency circulation upon the payment of a tax of 5 per cent. on the notes issued over and above the normal amount. This privilege was availed of by the Imperial Bank of Germany in the crisis of last year to the amount of more than 100,000,000 marks, and with the happiest results. The bank virtually said to the business community: "Have no fear; we will discount all the good paper that you bring us." And so it did. There was no chance for a panic to gain headway. In fact, there was no panic. Some few speculators were crowded to the wall because their securities would not pass muster, but no solvent trader or manufacturer was allowed to fail if he would pay the moderate tax which was imposed upon the emergency circulation. Certainly a trader who would grumble over a tax of 5 per cent. (which goes into the Imperial Treasury) cannot be very hard pressed.

The moral is that we ought to devise something akin to the German system which has now been in operation a quarter of a century, and which has carried that country safely through half-a-dozen crises of greater or less severity since it was established.

THE FRENCH ELECTIONS.

President Loubet's visit to Russia will fall very opportunely between the proclamation of the Franco-Russian alliance in the Far East and the general election. When the credit of 500,000 francs for the Presidential journey was voted on Monday in the Chamber of Deputies,

a scene took place which, if insignificant in itself, showed very strikingly the difficulties of the Ministry which is so soon to seek a vote of confidence from the electors. A Socialist rose after the vote and moved that an equal sum be appropriated by the Chamber for the relief of laborers who were out of work. The motion failed, but the incident brought out clearly the strength and the weakness of the Waldeck-Rousseau Ministry, namely, the alliance with the Socialists.

Practically, all sincere and rational opposition to the present Government concerns this "unholy alliance," which, in the view of many of the most respectable party leaders, has already involved the Ministry in dangerously radical legislation, and must infallibly lead to the overthrow of the republic and to anarchy. The most influential orator of the *Ralliés*—the Roman Catholic adherents of the republic—is the Comte de Mun. During the debate on the Associations Law he managed to draw from the Socialist members a practical avowal of their plan for general confiscation. There were other milliards, said one of them, which might be considered after the milliards of the monastic orders had been sufficiently reduced. In the vein of the Comte de Mun, MM. Ribot and Poincaré, leaders of the Progressive Republican party, have recently spoken at Marseilles and Rouen respectively. M. Poincaré expressed profound distrust of Waldeck-Rousseau's Socialist allies:

> "It would be a grave illusion," he said, "to imagine that in taming men, one necessarily tames the ideas which they represent. The moderates of the Socialist party—if indeed there be Socialists capable of moderation—themselves distrust the doctrines of their most violent coreligionaries. . . . Only the other day the Socialist Congress at Tours reaffirmed a declaration of principles which in all essentials might have been signed by outright revolutionists."

The outward sign of M. Waldeck-Rousseau's confidence in his Socialist allies was the appointment of the Socialist leader Millerand to be Minister of Commerce; and unless there be some profound hypocrisy involved in "Comrade" Millerand's position, one must feel that M. Waldeck-Rousseau has not only "tamed" his Socialists, but, measurably, their ideas also. In M. Lavy's interesting book, 'L'Oeuvre de Millerand: Un Ministre Socialiste,' are collected the most important addresses of the Socialist Minister, in all of which Socialism appears as a gradual process of reform wholly compatible with any free form of government. As long ago as 1896 in the "Programme de Saint-Mandé," M. Millerand affirmed collectivism to be an irresistible tendency, an inevitable product of social conditions as we find them. "No one can and no one will deliberately bring about collectivism. It is making, day by day, and is, grant me the phrase, the very secretion of the present capitalist régime." Again, in the same speech, he declared the minimum Socialist programme to be: "(1) the nationalizing of the means of production now in capitalist hands—gradually, as fast as the several industries are ready for such transformation; (2) the increase of the powers of the people through universal suffrage; (3) international federation of the working classes"—all of these to be obtained not by "a minority in revolt," but by a "majority conscious of the benefits of such a social transformation."

If Millerand spoke for his party, no one could quarrel seriously with a Socialist propaganda which sought definite reforms by regular parliamentary methods, and appealed not to the war of class—hatred of the capitalist and contempt of the bourgeois—but to the convictions of all the citizens of France. Unfortunately, the utterance of the leader of the Radical Socialists, the eloquent Jaurès, and the resolution of the Guesdists at Tours hardly justify so hopeful a view of the Socialist movement. It is fair to say, however, that in the various municipalities, notably Marseilles, which are governed by Socialists, the necessity of facing definite policies and expressing them in action has very much sobered these radical reformers. On this analogy one would expect to find that three years of constructive legislation with Waldeck-Rousseau has made "parliamentary Socialists" out of many of the Radicals.

M. Waldeck-Rousseau presents to the voters of France a tremendous argument in his three years of brilliant leadership. He found France torn by the passions of the Dreyfus agitation, and brought about, if not theoretical justice, at least peace. He reorganized the General Staff of the army courageously, and yet in such a way that the Nationalists had small pretext for violent recriminations. He came into a Parliament where there was no real majority, and organized from many groups a majority which for two years and a half he has held intact and increased. He has made the Socialists work with him, but has committed the Government to none of their more extravagant demands except the abortive project for old-age pensions. He has carried through the bill restricting the right of association and revising the monastic holdings—a purge which has to be administered every so often in all Roman Catholic countries—without seriously alienating the Catholics. His whole administration has been marked by high statesmanship, or all signs deceive. It is impossible to believe, with his conservative critics, that he has in gayety of heart embarked with a mutinous crew of Socialists on a voyage towards political disaster and oblivion.

France votes next month for or against M. Waldeck-Rousseau. In spite of doctrinaire politicians of high character, the issue is much less a political than a personal one. M. Waldeck-Rousseau not only rests upon his record as Premier, but justly enjoys a certain reflected popularity from the real love which the French nation has learned to give to the sturdiest and simplest and withal most amiable and sagacious figure in politics to-day—President Loubet. The rabble of Legitimists, Bonapartists, Anti-Semites, and reactionaries of all degrees which marches under the flag of Nationalism will make noise out of all proportion to the seriousness of their opposition. We believe that the vote of the arrondissements next month will show that the French are convinced that M. Waldeck-Rousseau has deserved well of the Republic.

THE RAILWAY STRIKE IN ITALY.

ROME, March 10, 1902.

A most animated Italian Rome, truly, gathered in the public squares, lined the streets, filled the balconies, to see the young King on his way from the Quirinal to the Senate-house to open Parliament in person for the first time. Tickets of admission to Palazzo Madama were sparingly given, and the main thoroughfares through which the procession passed were guarded with troops; but the crowds shouted welcome both to the King and to his charming, simple, beautiful young Queen, who looked around with naïve interest and animation. The hall was splendidly decorated, and ablaze with light and color. The throne from which King Victor Emanuel III. spoke is the same whence Carlo Alberto announced the *Statuto* in 1849, and Victor Emanuel II., first King of Italy, proclaimed Italian unity in 1861. The speech occupied barely ten minutes, but one had time to note the various humors of the different groups of Senators, Deputies, and the very limited number of spectators admitted. Considerable curiosity had been evinced by the public and the press as to the actual programme of the second session of the twenty-first Legislature, after a long vacation and the resignation, on the very eve of its inauguration, of the Minister of Public Works, on account of the divorce project, said some—in consequence of his disagreement with his colleagues as to the action to be taken on the burning question of the railways agitation and threatened strikes, according to others.

Hearty applause greeted the King's allusions to his father's worth and loss to the army and the navy; but the decisive affirmation of the attitude of the Government towards the Church, though hailed with vociferous delight by a portion of the assembly, was received in marked silence by others. Few but incisive were the spoken words: "In the relations between the State and the Church, my Government intends to maintain strictly the separation of the civil and spiritual orders; to honor the clergy, but to confine it to the limits of the sanctuary; to pay unlimited respect to religion and to liberty of conscience, but to preserve inflexibly intangible the prerogatives of the civil authority and the rights of national authority." The announcement of the action which the Gov-

ernment intends to take on the divorce question, and on the still more important question of the rights of illegitimate children to ascertain the names of their fathers and secure maintenance, was less dogmatic, but clear. "On judicial grounds, my Government will propose to temper, in harmony with the common law of other nations, the ideal principle of the indissolubility of civil matrimony; to reform by equitable methods the laws which deprive illegitimate offspring of their right to name and to maintenance." At this paragraph the applause was vociferous, redoubled, enthusiastic on the part of the partisans of divorce, and the silence on the part of the opponents ominously marked. The announcement of the proposed reduction in the price of salt was received good-humoredly, not enthusiastically, while the peroration, which affirmed the "peace and goodwill prevalent at home and abroad," was, by certain portions of the assembly, greeted with silent but evident incredulity.

Despite these diverse symptoms, the welcome given personally to the young King and Queen was hearty and unanimous. You felt—what the press and public did not fail to express immediately afterwards—that the majority approved of him and his policy, of his counsellors and of the programme, while a very strong, compact, but hopeless minority, stanch to the monarchy, deemed that the young sovereign had fallen into the worst possible hands, from which they were, for the present at least, powerless to extricate him. During the rest of the day we happened to find ourselves in a decidedly moderate, not to say reactionary, circle, or rather circles. Here the least hostile, most reasonable, observation made was that the Ministry had erred in judgment in forcing the divorce question into the speech from the throne, before any distinct project had been decided upon by the Cabinet itself. To this, "one who knows," and who has continual means of knowing, observed that the King had insisted on the introduction of the subject, which he has studied profoundly, and on which he has formed a very decided opinion. One can only imagine the next greeting and meeting between young Victor and his mother, whose ultramontane judgments and prejudices do but deepen and increase since her forced retirement from public life.

There is little doubt but that both lovers and haters of the Ministry awoke next morning without any special hopes or fears as to its immediate fate. So little suspicion had the Government of the trap laid for it in silence and darkness that not a single summons had been sent to the rank and file of its supporters, as the election of the Speaker was not regarded as a test of its power. No one seemed to doubt the reëlection of Villa, who had, during the late session, given general satisfaction, on the whole, by his activity and impartiality during the not always peaceful debates. What, then, was the astonishment of all but the plotters when the votes put secretly into the silent urns were counted, and it was found that, out of the 292 present, Villa had received only 142 votes, while the Socialist Costa had 17, there were other scattering votes, and the remaining 137 were blanks, cast by the Sonnino-Rudini clique, who had resorted to the white-feather manœuvre to defeat the Ministerial candidate! The consternation that followed the proclamation of the result of the voting was almost comic. Zanardelli quietly announced that the Ministry "retired to deliberate," and an hour later it was known that the entire body had sent in their resignation to the King. On the morrow it was at once affirmed that the King had refused to accept the resignation, but, with even more asseveration, that Zanardelli utterly refused to withdraw it, that Giolitti was equally determined, and that the entire Ministry decided to stand by their chiefs. This was all true. Of course, Villa telegraphed his refusal of the Speakership—it was not likely that the man who had been elected unanimously would condescend to accept office with a majority of blank votes! The King found himself in a tight corner, but held firm. The fact that the Opposition had not had the courage to designate a candidate who, by gaining a majority, would have indicated to the King the Constitutional lines to follow, exonerated him from turning to the Sonninians for counsel; for which they were devoutly thankful, as they were quite aware that it would be impossible for them to form a Government. Rather than do this, the King was resolved to dissolve, and to allow the existing Government to appeal to the country.

Meanwhile, the gas strike at Turin had been peacefully settled by arbitration between the gas companies and the representatives of the gas-workers, who had demanded arbitration from the commencement, but had been refused; the companies declining to treat with their delegates. The pressure of public opinion, of the press, and of the chief citizens of Turin compelled them to yield, and the result is that the workmen have secured adhesion to their reasonable demands, which, if conceded at first, would have prevented the strike and the waste of money and time which is the inevitable consequence of all strikes. This solution displeased the reactionists, who had exaggerated the story of the strike, accusing the strikers of the assassination of two carabiniers, who, it is proved, were murdered by some peasants out of revenge.

On the evening of the 24th it was "confidentially" affirmed that Zanardelli had consented to withdraw his resignation, and intended to present the old Ministry to the Chambers intact, minus a new Minister of Public Works; it being his intention to hold that portfolio himself in the interim. On the morrow the apparent enigma was explained by the announcement of the militarization and mobilization of the railway men in the army reserve, of the recall of the class of 1878, but lately dismissed to their homes, with distinct injunctions to the commander of the Ninth Army Corps to deal sternly and instantly with any refractory conscripts. The reason for this drastic measure on the part of the Minister, suspected by many, was soon made manifest to all. The railway servants, whose rights had been recognized at the time of the convention between the Government and the lessee companies in 1885, had been defrauded of them by the latter for seventeen years. Inquests had been made, and endless actions brought against the companies, all resulting in favor of the railway servants; successive Governments had promised redress and failed to fulfil their promises. Lately, the men had proclaimed their ultimatum: the regulation of their collective and individual position, with rules of promotion, of increased payment, of minimum salary, and gradual increase up to a certain maximum, with redress of certain grievances, etc., etc. Some of the lines had accorded the demands in general terms, but the late Minister of Public Works had always refused to confer with the organized representatives of the railway servants—this in homage to the companies, which disdained to treat with them.

Much was hoped from the intervention of Zanardelli and Giolitti; but when the Ministry was overthrown by the underhand plot of the reactionary Opposition, the railway servants, fearing a return of the Pelloux and Sonnino policy, resolved on a universal strike. This put Zanardelli on his metal. He was not the man to leave the King and the country in the lurch, or to trust to other hands the solution of a situation which only the firm and delicate hand of an experienced practitioner could undertake with any chance of success. Moreover, to permit a general strike of railway servants after the circular of January 24, when it was expressly laid down that public servants who had contracted with the heads of public services could not be permitted to suspend work, as private workmen might with private companies, was out of the question. To permit the strike was to admit the rule of anarchy; to allow the reactionists to suppress it by their old methods was to retard liberty and progress for years. By assuming the portfolio of Public Works the veteran statesman took on his own shoulders the entire responsibility of the consequences. The railway workers militarized might rebel—well, they knew what military discipline is, and must be prepared to take the consequences; or the non-militarized portion, which is by far the most numerous, might carry on the strike on their own account, and they could be dealt with only by the ordinary tribunals, and meanwhile, as the ministerial announcement in the official Gazette ran: "A strike on all the great railway lines would profoundly disturb public peace, would suspend the economical life of the country, paralyze the great industries, and hence deprive thousands of workers of the means of procuring their daily bread. It would hinder the cities from procuring food, with the inevitable result of enormously increasing the price of the prime necessaries of life, engendering unheard-of suffering among the poorest classes of the population."

This manifesto was hailed with derisive jeers by the "blood-and-steel" faction; but Zanardelli, wiser in his Old World liberalism than the English legislators for Ireland, while issuing his coercion bill, resolved at the same time on an attempt to redress the grievances of the railway servants one and all, and all at once. So he summoned to Rome all the heads and representatives of the several railway companies, together with all the recognized heads of the representatives of the workingmen—precisely those with whom the railway companies and ex-Minister Giusso had refused contemptuously to treat. And (tell it not in Gath!) some of these belonged to the actually militarized categories, and had to demand permission of their military superiors. A perfect howl of execration burst from the reactionary faction. Nevertheless, at the Ministry of

Public Works were convened the contending parties, and sittings were held from 8 A. M. even till 8 P. M., with intervals for meeting of the entire Cabinet and daily detailed report to the King of the hour-to-hour progress of the negotiations. The railway companies, frightened out of their wits at the apparent inevitability of the general strike, which they had pooh-poohed in the past, placed themselves and their clients in the hands of the Minister of Public Works, after defining the pecuniary limits which, in the interests of the shareholders, could not be surpassed, "even if the alternative were the rupture of the convention or the dreaded general strike." It must be borne in mind that the lease of the railway lines accorded by the fatal Depretis in 1885, against the judgment of competent authorities including three ex-Ministers of Public Works, against the protests and entreaties of all the patriots on both sides of the House, expires in June, 1905, so that but three years have to run when the Government will have to reconsider the question *ab ovo*, and the companies would not all be broken-hearted if the term should be abbreviated. But this would not be a profitable solution for the nation, as no steps have been taken or even thought of for the state's working the railroads, which are still national property. Hence the extreme difficulty and delicacy of the negotiations.

The conferences commenced on the 5th of March were concluded on the 8th, the most difficult question being the date of the execution of the accorded stipulation. The old servants affirmed that they had a right to back pay from the date of the conventions, but this was disregarded. The representatives of the railway men proposed as a great concession to date from 1900; but here stepped in the Ministers of the Treasury and Finance, objecting that three years' back pay would cost at least thirty-six millions, and that such a project could not be entertained for a moment. "Let us make it 1901," conceded the railway delegates. "Even twenty-four millions are impossible"; and the negotiations seemed at an end. Then Zanardelli threw himself personally into the breach. The companies, he said, have consented to spend over and above their original calculations an extra nine millions; further than that they will not, possibly they cannot, go. Even dating from January 1, 1902, the State will have to furnish for the next three years a sum total which is variously estimated at from twelve to seventeen millions. Even for this sum I must bring a bill before Parliament; a larger sum I will not propose; therefore, it is for you to decide whether, for the difference, you will renounce the present advantages of the thorough and entire organization of the services—a far more important item than an extra sum of money—the certainty of regular advancement, of appeal in case of fines and punishments, and all the innumerable benefits which an organized service offers, instead of a continuation of the quarrels, trials, contradictory sentences which have marked the last sixteen years.

The delegates felt their responsibility to be very heavy, as the great mass of railway men had voted unanimously to stand by their decision. One point, which they all had at heart, was gained. Eleven of the railway servants who had been tried and condemned by default in 1898 have been compelled to reside in foreign countries, certain on their return to be arrested and, of course, excluded from the railway service. These the Minister engaged to intercede for with the companies, or to insure their safe return and indemnity. Clearly, on all hands, there was the greatest possible desire to come to an amicable settlement. Finally, the delegates agreed to accept the date of the 1st of January, 1892, so that the new arrangements will run for three years up to June, 1905, when the nation comes into its own again, and the railway servants will treat anew either with the state or with new companies, though that such will ever be intrusted with the national railways seems utterly impossible at present. The companies have never kept to their contracts, and the lines and rolling-stock are in a shameful state. One thing is certain, that in no country in Europe, not even in France during the great war, is there such scandalous railway service to be found. This, whether you count punctuality, cleanliness, prompt service on passenger trains, or the regularity of goods traffic by slow trains or by express. Those who remember the preconvention times, know to their cost how things have gone from bad to worse, and how the condition of the poor railway men has deteriorated, with longer hours, shorter pay, and fewer numbers, so that one has rarely the heart to make a complaint, knowing that the innocent men will be made the scapegoats of the greedy shareholders and of the upper officials who grind the faces of the workers and worn-out toilers. It was this universal conviction that engendered such universal sympathy for the railway men during the late agitation, and that causes the general satisfaction with which the amicable accord has been attained.

Turati has been the directing mind of the compromise—for that it is a compromise no one can deny. The reactionists are furious, and ask how the Minister can dare to present to Parliament a bill for the concessions, forgetting what a strike would have cost, and that the mobilization itself (as the railway workers were to receive military pay) costs 35,000 lire per day. Naturally, as soon as all is quiet, and when every possibility of a strike is averted, the decree will be recalled, and that will give the Opposition a new grievance to bemoan. On the whole, there is general satisfaction, though the extreme Socialists and the extreme Republicans grumble and denounce the Ministry and the Commissioners. The King is decidedly satisfied with the conduct of his Ministers, and feels justified in his choice more than ever. As for the "last of the old guard" himself, he has a *nunc-dimittis* look on his pale and eager face which one would rather not see. Then, he is frailer and thinner than ever, but as eager as the old war-horse to see the battle out. The affair of the President is settled by old Bianchieri yielding to the King's pleadings and accepting the candidature for the Speakership. No Sonninian or Rudinian would dare to vote against or vote blank with the name of the stanch Constitutional to the fore.

There are thousands of public servants in nearly as bad a plight as the railway servants, whose rights are violated and whose mild remonstrances are disregarded. If the various departments are wise, they will redress the grievances of the postmen and the telegraphists; and the communes may bethink themselves that it is time to pay up the arrears of the miserable salaries due for months to the communal schoolmasters and schoolmistresses. Again far-off Calabria is making its voice heard in appeal, seeing that, of the benefits of unity, it knows nothing but the call of the tax-gatherer and the recruiting-sergeant. The present storm has passed over; a skilful helmsman has saved the vessel from wreck; but, though we breathe freely for the moment, we are far from crying victory all along the line.

J. W. M.

THE VICTOR HUGO CENTENARY.

PARIS, March 10, 1902.

The celebration of the centenary of Victor Hugo is fairly over, and one may already ask one's self whether it was as enthusiastic and as generally popular as the accounts in the daily press, or a part of it, would lead the reader abroad to suppose. The impression made upon me is distinctly that the character of the celebration was official and not popular. There were crowds in the Place de l'Hôtel de Ville, in the Place Victor Hugo, and in the Place des Vosges, called together by the functions that took place there: the reception of the foreign delegates, the unveiling of the curiously designed monument to the memory of the poet, the dedication of the dwelling once inhabited by him (and previously, it is said, by the famous courtesan Marion Delorme, the heroine of his first real acting play). There were very great crowds at the Pantheon to view the tomb and the numerous wreaths of flowers, of which the French are as lavish as any American community. The Rue Saint-Antoine, on Sunday, the 2d, was fairly well packed with a motley assemblage, drawn thither by the ceremony and the speeches, which it neither saw nor heard; but there was lacking the indefinable, though easily recognized and still more easily felt, spirit of popular demonstration and enthusiasm. Nothing comparable, even distantly, to the enormous crowds in 1885, was to be seen anywhere, and even the discredited and glory-shorn Mid-Lent called out more genuine vivacity and *verve*.

The most impressive sight was that of the people waiting in dense lines to enter the Pantheon. On the day I visited it, it took on an average a couple of hours to get in—that is, unless one were provided with a special permit, and thus enabled to pass through the cordon of police. The crowd was composed of all classes of persons, rich and poor, well dressed and poorly garbed, and every one had an interested and eager look. The illuminations also drew well, but that was simply because they were illuminations; their *raison d'être* had nothing whatever to do with the affluence of sightseers. There were no private illuminations, so far as I saw, neither was the decoration of buildings taken up by the general public. This was not for the want of stirring appeals to "pavoiser et illuminer," for each Mayor had launched a proclamation on the subject, and these proclamations were posted everywhere.

The remarkable thing about them was their literary and poetic character. Every one was different from the others (each Mayor, of course, desiring to prove his title to originality), and they were every one of them very well composed and deserving of being preserved. Thanksgiving proclamations, Gubernatorial or Presidential, are not to be named in the same breath. These Paris appeals to the citizens of the City of Light each had a quotation from the poet's works incorporated in them, and it was a downright treat to peruse the sonorous periods of the great chief of the Romanticists. Edmond Biré would have had something to say to the accuracy of the statements put forth by Hugo, but no one cared for Biré just then, and the delight of the metre and the rhyme and the glory of the language were all sufficient. No one could have charmed more witchingly than these Mayors, yet the average Parisian seems to have been like the deaf adder that stoppeth up her ears. He remained insensible to the appeal, and his house did not break out into fire or flags. In Belleville Quarter, it is said, the reception of the proposal to celebrate the centenary was received in most hostile fashion, for the amiable inhabitants of that quarter have so strong an objection to God and all his works that they declined, in non-academic, but none the less exceedingly clear and vigorous French, to honor a man who had actually sung of the "bon Dieu" in terms of praise.

The most striking feature of the centenary, from a literary and artistic point of view, was not the unveiling of the monument or the turning out of the school from the house in the Place des Vosges, ex-Place Royale, but the revival of "Les Burgraves" at the Théâtre-Français. I understand that the revival cost a lot of money, and certainly everything seems to have been done to insure the putting of the play on the stage in a manner worthy of the first actors in the world in their attempt to galvanize into a simulacrum of life a play incapable of living. The cast is splendid: Mounet-Sully, whose voice still holds those wondrous organ-tones that thrill one to the heart, takes the part of the Comte Job, the centenarian burgrave; Paul Mounet, whose vocal cords have given out under the strain of the shouting he has to indulge in, has Magnus for his share; Silvain does the Emperor Barbarossa; Lambert *fils* plays Otbert; Mme. Segond-Weber is superb as Guanhumara, and Mme. Lara is Regina. No one could ask for a more satisfactory distribution of parts—the more so that the whole performance is exceedingly well balanced, and that none of the performers strive after starring effects. They one and all conscientiously endeavor to lose their own identity in the part they have to represent, and they neither play to the gallery nor to themselves. And they have their reward; for genuine applause (not that led by the wretched *claque*, but the applause that comes spontaneously from a delighted public) greets them frequently. The directions of Victor Hugo and the traditions of the performances in 1843 have been carefully followed, so that there can be no doubt that the play has all the advantages it is possible to fortify it with. Well, with all this in its favor, with the interest lent to it as a revival, with the aid of the superb acting and the positively magnificent stage-setting, the thing is dismally dull.

Heresy, if you will, but truth in heresy. There is no getting over the fact that the drama drags its slow and unwieldy length along, and that one is constantly waiting for that life-like action on which Hugo laid so much stress, and which was declared to be altogether wanting in the masterpieces of Corneille and Racine. As for monologues, the classical drama cannot rival this attempt at dramatized epic. Every blessed one of the principal characters has to talk for half an hour—at least, so it seems to the tired spectator; and Job and Barbarossa and the prisoners feel it necessary each to give a course in variegated history. The one thing that saves these tremendous passages from being unbearable is the admirable delivery and intonation of the actors. They bring out the beauty of the verse—and it is very beautiful verse, much of it—in a way that enchants the ear; but as far as helping on the action of the drama is concerned, these sonorous monologues, full of eccentric names and references to historical events unknown to the vast majority of the hearers, might as well be omitted.

It is very striking, too, that, in his endeavor to be impressive, Hugo has repeatedly failed to attain even ordinary impressiveness. The scene in which the tattered pilgrim declares himself to be Barbarossa is lamentably weak and flat. Not all the efforts of Silvain, not all the attempts of Magnus, Hatto, Otbert, and the assembled burgraves, margraves, counts, and barons to appear startled and terrified, could save it. No one was awed, no one was startled, no one impressed, save, I confess it to my shame, with a feeling akin to laughter—so nearly akin to it, indeed, that the difference is infinitesimal. And who could wonder at it? Who could blame the bandit barons for refusing to recognize in the fat mendicant, with abundant white beard and tatterdemalion garments, the tremendous and awe-inspiring figure of the redoubtable Frederick Barbarossa? Silvain had to dress the part as required by Hugo. Well, the result is a total elimination of majesty, of grandeur, of the sense of power, and Hatto was fully justified in calling the dread monarch a buffoon. The shining figure in the play is that of Guanhumara, played, as I have said, by Mme. Segond-Weber. Assuredly, that is the one triumph of the revival, and those who have been fortunate to see her in that part will have reason to congratulate themselves. She was the only character that did impress one with the sense of an epic figure, of a really formidable personage, and her whole acting was one continuous triumph.

One more point about this centenary: it is the amazing variety of aspect which Hugo appears to have exhibited during his lifetime. That he was chameleonic in his beliefs, political and religious, is well known; and few, save extremists, dream of blaming him for that. Man has a right to change; and if Hugo took full advantage thereof, who shall say him nay? But can he have looked so differently from himself? Was he so many men in one? There is a portrait of him in one of the new panels "inaugurated" on the façade of the Théâtre-Français, a medallion in high relief. There is another in the foyer of the house, on the right of Houdon's magnificent statue of Voltaire (assuredly the finest portrait sculptor ever made). This new bust occupies the pedestal on which rested, until a week ago, another bust of Voltaire, "with his hideous smile," as Musset termed it. Then there are the Bonnat portrait and the David d'Angers one, and countless others, taken at various times during the poet's life, and one after death. It is hard to believe that he could have looked like one and all of them, and also like what he is represented on the top of his new monument in the Square that bears his name. The inevitable woman who pervades French art, high and low, is there, of course—four times over, and in attitudes more remarkable for their daring than their grace. But by-and-by, in future centuries, people will ask themselves what Hugo really looked like, and the *savants* of that day will tender them many a counterfeit presentment which will heighten their wonder and prevent their coming to a satisfactory conclusion.

F. C. DE SUMICHRAST.

LUDWIG FULDA.

CLEVELAND, March 17, 1902.

It was in March, 1890, after less than two years of imperial power, that Kaiser Wilhelm II. made his bold and withal wise move in European politics by dismissing the Iron Chancellor with the grandiloquent title of Herzog von Lauenburg, which Bismarck said he would use when he wished to travel incognito. The Kaiser was at once accused of ingratitude and megalomania, the madness of the Cæsars which ruined the Roman Empire. Even Young Germany was amazed at the intrepidity of its dashing leader: hoary wiseacres predicted that Bismarck would soon be recalled to the helm to pilot the ship of state out from the dangerous reefs upon which the Emperor was surely running it. Twelve years have shown the world that the young ruler not only can guide his Government as well as the old statesman ever did, but also that he can accomplish his every end by the brilliant insight of intellectual genius, not by the stolid stubbornness of brutal violence.

Not since the days in which Aristophanes so mercilessly and so fearlessly lashed the demagogue Cleon and his political tyranny in "The Knights" and "The Wasps," has a dramatic author dared to present such keen political satire to the public as Fulda did in his "Talisman." There can be no doubt as to who is meant by this king who claims the valor of all heroes, the wisdom of all sages, and says that the Almighty alone is his peer. Nor can we mistake the noble and valiant knight, invincible in the war against the Heathen (*sic*), who has been dismissed from the first office of the land since he frankly said he could not see the bright halo which a treacherous rival for the chancellorship persuaded the king ever gleams about his royal head.

Ludwig Fulda was born July 15, 1862, at Frankfort-on-the-Main, of wealthy Jew parentage. As a child he was frail and dreamy. After graduating from the gymnasium of his native town, he studied philosophy and Germanic philology at the universities of Heidelberg, Berlin, and Leipzig. In 1883 he took the degree of Doctor of Philosophy at the University of Heidelberg. His dissertation was a monograph on the now almost forgotten German poet Chris-

tian Weise. He began his literary career in Munich as an ardent admirer and disciple of the veteran Paul Heyse. To this day he never fails to make an annual visit to his revered master in his villa at Gardone on the beautiful Lago di Garda. Last spring, shortly after the great Berlin success of the young poet's "Die Zwillingsschwester," I saw him walking arm in arm with the venerable Altmeister among the ruins of Catullus's villa near Sirmione, on the southern end of the lake. It was refreshing to see one of the Youngest Germans who still loved and venerated the old master, twenty years ago the foremost figure in German literature, at whom it is quite the vogue now to shrug one's shoulders. Fulda should, indeed, be grateful to Heyse: it is from him that he learned his exquisite art, the careful form in which his thought is always cast, and the perfect finish of each fine phrase.

After leaving Munich, Fulda lived a short time in Frankfort, just long enough to loathe the intellectual provincialism of the place; in 1888 he moved to Berlin, which is now his permanent home. He first appeared as a playwright with several little one-act comedies in prose in the style of Wilbrandt. "Unter Vier Augen" (1887) is the best of these, and quite good of its kind. It is the story of a young husband who convinces his socially ambitious wife, on the night of her first dinner-party, that real home life is better than all social dissipation. There is in it much fine satire on "the best society." But, like most tyros in comedy, the young author relies too much upon *jeu de mots*, and it is too apparent that he is incorporating wit and wisdom gained from reading rather than from experience.

Carried away by the success of Sudermann and Hauptmann in the social drama, Fulda produced several very realistic plays, the best of which is "Die Sklavin" (1892). It is the story of a German wine-dealer who treats his wife as a slave, and subjects her to such brutal indignities that she leaves him. Suicide would have been the usual realistic solution for the social outcast but for a *deus ex machina*, in the form of a young widower, who takes her to his home. The play is no worse and no better than a hundred other German plays of to-day, and, like all of them, has no significance for real dramatic literature. The German woman question, however serious in itself, has no affinity with art.

There is a Hindu proverb which says, "Of the two kinds of blind men, he is most blind who is deceived by the material world." Fulda, like every true artist, soon saw that real ephemeral persons and events may be interesting enough, but that the verities of life and art, however often they may need restatement, are the same in all ages, and that art should deal with ideal types in their eternal relations. The German nature is naïve and lyric as that of a child, Berlin to the contrary notwithstanding—for Berlin is even less representative of Germany to-day than Paris is of France. The German nature has ever loved the fairy-tale beyond all others. The deepest and most suggestive of German sages, Herder, wrote: "No other form of poetic art knows how to say such fine and deep things to the human heart as does the fairy-tale." Fulda knew his countrymen well when he turned to the Märchendrama in the "Talisman." He took his plot from Andersen's charming tale, "The Emperor's New Clothes." The story itself, in a slightly different form, is world-old. From Hindu lore it found its way into early German literature through the "Pfaffe Amis," and was, of course, settled upon the merriest of mediæval rogues, Till Eulenspiegel. In Andersen two rogues impose upon a foolish old king by pretending to make for him a robe which is invisible to all who are either stupid or bad. No one, not even the king, can see it, for there is nothing to see, but all pretend to see it plainly and rave over its beauty. When the king is promenading to show the people his gorgeous raiment, a little child cries out, "Why, the king has nothing on!" But the monarch refuses to be disillusioned.

In Fulda's "Talisman" all this merry nonsense is given its deep psychological significance. The obtuse old monarch is changed into a fiery young despot, who deems himself clairvoyant, but is really blinded by adulation. He knows he cannot see the robe, and that his nature is bad, but decides that his very wickedness shall make him greater. With clear insight into the King's inner nature, Omar, the son of the banished chancellor, skilfully disillusions the megalomaniac by means of the pretended robe. In the old story the hero was only a clever rogue, but here he is the personified type of moral greatness. Andersen's little child becomes the simple merry Rita, whose prototype in the Märchendrama is unmistakably Mirza in Grillparzer's "Traum, ein Leben." The political satire is superb—the sycophant courtiers, deceived deceivers, who all vow they see the robe, but quarrel as to its color and texture; the king, who actually believes that he alone cannot see it, but dare not say so; the people, divided into factions, liberals and conservatives, in their zeal to see it. The climax could not be finer: the King in his underclothes parades before the people in a magnificent pageant to display the robe. Rita cries out ingenuously that he has nothing on, and then naïvely remarks to the enraged monarch:

"Herr, kann dich das im Ernst erbosen?
Du bleibst der König—auch in Unterhosen."

"Sire, can that really put you in a rage?
You still are king—even in underdrawers."

When the King finally pardons Omar and Rita, condemned to die together, and offers him the first office of the land, Omar takes Rita by the hand and leaves the insipid court, to dwell with her and her old father, the inimitable Habakuk, in his little cottage. To the King he leaves his talisman—

"Der Mut der Wahrheit ist der Talisman."

"The courage of the truth, that is the Talisman."

The whole drama is thoroughly unconventional; it has none of the inevitable stock figures of German comedy. The satire is most subtle and the merriment exhilarating. Through all runs a clear vein of rich poetry and deep thought. The form is simply perfect; it would be hard to find in all dramatic literature more exquisite art. Of course, the realistic critics held up their hands in horror at the reappearance of the Märchendrama. Was the German drama to go back to the days of Tieck and his "Puss-in-Boots," of Platen and his "Silver Slipper"? By no means. Fulda saw far deeper into the significance of the Märchendrama than ever did the Romanticists, and knew that, restated, it could be made most serviceable. He had studied carefully Grillparzer's "Traum, ein Leben," and saw in it a form of the drama which, used discreetly and not too often, could express more real truth than all the realistic formlessness of modern stage-plays. He restored again to their old supremacy the fine fancy and rich imagination of the German poet. He realized one of the fundamental facts of art, that for each folk there is an indigenous form in which alone its genius can be fully expressed. That he was right was attested by the success not only of his "Talisman" (1893), but also of Hauptmann's "Versunkene Glocke" (1896), and Sudermann's "Die Drei Reiherfedern" (1898).

Fulda's latest drama, "Die Zwillingsschwester," a comedy in verse of Italian cinquecento life, is now being played night after night in Berlin, Vienna, Munich, London, Paris, and New York. It was first brought out by Agnes Sorma on February 21, 1901, at the Lessing Theater in Berlin. The success was unprecedented; Fulda appeared several times before the curtain. He is now a tall, thin, ungainly man, with very dark eyes and black moustache. The most characteristic feature about him is his sarcastic smile. "Die Zwillingsschwester" was produced in New York first in German by Herr Conried at the Irving Place Theatre, the one theatre with a real literary and artistic standard in this country. Its success was so great that it was at once adapted into English ("The Twin Sister") by Louis N. Parker, and put on at the Empire, where it is equally successful.

"Die Zwillingsschwester" is a play of pure fancy, entirely removed from this noisy work-a-day world; its success is a severe blow to the realists. The story has all the rich flavor of Boccaccio without his lubricity. Count Orlando della Torre of Padua is weary of his beautiful young wife, and longs for a change in the conjugal monotony. He decides to go with his jolly companion Parabosco to Venice for a lark. His noble wife Giuditta pretends to leave for a sojourn with her mother, but soon returns as her own maiden twin sister, the merry Renata, who was expected on a visit. Orlando, forced to remain at home to entertain the supposed Renata, falls desperately in love—with his own wife, as does also Parabosco! Thus Giuditta, as Renata, again fascinates and wins—her own husband. When the real Renata arrives, all is delightfully cleared up, and Orlando declares no other woman in the world but his own wife could have tempted him to taste forbidden fruit.

No better comedy has ever been written than the scenes where Orlando falls so passionately in love with his own wife; the disclosure and reconciliation at the end are simply inimitable. The manner in which Sorma brings out the subtle shades of difference between the twin sisters is a triumph of her art. Just a tinge more of life and gayety in the merry maiden Renata makes her more fascinating to Orlando than the slightly subdued wife Giuditta. Just such a merry maiden had Giuditta herself been when she first won her husband; just such Sorma makes her again to win him back. In addition to this excellent characterization, there is a wealth

of rollicking merriment and epigrammatic wit. Let one example suffice:

"Der Mann ist doch ein Mann, nicht nur ein Gatte."

"A married man is still a man, not merely a husband."

What the realists have given us so much gratuitous filth to portray is here most deftly worked out. As Giuditta gleefully taunts her repentant husband, an incontinent man has eyes for every other woman

"Except his wife—until in borrowed guise
She turn herself into forbidden fruit."

Fulda has also written some good poems and fine epigrams, besides giving the Germans his excellent translations of Molière and Rostand. Like the latter dramatist, he has a remarkably felicitous way of putting things. He may not have the deep poetic insight that Hauptmann once had, nor the great power of thought that Sudermann still has, but he is more of an artist than either. He has less to say, but he can say it much better than either.

EDWARD STOCKTON MEYER.

Correspondence.

OUR DUTY TO CUBA.

TO THE EDITOR OF THE NATION:

SIR: There appears a communication from "I. J. W.," in your number of March 13, under the heading "Our Duty to Cuba," criticising the comments of the *Nation* on the conduct of the House of Representatives in dealing with the question of Cuban reciprocity. The customs tariff of Cuba was prepared by the United States Government, and numerous amendments have been introduced by that Government since the occupation of the island, directing the appraisal of foreign goods by certain (higher) sections, and that of American goods by certain other sections. This has increased American importations into Cuba. Representatives from this island have clearly pointed out that Cuba is willing to make further concessions to encourage and protect trade with the United States, yet Cuba has had no chance to introduce amendments in the United States customs tariff, which remains unchanged *against* all Cuban products. It may, therefore, be seen that the problem is one of mutual commercial advantage, to be decided by broadminded business men who will not be influenced by petty personal conceptions such as those of "I. J. W.," whose brain could suggest no better comparison than his refusal to contribute alms to a street beggar.

R. G. MENDOZA.

HAVANA, March 19, 1902.

RIZAL'S PATRIOTIC HOROSCOPE.

TO THE EDITOR OF THE NATION:

SIR: In the light of subsequent events, it is thought that the following extract from an article written by José Rizal may be of interest to readers of the *Nation*. The article was headed "Filipinas* within a Hundred Years," and appeared September 30, 1889, in *La Solidaridad*, the organ of that band of brilliant and courageous young Filipinos, like Rizal, Luna and Del Pilar, several of whom gave up their lives for love of country. Rizal never advocated separation from Spain and independence for the Philippines; he only pleaded for reforms, and prophesied that separation and independence must ultimately result unless reforms should be made. Such is the tenor of the article from which the following extract has been translated:

"If Filipinas shall attain independence at the end of a heroic and desperate struggle, can it be certain that England, Germany, France, or even Holland will not venture to seize what Spain has not been able to hold? Africa for some years will absorb the entire attention of Europe. There is no sensible nation which, for a paltry handful of poor but war-inured islands, will turn its attention away from the immense tracts of virgin territory, unexploited and undefended, to which the Dark Continent invites it.

"England has colonies enough in the Orient, and is not going to run the risk of losing her balance; she is not going to risk her possession of India for the poor Philippine archipelago. Had she cherished such a purpose she would never have withdrawn from Manila in 1763. She would have kept a post in the islands from which gradually to have extended her domain. Besides, why does the great merchant John Bull need to concern himself about Filipinas, for Filipinas is not the mistress of the Orient, while there are Singapore, Hong Kong, Shanghai, etc.? Probably England will look with kindly eyes upon the independence of Filipinas, which would throw open its ports and give her commerce free trade. And, further, there are tendencies and opinions in the United Kingdom which hold that it possesses already too many foreign colonies, and that they only injure and weaken the mother country.

"For like reasons Germany will not take the risk. The inequality of her strength and a war in foreign lands would endanger her existence on the Continent. So we see that her activity, in the Pacific as well as in Africa, is limited to conquering *easy territory that does not belong to anybody.* Germany is keeping out of every external complication.

"France has enough to do in Tonkin and China, and looks for her future there. Besides, the French spirit displays little love of colonization. France loves glory, but the glory and the laurels that spring from European battle-fields. The echo from the battle-fields of the extreme Orient does not satisfy her craving; it is too much dulled by distance. France, moreover, has other business to attend to, not only within her own bounds, but on the Continent.

"Holland is sensible. She will be content to hold the Moluccas and Java. Sumatra holds out to her a brighter prospect than Filipinas, whose seas and coasts are not propitious to Dutch expeditions. Holland is proceeding with a good deal of caution in Sumatra and Borneo for fear of losing them.

"China will consider herself happy enough if she succeeds in maintaining her unity and escaping dismemberment at the hands of the European Powers that are colonizing the Asiatic Continent.

"The same is true of Japan. She has at the north Russia watching her with covetous eye, and at the south England, whose tongue she has adopted as her official language. And she is under such diplomatic pressure from Europe that she cannot think of the exterior until she has freed herself from it. She has an excess of population, it is true, but is more drawn to Korea than to Filipinas; and, besides, Korea is more easy to take.

"Perhaps the great American Republic, which has interests in the Pacific and does not share in the spoils of Africa, may some day think of ultramarine possessions. This is not impossible, since example is contagious, and greed and ambition are vices of the strong. Harrison has already manifested something of the spirit in the Samoan affair. But the Panama Canal is not yet opened, and the territory within the States is not yet thickly settled. And even though the United States should openly attempt the conquest of Filipinas, the Powers of Europe would interfere; for they know very well that the appetite for conquest is excited by the first mouthful. North America would be too troublesome a rival if once it should begin the practice of colonization and conquest. It is, furthermore, against its traditions."

Very respectfully,

M. F. STEELE.

ANGEL ISLAND, CAL., March 12, 1902.

* Rizal, Del Pilar, Murgas and other Filipino writers almost invariably wrote *Filipinas* instead of *Las Filipinas*, and treated the word as a singular noun, thus, "Filipinas *es* mi patria," like, "the United States *is* my country."

KHAKI.

TO THE EDITOR OF THE NATION:

SIR: British Jingoes want to put Boers to death for wearing khaki, which they say is the British uniform. The Boer, I take it, in his present condition, wears the captured clothes of his enemy, not for the purpose of treachery, but because he has no clothes left of his own. Such an appropriation of the clothes of the enemy was, I believe, not deemed a breach of the laws of war before the Hague Conference; and from the Hague Conference, the Transvaal republic, at the instance of the British Government, was excluded.

However, khaki is not the British uniform. The British uniform is red, except for the artillery and one regiment of Horse Guards, the uniform of which is blue. Khaki is worn, not for the purpose of distinction, but for that of safety, as least presenting a mark for rifles; and its use, like that of defensive armor, must be open to all the world.

EQUITY.

March 18, 1902.

THE ETYMOLOGY OF "RATLINGS."

TO THE EDITOR OF THE NATION:

SIR: In this part of the country the name "ratlings" (sometimes spelled "rattlings") is given to kindling that has been cut into strips about four feet long and tied up in bundles. I have never heard the word used in connection with any other kind of kindling. The etymology seems to be obscure. Is it perhaps related to the nautical term *ratlines* and its variants *ratlins*, *ratlings*, and *rattlings?* I conjecture, though, that it may be akin to M. E. *rattes*, rags, M. E. *ratten*, to tear, Icel. *hrat*, *hrati*, rubbish, trash, Norw. *rat*, rubbish (cp. *ratgods*, refuse goods), Sw., Norw. *rata*, to reject, refuse, Eng. *rate*, to refuse, find fault with.

CHARLES BUNDY WILSON.

IOWA CITY, IOWA, March 15, 1902.

Notes.

The Société des Bibliophiles Français, founded in 1820, is about to publish an account of "quite a family" of manuscripts of St. Augustine's 'City of God,' illuminated by artists of the middle and end of the fifteenth century. This important work, which will make its appearance towards the close of the present year, will be illustrated by numerous reproductions from the manuscripts in question, which are found some in the National Library in Paris, some in the libraries of La Haye, Nantes, Mâcon, etc. The Society's home is at Paris, No. 21 Rue Cambon.

The Grafton Press announces 'The Official Golf Guide and Annual, for 1902,' com-

piled and edited by W. G. van Tassel Sutphen.

'What's What, at Home and Abroad,' is a pocket handy-book for the housewife, the sportsman, and the man of affairs, about to be published by the Bradley-White Co. of this city.

Infallibly recurring annuals are Dr. W. J. Rolfe's compact 'Satchel Guide for the Vacation Tourist in Europe,' of which the thirty-first issue (Houghton, Mifflin & Co.) is enlivened by prefatory allusions to antiquated misinformation in rival guides; and that most useful and painstaking "Year-book of Philanthropy," 'Burdett's Hospitals and Charities' for 1902 (London: The Scientific Press; New York: Scribners), of which the index fills 55 triple-columned pages. Novel is "a carefully selected list of sanatoria for the open-air treatment of tuberculosis." The editor is able to congratulate himself on the enforced adoption of his uniform system of accounts by the hospitals and public institutions of Queensland. There is nothing to compare with this combined register, comment, and statistics for the whole world's charity to man.

The Dent-Macmillan reissue of Thackeray's Prose Works, edited by Walter Jerrold and illustrated by Charles E. Brock, proceeds with 'Pendennis' in three volumes and 'Barry Lyndon' in one. These are soberly attired in olive cloth, with clear, if condensed, letterpress. Laurence's portrait of Thackeray, now in the National Gallery, which FitzGerald considered the most faithful presentment for posterity, is the leading frontispiece. The others are part of Mr. Brock's clever series, which are partly let into the text, partly occupy a full page, often in red chalk. Mr. Jerrold's function is bibliographical, and is modestly discharged.

It is fourteen years since we had the pleasure of praising Mr. Reuben Gold Thwaites's 'Down Historic Waterways: Six Hundred Miles of Canoeing upon Illinois and Wisconsin Rivers' (Chicago: A. C. McClurg & Co.). In bringing out a new edition, with some pruning and some rearrangement, the author is able to justify himself by saying that, for all practical purposes, the "waterways" are unchanged since he made his entertaining record of their attractions for the canoeist. Hence the little volume remains a faithful guide. He has much enhanced its worth to the general reader by eight full-page photographic illustrations of scenery along the course. The view of the junction of the Wisconsin River with the Mississippi is one of the most striking.

The Merrymount Press has been called in to the making of John Lane's delectable little reprint of Bacon's essay 'Of Gardens.' Mr. Edmund New, who designs the pleasing cover, also attempts a bird's-eye view of the garden recommended by Bacon—"best to be Square; Incompassed, on all the Foure Sides, with a Stately Arched Hedge," with its "Greene in the Entrance; A Heath or Desart in the Going forth; and the Maine Garden in the midst," "a Faire Mount, with three Ascents," alleys, living fountains, and flowers or greenery for every season.

In 'Lilies for English Gardens,' by Gertrude Jekyll (Scribners), we find a great deal of well-arranged information in regard to this attractive group of plants. The illustrations are all of a high order of excellence, and the information is trustworthy. With some important modifications here and there, the directions for cultivating the better sorts answer pretty well for our more exacting climate, while the hints for grouping need absolutely no change. It is very pleasant to observe that the later photographs of flowers in most of the leading horticultural publications have been so successful in expressing "color values." It is to be hoped that the old style of dead flatness in photographs of flowers will never be brought back. In the present work, color values are well given. To all amateur cultivators of lilies this book by a "working amateur for thirty years" can be heartily commended.

The fourth and closing volume of Professor Bailey's 'Cyclopædia of American Horticulture' (Macmillan) follows out the lines judiciously laid down at the outset of the great undertaking. The editorial skill shown throughout the work is very marked, and the editors are to be sincerely congratulated upon the coöperation which they have received from their contributors and from the printers. The patience of the editors and of the printers must have been severely tried by some of the engravings, a few of which are wholly unworthy of the work. The printing of this volume is distinctly better than that of the first. It is pleasant to learn that Professor Bailey suggests the publication each year of a supplemental pamphlet, of about a hundred pages, uniform with the page of the Cyclopædia. From the preface we are told that the manuscript of the first supplement, comprising a key to all the families and genera mentioned in the Cyclopædia, has been prepared. The second, devoted to the Bibliography of American Horticulture, is also ready. These supplements are "not definitely promised, but they will be made if there is sufficient demand for them." Certainly the demand should be imperative.

Old associations would prompt to gentle treatment, if that were in any way possible, of the many-editioned Eadie's 'Biblical Cyclopædia.' Its old-fashioned picturesqueness of expression and illustration survives in its new form (Philadelphia: J. B. Lippincott Co.), but its old-fashioned attitudes survive as well. Yet it has been "revised throughout," so the phrase runs. As revisers are named Sayce, Tristram, W. M. Ramsay, Vernon Bartlet, Pinches, and Redpath. These must pass on from one to the other the responsibility for the present very strange product. In geography, natural history, Oriental customs, and non-dangerous subjects generally they have produced quite bright and telling little articles. The archæological elements are also fairly good, though of the happy-go-lucky type familiar to us in Professor Sayce's books. But critical and contentious matter is sternly ruled out. Such statements of date, authorship and purpose, of history and interpretation, as are made, are of a frankly antediluvian character. It is all a great pity, for 'Eadie' had many excellent features, but the way is still clear for a good one-volume dictionary of the Bible.

Dr. G. Woosung Wade's 'Old Testament History' is a very solid little book of nearly 550 pages (Dutton & Co.). It does not claim originality, and certainly has none, but follows diligently in the footsteps of the "authorities," while keeping as close to the Biblical "Authority" as is fairly possible. Contentious matter is dropped to small type, where it at least looks less. The book is usefully arranged (chapters on history and religion alternating with one another), is full and clear, and will probably be of assistance to less advanced students, who will hardly find it light reading. More cannot be said for it.

We commend for very interesting reading Prof. S. B. Christy's biographical notice of the late Prof. Joseph Le Conte, read before the American Institute of Mining Engineers in November last, and published in its Transactions as well as in a Bulletin of the University of California's Department of Mining and Metallurgy, with a portrait. Prof. Christy had the privilege of perusing the autobiography left behind by his subject, which covers nearly 600 closely written pages, and which he pronounces fascinating. Its publication may be looked for. The brochure closes with a list of Prof. Le Conte's writings.

The most interesting, though not the most important, of the Consular Reports for March are those treating of new fields for American trade. A consulate was opened a year ago at Harput for the two Turkish provinces from which comes four-fifths of the emigration from Asia Minor to the United States. Nearly every family has a member or relative here, and their annual remittances have reached half a million dollars. At present the amount is about $200,000. A year's experience leads the consul to believe that there is a profitable market especially for agricultural implements and sewing-machines. Of these, 332 have been sold by one agency in fifteen months. The chief export to the United States was sausage-casings. In Siam, a country which has a most promising future, our trade increased last year more than 72 per cent., double that of any other nation, notwithstanding the fact that "there has not been a vessel of any description flying the United States flag in this port [Bangkok] since 1896." Among other subjects of interest touched upon are the economic conditions in Great Britain, and the unfavorable influence of trade-unionism on the workman, and the methods by which the sugar-producers' and refiners' syndicate maintain high prices in Germany. Ordinary white lump sugar costs to-day in Berlin, writes our consul-general, "nearly three times what is charged for the same grade of German-made sugar in London, and this at a moment when Germany has just harvested the largest beet-sugar crop in her history, and when industrial depression and diminished wages render high prices for any food material especially burdensome to the people."

The conviction, on the part of the Prussian Government, that the efficiency of judicial and administrative officers nowadays involves at least some insight into technical questions, must be the cause of the recent appointment of two members of the faculty of the Technical High School to simultaneous professorships at the University of Berlin, where Professor Slaby will henceforth lecture on electrotechnics, and Prof. Eugene Meyer on mechanical technics and technical physics. For mathematical and scientific students in the University this new departure means an extension of university work into the field of applied

science, a movement begun at Göttingen a few years ago.

Professor Seybold, who is preparing a new catalogue of the Oriental department of the University library of Tübingen, has discovered what the *Vossische-Zeitung* declares to be the earliest manuscript of the 'Thousand and One Nights' in existence, being fully five hundred years old. It contains, besides many variants, one story found in no other copy of this collection. Professor Seybold has also discovered another valuable novelty in the shape of a Druse manuscript, giving full details of the peculiar teachings and tenets of that strange sect in the Lebanon district. These finds are both to be published.

The Italian Ministry announces that the commission appointed by the Government for the purpose of publishing the Pandects of Justinian will, in the near future, issue a photographic reproduction of the famous Codex Pisanus-Florentinus, under the auspices of the directors of the Laurentian Library. The codex covers 1,844 pages, which the introduction will swell to some 2,000 pages. The work is to be completed within three years, a fascicule of 200 plates appearing every three months. The work is being done by the firm of Danesi in Rome. Of the hundred numbered copies, only seventy are to be open to the book trade. The subscription price is 800 lire.

The libraries of Rome have recently been increased by an interesting collection, secured through the exertions of that champion globe-trotter, Giovanni Vigua del Ferro, who, in 1898, accompanied the Italian expedition to China in the official capacity of an interpreter, and, at the conflagration of the imperial palace in Pekin, managed to save a large part of the library. A catalogue is in preparation.

The first call for the twelfth International Congress of Orientalists has been issued by the committee, the convention to be held in Hamburg, beginning on the 4th and ending on the 10th of September of the present year. The work will be distributed among nine sections, viz.: (1) Linguistics and General Indo-European Department; (2) India and Irania; (3) Farther India and Oceanica; (4) Central and Eastern Asia; (5) General Semitic Department; (6) Islamic Peoples; (7) Egyptian and African Languages; (8) Intercourse between the Orient and the Occident, in both ancient and modern times; (9) Colonies in the Orient.

Would-be competitors for the Justin Winsor prize of $100, offered by the American Historical Association for the encouragement of historical research, for the year 1902—and they must be "writers who have not yet published any considerable work or obtained an established reputation"—should address Prof. Charles M. Andrews, Bryn Mawr, Pa. The prize has been awarded only three times since 1896.

Mr. William I. Fletcher's Summer School of Library Economy at Amherst enters upon its twelfth year with a six weeks' session, beginning July 7.

—Mr. Worthington C. Ford has royally kept his promise to the subscribers to his publication of the 'Journals of the House of Representatives of his Majesty's Province of the Massachusetts-Bay, 1715' (Boston). A more elegant production is seldom seen; but this is much more than a reprint in the old manner of typography. The gap in the Journals has been filled in, as proposed, with the Minutes of the Council, which reflect the House's action, while the editor himself has supplied an illuminating preface, a list of the members of the House, and an index. In the list of members one is struck with the occurrence of names which are strongly local to this day, as, Winthrop for Boston, Clap for Dorchester, Thaxter for Hingham, Tufts for Medford, Coffin for Nantucket. The main political action of this first year of George the First's reign is divided between the supersession of Gov. Dudley by Gov. Burges and the former's ineffectual efforts to induce the House to substitute taxation for paper money. Among bills considered was one (already) for the preservation of pine trees. In dealing with one of its own members, the House expelled John Randall, member for Rochester, as "a Profane person," who also "stands Convict of Scandalous Immorality." Like some of our latter-day legislators, "he expressed himself unconcern'd to clear his Reputation"; but this was not accepted as a vindication. His constituents, too, were "Reprimanded for their abusing their Privilege, in Electing and Sending a person of such an Ignominious Character to Represent them." Two instances are reported of refugees from the South asking for an abatement of the duty on the black slaves accompanying them; one, "Archibald Stobo, a Minister of the Gospel, lately arriv'd from Carolina, Driven from his Habitation there by the Hostility of the Indians." His importation consisted of eleven negro women and children. Another clergyman, "Joseph Lord, Pastor of the Church at Dorchester, in South Carolina," asks that an Indian girl attending his children may be admitted and remain, "the Law of the Province to the contrary notwithstanding." This was granted, provided she ultimately departed with the family, "and that he do not make Merchandize of her in the mean time."

—Ten years ago, in reviewing Prof. Charles Eliot Norton's translation of the 'Divine Comedy' (Boston: Houghton, Mifflin & Co.), on its first publication, we compared it, passage by passage, with the other English prose versions, and showed that it excelled them all. Now Professor Norton has issued a revised edition of his work, and its superiority over its competitors is still more evident. This revision might almost be called a new translation, so frequently does it vary from the former. Greater accuracy and a smoother reading in English have been Mr. Norton's aim, and he has achieved it by indefatigable industry with the file, and by the application of his very delicate critical sense to the minutest verbal details. Whoever compares the new interpretation with the old will have a rare lesson in Dante exegesis; such a comparison will give, further, an insight into the way in which clear writing, like Mr. Norton's, is perfected. For instance, "The army of Christ, which it had cost so dear to arm afresh, was moving slow, mistrustful, and scattered, behind the standard" (Paradise, xii., 37-39), becomes "The army of Christ, which it cost so dear to arm afresh, was moving behind the standard, slow, mistrustful, and scanty." The improvement is obvious. If we could sum up in a word wherein Mr. Norton excels all other translators of Dante, that word would be fidelity—equal fidelity to the letter and to the spirit of the text. John Carlyle and Dugdale are certainly readable; so is Mr. A. J. Butler in certain passages; so also is Sir Edward Sullivan; but, one and all, they fall short in fidelity. Carlyle, like the Bible translators, sometimes fills out his sentence with italicized words or phrases not in the original, and the texture of his English is not uniformly compact. Dugdale does not always guard against such a phrase as "literary glory" for *La gloria della lingua* (Purg., xi., 98). Butler tends towards the style of the modern sensational novelist, as where he transforms *e scolorocci il viso* into the un-Dantesque "and change the hue of our visages" (Hell, v., 131)! Sullivan, with Celtic audacity, ventures to supply an adjective, or to attach a secondary meaning to Dante's words; thus, where Dante makes Count Ugolino exclaim, "Ahi dura terra, perchè non t'apristi," the Irish baronet makes him address the "*stony-bosomed* earth" (Hell, xxxiii., 66). Cited singly these examples may seem trivial; but they really illustrate temperamental peculiarities which continually crop out to mar the various translations mentioned. From such false notes Mr. Norton's work is free. It should be added, that this new edition not only is set in larger type, but also has many more notes than the earlier, so that it offers the reader unacquainted with the original a brief but sufficient exposition as well as the English text. We can repeat with assurance now the prediction made ten years ago, that Mr. Norton's is destined to be the standard translation in English of the 'Divine Comedy.'

—'Palaces, Prisons, and Resting-Places of Mary, Queen of Scots,' by Mr. Michael Myers Shoemaker (London: H. Virtue & Co.), is a book which makes its chief appeal through the profuseness of its illustrations. In the course of her sad but romantic career, Queen Mary had much to do with three countries, and it was an age which, despite numerous shortcomings in other directions, was marked by the beauty of its domestic architecture. Thus, in following her steps from the moment when she was born at Linlithgow to the moment when she was executed at Fotheringay, we pass through many castles of the later Middle Ages and many châteaux of the Renaissance. Without the aid of illustrations, such an investigation would be edifying only to blind adorers, but when ample material is provided for the comparative study of sixteenth-century castles in France, Scotland, and England, the work in question becomes one of more general interest. Considered merely as a picture-book, this volume deserves some commendation, though it hardly rises to the height of its opportunity. There are eight photogravures of not quite the best quality, twenty-four plate illustrations, and numerous illustrations in the text. The choice of subjects is on the whole good, but in the case of France a better selection might have been made. The châteaux neither of Touraine nor of the Île de France are shown to full advantage, notwithstanding the fact that one or two things, like the façade of Francis I. at Blois and the room in

the Hôtel de Ville at Orléans where Francis II. died, are satisfactorily reproduced. Our one comment upon the text must be that the topographical part of it is decidedly better than the historical. The author disclaims in his preface any intention of writing "another history of Scotland's unfortunate Queen," but this long pilgrimage from place to place involves the constant discussion of historical questions which grow out of her life. Victor Cousin called himself the posthumous lover of Mme. de Longueville. Mr. Shoemaker might be called a posthumous worshipper of Queen Mary. In his last sentences he describes the famous tomb in Westminster Abbey and then says: "We may not follow her into the courts of heaven, so here we must leave her." The same note of rhetorical exaggeration may be detected in almost every page, with the result that however much enthusiasm may be kindled thereby, the interests of history suffer. In appearance this is rather a pretentious work, but, while possessing some good illustrations, it cannot be said to belong to the first class.

—The latest publication (vol. xv.) of the Selden Society ('Select Pleas, Starrs and Other Records from the Rolls of the Exchequer of the Jews, A. D. 1220-1284,' edited by J. M. Rigg) will go far to throw light on the vicissitudes of Jewish life in mediæval England. The explanation of these, when found, is simple enough. The feudal system paid almost no attention to domicile; it founded upon birthright and personal allegiance. Hence the capitulations by which foreigners ruled, and still rule, themselves in the East, and the law courts which the Hanseatic League held in London. Hence, too, the resident alien had no rights but those which self-interest granted and continued to him, and his lack of rights was just as hereditary as the possession of them. The Jews, further, stood outside of international comity, and had no part in the fellowship of the Church; were thus out of law, and mere chattels to be acquired and used by any one. In England, they became a chattel of the King, a perquisite of the Crown like treasure trove. And the Crown found them very useful. Handicrafts and trades were gradually closed against them by the gilds. But Christians could not lend money at interest, while Jews could; usury, therefore, became their profession, and the Crown encouraged them in it. The surplus wealth of the country flowed into their coffers, and was from time to time squeezed thence into the royal treasury. All which the Jews had belonged to the Crown; but their sins, including that of usury, were upon their own heads. Such is the situation developed for us by the documents in the present volume, and by Mr. Rigg's most able introduction. The details, too, are full of interest and surprises. Constitutional agitation went hand in hand with anti-Semitism. The bonds of the Jews were kept for safety in the chapterhouses of cathedrals, and were not very safe even there. Later, the Crown itself took charge of them, as virtually royal property. The word of a Jew stood in law for more than the word of a Christian, but, if he embraced Christianity, all his estate went to the Crown—both for excellent reasons. Mr. Rigg is evidently in doubt on the story of Hugh of Lincoln and on the other charges of ritual murder. He cannot find in them any trace or possibility of a mythical origin, and (if we may read between his cautious remarks) feels that they may have had some basis. One thing in the whole is clear, however inevitable it may have been through the working of fixed causes: England was no better than the other Christian lands in its treatment of the mediæval Jew. For him there was more rest under Islam than in Christendom. So, while there was no Jewish literature in any of the languages of mediæval Europe, there was one, extensive if not artistically great, in Arabic.

—We had occasion some time ago to speak of Miss Neena Hamilton's struggle to get her doctor's degree in Germany. We now have before us her thesis. Few, surely, of such admirable scholarship, ripe tone, and delicate appreciation are presented by women candidates for degrees, or even German professors would prefer them as pupils to all but very few men. Miss Hamilton has treated of the "Adoration of the Magi" in Tuscan painting. She confines herself chiefly to the period between Giotto and Leonardo, but lets us know how this popular theme was treated from the earliest Christian centuries, and does not fail to inform us of the effect Leonardo's composition had upon his contemporaries and followers. In this part of her work Miss Hamilton betrays no less acquaintance with the new æsthetics than with the new connoisseurship. Upon the data furnished by the latter, and with the new standards and new methods of appreciation afforded by the former, she discourses of a single subject of painting, the "Adoration," in a way that gives a penetrating insight into the whole aim and entire significance of Tuscan art. Then she discusses the gradual evolution of the theme from an iconographic point of view. Finally, she speaks of the effect upon this subject of popular fancy and the miracle plays. In all this, Miss Hamilton gives evidence of a breadth of sympathies and of an accuracy of information that many an older student, who has long since won his spurs, might envy. Our one and only fault with her volume is that it is in German. Its full title is 'Die Darstellung der Anbetung der heiligen drei Könige in der toskanischen Malerei von Giotto bis Lionardo' (Strassburg: J. H. Ed. Heitz).

COL. WILLIAM BYRD OF VIRGINIA.

The Writings of "Colonel William Byrd of Westover, in Virginia, Esqr." Edited by John Spencer Bassett. Illustrated. Doubleday, Page & Co. 1901.

While the North American colonies had little that can be properly called literature before the middle of the eighteenth century, those of the South had nothing at all. The reasons lay in the conditions of Southern society. The cultivated class—that is to say, the planters—lived in their own circles, and knew no public beyond that of their neighbors and kinsfolk. Their plantations were, to a large extent, self-supporting; and, their outside dealings being managed by their agents in England, who sold their tobacco, and shipped them such articles as could not be produced on their estates, it was quite possible for a Virginia planter to live in luxury without having had a single business transaction with a fellow-Virginian. Fox-hunting, horse-racing, balls, and occasional visits to the county court or the sessions of Assembly varied the monotony of tobacco-growing.

But we must not think of the planter's life as wholly material. He felt himself, above all, a gentleman. He had had a gentleman's education, which was of itself a kind of patent of nobility. This, if possible, he felt bound to transmit to his sons; and as there were no schools in the colony where it could be had, he sent them to England. This education usually included the study of law, which was held to be eminently the profession of a gentleman, and was sure to be useful, as the Virginians were rather a litigious people. Outside of planting, the law, and public office there was no possible career; army or navy there was none, and the Church had nothing but poverty to offer.

There was also another reason which recommended the study of the law to the Virginia gentleman. These upper families formed a governing caste, so connected by intermarriages as to be almost a clan, and from them came the councillors, the judges, the holders of all Crown offices, the members of the Assembly. The Governor, appointed by the Crown, was an alien. Nearly all political questions hinged on the respective rights of the Crown and of the people; and while the burgesses were supposed to represent the latter, the councillors and office-holders were, theoretically, the advocates of the royal side. In point of fact, however, these felt themselves first of all Virginians, and jealous of any extension of royal prerogative that encroached upon the rights or advantages of their class, which they were prompt to defend, whether at home or before the Privy Council, by arguments founded on English law and precedent.

The educated planter had, of course, his library, as he had his coat of arms. Small though it might be, it was pretty sure to contain 'Hudibras,' Dryden, Pope, Prior, Swift, and Addison, with at least the familiar Latin authors. A gentleman was expected to know some Latin; it belonged to his caste, and drew more sharply the line between him and the small farmer. But there were some who had really fine libraries. That of Col. Byrd at Westover (dispersed in 1778) was probably the largest in the colonies, containing about 4,000 volumes in Greek, Latin, French, and English, and including that priceless MS., the Southampton Papers. Anything like literature, therefore, could arise only in this special caste. But what did arise did not recognize itself as literature. It was not intended for publication (for there were no publishers and no public), but for the family or the social set. It was an eminently gentlemanly accomplishment to be able to write a set of verses in the style (*longo intervallo*) of Pope or Prior, or to turn out an occasional epigram; and copies of such verses were handed about. But of far more value were manuscript memoirs and journals of travels, of which probably a number still exist, and it is greatly to be wished that they might be disinterred and made public.

Of the class of which we have been speaking, one of the most distinguished members was Col. William Byrd of Westover. He sprang of an ancient English family, whose

genealogy is traced, in the work whose title is cited above, from the twelfth century, apparently without that weak link in the seventeenth which is the tender spot in so many stately American pedigrees. His father came to Virginia about 1670, where the social position and influence of his uncle, Thomas Stegg, whose estates he inherited, secured him a footing in the best society. He had mercantile tastes, and, while holding several public offices, carried on a lucrative trade with the Indians. As he grew rich, he caught the land-hunger which was endemic among the planters, and extended his holdings to more than 26,000 acres, fixing his residence at Westover on the north side of James River, where he died in 1704. His wife, Mary Horsemanden, had died in 1699.

William Byrd, his son, and the author of these papers, was born in 1674. His father took great pains with his education, sending him first to a school in England, then for a while to Holland, and finally entering him as a student of law in the Middle Temple in London, where he studied for about five years, when he was called to the bar. In 1696 he returned to Virginia, and at once entered public life as a member of the Assembly. The next year he was again in England, the bearer of an address to the Board of Trade, and while on this mission was chosen the agent of the colony. In London he mingled in the best society, one of his warmest friends being the distinguished Charles Boyle, Bentley's antagonist in a once famous literary war; and through his influence, probably, Byrd was made a Fellow of the Royal Society, to whose transactions he contributed at least one paper. On his father's death, in 1704, Byrd returned to Virginia, and in 1706 married Lucy, the daughter of Gen. Daniel Parke. In 1708 the Queen appointed him a member of the Council of the colony, a position which he held until his death, and he was also made Receiver-General for the Crown.

From the time of Berkeley's fall, the Council had been virtually the Government, and, by a kind of "senatorial courtesy," they winked at each other's irregularities (to use no harsher word) of various kinds, but especially in taking up and laying out lands. Ludwell, for instance, it was alleged, having obtained a grant of 2,000 acres, raised it to 20,000 by adding a cipher, and the Council held their peace. But when the Scotchman Spotswood came out as Governor, he began to look into things, and then a storm broke out. He wrote to England, charging a number of public officers with derelictions, and, among the rest, Byrd, the Receiver-General, for allowing practices by which the Crown suffered heavy losses in revenue. Byrd went to England in 1715 to defend himself and his inculpated friends, and in this he was partly successful. In 1716 his wife died. He returned to Virginia in 1720, and used all his influence to bring about a reconciliation between the Governor and the Council. Shortly after this the Assembly again appointed him as the colony's agent in England, and he returned to London, where he resided till 1726. While in England he married Maria, daughter of Thomas Taylor.

In 1726 Byrd returned to Virginia, and settled down at Westover to the life of a Virginia gentleman. Outside of his duties in the Council, he found many occupations for his active mind. He collected his noble library and a fine gallery of portraits; he kept up an extensive correspondence with London friends; he experimented in agriculture and fruit-growing; he dabbled a little in medicine. Although always embarrassed by debt, still, with the ruling passion of his class, he kept adding to his landed estates, until at his death he owned nearly 180,000 acres in Virginia and North Carolina.

In 1727 he was appointed one of the commissioners on the part of Virginia to settle the long-disputed southern boundary of that colony. This was a pretty arduous piece of work, leading for a great part of the way through a wild, rugged, and in places almost impassable country, much of it morass and dense cane-brakes. The course of the line took them directly through the Dismal Swamp, which it was believed no white man had ever traversed before. The commissioners themselves quailed at its horrors, and left the indomitable surveyors and linemen to struggle amphibiously through. Byrd says of it:

"Since the Surveyors had entered the Dismal, they had laid Eyes on no living Creature: neither Bird nor Beast, Insect nor Reptile came in View. Doubtless, the Eternal Shade that broods over this mighty Bog, and hinders the sun-beams from blessing the Ground, makes it an uncomfortable Habitation for any thing that has life. Not so much as a Zealand Frog cou'd endure so Aguish a Situation.

"It had one Beauty, however, that delighted the Eye, tho' at the Expense of all the other Senses: the Moisture of the Soil preserves a continual Verdure, and makes every Plant an Evergreen, but at the same time the foul Damps ascend without ceasing, corrupt the Air, and render it unfit for Respiration. Not even a Turkey-Buzzard will venture to fly over it, no more than the Italian Vultures will fly over the filthy Lake Avernus, or the Birds in the Holy-Land over the Salt Sea where Sodom and Gomorrah formerly stood.

"In these sad Circumstances, the kindest thing we cou'd do for our Suffering Friends [the surveying party] was to give them a place in the Litany. Our Chaplain, for his Part, did his Office, and rubb'd us up with a Seasonable Sermon. That was quite a new thing to our Brethren of North Carolina, who live in a climate where no clergyman can Breathe, any more than Spiders in Ireland."

Boyd is caustic on the North Carolinians, many of whom, he says, were fugitives from the laws and taxes of Virginia, and lived in this Debatable Land in a state little better than heathenish, though they had grace enough to take advantage of the presence of a chaplain with the commissioners to have their children baptized, so that the progress of the line was marked by a trail of little Christians. Sallow from the pestilent climate, squalid and unkempt, their natural uncomeliness was often aggravated by the loss of the nose, a privation due, in Byrd's opinion, to over-indulgence in fresh pork, and so common in those parts that the absence of the feature was scarcely noticed.

In spite of difficulties the survey was carried on from March 6 to April 8, when further operations were postponed till the fall. On September 21, the work was taken up again, but in two weeks the Carolina commissioners gave up the job, and, protesting against anything that should be done in their absence, returned home. Mr. Fitzwilliam, of the Virginia commission, returned with them; but Byrd and Dandridge made a counter-protest, and carried on the line until they reached the lower ranges of the Blue Ridge, when the approach of winter stopped the work.

In 1732 Byrd made what he calls a "Progress" to the mining country between the Matapony and Rappahannock Rivers, where he, Spotswood, Augustine Washington, and others had important iron-works; and in his diary he notes very interesting particulars about this industry. In the next year he took a journey for the purpose of laying out a tract of 20,000 acres in North Carolina, at the junction of the Dan and Irvine Rivers, which he had bought from the commissioners of that colony, to whom it had been given in pay for their services. The journal of this trip forms part of the present volume.

In 1743 Byrd became President of the Virginia Council, and the next year he died and was buried in his garden at Westover. He left a son and four daughters, who have had numerous descendants. Byrd's culture, polished manners, elegant hospitality, and gayety of conversation made him one of the most respected as well as most popular of Virginia gentlemen. As a writer he is always bright and entertaining. He possessed eminently the art of seeing. He notes everything, and is curious about everything: soils, rocks, animals, plants, customs of the people, nothing seems to escape him. His style is easy and vivacious, spiced here and there with a little waggishness, with perhaps a flavor of his Templar days. The editor's biographical introduction is in all respects admirable, and adds greatly to the value of the work, which, moreover, so far as paper, type, and other external furtherances are concerned, is a noble specimen of book-making.

THE ANTHRACITE COAL INDUSTRY.

The Anthracite Coal Industry: A Study of Economic Conditions, etc. By Peter Roberts, Ph.D. With an introduction by W. G. Sumner, LL.D. The Macmillan Co. 1902.

Coal has become the very life-blood of our modern industrialism. Except in the forest itself, wood is used for fuel almost solely as a luxury; for, to generate the same amount of heat as is given off by coal there must be burned, even in the most economical furnace, twice the weight and four times the bulk of wood. Consequently, if wood existed in quantities comparable to coal, its transportation alone would prevent its filling the place in our industrial system of the more condensed fuel. But while all coals, including even peat, possess, compared with wood, this quality of condensation, the variety which exhibits it in the most eminent degree is anthracite; and to this it owes its high pecuniary value and its adaptability to domestic use. In fact, the favor it has found in the household has secured for it its high price, for in the latter half of the past century it has entirely supplanted soft coal, with its dirt and smoke, in the homes of the Northern Atlantic States, and has therefore come literally into personal touch with us. Apart from its scarcity, its geographical and stratigraphical relations have given it peculiar importance in financial and railroad circles; and the same causes have made the anthracite regions the battlefield of the most acute struggles between capital and labor. It is this phase of the anthracite

question which gives it universal popular interest, and it is to this that Dr. Roberts's book is devoted. His facts and conclusions are entitled to consideration, for he states the facts and treats the complicated problems which grow out of them as one who has personal knowledge of the conditions of which he writes. The opening chapters, in which he gives technical details of mines and mining intended to elucidate economical conditions peculiar to them, are probably too abstruse for the lay reader and not sufficiently precise for the professional. Nevertheless, we heartily endorse the recommendation of the work with which Professor Sumner introduces it to the public.

While the soft, bituminous varieties of coal are widely and abundantly distributed over our continent, the hard, anthracite varieties have been found in workable quantities and of sufficient purity to be of value in few, very restricted localities. The same is true of the relative abundance of the two varieties in Europe. Great Britain possesses but one, very limited, area of anthracite. It is in Wales, and is too small to supply domestic fuel, even if the predilection of the people for an open flaming fire did not induce them to prefer soft coal, in spite of the smoke nuisance. To the British navy, however, the smokeless flame of anthracite makes it peculiarly valuable. East of the Mississippi it occurs only in northeastern Pennsylvania, where the coal from the northern or Wyoming, the middle or Lehigh, and southern or Schuylkill basins underlies some 500 square miles of the country between Susquehanna and Dauphin Counties. Unlike the beds of bituminous coal, which in the Appalachian field usually lie flat, and can therefore be cheaply mined and drained by tunnels, and which, being soft, can be broken down by hand or cut by machinery without the use of powder, the anthracite beds are steeply tilted, and can be worked in depth only by shafts, vertical or inclined, some already from 1,500 to 2,000 feet in depth. And the coal itself is so hard, and often so tightly glued to the shales between which it is bedded, that blasting must be resorted to in disengaging it. There are collieries from which two tons of rock and ten tons of water are raised 1,500 feet for every ton of clean coal sent to market. The cost of mining anthracite is therefore much greater than that of mining bituminous coal, and its scarcity gives it in the ground a much greater value.

As a result, the royalties paid to the owners of anthracite lands per ton of coal extracted are on an average from thirty to forty cents per ton, as against ten to twelve cents paid for bituminous coal. Considering the growing demand for anthracite and the comparatively limited supply in the ground, the royalties are perhaps legitimate, on the general principle that every man is entitled to take all he can get for his commodities; but they are certainly high if compared with the proportion distributed to wages paid out of the total paid for the product. And the same is true of the transportation charges. Our author attempts to distribute the cost at tide-water as follows:

Cost of production per ton, including mining, breaking, and loading on cars	$1.56
Transportation to tide-water	1.50
Total	$3.06
Price at tide water	3.75
Profit of operator by difference	$0.69

As the transportation companies own most of the coal lands and leases, they absorb, not only the transportation charges, but most of the operator's profits; and, therefore, of the assumed total of $3.75 their share is approximately $2.19. Hence the discontent and strikes and hardly suppressed lawlessness among the mining population of the region, which, rightly or wrongly, conceives that an unfair distribution is made of the proceeds of the coal between capital and labor.

Railroad companies are everywhere regarded by the wage-workers as one of the most objectionable developments of capital, while a group (and still more a close combination) of railroads owning coal, and engaged in mining as well as transporting it, is suspected of embodying the concentrated essence of capitalistic knavery and tyranny. This combination of functions has gradually, sometimes unwillingly, been assumed by the railroad companies. They entered the anthracite coal fields originally as carriers, but were almost compelled, in order to keep competitors out of their sphere of operations, to buy most of the lands or mines which alone supplied the freight; for the area is so small, and several of the competing companies so powerful and aggressive, that nothing but possession would have given protection. The security of ownership was, however, secured in some cases at too great a cost. The Philadelphia & Reading Railroad and Coal & Iron Company paid such excessive prices that the weight of debt incurred by the purchase by the Coal and Iron Company wrecked the railroad company, its guarantors. Possession once secured by powerful and wealthy corporations, competition in production became acute. To restrain this within bounds, agreement after agreement was made and broken by the companies. These agreements assigned to each company a proportion of the total output of coal, assumed to be sufficient to meet the requirements of the market. But the temptation to transgress the agreed-upon limits of freight having again and again proved too strong for resistance, Mr. J. P. Morgan has effected a combination of the coal-owning and carrying roads, under a syndicate agreement which it is believed will insure absolute unity of action by these great corporations, and prevent the individual operators from breaking the harmony. Thus the only supply of domestic anthracite upon which the country east of the Rocky Mountains depends is substantially now controlled by a united ownership.

Never has a syndicate possessed a better opportunity of proving that the benefits accruing from consolidation can be demonstrated in practice as well as in theory and on paper; that, by lopping off unnecessary administration expenses and by balancing supply and demand, a stable and at the same time lower price can be secured to the public; and that, by the employment of unlimited capital and the introduction of better machinery and better methods of mining, both cost and coal may be saved. Above all, as the stress of competition is now removed, and the only restraint on price is the limit the public will pay for coal, the syndicate, after allowing the railroad fair freight rates, can afford to pay its miners liberal wages, and relieve the country from the risks of ever-recurring strikes in the anthracite regions.

These risks are great, for the miners and workmen are chiefly aliens. Ever since the seventies, immigrants from Central Europe have been replacing American labor, till now men of fifteen or sixteen nationalities are represented in the coal regions, and the hard work of the mines is almost exclusively performed by men and boys, many of whom cannot speak or understand English. Strange to say, they are eager to join the Union, and ready to strike and submit to the consequences; but, as might be expected, they exercise less self-restraint, and show less respect for the non-union workmen than does the American unionist—and therein lies the danger. It must be admitted that an equitable adjustment of wages is very difficult. As long as mine work is done by contract, at so much per car or ton of clean coal, the respective skill of the miner, the vein in which he works, the varying quality of the coal in the same vein, all determine the net amount the miner may receive for his work. But the chief complaint is due to a cause difficult of removal, namely, intermittent employment, arising from the intermittent demand for the coal. Were anthracite used as widely as soft coal for manufacturing and metallurgical purposes, the monthly demand would be practically uniform; but, being a domestic coal, less is used in summer than in winter, more is called for in the autumn months, when families are laying in their year's supply, than even in the depth of winter; and much more is consumed in a severe than in a mild season. Dr. Roberts considers that if this element of periodicity could be eliminated, 30,000 of the men and boys in the anthracite regions could be dispensed with, and the remaining 110,000 be regularly employed at remunerative wages. As it is, the men and boys employed underground and at the breakers, where the coal is crushed and sorted into marketable sizes, average only 180 days of work a year; and perilous and hard as is their labor, it is rewarded by a wage of only $33 to $37 per month for underground, and $25 per month for outside hands. The only remedy for this intermittent employment would be the carrying by the syndicate of stocks sufficient to meet the excessive monthly demands at the season when they run above the normal average. This done, and steady employment secured to a smaller number of operatives, the surplus population would drift elsewhere, and a great source of danger to the country would be averted.

Anthracite is a costly fuel, and will continue to be so. The visible supply of coal which can probably ever be mined at a profit is under five billion tons; and as this is being burned in our stoves and furnaces at the rate of fifty million tons a year, the supply will be exhausted in less than 100 years. The cost of mining will increase with depth; but, on the other hand, improved methods of mining and better machinery for breaking and sorting coal at the surface are steadily decreasing the waste of this precious fuel. Till recently not more than 40 per cent. of the coal in the vein actually reached the market. The life of the mines being comparatively short, the capital involved must be returned, with the heavy interest which the risk of mining

reasonably entitles it to, within a limited time; therefore, there is less probability of reduction in the cost of production than investors in other industrial enterprises can flatter themselves with. The cost of anthracite must, therefore, remain high. But it is not so secure from replacement by a substitute as to permit of the price being forced above a reasonable figure. Though every housewife who has used clean, smokeless, free-burning hard coal would revolt against soft coal, with its dust and smoke and tendency to agglomerate in the fireplace, she would not refuse to use gas or good hard coke. Hence in one or other of these forms of fuel the present syndicate, or any other combination of capital which might be formed to control the output and regulate the price of anthracite, will meet with an article which as a substitute will keep the price of anthracite within bounds, and which, when the latter becomes scarce, will supply its place.

More Letters of Edward FitzGerald. [Edited by William Aldis Wright.] Macmillan. 1901.

The same "Old Fitz" here, and yet in wonderful freshness and variety. Take this nosegay from the very first letter (to W. F. Pollock, 1839): "I have also heard Thackeray speak well of him [Grammont]; but he is naturally prejudiced in favor of the dirty and immoral." "Walpole, I suppose, wrote easily; but then it is not easy to have such a head as would write so easily. Q. E. D." "He [Alfieri] was such a fellow for Liberty, too; he calls Catherine II. *codesta Clitennestra filosofessa*, which words have the whistling of the lash about them, I think." On another side, view his droll solicitude for the "distressed Widows" in his poultry-yard. He is writing to Herman Biddell (1867), in a series of letters that do much to lend novelty to the present collection:

"You gave me hopes of finding a Chanticleer to replace that aged fellow you saw in my Domains. . . . I will not hold out for the identical plumage—worthy of an Archangel—I only stipulate for one of the sort: such as are seen in old Story books; and on Church-vanes; with a plume of Tail, a lofty Crest and Walk, and a shrill trumpet-note of Challenge: any splendid colors; black and red; black and gold; white, and red, and Gold! Only so as he be 'gay,' according to old Suffolk speech."

And next year he is still waiting "for an old-fashioned, Aesop-fable fellow."

There are two letters to George Borrow that should be remarked; and among the few glimpses we get of Mrs. FitzGerald we find her in correspondence with Mrs. Borrow. There are five letters to Professor Goodwin of Harvard, in one of which (1882), "I was told of Mr. Longfellow's Death, and understand the sorrow you must feel for the loss of so amiable a Man"; a significant omission of any praise of the poet. Lowell comes in again for much comment as a poet whose verse somehow fails to interest, and as a prose-writer chargeable with the sin of fine writing, yet, in FitzGerald's opinion, "altogether the best Critic we have; something of what Ste.-Beuve is in French," but with "not nearly so much Delicacy of Perception, or Refinement of Style." In 1880, "I have only heard of Lowell that he had nursed his Wife night and day: which Mrs. Kemble also says is usual with American husbands." Lowell's humor seems to have made no impression on this kindred jester.

The closest affection is unquestionably shown in the numerous letters to Frederick Tennyson, along with the greatest frankness of family literary judgment—concerning Charles Tennyson's sonnets, and concerning Alfred's decadence since 1842, *e. g.* (1850): "Alfred has also published his Elegiacs on A. Hallam; these sell greatly; and will, I fear, raise a host of Elegiac scribblers"; and again (1874): "But I think he had better have done singing; he has sung well—*tempus silere*, etc." In fact, this note of regret over Alfred seldom ceases in these pages (ill-health, matrimony, and Mrs. Tennyson's nature are partly held responsible for the falling-off, but also over-production). Witness these extracts, first from a letter to Pollock (1842):

"Is Alfred in town still? I have got his books. It is a pity he did not publish the new volume separately. The other will drag it down. And why reprint the Merman, the Mermaid, and those everlasting Eleanores, Isabels,—which always were, and are, and must be, a nuisance, though Mrs. Butler (who recognized herself in the portrait of course) said that Eleanore (what a bore) was the finest thing he ever wrote. She has sat for it ever since, I believe. Every woman thinks herself the original of one of that stupid Gallery of Beauties. The sonnet to J. M. K. also remains; there's a beauty, too."

Again to Pollock (1869):

"I found the new Idylls on the Lowestoft Bookstall; but I can get no more interested in them than in any of their Predecessors; except the old Morte D'Arthur. . . . The whole Legend, and its parts, appear to me scarce fitted to interest any but the childlike readers of old knightly days whom they were intended to amuse, I suppose; not, in the main, *very* much beyond Jack the Giant-killer, etc., and I think such Stories are best told in the old, simple English of the Romance itself. When elaborated into refined modern verse, the 'opus' and the 'materia' seem to me disproportioned."

And to E. B. Cowell (1882): "I wish nevertheless that A. T. would not have tried the Stage, even if he persists in trying other modes of Publication." There is, in a letter to the present editor, reference to an "annotated Tennyson" which Old Fitz has placed in Mr. Wright's keeping, and fears lest it may get out in his own lifetime; the liberties apparently having been "only to *cut out*—never to add or alter." It would be a pity if this should never see the light. A great pity it certainly is that his undertaking to cut Richardson was frustrated by inadequate abridgments by other hands. To W. E. Crowfoot (1865):

"I suppose you never read that *aggravating* Book, Clarissa Harlowe? Now, with a pair of Scissors, I *could* make that a readable Book: and being a perfectly *original Work of Genius*, I should like to do that Service to my Country before I die. But I should only be abused, and unsold for my pains."

We resist the temptation to cite further examples of FitzGerald's literary criticism, with which this volume is studded, but must be permitted three illustrations of his independence. He would not, in 1850, subscribe for a monument to "Daddy Wordsworth," as "I am against stuffing Westminster Abbey with any one's statue till a hundred years or so have proved whether Posterity is as warm about a Man's Merits as we are." For the same reason, in 1864, he would not give to a memorial of Thackeray in the same place. In 1869 he declined to be a party to a portrait of Lord Hatherley "on coming to be Chancellor." "First, he may make a bad Chancellor, however good a Man and able a Lawyer. Secondly, he mayn't keep in office a year, however good a Chancellor he may be." This caution was so well justified as to be prophetic; in 1872 he writes: "The *Times* and *Daily News* have each Articles to repudiate the Chancellor's Reported Retirement; both in terms which make me suppose it is true." In fact, Lord Hatherley proved anything but a successful Chancellor, and made way at that date for Roundell Palmer.

We conclude with some irresistible references (in these Galluping cipher times) to Spedding and his finished (1874) "forty years' task—'In Whitewashendo Bacone.'" "I used to tell Spedding that Polonius was meant for Lord Bacon; but I doubt the Dates won't bear me out." And: "Pray look at a beautiful little Comment by Spedding on a passage in Shakspere in the last number of *Notes and Queries*, April 18, [1874]. Oh! that he had given to Shakspere a tithe of the time he has given to Bacon!"

Life of Sir William Wilson Hunter, K.C.S.I., M.A., LL.D. By F. H. Skrine, F.S.S. Longmans, Green & Co.

It is given to few men to begin a history when nearly sixty, and have the world feel that the premature ending of such a belated work is really a great calamity. Sir William Hunter's name is less well known here than in England, partly because much of his influence was personal, and partly because the special topics treated by him in popular lectures have little interest for Americans. But his 'Gazetteer' at least has made his name familiar, and even the general historical student may perhaps know that Hunter's unexpected death, two years ago, cut short the most important history of India yet planned or published. The ripened fruit of many years' toil was to have been harvested in these volumes, of which only one was completed.

The present Life is too bulky for the general reader, and contains much, notably in family correspondence, that will appeal but slightly to those who know Hunter only as a writer; but it gives some insight into modern political life in India, and shows admirably not only what Hunter was, but what he had to contend with in rounding up the wide-strewn mass of information contained in the many volumes that bear his name. His biographer is sympathetic and judicious in the use of the material put at his disposal.

Personally, Sir William was a delightful character. Shrewd and agreeable, he won a host of friends, and was always a favorite at any gathering. To this side of his character Mr. Skrine has paid tribute in many appreciative paragraphs, and evidently did not intend to say (on p. 171) that Hunter "made it a rule to requite good with evil" (*sic*); though when Sir William got the upper hand (he seems to have been the victim of a good deal of political jealousy), he was not quite saintly in his feelings, being not at all averse to "paying back." The Life has a number of good anecdotes. One of these is of a college Don, who had several unmarried daughters. "At

least," said a friend, to whom he had complained of the burden, "they are great resources for your old age." "True," replied the Don, "but I should like to husband my resources." In 1888 Hunter wrote to Kipling: "Your mother sent me a poem from your hand with a request to obtain a place for it in a magazine. But the poem has been returned to me. . . . It is, I think, to be regretted that you devote to clever trifles of this sort talents which are capable of better things. They practically fix your standard as that of the gymkhana and mess-room."

Curiously enough, Hunter himself fixed his own standard lower than his real worth, wasting much time on popular work. But strictly speaking he was not a scholar at all. He was a man of affairs, more or less of a politician, and his ambition from the first was to become a statesman rather than an historian. Even his literary ambition was rather to be a pleasing writer than a profound scholar. His first essays were poetical; his first prose efforts were in descriptive writing. The 'Annals of Rural Bengal' and the 'Old Missionary' show his bent, and even the dry pages of the 'Gazetteer' were not allowed to be merely statistical. He endeavored to make literature out of chronicles without sacrificing the exactness of the chronicles. It was almost an accident that led him into the compilation of that great storehouse of knowledge known as the 'Imperial Gazetteer'; and his 'Brief History of the Indian People' was undertaken solely at the request of the Madras Government. The work he delighted in was almost journalistic; much of it was journalism pure and simple. The fact is, he frittered away a great deal of his life in ephemeral work over which he groaned perfunctorily, but to which he gave so much attention as to prevent more important undertakings. A man of inexhaustible energy, he seemed never to know when he had enough to do. He could always contract to write a few editorials or dash off a public lecture, as if time and strength had no limit. One feels in reading his life that his wonderful executive power and limitless capacity for work, instead of aiding him, hindered the development of his best faculties. He was too much a man of the world to be a scholar, too energetic to be confined to one object. He had to have a dozen things on hand at once, and the result was that the most important thing was left to the last and was never done at all.

Hunter's specialty was political history based on a first-hand knowledge of India, and the province in which he was pre-eminently master was the period of British rule. All that goes before this in his 'Brief History' is simply "read up," not from original texts, but from the works of European scholars, so carelessly that a citation on one page will contradict that on another, without his seeming to be aware of it. But, once within his own field, he handles the subject with such ease and beauty (one is tempted to say) that his greater 'History' promised to be an enduring literary monument, as well as a valuable historical work. By that one volume he will live. The rest will remain only for a time. There may be something lasting in the charm of the 'Annals' and the quaint picture of the 'Missionary,' but that on which he spent his best years will pass away, as must all statistical surveys. Had he lived ten years longer he would have become the Gibbon of India. As it is, he has left a magnificent torso, and lived the hurried life of the ready writer and successful man of action, fond of fast horses, popular applause, and a good berth; winning all these and almost winning more, the satisfaction of having accomplished to the full the abiding results for which his ability and opportunities so nobly fitted him.

Eugene Field: A Study in Heredity and Contradictions. By Slason Thompson. With portraits, views, and facsimile illustrations. In two volumes. Pp. xiii, 346, 349. Charles Scribner's Sons. 1901.

Mr. Thompson's book is more contradictory than Field's life and character, as he has presented them to us. He writes as from a great affection for his friend, and in his more general expressions he habitually writes him up, while in his particular statements he quite as habitually writes him down. There must be wasp-bread somewhere as well as bee-bread, and Mr. Thompson has got upon the track of it (as Froude in his 'Carlyle,' Purcell in his 'Manning,' Lamon in his 'Lincoln,' and, very recently, Henley, writing of Stevenson), and made a meal of it. His view of Field may be just, but his book is distinctly a depreciation. Many hundreds of those who have known Field only in his more deliberate work, when they put down this book will wish they had never taken it up. They had fondly imagined that Field was at least predominantly a sentimental humorist, most kindly and sincere, and they find, Thompson *judice*, that he was predominantly a mountebank; a practical joker, as he was nothing else. Not but that there are general expressions highly favorable to Field's ultimate significance, but they are so outweighed by the mass of derogatory and injurious particulars that they make no adequate impression. Nearly all of Mr. Thompson's facts may have gone through the form of taking place, but the proportion is not duly observed between these and Field's best work. The mass of the former was, doubtless, much greater than that of the latter, but its final significance was much less. Worst of all is Mr. Thompson's confession that his book would never have been written if Field had been merely the literary workman, and his proposition that the essential man was not the higher workman, but the lower clown. That a humorist of Field's qualities should be taken seriously is, of course, a paradox; but that Mr. Thompson ought to have conceived his book, as a whole, in a more serious spirit does not, we think, admit of any doubt.

Field's mother died when he was six years old, and he was sent with his brother to relatives in Amherst, Mass., for a course of New England training. In 1868, after three years at Monson with a good Mr. Tufts, who experienced the proverbial difficulty in making his pupil drink the water to which he had been led, the boy went to Williams College, where he seems to have left fainter traces than the afterward famous generally do in their first haunts. But he had only six months in which to make an indelible impression. Permitted to retreat in good order, he resumed his studies and his pranks at Monson, till in July, 1869, his father's fatal illness called him to St. Louis. Later, he made trial of two Western colleges with no creditable result. Mr. Thompson's pages reveal nothing pleasanter in Field's life than his affectionate loyalty to Mr. Melvin L. Gray, the executor of his father's estate.

Upon coming of age, his next move, after seeking in marriage a bright girl of fourteen, was to take her brother to Europe "to spend six months and his patrimony"—actually $8,000, about one-third of the whole, the other two-thirds melting rapidly. Returning penniless to St. Louis, he hastened to get married, and made no mistake in that particular. When he began to have earnings, the wife took charge of them, having direct relations with his employers. But these relations were not of so binding a nature but that the week's payment generally came to the wife five or ten dollars short. Ten was the limit at which Field's conscience or affection interposed. Mr. Thompson has a recurrent fondness for this aspect of Field's character. He revels in his impecuniosity, and in his humorous artifices for compelling one or another friend to pay for what he ate and drank. Mr. Thompson was oftener than any one else the victim of these inventions.

Mr. Thompson represents the hobble-dehoy period of Field's life as ending with his Denver editing, but in fact it ended only with his life. His work grew more serious in its thought and style, and he came to have a very real conscience for it, writing some of his things over many times—one of them seven; to its hurt, says his biographer. But if his work grew more serious, so did not his impish mischievousness. He was that insufferable creature, the practical joker, in its most aggravated form. Sometimes the joke was very simple—the invitation to sit in a bottomless chair; sometimes very daring—like the impersonation of Carl Schurz in broken English to an expectant audience; sometimes very elaborate. A favorite freak was to invent children for people who had none, and another to ascribe his own poems to wholly innocent persons. Again, he would insinuate doubts as to the authorship of this or that writer's favorite poem, and carry on a fictitious correspondence of opposition and defence for weeks and months together.

The chapter on "Personal Characteristics" gives an account of Field's office habits that could not be excelled for illustrations of irresponsible indifference to others' need of quietness and peace. His "Relations with Stage Folk" reveal him as an inveterate theatre-goer, on the best of terms with the stage people. Less to his credit is a political chapter. His paper was Mugwump, but so was not he. He was a Republican by inheritance, without personal conviction. Having saved the Government, he thought the Republicans had a right to use or abuse it without let or hindrance from anybody.

> "We'll run the country as we please—
> We saved it, and it's ours"

—which meant that it was theirs for all the purposes of party patronage. At the same time, he had the keenest eye for political humbug and pretence; and Republican leaders, McKinley with the rest, often felt the sting of his long-lashed whip, fresh-braided every day.

Mr. Thompson has no more interesting chapter than that upon Field's "Auto-

Analysis," a mixture of truth and fiction so strange that it is hard to rightly separate the two. The biographer's cruellest insinuation is that Field's "I do not love all children" was at once the truest and the least credited item. He says that he loved his own children passionately, but cared for others more as subjects of deliberate study than as objects of personal sympathy. And he makes this damning accusation, which we trust some one will hasten to rebut: "This man . . . took almost as much delight in making a child cry, that he might study its face in dismay or fright, as in making it laugh." To believe this would be for thousands an immense deduction from their satisfaction in "Little Boy Blue" and the child-sweet companions of that pathetic poem. Mr. Thompson should have hesitated long before infecting with a taint of unreality that element in the work of Eugene Field which has most endeared him to his fellow-beings.

Kate Bonnet. By Frank R. Stockton. D. Appleton & Co.

Policeman Flynn. By Elliott Flower. The Century Company.

For all of us who know our Stockton by and with heart, the greatest surprises of his new book are afforded by its comparative absence of surprises. The familiarly incalculable is present in his themes, to be sure. A farmer turned pirate is a figure that could have occurred to no one else except perhaps Gilbert. A real pirate, Blackbird, ruler of the seas, commanding a Scotch Presbyterian to convert him, Blackbird—"has got the swing," as Corporal Brewster would say. This, too, almost sings itself to Sullivan music. There is instant appeal, besides, to the Stockton sixth sense in the sea-chase of many vessels after each other over the high seas, decorous gentlemen figuring as forced accomplices of those who are "'pied with crime." Real fighting and gore that is no sham are certainly genuine innovations. But that the expected should ever happen in the world of Stockton is the most unexpected thing in the world. To say more would be telling. This latest phase of his pleasantry may lead the literary controversialists of the future, when the Shakspere-Bacon question shall have been laid to rest, to squabble over the problem whether Weyman, Churchill, Jacob Abbott, and Stockton were one or more.

It is perhaps safe to say that if Dooley had never written, neither would 'Policeman Flynn.' The Irish-American dialect is reproduced by both in the same peculiar way. The rough good sense tinctured with wit is of the same kind, if not of equal rank. What is pure philosophy with Dooley takes a practical turn with the man who earns his steplivelihood as a policeman. Here are two specimen gems from Officer Flynn's treasure-box: "Why don't they wor-rk f'r a livin' instead iv wor-rkin' f'r a job?" "If ivir I had th' ma-akin' iv th' la-aw, I'd ha-ave first iv all in th' big book a sintince r-readin' like this: 'Th' la-aws herein mane what they mane, an' not what they sa-ay.'"

Printing and Writing Materials and their Evolution.—Proof-Reading and Punctuation. By Adèle Millicent Smith. Two volumes. Philadelphia: Drexel Institute. 1902.

Printing is no more the mysterious art it seemed to be in the middle of the fifteenth century. Its elementary principles are fairly understood by intelligent readers, to whom its ordinary practice seems the simplest of mechanical crafts—cannot any school-boy put types together in readable order, and stamp paper on inked letters by the help of a press? It is this belief that creates the growing class of amateur printers, which includes men of the highest culture as well as schoolboys; but not much experience is needed by the amateur to prove that printing is also one of the difficult arts. To make a worthy book, much must be added to the mechanical dexterity which is hoped to come after persistent practice. Especially should the amateur, and the apprentice, too, know how books have been made by the qualified craftsmen of all periods. He must know something about the manufacture of paper and ink, about the construction of presses, about electrotyping and photo-engraving, about different methods of binding books. "To read and to write may come by nature," but the production of a well-made book cannot be evolved from one's interior consciousness. The apprentice and the amateur need a teacher. He is badly taught who teaches himself.

The books whose titles are cited above contain information about details of bookmaking not to be found in the ordinary manuals of printing, and not easily gleaned from or digested after a reading of bulky encyclopædias. No subject is exhaustively treated, but the suggestions conveyed will be found more practically useful by reason of their succinctness. The chapters on punctuation and proof-reading will be of service to experienced compositors, who may, nevertheless, in a few instances dissent from the applicability of the teachings to all kinds of printed work. In the preparation of the matter contained in these books, the author specifies the names of experts of authority who have given her guidance and counsel on technical matters.

BOOKS OF THE WEEK.

A. P. H. X. Y. Z. of Wall Street. Stuyvesant Book Co.
Babcock, M. D. Letters from Egypt and Palestine. Scribners. $1.
Baily, R. C. Mabel Thornley. Abbey Press. $1.25.
Baldwin, J. M. Social and Ethical Interpretations in Mental Development. Macmillan. $2.60.
Benson, E. W. Addresses on the Acts of the Apostles. Macmillan.
Blaisdell, Mary F., and Etta A. The Child Life Fifth Reader. Macmillan.
Blauvelt, Mary T. The Development of Cabinet Government in England. Macmillan. $1.50.
Brandt, M. von. Dreiunddreissig Jahre in Ost-Asien. Band 3. Leipzig: Georg Wigand.
Bridges, Robert. Bramble Brae. Scribners. $1.25.

FICTION of SINCERITY and PURPOSE

EDITH WHARTON'S distinguished novel

The VALLEY of DECISION

IN THE EAST

Boston Evening Transcript
"Stands out giant-like among its surroundings."

New York Sun
"Will undoubtedly become a classic."

Philadelphia Public Ledger
"Stamps her a novelist of rare distinction and power."

IN THE MIDDLE WEST

Chicago Evening Post
"The most distinguished literary performance yet accomplished on this continent."

Denver Republican
"Has put Mrs. Wharton in the front rank of English novelists."

Kansas City Star
"In seeking comparisons for it, one can only name the masters in fiction."

IN THE SOUTH

Louisville Courier-Journal
"The most splendid achievement of any American man or woman in fiction."

Baltimore Sun
"Has proved her title to take place among the foremost novelists."

St. Louis Globe-Democrat
"Equal to the best that has come from the pen of Mrs. Humphry Ward."

In two volumes. $2.00.

Of North and South
ALIENS
BY MARY TAPPAN WRIGHT

The NEW YORK SUN says:

"THERE is nothing historical about it, no idea of instruction or of serving any cause, just a plain story, a vivid description of an unusually interesting bit of contemporary American life, that somehow, almost incidentally, brings home the real troubles of the South, so that they are not easily forgotten."

"The Southern types, with the subtle effects of social and political traditions, are portrayed with insight and power."
—*Philadelphia Record.*

$1.50

Of Musical Over-Culture
MELOMANIACS
By JAMES HUNEKER

"Mr. Huneker has had a very definite end in view in these extremely clever sketches, the satirization of the sentimental and symbolist movement in art and in music in particular. He succeeds admirably, not only in his satire, but also in strengthening the conviction that he is one of the most brilliant and original critics in America."—*Philadelphia Public Ledger.*

"Stamped with the hall-mark of originality. His choice of subjects is exceptional, his literary style is unique, his understanding of the art of music is thorough and comprehensive. In everything he is unconventional."—*Boston Evening Transcript.*

"A good deal more than a bundle of clever satires—fantasies upon persons and things musical. Witty and alluring to a degree sometimes extraordinary, hinting at a knowledge of music, literature and the plastic arts no less wide than intimate, and brimming with imagination and plausibility."—*New York Mail and Express.*

$1.50

MISS ANABLE'S Boarding and Day School for Girls. Established in 1848. Circular on application. Opens Sept. 26. 1350 Pine St, Phila., Pa.

HARVARD SUMMER
School of Theology.
Fourth Session, July 1-18, 1902.
Subject: CURRENT PROBLEMS IN THEOLOGY.
Lectures by
Professors F. G. Peabody, G. H. Palmer, W. James, G. F. Moore, W. W. Fenn of Harvard, and Professors G. A. Coe, O. Cone, G. B. Foster, H. C. King, H. S. Nash, and Rev. Charles F. Dole.
For circulars, apply to Rev. R. S. Morison, Secretary of Divinity Faculty, Cambridge, Mass.

Royal Victoria College,
McGILL UNIVERSITY,
MONTREAL.
A residential College for the Women Students of McGill University. For conditions of entrance, scholarships, courses, degrees, terms of residence, and other particulars, address THE WARDEN, Royal Victoria College, Montreal.

DIVINITY SCHOOL
—OF—
HARVARD UNIVERSITY
CAMBRIDGE, MASS.
AN UNDENOMINATIONAL SCHOOL OF THEOLOGY.
Announcement for 1902-03 Now Ready.

Miss Baldwin's School for Girls
Preparatory to Bryn Mawr College
MISS FLORENCE BALDWIN, Principal. Within ten years more than one hundred and twenty pupils have entered Bryn Mawr College from this school. Diplomas given in both General and College Preparatory Courses. Fine fire-proof stone building. 25 acres beautiful grounds. For circular, address the Secretary, Bryn Mawr.

SWITZERLAND, GENEVA.
A SELECT HOME SCHOOL for 6 BOYS. Experienced American tutoring in a refined French Swiss home. Summer in the Alps. Unique advantages. For pamphlet and superior references, address J. C DUFOUR, M.A., Porter Academy, Charleston, S.C. After June. No. 20 Avenue de Lancy, Geneva.

ROCK RIDGE A SCHOOL FOR BOYS at Wellesley Hills, Massachusetts

Rogers Hall School
For Girls. Certificate admits to Smith, Vassar, Wellesley, and Wells. Four acres for outdoor sports. Golf, Basket Ball, Tennis. Address **Mrs. E. P. UNDERHILL, M.A., Prin., Lowell, Mass.**

WABAN SCHOOL Best intellectual, physical, and ethical conditions for the education of boys. J. H. PILLSBURY, A.M., Principal, Waban, Mass.

School Agencies.

THE FISK TEACHERS' AGENCIES.
EVERETT O. FISK & Co., Proprietors.
4 Ashburton Place, Boston. 1505 Pa. Ave., Washington 156 Fifth Ave., New York. 414 Cent. Bldg, Minneapolis. 533 Cooper Bldg., Denver. 80 Third St., Portland, 203 Mich. Blvd., Chicago. 525 Stimson Block, Los Angeles. Hyde Blk., Spokane. 420 Parrott Bldg, San Francisco.

ALBANY TEACHERS' AGENCY, 81 Chapel St., Albany, N. Y.—Provides schools of all grades with competent teachers. Assists teachers in obtaining positions. Rents and sells School Property. HARLAN P. FRENCH, Proprietor.

SCHERMERHORN Teachers' Agency. Teachers—Schools—Tutors—Governess—Property. Tel. 4658-18th. JOHN C. ROCKWELL, Mgr., 3 E. 14 St., N. Y. C.

Teachers, etc.

A GENTLEMAN WHO TOOK HIS degree at the University of Michigan, and who has since spent some time at the Sorbonne and at the University of Berlin, wishes to teach French, German, and Germanic Literature in some good High School or first-class College. Best references. Address J. A. M., this office.

WM. WEBER, B D., Ph.D. (Universities: Bonn, Strassburg, and Yale), Instructor in Languages and Mathematics, 355 George St., New Haven, Conn. Coaching for entering any department of *Yale University* a specialty.

*A WOMAN DOCTOR OF PHILOSO-*phy, with abundant experience as a teacher and tutor, now private secretary to a college president, desires an appointment as Professor of Mathematics or Dean. Address PH.D., care of the *Nation.*

A Ph.D. (Mathematics) WITH SIX years' successful experience as a university instructor and assistant professor, desires a position. Address X. Y. Z., care of the *Nation.*

Candidates for the Charles Scribner University Fellowship in English Literature at Princeton University
must send in their applications to the Registrar of the University on or before May 15, 1902. Candidates must be graduates of not more than five years' standing of an accredited American college. Application blanks may be had from Professor T. M. PARROTT, Princeton University.

For Sale.

SUMMER COTTAGE FOR SALE.
Owing to his removal to England, Professor Ashley of Harvard offers for sale his cottage at Smith's Cove (five miles from Digby), Nova Scotia. Cottage contains eight rooms. Beautiful view of Digby Basin from wide piazza; one and a half acres of land sloping to smooth, sandy beach, with safe and warm bathing; capital sea fishing in vicinity; unspoilt agricultural life around. Price $1,000. Address
E. HART NICHOLS, Attorney, Digby, N. S.

BOOKS AT LIBERAL DISCOUNTS. | **When calling please ask for MR. GRANT. Whenever you need a book address Mr. Grant.**
Before buying books write for quotations. An assortment of catalogues and special slips of books at reduced prices sent for 10-cent stamp.
F. E. GRANT, Books,

An unbroken record of success in the profitable handling of money for a large list of Eastern investors is the best reason for your confidence.

LETTERS OF CREDIT. We buy and sell bills of exchange and make Cable transfers of money on Europe, Australia, and South Africa; also make collections and issue Commercial and Travellers' Credits available in all parts of the world.
International Cheques. Certificates of Deposit.

BROWN BROTHERS & CO.,
NO. 59 WALL STREET, NEW YORK.

SCHOOL TRUSTEES,
PRINCIPALS,
TEACHERS,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, APRIL 3, 1902.

The Week.

It is a gratifying announcement that the island of Cuba is really to be turned over to President Palma on May 20, and that all the United States troops except some 800 will be on their way home by that date. As far back as last autumn, Secretary Root declared that the island would be evacuated in May if the Cubans themselves should not cause unnecessary delays, and he has kept his word, despite the discouraging attitude of Congress. That the insular government which will take over the administration of Cuba from Gen. Wood will by no means be the free and independent one for which the Cubans fought so long, is unfortunately true. The Platt amendment has tied its hands in more than one respect, and there are apparently to be small permanent garrisons of Americans in the various naval stations ceded, under pressure, to the United States. Congress itself, by its timidity before the beet-sugar interests, and its failure to give prompt aid to the struggling islanders, may yet compel President Palma's Administration to take office with the economic ruin of the island staring it in the face. Since its first problem may be that of preventing wholesale starvation among the population, the new Government, however it may be formed, is hardly to be congratulated in this respect upon the opportunity before it.

President Roosevelt's message on Cuba might have had a sharper sting in its tail. He rather meekly says that there must be "wise and beneficent legislation to stimulate the commerce between the two countries" if our task is to be "fittingly accomplished." That is pitched in a much lower tone than the recommendations he made last December. It may signify that he is simply displaying the wisdom of the serpent, in not exasperating by more pungent language the hesitant Republicans whose votes he is trying to win by party blandishments; but he must be aware that some of the rebellious Congressmen may take his tame appendix as merely the harmlessness of the dove. If they do, they will work harder than ever to defeat all legislation in aid of Cuba. They will, of course, vote to establish the diplomatic offices which the President urges. The last man of them will rally for an appropriation of that kind, and each Congressman will have at least three candidates for every one of the offices created. The real difficulty is to induce them to enable the Cubans to trade with us and make an honest living. After more than three months of backing and filling on this subject, it is still doubtful if Congress will do anything at all; and we think the President might well have taken advantage of his message on Thursday to state the urgency of the situation and the duty of the hour in telling phrase. The vague and perfunctory words he used represent an opportunity lost. If he was to say anything at all, there should have been an explicit utterance that would bite itself into the consciousness of Congress and the country.

Senator Hanna is now openly before the public as the champion of the convicted Director-General of Posts, and is avowedly working hard to save him from a Cuban prison. It is evident that there are close personal relations between the two men. The United States Senator, it seems, is genuinely convinced that Gen. Wood "ordered" the Cuban court to convict Rathbone, and that in the face of Secretary Root's "probable" belief in Rathbone's innocence! Fourth Assistant Postmaster-General Bristow "put up the whole job" on poor Rathbone, merely to spite his political rival, the immaculate Mr. Perry Heath. It follows from this that Assistant Inspector-General Burton of the army, Gen. Wood, and a host of other officials and expert accountants in and out of Cuba, were in the conspiracy to trap this honest gentleman from Ohio, whose weakness was merely a desire to spend Government money freely for the benefit of the service. Senator Hanna's eagerness to lay bare the scandal is touching to behold, though it is not true, as reported, that he seeks a law giving an "American" trial to Rathbone.

In the bill creating a civil government for the Philippine Islands is a provision for the unlimited coinage of silver dollars. Added to this is an authorization of coinage of these dollars at the mint of San Francisco, with a proviso that the silver so coined shall be of American production. This is a measure of "protection" for the owners of silver mines that was never put into any bill for the free coinage of silver in our own country. This clause ought to be stricken out for very shame. It looks for all the world like a measure to tax the Filipinos for the benefit of Americans, and, if passed, will be taken as a precedent for countless other schemes to exploit the island for the profit of particular classes and individuals in this country. As a matter of fact, however, the owners of our silver mines will get no benefit from it at all, although they will get plenty of reproaches for it. We are a silver-exporting country, and we cannot get more than the London price for any part of our product, whether we sell it to the Filipinos for coinage or to the European manufacturers of spoons and forks. Therefore the only effect of this clause in the bill is to bring reproach upon us and to furnish a bad precedent. The House of Representatives ought to reject the silver coinage scheme *in toto*, but especially should it strike out this ill-omened provision for the compulsory use of the product of American silver mines.

The question what kind of money we shall sanction in the Philippines ought to be determined in harmony with the world's progress, and not in conflict with it—that is, in favor of the gold standard A few years ago, Japan was confronted with the same question. She had nominally the double standard, but actually the single silver standard. In order to keep pace with civilized nations, she found it necessary to adopt the gold standard. The market ratio between silver and gold at the time when she decided to take this step was 32 to 1. She accordingly decreed that the gold yen should bear that relation to the silver yen as to past contracts, and that, for the future, gold should be coined in unlimited quantities for private individuals, but that silver should be coined only on Government account. The plan was carried out successfully, and no harm was done to anybody. The experience of India is no less useful as a guide. That country has passed successfully from the single silver standard to the single gold standard by taking as a basis and point of departure the actual market value of the two metals at the time when the change was decided upon—16 pence per rupee. The coinage of rupees was prohibited except on Government account, the English sovereign was made legal tender in India at that ratio, and gold coinage for private persons was authorized at the Indian mints in unlimited amounts. There is no occasion for a special coinage for the Philippine Islands. A special silver coinage would be a step backward. It would be an injury in the long run to the Filipinos, and would tend to a recrudescence of silverism in the United States.

The doughty Funston has already fallen into the customary trouble of talking generals, and attempts to extricate himself in the customary way of his kind—that is, by asserting that the reporter lied. That the swaggering words attributed to Funston in the Topeka *Capital's* interview were actually uttered by him, there is no reason to doubt. They were in perfect keeping with his

character. But when President Roosevelt sent him a sharp telegram, asking him if he had been correctly quoted—that is, if he had really said that the President had approved his swashbuckling speech at the Lotos Club, and had asked him to repeat it in Boston—the mighty man of valor took refuge behind the anonymous reporter. He never said it. Certainly not; and as long as Gen. Funston's standard of morality is simply the articles of war, and he cares not for the rules of conduct becoming an officer and a gentleman, he will doubtless escape without a reprimand. He has had his warning, however. So has the President, who will know how to deal with the second offence of a warrior who slays the enemy with his mouth.

It would be unfair to Gen. Miles, in criticising his foolish plan for settling the war in the Philippines, to overlook his humane motives. He was evidently moved by a genuine desire to remove the stigma from the army which the continued allegations of cruelty have put upon it, reinforced as they are by the horrible testimony now being given in the Waller case. He was also influenced by the hope of ending a war which has cost thousands of American lives, and necessitated the employment of 120,000 troops. But the fact remains that the methods Gen. Miles would have employed were childish in the extreme. They should make clear to the public the reasons why one Democratic President and two of his Republican successors have found it impossible to get on with him, and why the best interests of the service demand his immediate retirement. Take the history of the China expedition, for instance. No capable general would have advocated the withdrawal of 15,000 men at a time when MacArthur found 73,000 too few. Yet the Lieutenant-General Commanding was willing to do this in the face of MacArthur's protests, and without personal knowledge of the Philippine situation, for the sole reason that his vanity might be flattered by his appointment as generalissimo of the allied forces in China. No one can read his latest proposal without seeing that he is now a dangerously unsound adviser to President or Secretary of War.

The real place to look for the effect of the resignation of Commissioner Evans is the Grand-Army and pension-shark clique that has been hounding him for years because he has been an honest Commissioner. They are undisguisedly elated that they have worried out of the inflexible Roosevelt what they could not drive the gracious McKinley into doing for them. There we have the true measure of the misfortune which has befallen the public service. The President distinctly says that he is to have another office as a reward for his "excellent service." Then why not insist upon his keeping on in that excellent service? Why invite the struggle all over again with a new Commissioner, in whose appointment and administration the pension cormorants will see their great opportunity? With Mr. Evans in office, the fight was won; with his successor, it must be begun over. The enemies of decent administration of the Pension Office do not care two straws whether Mr. Evans is "promoted" or not; all they wanted was to get him out of his present office, and that they have now accomplished. Of course, if Mr. Evans had grown faint in the fight, or if his health made his resignation imperative, there was no help for it, but it is evident from his published explanation that he would have remained in office if the President had insisted upon it. "My incumbency," he said, "has begun to embarrass public officials and statesmen." How embarrass them? By performing the "excellent service" to which President Roosevelt testifies? Everybody knows that the embarrassment came solely in consequence of the remonstrances and threats of pension-beggars and pension-peddlers. There can be no doubt that the President has made his task of preserving the Pension Office from these raiders doubly and unnecessarily hard.

By the choice of James R. Garfield as Civil-Service Commissioner, to succeed that absurd McKinley left-over, Rodenburg, President Roosevelt has both strengthened the Commission and given fresh earnest of his determination to have a pure and vigorous enforcement of the civil-service laws. Mr. Garfield is highly esteemed by those who know him, for his quiet strength of mind and character; and made a fine reputation for himself as State Senator in Ohio. At Columbus, during his term of office, he was the resolute advocate of good government and the unsparing enemy of trimmers and tricksters. Through his efforts the Garfield Corrupt Practices Act was put on the statute-book, though it proved such a thorn in the flesh of the spoilsmen that they have since repealed it. This necessarily drew attention to him as a champion of purity in the public service, and his willingness now to leave his law practice and go to Washington as Civil-Service Commissioner argues an intention to devote his energies to the cause which he has at heart as truly as the President. Mr. Roosevelt has been fortunate in getting rid, thus early, of the milk-and-water Civil-Service Commissioners whom President McKinley kept for the amusement of the politicians.

It is the expectation in Washington that Congress will adjourn early in June, leaving in suspense as many controverted questions as possible. Among these will be the Ship Subsidy Bill, the Isthmian Canal Bill, all bills relating to the currency, and all relating to the tariff and reciprocity, except the Cuban bill, of which the fate is still in doubt. The Republican leaders are looking forward to the autumn elections with much trepidation. They are charged with a heavy backload of Trusts and combines, some of which Chairman Babcock is trying to curtail, while others President Roosevelt and Attorney-General Knox are trying to cast off. They have a Philippine policy which they do not boast of so proudly as they did two years ago. And as for their ship-subsidy scheme, they speak of it only in whispers; yet if it is a proper measure, it should be passed now. If it is an improper one, it should be rejected now. The party should have the courage of its convictions, and take all the risks involved in any policy which it believes to be right—like this of ordering donations from the national Treasury to private enterprises, whether they are already prosperous or not. The Democrats, on the other hand, are preparing to go to the country with a platform of liberty and independence for all foreign peoples who desire it, and to whom we can lawfully give it, and of opposition to subsidies and monopolies of every kind. On the whole, they have a fair chance of winning a majority of the next House, though it must not be forgotten that, under the new census, there will be twenty-nine more members in it than in the present one.

Mr. Morgan's extremely interesting testimony on March 26 in the Northern Pacific suit throws further light on some disputed points of the remarkable episode of last May. It will be recalled that Mr. Schiff and Mr. Steele set forth, on Monday week, that the Union Pacific interests had applied for a share in control of the Burlington purchase, and had been refused; that J. P. Morgan & Co. supposed themselves to control the Northern Pacific, until they discovered that some of their associates had been selling; and that the house of Morgan individually bought in the open market, between May 1 and May 7, 1901, $15,000,000 of Northern Pacific stock. The two last-mentioned statements Mr. Morgan confirmed; adding that, on learning that the Union Pacific people claimed control, he had personally directed his firm to buy 150,000 shares of the common stock in the open market. This was done, Mr. Morgan testifies, because the firm felt itself morally responsible to the shareholders who had previously bought on its initiative. The average cost of this stock to the house of Morgan appears to have been 115, at which price it was subsequently turned over to the Northern Securities. That price was 29 per cent. above the highest of 1900, though, of course, much lower than what other buy-

ers paid, a day or two later, in the corner. Of the stock issued by the Securities Company on this exchange, the house, it was testified, now holds 110,000 to 120,000 shares. This, it may be observed, amounts to barely 3 per cent. of the Northern Securities' capital.

Mr. Morgan testified that the plan which eventually led to the Burlington purchase was conceived two years ago. The idea of joint purchase by the Northern Pacific and Great Northern appears to have been Mr. Morgan's own. Mr. Morgan wished to buy the Chicago, Milwaukee and St. Paul for the Chicago outlet, but, after negotiation, was unable to make the bargain. This, of course, explains the 40-point rise in St. Paul shares in the early months of 1901. It was Mr. Hill, according to Mr. Morgan, who wished to buy the Burlington, and who personally carried through the "deal." But Mr. Morgan also admitted that he had himself approved the plan to pay $200 per share for the Burlington stock. It could not, he explains, have been bought at any lower figure. It should be recalled, in this connection, that 144 was the highest price of Burlington prior to the period of the "deals." The security-holding plan, it now appears, had previously been conceived by Mr. Morgan himself for Northern Pacific shares, and by Mr. Hill for the Great Northern. The Northern Securities plan was a combination of the two.

The chief point of interest in the most recent developments regarding the Asphalt Trust's affairs is not the fact that the company is badly insolvent today, but that, apparently, it was never solvent. The cold and unfeeling report by the Audit Company, after examining the books, indicates this with entire distinctness. The National Trust really began business in October, 1900, when it absorbed the Asphalt Company of America, much in the fashion of the more recent "stock-holding companies." It issued bonds for the paid-up stock of this junior company, and assumed that concern's $30,000,000 fixed liabilities. This represented an annual fixed charge of $1,800,000, against which the company is now shown to have earned but $371,000 net in 1901, and, of course, less in 1900. The plea of the old management that its Venezuela experiment was costly, and that one subsidiary concern was a total failure, does not help matters. The truth appears to be that even if the company had not sunk the half-million dollars accounted for by these two enterprises, it would still have earned last year less than half of its fixed charges. Moreover, it may properly be asked how long it is since a company's creditors have accepted outright blunders in management as a valid excuse for bankruptcy.

It would be a pity if the National Civic Federation, with its Committee on Conciliation, should be taken advantage of by labor leaders, yet there are some indications that it is exposed to such a danger. Strikes seem in some cases to have been precipitated in the belief that the workingmen had found a new ally against the employers. Some of the moves in the threatened strike of anthracite coal miners look as if demands were made a little more exigent, or even unreasonable, in the feeling that the Civic Federation was bound to step in to reinforce the claims of the miners, or at least to prevent any great harm coming from an ill-judged strike. It is probable that the settlement of the Dayton strike, through the good offices of the Federation, with the result of "unionizing" the works there, has had the effect of making labor organizations believe that the Committee on Conciliation would always side with a trade union in a controversy. This is unfortunate. The remedy, however, is clear. It must be made certain by the wise and firm action of the Federation that its great aim is neither to bolster up nor to destroy labor unions, but simply to work for industrial peace through the cultivation of the spirit of fairness and forbearance on the part of both men and masters.

Nothing could be fairer than the settlement of the Delaware Senatorial deadlock which several prominent Republicans have offered to the Addicks faction. The proposal is, in a word, that each faction shall offer a list of ten names from which the other division of the party is to select its candidate. Naturally, the list accompanying the letter of the regular Republican State Committee does not contain the name of Addicks. There is no likelihood that he will consent to be shelved in this way, and it is only too probable that the personal ambition of a single politician of the baser sort will still deprive the State of Delaware of its voice in the Senate. Even if Mr. Addicks were a good man, or a great man misunderstood, his subordination of the dignity of his State to his own personal quarrel would be unpardonably offensive. His tools should see, if he cannot, that outraged public opinion may have in store for their leader and themselves a much worse settlement than that which has just been offered.

On January 23, Mayor Low, in replying to Dr. Parkhurst's demand for the enforcement of the Sunday-closing law, stated that "the excise law has been enforced up to the very limit of what is practicable with the means at command." On Sunday forty policemen in one precinct proved how mistaken this statement was by going out in full uniform and making eighteen arrests, as well as by reporting many excise violations in saloons to which they could not obtain entrance. Whatever may be the Mayor's attitude hereafter, it is now impossible for him or for his Police Commissioner to maintain that the Department is really exercising all its great powers to enforce that law. Nor will the old excuse, that concentrating attention upon that one will lead to the neglect of the "other mandates of the Legislature," do service on any future occasion. Those forty patrolmen had been forced by their superiors into living a "plain, unvarnished lie." Encouraged to permit violations of the law, and at the same time compelled to sign written statements that they were ignorant of any such violations on their respective beats, these men declined to carry on this farce any longer when it appeared that they might become the victims of an unrelenting District Attorney. What is to be the attitude of the Mayor and Col. Partridge now? Manifestly, they cannot punish these men for having conspired to do their whole duty, despite the opposition of superior officers, for they must know that, if the entire force were actuated by this spirit, there would be a wonderful change over night in the number of excise violations. The city is shocked at the revelations of the last few days in regard to the openness with which gambling is going on under a reform Mayor. But why should any one expect a patrolman to enforce the anti-gambling laws and not the Sunday-closing statute? The issue is momentous for Mayor Low, and is not to be glossed over.

Dr. Morrison, the Peking correspondent of the London *Times*, reports that the preliminary arrangements for the evacuation of Mantchuria have been completed, and that Russia will abandon successively the three provinces now in her control in six, twelve, and eighteen months. Such action would meet perfectly the most extreme demands of the Powers, and would remove a possible cause of friction with the Anglo-Japanese alliance. That Russia has given up her ulterior designs upon Mantchuria nobody will believe. To withdraw the garrisons temporarily may be chiefly a measure of economy and convenience. Holding Port Arthur and the railroad approaches, and leaving the memory of her Cossacks everywhere in the region, Russia can withdraw the troops without sacrificing her moral claim or her influence. The process of Russification will meanwhile go on in commercial ways, and the final absorption of Mantchuria may, barring accident, come about in the most peaceful manner. There is no insinuation of *Slavica fides* when we say that Russia will evacuate Mantchuria quite as a lumberman leaves a woodlot which he has "blazed" for the winter chopping.

THE REVIVING OPPOSITION.

The first duty of an Opposition is to oppose. To watch and criticise and expose the proceedings of a Government is the main task of the party out of power. That this has not been well done by the Democratic Opposition for the past four years, has been one of the calamities of our party situation; that the Democrats in the present Congress have begun to see the indispensableness of it, is one of the signs of promise on the political horizon. It shows that we are at last shaking off the incubus of war.

War always demoralizes the Opposition in a country where party government exists with a parliamentary system. To criticise is "unpatriotic," in a state of war, and to oppose is treason. War simply Orientalizes politics, substituting the will of the commander-in-chief for the free voice of the people. There is a story of an Oriental potentate who determined to set up a Parliament on the approved European model. He had representatives gathered together in a great hall of his palace, and he or his viziers explained to them the advantages of Parliamentary government, and said, "It will all be arranged; one side will sit with the Government on the Government side, and the other will sit on the Opposition side." Thereupon the members broke silence and demanded with one voice which was the Government side, and, on being shown it, they threw themselves in a hurry on the benches of the Government. That is practically what has become of the English Opposition during the Boer war, and it is substantially what has happened to the Democratic Opposition since our war with Spain. But there is cheering evidence that the long lethargy is breaking up, and that we are getting again at Washington a party of alert criticism, swift to discover the joints in the harness of the Government, quick to take advantage of tactical or political mistakes by the party in power, and ready to discharge the public duty of letting the country know what its rulers are doing. The debates on the Philippine bills and the discussion of the Cuban bill, thus far, indicate a decided revivification of an American Opposition.

The party in Opposition has, however, a second duty fully as important as that of keeping sleepless watch upon the party in power and subjecting all its measures to the most searching criticism. It must also endeavor, as Mr. Asquith recently said of English Liberalism, to "convince and, if it can, to convert the judgment of the country." That is, it must offer both men and measures as alternative to those of the party carrying on the Government. It must show that it has an administrative and political programme of its own. Leaders are, of course, the first requisite. The process of ousting a Government is practically that of gaining the confidence of the electorate, and confidence is a thing won by and given to men, not measures. However disgusted the voters may become with the leaders of the Government, they will take a good look at the leaders of the Opposition before deciding to substitute them for the others. It would not be strange, indeed, if the Democrats should think that all that is necessary to do is to let Payne and Henderson, Hanna and Frye, have rope enough to hang both themselves and their party. These skilled architects of Republican disaster are, in truth, doing splendid work for the Democracy. But it still remains the fact that a party cannot get into power purely on the blunders of its opponents. It must have orators and leaders of its own to persuade the country that a change of personnel would improve the Government.

In this particular, the Democracy has undeniably been and still is weak. At the time of the break-up of English parties a half-century ago, it was said that the Whigs were a set of statesmen without a party, while the Tories were a fine party without statesmen. The latter plight has been, and remains to an unfortunate extent, that of the Democratic party. It is a party in search of a leader. He has not yet been found, but at least the process of getting rid of the blind party leaders of the blind is going on hopefully. The retirement of Senator Jones, which seems to be assured as a result of the Arkansas Senatorial primaries, could not easily lead to the promotion of a more unfit Chairman of the National Democratic Committee. He can be spared to great advantage, and it is certain that repudiation by his own State would be the end of him politically. The younger and more aggressive Senators of his party have grown very weary of his masterly inefficiency. One of them recently asked a Southern Senator whose wit yet gleams out in the midst of bodily decay, if he did not think that Jones was about the biggest humbug that the South had ever sent to the Senate. "Well, I am bound to tell you," was the reply, "that I am very strongly committed myself to Morgan!"

Although no strong and inspiring Democratic leader has yet arisen, it must be granted that the work of framing an alternative governmental programme is, nevertheless, being well done by the Democratic Opposition in Congress. We have before commented upon the constructive proposals for a solution of the Philippine problem which the Democratic Senators have submitted and supported with so great a weight of argument. Monday's proceedings in the Ways and Means Committee show that the Democratic members are equally prepared to construct as well as to criticise, and to offer amendments which will serve the purpose not only of embarrassing the Republicans, but of revealing to the country a more excellent way. Mr. Richardson's motions to amend were exceedingly shrewd. They were all rejected in committee, of course, but they will be urged again on the floor of the House. Then the Republican party will be compelled to go on record either for or against the policy of removing duties on articles made or controlled by a monopoly, as also on commodities which are manufactured in the United States and sold abroad cheaper than at home. It will likewise have to face the separate questions of what to do with the duties on steel products, and also on wood pulp "suitable for or adapted to the manufacture of printing-paper." The newspapers will have something to say to Representative or party that goes wrong on that issue. In any case, all these tokens of a reviving Opposition are most welcome. The Republicans themselves have professed to desire a stronger Opposition for their own good. May they not be disappointed.

GOVERNOR AND LEGISLATURE.

We put the Governor first, in reckoning up the work of the New York Legislature, because he is properly first. Everybody who looks behind legal fictions to the real fact, knows that Gov. Odell is now substantially the Government of this State. Sir Robert Peel once objected in the Commons to being called the Government of Great Britain; he was but the servant of the House, etc. But the retort was made, and it was a fair one, that as long as he acted as though he were the Government, he could not complain of being treated as if he were. Gov. Odell has not only acted as if he were in control of the Legislature; he actually has been. It was clear, for example, that the bill for reorganizing the management of the hospitals for the insane was passed through an unwilling Legislature under orders from the Executive Chamber. This and other incidents of the session made it evident that the Governor is entitled to say, "The Legislature, *c'est moi*."

Of course, he does not say this. Such Louis Quatorze airs would offend our stern republicanism, which clings to the form, even if the substance is gone. But the truth is none the less transparently clear. Gov. Odell both blocked out and determined the main part of the work of the Legislature, so that its effect upon his prestige and prospects is the earliest question which a review of the session raises. And we speak only the opinion of all candid observers when we say that the Governor stands in a somewhat less commanding and enviable position than that he held at the close of the Legislature of 1901. It is not that his power is appreciably shaken—he remains master; but in his mastery he has shown less of his old cool poise. He has been testy at times. He has vacillated in some important matters, and acted as if

he were not sure of his ground; and a few of his pet measures he has had to abandon.

To the Legislature of 1901 the Governor's message was a legislative programme. Scarce a single recommendation of his failed of enactment into law. He burst upon the State, and upon the nation, as a public man of extraordinary powers; and his firm grasp of the business of the State, his resolute economies, his fruitful measures of taxation, gave him a reputation and an authority almost unequalled. This year, however, either his skill or his fortune has failed him somewhat. His proposal of a recording tax for mortgages, with subsequent exemption, was knocked about in the Legislature, battered into unrecognizable shape, and then left to die. Similarly his recommendations of canal legislation miscarried. As for his plans for reorganizing the State charitable institutions, they had partly to be radically remodelled, while those of them that became law did so only after a great amount of friction in the Legislature, and of ill feeling among some of the most philanthropic people in the State. Yet, as it stands, Gov. Odell's achievement this year is remarkable. It suffers only by contrast with his fairly sensational success of a year ago.

A great man's failures have been said to be more instructive than a small man's successes. In that light, there is much to be learned from the limitations which Gov. Odell has exhibited and the mistakes he has made. His proposed mortgage legislation failed for lack of the Governor's having accurately measured rural prejudices on that subject. This is the more surprising as, if there was anything he was supposed to know thoroughly, it was what people "up State" thought. His bills for changing the control of the charitable institutions were not only ill-advised, but badly advocated, and were put through under an unfortunate appearance of compulsion from the Governor's office. In this matter he obviously neglected to ascertain the sentiments of the people most interested in the care of the State's dependent population. The result was indignation on their part which a Governor as skilful as Mr. Odell was thought to be, should have known how to avoid exciting. His canal legislation fell helplessly between two stools, in a way reflecting little credit on either Governor or Legislature.

As we have said, with all abatements made, the net result of the legislative session is commendable. There have been no scandals. The Governor has worked in harmony with Mayor Low as regards all bills affecting the city's interests. So far as we know, there has been no unwise charter-tinkering or interference with municipal home rule. Neither Gov. Odell nor the Legislature would lift a finger to help the city to a better excise law; but as our municipal Administration does not appear to know its own mind on that subject, we do not perceive that the Albany authorities can be greatly blamed for inaction. In purely State affairs, on the other hand, the Legislature has lived up very closely to Gov. Odell's programme of economy and reduced taxation. By holding down appropriations, and finding new sources of income, the State tax has been cut down to the lowest figure in our history. When we add that the session was the shortest for more than a hundred years, we see how true it is that the New York Democrats will need to deserve to succeed by the excellence of their candidates and the sincerity of their professions, if they are to have any hope of dislodging the Republican party next fall, after so creditable a legislative and executive performance.

CONTROL OF "HALF BILLION" CORPORATIONS.

Mr. J. P. Morgan's view of the practical working of a $400,000,000 corporation, as set forth in his testimony on Wednesday week, merits the widest possible discussion. It may be called the authoritative exposition of the purpose underlying the present extensive corporation mergers. In a word, Mr. Morgan holds that stable control is the prime requisite for the welfare of modern corporations; that it can be guaranteed only by fixing the share capital at so large a figure that no outsider can buy up a majority; and that a capital of $400,000,000, such as the Northern Securities possesses, is sufficiently large to insure that result.

These three points suggest in turn three queries, which must be answered before the "security-holding" plan receives unqualified assent. First, is or is not stability of control an advantage in itself? Second, how is beneficent and wise management to be guaranteed by such stability? Third, what proof is there that future "contests for control" will be averted, even with a capital stock of half a billion dollars?

Generally speaking, stable control of a great corporation is an obvious advantage. The shareholder knows, with sufficient accuracy, what is the policy of such a management, and can judge the worth of his investment accordingly. Those railroads whose controlling interest has for many years remained virtually the same, are in most cases classed with the conservative investment properties. If they fail, it is more likely to be due to antiquated methods, or what is popularly called "dry-rot" in management, than to rash experiments or stock-jobbing manipulation. But Mr. Morgan's proposition provides absolutely no remedy for a possibly incompetent or dishonest management. His hypothesis is that no rival interest could, under any circumstances, secure control of a $400,000,000 corporation. This would, of course, exclude an opposition interest bent on beneficent reform. In his testimony, Mr. Morgan referred, very properly, to the work of his firm in establishing sound financial methods, and to the fact that, though it virtually dominates the Northern Securities now, it may at some future period dissolve or withdraw. Who is to guarantee an equally conservative successor? The answer probably would be, that, in so serious a matter, conservatism will govern; and it would, perhaps, permanently prevent accession to control by a band of wreckers. But it cannot guarantee an existing management, or its successor, against mistaken policies. In the corporate history of the past, such errors, if persisted in, excited opposition which, through the banding together of shareholders, ended by ousting the blunderers from control. Apparently, Mr. Morgan's theory would destroy this remedy; for if such a reform movement could gain control of a $400,000,000 corporation, there is surely no guarantee that any rival interest, offering inducements for a change, could not.

This, then, is the dilemma—either the company's shareholders have no real protection against mismanagement, or else the assumption of absolute stability of control is incorrect. Our own feeling is, that the first of the two alternatives is the more formidable. A very little time ago a capital of $90,000,000 seemed as enormous as a capital of $400,000,000 seems to-day—for ideas have expanded in the interval. Every one who has watched industrial finance during the two past years, will recall the peculiar performances of the managers of the $90,000,000 Steel and Wire Trust, and the wholly abortive effort to dislodge them. Yet there is no reason to suppose that they, any more than the present Steel Corporation management, owned an actual majority of the stock. Nor do we have to go back to stock-jobbing boards for examples. The United States Steel Corporation itself has just embarked on a fiscal experiment which a large part of its shareholding constituency disapproves. The substitution of $200,000,000 in bonds for share capital, and the tampering with the fundamental law of New Jersey incorporations to facilitate it, are moves which, in a small corporation, where free discussion had a hearing, might easily have been vetoed.

Let us suppose a management which should go even further in the scheme of piling fixed indebtedness on a corporation's shoulders—what then? The truth is, as it appears to us, that instead of absolute assurance of safety for the future, some of the greatest safeguards with which all corporations have hitherto been surrounded would be found to have been removed. We do not go

into the question whether the public will consent indefinitely to the perpetual control of this mass of capital by people who do not actually own even a majority of it, and who in no real sense represent the body of investors. But the fact is not to be ignored that, with the extinction of private ownership, in the old-fashioned meaning of the term, the plan of Government ownership necessarily gets a lift. Furthermore, it must be recognized that Mr. Morgan's own idea of perpetual control, by a minority interest, of a body of enterprises so vast as presumably to defy competition, does not help matters with the courts. For if this advantage can be attained by a $400,000,000 company better than with one of $50,000,000, then, clearly, a "ten-billion company" will approach still nearer to the ideal. In other words, the query of Mr. Justice Brown, whether the Northern Securities might not eventually own all the railways of the United States, becomes highly pertinent.

These are questions which must be soberly considered by the public, because the problem with which they have to do has only begun to vex us, and if it is to be met by judicial or legislative restraint, no time ought to be lost in setting about it. The "security-holding plan" is believed to avert the financial and industrial chaos of the Gould and Drew "campaigns." To that extent, it marks a real advance in security. But are we, after all, so sure that "contests for control" are past for ever with our mammoth corporations? "What do you think of a four-hundred-million corporation?"—Mr. Morgan is reported to have asked the lawyers, when they insisted on the magnitude of a $10,000,000 "deal." Half a dozen years ago, however, we imagine that any one who had talked in Wall Street of a "contest" in which one American banking house bought $15,000,000 stock in a single week and another $78,000,000—each on its individual account—and in which a $100,000,000 stock was cornered, would have been listened to with either bewilderment or ridicule. What absolute guarantee have we that firms which can raise, on short notice, for a contest for control, nearly a hundred millions capital to-day, may not be able, two or three years hence, to raise two or three hundred millions?

CECIL RHODES AS A TYPE.

In Kinglake's history of the Crimean war, he closes one chapter with an account of the death of Marshal St.-Arnaud. The French commander, with a reputation for cruelty in North Africa and for open political crime in Paris, came to his end with all the consolations of religion about him, and amid sympathetic tributes from the allied nations. Kinglake records all this quietly, and then adds the single mordant sentence, "The manner of man he was, I have before told." Similarly would we now turn aside from the merely personal aspects of the life of Cecil Rhodes. Those we have freely set down and commented upon in his lifetime. The manner of man he was, we have told our readers before. All that remains is to attempt to place him in the age in which he lived; to show how he was a true child of it, typifying some of its largest forces; and thus to essay a little of what Rousseau called the most difficult form of philosophy—the observation of what is going on under our eyes.

Rhodes typifies his time in his calm assumption of the unlimited power of money as such. This was one of his working maxims. To the cynical saying attributed to Walpole, "Every man has his price," Cecil Rhodes made the triumphant addendum, "And I have that price." There has probably not been another case of a man so deliberately seeking wealth as a means of securing political power. For riches merely as a possession, Rhodes seems to have had something like contempt. That was a part of his large-mindedness. Vulgar ostentation of wealth was not for him. He had vast conceptions, mighty ambitions; and "how," he asked, "can you carry out your ideas without money?" So he sought and won his millions. He had no advantage of birth or station. He had to make himself, as the Spaniards say, "a son of his own works," and his first work was the amassing of a glittering fortune. With that as a fulcrum, he believed that he could move the world. And he did, or seemed to. The English world of politics gravitated to him. Dukes competed to be on his directorates. Royalty itself clasped his hand effusively, even when he came to London to stand trial as an international criminal.

Now, in all this, there was nothing peculiar to Rhodes, except as he had peculiar opportunities and a vast field. He was only a man of his day. All the world over, men have been struggling, as he did, and at the same time that he did, for the command of the power which great wealth gives. It is simply the continuing effort to replace the feudal system, the aristocracy of birth and rank, with what we have to call—though the name has bad associations—the plutocracy. The process began long ago. The Fuggers and the De Witts and the Medici showed, hundreds of years ago, the possibilities of a new line of princes—the merchant princes; and their enormous multiplication to-day speaks only of the increased opportunities in the modern world to accumulate great fortunes.

There is surely nothing blameworthy in this *per se*. Power for power, there is as much reason why the man should have it who has carved his way to wealth, as the man whose remote ancestor carved the heads of the Paynim, or who is descended from a king's mistress. The only vital question is whether it is possible to moralize the new plutocracy, so as to make it more efficient than the decadent old aristocracy. That question cannot yet be said to be settled. Many shining examples of the noble use of money make us hopeful that great wealth will come to be associated with *virtus* (not the Machiavellian *virtù*) as well as power. But Mr. Rhodes's case is one of those to make us hesitate, to throw us back upon the conviction that human nature, after all, does not change greatly in the course of the ages, and that a position won by the remorseless manipulation of business or the stock market may be made to serve as bad ends as that of a dictator by grace of the sword. Not even a funeral lauder of Cecil Rhodes can say that he, like the Happy Warrior of Wordsworth,

> "——made his moral being his prime care."

This magnate of South Africa undoubtedly had a large way of looking to the future of that country, just as he had large and fruitful schemes of money-making, but in both it seemed to be the game and not the winnings that most absorbed him. In this, too, his figure is a typical one. The speculative excitement, the gambler's thrill, the interest in the rise and fall of stocks as if they were so many chance-flung or trickily "forced" cards, bringing good or ill luck—this is a well-marked feature of "this thing they call high finance" in our day. It is a deep and complicated play. The Gateses and the Lawsons "plunge" in the market with the same delightful sense of taking great risks that a gambler has in backing his favorite or trying to break the bank. We have recently seen the inherent affinities between Monte Carlo and a billion-dollar Trust. It is often the pleasure of the game, the feverish interest of pursuit, which seems to dominate the large speculators of the time more than any other motive. Rules of the game? Why, the first, last, and only rule is to win. Rhodes appears to have known something of these high excitements of playing the game, with provinces for stakes. He gambled with dignity, and with millions dependent on the fall of the cards, yet he showed the true aleatory instinct so common among the unscrupulous speculators of the day. Lord Rosebery has been said to be, in his Imperialism, only Mr. Chamberlain, *édition de luxe*. In like manner Cecil Rhodes was a sort of Jay Gould, *édition de luxe*.

Nor can we end without remarking how Mr. Rhodes was a faithful reflex of his generation in the fine name which he devised for the rapacity, the cruelty, the disregard of both moral and legal obligations, which his methods involved. He was an "empire-builder." He

worked for the British flag—that "chief commercial asset," as he once called it, in an unconscious revelation of his mind. If he was a true Imperialist, the argument was, that if he was extending the bounds of his country's sway, neither his motives nor his acts must be too closely scrutinized. He could wrest lands from the natives, he could force them into practical slavery, he could march over corpses to his goal—and no questions must be asked if he was, all the while, "pegging out claims for old England." It is not for Americans to condemn in another what they allow in themselves, by throwing a stone at the Englishman who serves to show them the true nature and inevitably hypocrisies of that Imperialism upon which they are to-day invited to enter. From him and his conceptions, now gone to the infallible judgment of history, we turn, for refreshment and reminder, to that saying of another Englishman, John Stuart Mill, which puts the sufficient brand upon all the current excuses of our shamefaced Imperialists: "I am not aware that any community has a right to force another to be civilized."

COLLEGE VACATIONS.

Dr. Charles S. Minot of the Harvard Medical School calls attention, in *Science*, to the notable shortening of the academic working year. He has tabulated the vacation periods of twelve representative universities and of three technical schools, and finds that none of them, except the University of Chicago, are in session for more than two-thirds of the calendar year. Differing considerably in the recess allowed at Christmas and Easter, they all agree in making the working year consist of thirty-five weeks or less. Columbia, for example, is in term for thirty-two working weeks. Johns Hopkins and the Massachusetts Institute of Technology are together at thirty-three; Yale, Brown, Princeton, the University of Michigan, and Cornell practically concur, within a few days, in a year of thirty-four weeks; Harvard is exceptional at thirty-five, while the Rensselaer Polytechnic Institute enjoys a solitary distinction at thirty-six. It should be remembered, in considering these statistics, that several days at the beginning of the term are days of grace. Registration is going on, and professors are coming round at their leisure to initial lectures. On the other hand, ceremonial of one kind and another occupies several days after the year's work has been completed, so that we must assume that the working period of an American university is nearer thirty than thirty-three weeks—the apparent average. From these figures, Dr. Minot concludes that "the amount of university vacation is very excessive. . . . With the vacation shortened, it would be easily possible to bring young men into active life a year earlier than is now possible, and that would be an immense gain."

The question is complicated by the fact that two quite distinct classes of students, with possibly different needs, so far as vacations are concerned, are now dealt with as a single class. Graduate students and professors generally need the long vacation, not only for recuperation, but for freer work than is possible in term. The process of preparing candidates for the doctorate is not unlike that by which *foie gras* is brought about in the geese of Strassburg; and the moral relief of an occasional long period, in which the graduate student, with lectures and the routine of his seminar left behind, is free to be his own man, seems almost indispensable. University professors, too, rarely spend the long vacation in idleness. It is their time for travel and for consecutive research, for visiting great libraries and foreign institutions of learning. The proper utilization of this time is the condition of intellectual growth and of enhanced usefulness.

With the undergraduate student, however, the case bears a different aspect. It is doubtful if the really ambitious student wishes to suspend his studies for four months and more every year, and it is questionable whether these long, idle summers are not an excessive luxury even for the average well-groomed, indolent student of our Eastern colleges. Long ago President Thwing found in these long periods of idleness a demoralizing influence which made itself felt throughout the year. It is noteworthy that the German Gymnasia and Realschulen—educational organizations vastly more efficient than the American college—are limited to a total vacation period of ten and a half weeks, of which the long vacation rarely takes more than eight. There is no question that a vacation of this duration is plenty long enough for the average young man of college age.

The obvious reform of reducing the college vacation to two months, and of gaining in all some seven or eight weeks to the working year, is, in spite of its theoretical desirability, almost impracticable. Such an innovation might be attempted at the smaller colleges, which have no graduate department, but here the howl which would arise from the engaging sons of wealthy parents, and the earnest if less vociferous protest of fagged-out professors, may be easily imagined. In many senses the older colleges are becoming a kind of annex to society. The vacations must be compatible with summer flights to Europe, and it is possible that in the future the early salmon fishing and the late trouting may as thoroughly regulate our academic calendars as the shooting does the sessions of the English Parliament.

Quite aside from such considerations, at the universities where graduate, professional, and undergraduate curricula tend more and more to overlap, and the same professor teaches in several schools, any shortening of the vacation period is difficult for administrative reasons. The best interests of the graduate schools require the longer period, and the undergraduate department is simply carried along. It may be said that this confusion of collegiate with university education, which is highly illogical, is also essentially vicious; and many feel that college education in this country needs a thorough reorganization, in which its integrity and historic character shall weigh at least equally with the necessity for preparing students for subsequent professional studies. But such speculations regard a remote future. There is no immediate likelihood that any of the colleges will take the sensible step of lengthening their working year. The colleges which have had the ill fortune to engender a progeny of university departments cannot well do so, for in all such instances university outweigh collegiate interests. The desirable shortening of the educational period, then, will not, for the present at least, come about through lengthening the working year at the colleges. Educators must set themselves to what is, after all, the root of the matter—the improvement of the quality of instruction. More must be put into the college year. This is the true way of saving the student's time, and there would be no gain in adding few or many weeks to a "working year" which for many students is virtually one long vacation.

THE POETIC PLAY IN THE LONDON THEATRE.

LONDON, March, 1902.

To put on the stage of two West End theatres two long plays in verse, by the same author—the one founded on a Greek poem, the other on an Italian—seems, it must be admitted, rather a risky thing to do, now that music halls and light musical comedies are all the vogue. And yet we have Mr. Stephen Phillips's "Ulysses" at Her Majesty's and his "Paolo and Francesca" at the St. James's; and the extraordinary part of it is that both are proving such a success that there is every probability of their running all through the season—the Coronation season. But, remembering "Herod," I was not so sure the risk was as great as it seemed, and my curiosity has carried me to see both plays. What did I find?

Let me explain at once that I have read neither one nor the other. I preferred to judge them entirely as dramas. But, as they have been published and already read by most people, I need not describe the plots in detail. In "Ulysses" Mr. Phillips has taken a few episodes from the Odyssey and strung them together so as to make a play exactly suited to Mr. Tree's requirements. Mr. Tree's talent as actor is for

make-up; as stage-manager, for the sort of Drury Lane effects that force a gasp of astonishment from the audience as the curtain goes up. No one could have catered better to this talent than Mr. Phillips. He shows us the Greek hero first bewitched on the island of Calypso; next—with an intermediate glimpse of Penelope besieged by the suitors—descending into Hades; and last, arriving in rags on the shores of his native Ithaca, and then, in splendid armor, slaying the suitors in the banqueting hall of his own palace. Moreover, Mr. Phillips shows Ulysses as the sport of chance, or, rather, of the gods. The play opens with a prologue on Mount Olympus, where the gods sit in council, and, throughout, Ulysses is but a pawn in the not over capable hands of Pallas Athene.

To crowd the adventures of the Odyssey into three acts, to arrange them so as to suggest any human interest, any revelation of character, any passion, would, perhaps, be an almost superhuman feat. Mr. Phillips, whose chief merit is that he understands his own limitations and makes the most of them, has wisely not attempted the impossible. He has provided Mr. Tree with ample occasion for change of costume and as little necessity for acting; he has been still more lavish in the opportunities offered for ingenious scenery and spectacular splendor. "Herod" was a melodrama; "Ulysses" is a pantomime; there is all the difference. Indeed, when the curtain rose on the Prologue in Olympus, I almost wondered if Mr. Phillips meant the whole thing as a joke, and was not laughing up his sleeve at the simplicity of the public. The gods have replaced the Drury Lane fairies, but otherwise it might be the beginning of the national Christmas entertainment. There they sit in the approved traditional costume, talking in the traditional rhymed couplets of pantomime; Athene comes up through a trap-door, Zeus hurls his thunderbolt, and the electric light flies across the stage. The second scene, on Calypso's Island, is the excuse for a ballet. There is a song to enliven the revels in the palace where Penelope waits and suffers. Hades is pure spectacle, recalling the Brocken scene in Irving's "Faust," but not so well done. At the beginning of the last act there is a little episode that makes one doubt whether, after all, Mr. Phillips did not aim at something more serious than pantomime. Ulysses, on his return, is recognized by the old swineherd, Eumæus, and the part happens to be played by Mr. Lionel Brough, who, though he makes no claim to special distinction, does understand that the business of the actor is to act. But when the swineherd's hut is left for the palace hall, it is spectacle again, and now with a good strong touch of melodrama thrown in.

This, in brief, is the play Mr. Phillips has made of the Odyssey. It is without life, without passion; a dialogue in verses upon which to hang a succession of gorgeous or impressive stage pageants. Mr. Phillips is usually praised, even by his least ardent admirers, for his dramatic construction. But, really, in this case, it is very much the sort of construction Mr. Crummles asked of his authors; only, instead of a pump and wash-tubs, Mr. Tree and his clever scene-painters have to be written around. If the verse were beautiful, the plot would matter less. Everybody has been to the Comédie-Française where the one pleasure was in the actor's musical delivery of musical lines. But what Mr. Phillips's verse is, you have no means of judging at Her Majesty's. The English actor has still to master the most elementary tricks of his trade and to learn how to use his voice. There remains but the spectacle, upon which no trouble has been spared—I have heard even archæologists approve the palace of Ulysses. Mr. Tree knows that spectacle is just what people want, and he gives it without stint.

In "Paolo and Francesca," the subject should allow greater chance of human interest. But, curiously, the result is as lifeless, as emotionless. The wonder is that Mr. Phillips could remain so cold, that he was not stirred, as he wrote, by the story of the lovers whom Dante has made types of youthful passion for all time. But he seems ever the well-trained showman, dangling his puppets, with one eye on the wires, the other on the audience. He has to build up a plot about the scene with the book—the book of Guinevere and Launcelot—that Dante has presented him ready-made. And so, he has introduced the character of Lucrezia, Giovanni's kinswoman, the childless widow, at first hard and bitter in her envy of Francesca, the possible mother of children whose little pattering feet will be heard in the grim castle, and then as fierce in her love when Francesca offers herself as child. He has introduced a "drug-seller" who savors overmuch of the apothecary at Mantua. And he has not read his Maeterlinck in vain. Again and again, as you watch the action, you find yourself thinking with regret of "Pelléas and Mélisande." Altogether, there is a distinct attempt at a plot—at something more than a succession of scenes through which the hero swaggers. But it leaves you as cold as Mr. Phillips himself. You are never carried away; you are as intent upon the wires as the author. There is not a thrill in Lucrezia's lengthy lamentation over her childlessness—you know too well she is there to provide a second good part for the accomplished or popular ladies in Mr. Alexander's company. There is nothing to clutch at your heart-strings in Paolo's visit to the apothecary and his demand for the poison that alone can save him from a love meaning dishonor to his brother. And how appalling is the comic relief, what a false note it strikes, how obviously it is designed to drag out the play to the necessary time limit of three hours! And, indeed, what plot there is evidently has seemed so thin to Mr. Alexander that he, as well as Mr. Tree, relies on spectacle to assure the play the long run that alone can repay him for his trouble. And so there are wedding processions and wedding hymns, a crowded stage and gorgeous costumes. A scene at a wayside inn, with its peasant maidens trooping in, its rakish soldier's song, its clinking and jangling of armor, is for all the world like a bit out of a comic opera. In a word, from beginning to end, there is but one episode that seems something more than an ingenious piece of stagecraft, and this you see through a glamour of poetry, of old emotions and associations, that makes you forget for a moment Mr. Phillips's puppets before you to remember the passion-born lovers of Dante and of the poets who, since, have told their love again in words or in paint.

Paolo and Francesca meet in a garden in the pale light of dawn; they sit and read the fatal book on a marble seat surrounded and overhung with roses; they wear beautiful clothes, and Miss Millard, the Francesca, is graceful, while Mr. Ainley, the Paolo—a priggish lover for the most part—manages to pose with equal charm; the result is a stage picture well designed. But if thus calmly their passion shook them, would the tragedy ever have been written—would Giovanni, in the next act, have entered with hands steeped in their blood? Mr. Arthur Symons, in his criticism of the play, has admirably expressed the weakness of this one scene, the very basis of the tragedy:

> "The two lovers do but recite to one another, either out of the book or out of their own heads; they sit together, look lovely, and speak melodiously; but it is Mr. Frank Dicksee's lovers who sit there, not Rossetti's."

And what of the verse? Why do I say nothing of it? Because, as with the verse of "Ulysses," there is nothing to say. Those who have read the book quietly at home have the advantage of me in this respect. Verse can be bellowed, sung, whined, murdered by the English actor, but not spoken. Mr. Alexander, as Giovanni, does his best and works very hard, but, not content with his own shortcomings, he is borrowing Sir Henry Irving's—even to the Irving stride and the Irving grunt. Miss Millard's voice, as Mr. Symons says, is melodious, and to me the pleasantest thing in the play, but only in the garden scene could I follow the words as she spoke them. Miss Elizabeth Robins, the Lucrezia, has more control of her voice, but I fancy she finds the prose of Ibsen easier to manage, because more sympathetic.

Impossible, it may be thought, that two plays, empty as the "Ulysses" and the "Paolo and Francesca" of my description, should meet with such success. In neither subject is there anything that makes for popularity with an English audience, and, as a rule, with a few notorious exceptions, poetry is doomed to failure on the modern stage. True enough. But I have written in vain if I have not explained that neither is to be considered as a play; it is the spectacle the public wishes to see. There is another reason. A *claque* in the English theatre, the critic boasts, would not be endured for a moment. But Mr. Phillips has had such a deafening *claque* in the English press as does not often delight the ears of the minor poet. He has his admirers who, I am told, cannot speak of him but in solemn whispers as "The Bard," and some of these admirers enjoy the freedom of the daily paper and the monthly review. His portrait now hangs in every bookseller's window in London. He is the man of the hour, and accepted as are so many other things, in and out of the theatre, once they have been enough talked about.

In the other theatres just now, managers are less ambitious. In one, old-fashioned sentiment, laid on thick, and called "Mice and Men," holds the boards, and a long run is predicted for Mr. Forbes Robertson and Miss Gertrude Elliot, who are playing it. In another, it is a comedy, "Frocks and Frills," that sets the fashions for all the

women in town, who are turning to it for hints before they buy their spring clothes. In a third, English versions of French plays, carefully edited by a scrupulous censor who accepts "Paolo and Francesca" without flinching, are having their little day. American farces and musical extravaganzas are everywhere, and, really, though I have diligently made the rounds, the only two plays that strike me as having the least merit are "Sherlock Holmes" and "Arizona," also American, and played by American companies. The reason is simple. Take "Arizona," for instance; it is honest melodrama, and pretends to be nothing else; it is good of its kind, for melodrama it has even a certain freshness, and it is performed not by puppets, but by actors and actresses who, if none is above the average, all have some life in them, and play with a go, a gayety, and an apparent belief in what they are doing, that, I, for one, found delightful after the prosing and mouthing and shamming of the gods and mortals who fill the stage in "Ulysses."

But the English theatre has sunk into a slough of despond, and I do not think the state is likely to drag it out again. The state-aided theatre in France has long and fine traditions behind it. The English National Theatre would be without traditions, and, if it fell into the hands of the enthusiasts whose societies were intended to bring about the much-needed reform, the hopes of its creating traditions of the drama as an art for coming generations would be small. The Stage Society has never been as enterprising as Mr. Tree or Mr. Alexander. What has it done of interest this winter except to produce "Mrs. Warren's Profession," one of Mr. Shaw's "unpleasant plays," for which it was difficult to find a manager who would lend his theatre or an actress who would take the principal part? The objection, however, is not the unpleasantness—that is a manner of speaking; the trouble is, it is not a play but a moral debate, and, from the dramatic standpoint, there is every reason why it should be rejected by a capable manager. Enterprise, really, is not the unknown quantity, nor is it the good play. The more you go to the theatre in England, professional or amateur, the more you realize that it is the good actor who is wanted. And I am afraid not even a National Theatre can produce the good actor at a word. N. N.

MADAME RÉCAMIER.—I.

PARIS, March 14, 1902.

M. Joseph Turquan has, for a time, abandoned the Empresses and Princesses of whom he makes himself the biographer, for a simple lady, Madame Récamier; but was she not a queen of beauty? His new volume is, in many senses, far more interesting than its predecessors, and I believe that it was written with more care and attention. Facts speak loudly enough in the case of the Empress Josephine, of the Duchess d'Abrantès, the former heroines of M. Turquan; with Madame Récamier the case is different—the art of guessing, of insinuating, has to be used; and M. Turquan uses it, not always without success, always in a highly critical, if not malevolent spirit. This constant effort has left its impress on his work, and gives it an interest which is often wanting in the other volumes of the series, "Souveraines et Grandes Dames."

Madame Récamier was the only daughter of M. Bernard, originally a notary at Lyons, and afterwards a tax-collector in Paris. She was born in Lyons on December 4, 1777, and was married in Paris to M. Récamier on the 5th Floréal, first year of Liberty (April 24, 1793), on the very day when the populace carried Marat in triumph through the streets of the capital. There was no religious ceremony; the civil marriage took place, almost in solitude, at the Hôtel de Ville. Madame Bernard had procured a place for her husband in Paris through the influence of M. de Calonne, who was a friend of hers, and had thrown him in the society of the bankers. One of the chief frequenters of her house was M. Récamier, the son of a hat-merchant of Lyons, who had made a fortune and become a banker in Paris. M. Récamier was forty-two years old when he married the girl, who was only fifteen years old, and whom he had for many years been accustomed to treat as a child.

The reasons for this marriage have always been enveloped in mystery. M. Turquan goes boldly into a delicate subject, and says that M. Récamier never claimed his marital rights, and it does not appear that she claimed hers.

"Their tie," wrote Madame Lenormant [Madame Récamier's own niece, who published, many years ago, two volumes under the title, 'Memoirs and Correspondence of Madame Récamier'], was never anything but superficial; Madame Récamier received nothing from her husband but his name. This may seem astonishing, but I am not bound to explain it; I can only attest it, as all could have attested it who, having known M. and Madame Récamier, shared her intimacy. M. Récamier never had any but paternal relations with his wife, and always treated the young and innocent child who bore his name merely as a daughter, whose beauty flattered his eyes and whose celebrity flattered his vanity."

Madame Lenormant says elsewhere in her book: "She missed the affections which are the true felicity and the true dignity of a woman; she was neither a wife nor a mother, and, her empty heart pining for tenderness and devotion, found some satisfaction for this need of love in the homage of a passionate admiration whose language pleased her ears." In the lifetime of Madame Récamier, it was said, or rather whispered, that she had married a man who was her father. M. Récamier was a man of pleasure, and all the details we know about Bernard and his wife favor a suspicion that Madame Bernard had received more than usual attentions from M. Récamier.

M. Récamier gave to his young and charming wife all that fortune could give—not at first, during the days of the Terror, when it was dangerous to appear rich, but after the ninth Thermidor. M. Récamier, who had been so prudent during the bloody days of the reign of Robespierre as to show himself among the witnesses of the executions which took place daily, seems to have been what is called in our time an opportunist. Perhaps he assisted at the execution of Robespierre and his friends; at any rate, he stood very well with the Thermidorians, and his fortune increased rapidly, as he became a large army contractor.

During the Directory, Madame Récamier became one of the queens of Paris. Her husband took her to Barras. Madame Lenormant defends her niece energetically against the imputation of having moved in the society of the famous Director; but she confesses that she had to go once to the Luxembourg, where Barras lived, in the spring of 1799, some time before Bonaparte threw the Directory to the winds. The papers of the time gave a detailed account of the feast at which Madame Récamier appeared, and at which some complimentary verses were read to her. If Madame Récamier allowed her husband to take her to Barras, she certainly knew nothing about the army contracts. She was young and inexperienced; she lived at a time and in a society where all social rules had become very loose. She met Madame Tallien, Madame Bonaparte, wherever she went. Sainte-Beuve, who treats Madame Récamier very kindly in his 'Causeries du Lundi,' says, however, in speaking of this period of her life: "To conform to the truth, I must lower my tone a little, and descend for a moment from that ideal height of Laura and Beatrice where people are accustomed to place her."

It was probably at the house of Barras, says M. Turquan, that Madame Récamier made the acquaintance of the famous Madame de Staël. This acquaintance developed rapidly into a great friendship. Madame Récamier herself thought it necessary to explain its origin differently. Her husband bought M. Necker's hôtel, which Madame de Staël wished to sell.

"One day—and this day was an epoch in my life," says Madame Récamier, in a note which she communicated long afterwards to Benjamin Constant, "M. Récamier arrived at Clichy [where the Récamiers had a château] with a lady whom he did not name, and whom he left alone with me in the drawing-room while he joined several persons in the park. This lady came to talk about the sale of a house. Her dress was singular. . . . I took her for a foreigner. I was struck by the beauty of her eyes and by her look; I could not understand what I felt. . . . She told me, with a penetrating grace, that she was charmed to know me; that M. Necker was her father. I then recognized Madame de Staël. I did not hear the rest of her phrase; I blushed; my embarrassment was extreme. I had just read her 'Letters on Rousseau' with a passionate interest. One felt at once in her a perfectly natural and a superior person. On her part she fixed on me her great eyes with a kindly curiosity, and addressed to my face compliments which would have seemed exaggerated if they had not seemed to flow from her."

This first meeting, as described, not without real literary talent, by Madame Récamier, resembles much what between lovers is called the "coup de foudre."

M. Récamier bought the Hôtel Necker, and had it arranged and furnished in the best style of the Directory, a style which afterwards was called the Empire style. Madame Récamier gave parties, received the literary men of the time, such as La Harpe, Lemontey; political men, such as Camille Jordan, Barère; *émigrés* who had returned to France, such as Talleyrand; bankers and army contractors, friends of her husband. She was very eclectic, and long is the list of her usual guests. When Gen. Bonaparte came back from Egypt, Madame Récamier opened her salon to his aides-de-camp, Lannes, Junot, Marmont; to Murat, his brother-in-law; to Bernadotte; to Eugène Beauharnais.

Bonaparte himself seems to have paid little attention to Madame Récamier; was it because her father, M. Bernard, who had become one of the administrators of the Post-office, was interested in a paper which was hostile to the Government, to the First Consul, and to his family? M. Bernard was accused of making it an instrument of correspondence between the Royalists and the Chouans of Brittany. Napoleon recalls this circumstance in the memorial of Saint Helena. M. Bernard was arrested, but was not tried, thanks to the intervention of Bernadotte; but he lost his place.

From that moment dates the opposition of Madame Récamier to Bonaparte. It must be said, also, that she had fallen under the influence of Madame de Staël, who could not forgive the indifference which Bonaparte had shown her at the time of the 18th Brumaire, when she tried to bring him under her sway. The salon of Madame Récamier became gradually a centre of opposition. She surrounded herself with Royalists; her intimate friends became M. Mathieu and M. Adrien de Montmorency. M. Turquan will have it that Madame Récamier obeyed only the vulgar feeling expressed since Thackeray's day by the word snobbery. I consider this accusation unjust; and, while there may have been in Madame Récamier a mixture of that feeling which draws the mind not unnaturally towards what has the halo and the consecration of the past, there were in her many other noble and delicate feelings, and her whole life protests against the accusation of having "meanly admired mean things."

Correspondence.

ENGLISH PRAYERS FOR PEACE.

To the Editor of The Nation:

Sir: The English are praying for peace. Heaven will grant their prayer on its usual condition of self-help. But the English will not be helping themselves to peace so long as Lord Milner is kept in his present position. The prospect of submission to that man's insolent and vindictive tyranny is enough to drive the Boers to desperation. This is so obvious that it may not uncharitably be thought to be designed.

It would be easy to retire or transfer Lord Milner, without disparagement of his capacity or character, simply on the ground of the hostile relation between him and the Boers. It is one of the weak points in Lord Rosebery's manifesto that he tries to block this most desirable measure without giving any intelligible reason.

From Lord Milner's recent speeches, it clearly appears that, having been sent to rule the two races of the Cape Colony with an impartial hand, he, from the outset, conspired with the British against the Dutch. Every Dutchman put to death for treason against such a Government is murdered. Equity.

March 30, 1902.

A LETTER OF EDWARD FITZGERALD'S.

To the Editor of The Nation:

Sir: As every successive output of Edward FitzGerald's Letters (witness your issue of last week) appears to meet with a welcome, you may be willing to give place to the enclosed copy of one addressed by him to the late Fitzedward Hall, who forwarded it to the *Nation's* reviewer of his version of the "Agamemnon" of Aeschylus.

X.

March 31, 1902.

Woodbridge: June 14, '77.

My dear Sir—Thank you for the "Nation," which I return you, as you desire: sooner than I shd. do were it not that some one (I know not who:) had sent it to me before. So I have had ample time to digest myself. Perhaps I ought not to acknowledge that I think the Review *just*, seeing that it's praise so much overweighs it's blame; but I *do* think so, nevertheless; & am yet not intoxicated (at my all but 70 years of Age) with the credit given me for so far succeeding in re-producing other men's Thoughts; which is all I have tried to do. I know that many others wd. have done as well—and any *Poet* better—had they as much Leisure, & Inclination, for such work as I have had.

I have also seen the *Atlantic;* wh. I have taken in for two years on account of my friend Mrs. Kemble's "Gossip" which I am sorry to find is discontinued since she has returned to England.

I believe it is from no *personal* prejudice that I think American Reviews of English Books are apt to be juster than English of English. The Critics are removed from the Authors they criticize: from the Clubs, & Coteries, & Editors, who are *for* them, or *against;* & so can judge independently: wh. is scarce possible otherwise. So I maintain that we Country folks are—ceteris paribus—better Judges than the Londoners; for the same reason; & I see that Wilson—(Chr: North) said the same of Scotch Critics to N. P. Willis. "The opinion of one quiet, intelligent Country Parson was worth them all," he said.

My Versions, such as they are, were originally all privately printed to give to Friends: & these two have found their way into Public; I mean Omar K. & King Agamemnon—the Latter of whom remains to be slain anew, or trodden over, by our *Athenæums, & Academies,* I dare say. I have never sent a Copy to any but such Friends as I have spoken of; and to two or three American Gentlemen who took an interest in the Books. The Price they are published at—not my doing—pre-supposes only a small Sale, & seems to me ridiculously high. All which only means—"Will you have one?" I venture this, as you have been polite enough to send me it's Praises from among my Patrons in America.

Yours truly E. FitzGerald.

P. S. I re-post the Paper in the cover it came in, so as to make sure of it's finding you as clean as it left.

LORD DURHAM'S REPORT.

To the Editor of The Nation:

Sir: It is by the merest accident that I have come across a copy of your able and interesting journal, dated February 27, which contains a letter from a fellow-Canadian *re* the authorship of Lord Durham's celebrated Report. The writer guards himself by calling it a "local legend," but the assumed claim that the author of that Report was a Mr. Dunkin is so contrary to facts that it may be characterized as something else than a "legend."

The authors, and the only authors, of that Report were Charles Buller (afterwards the Right Hon. Charles Buller, M.P.), Mr. Turton (afterwards Chief Justice of one of the Australian colonies), and my late father, Adam Thom, LL.D., editor of the *Montreal Herald* (afterwards Chief Judge of Rupert's Land, B. N. A.)—all acting with and under the Earl of Durham. I have often heard my father speak of this matter, and any one who knew him would be sure of this, that he had too much generosity of character and too much fairness of mind to try to deprive any one of his right to share in the credit gained by those who drew up that celebrated state paper. To set up, at this time of day, such a claim as that made on behalf of Mr. Timothy Dunkin is an insult to the memory of three men, not one of whom would have condescended to "amend" or "polish" or put forth to the world what was not their own.

Yours truly, A. Bisset Thom.

Aylmer, Ont., Canada, March 27, 1902.

Notes.

A third revision of Dr. Edward Robeson Taylor's 'Sonnets of Heredia,' with fresh notes, is to be published by Elder & Shepard, San Francisco.

Albert Brandt, Trenton, N. J., will soon issue 'Cape Cod Ballads,' by "Joe Lincoln," illustrated by E. W. Kemble.

Early in April, L. C. Page & Co., Boston, will have ready 'Stephen Holton,' by Charles Felton Pidgin, author of 'Quincy Adams Sawyer.'

Directly forthcoming from Doubleday, Page & Co. are 'American Masters of Painting,' by Charles H. Caffin, and 'Our Literary Deluge,' by Francis W. Halsey.

Less than 130 pages have been added to Gen. Sheridan's 'Personal Memoirs' by his younger brother, Gen. Michael V. Sheridan (Appletons). They are not the production of a practised writer, and their tone is not unexceptionable; but as they relate the chief incidents of the greater soldier's life from 1871, where he left off, they materially enhance the value of the book. Sheridan had plenty to occupy him—politically in connection with reconstruction troubles in Louisiana; and with the Indians, for which period the bloody annals of Piegan, Sioux, Ute, Nez-Percé, Apache are here briefly, not always judicially, unrolled. The reader must go to other sources to discover the debatable character of much of this history. It is noticeable that Sheridan ended, as so many army officers had done before him, as the defender of the Indians against ill-treatment and broken pledges. His brother's personal tribute is sincere and pleasing.

Another work brought to a conclusion in a reissue is Mr. W. G. Collingwood's 'Life of John Ruskin' (Houghton, Mifflin & Co.), first published in 1893, seven years before Ruskin's death. There was much opportunity for the abridgment which has now been practised by rewriting, resulting in one volume in place of two. More personal details, some fresh letters, have been introduced. The author remains the devotee we found him in our notice of the original biography.

It is just four years since we reviewed at some length Prof. J. Mark Baldwin's 'Social and Ethical Interpretations in Mental Development' (Macmillan). The third edition, now before us, has been somewhat enlarged in response to the criticism the book has undergone, for which Professor Baldwin gives the necessary references in his new preface.

A reprint of the third English edition of 'The Greek Poets,' by J. A. Symonds, has just appeared in two handsome volumes (London: Adam & Charles Black; New York: Macmillan). Symonds's work still

commends itself for its genuine literary flavor, for its hearty and intimate appreciations, for the wide acquaintance with modern literature which illuminates its criticism, and for the sustained enthusiasm which lifts the reader into an atmosphere proper for intelligent enjoyment. Symonds himself was half a poet, and contributed some of the best of the versions which make the book so valuable. He is somewhat diffuse; he rhapsodizes overmuch, and the ardor of his admiration often transcends the Greek law of measure; here and there, a statement or an opinion needs qualification or correction; but the book will not be superseded until some very thorough scholar treats the same subject with Symonds's literary gift and culture, warmed by his constant glow of sympathy.

In the latest issue of "Bell's Miniature Series of Painters" (Macmillan), the general editor, Dr. Williamson, deals with Holman Hunt. The little book is less one-sided in its criticism than most volumes of the sort, and gives a fair view of its hero's limitations as well as of his merits, though it might have been well to point out how far that artist's elaborate meanings are apart from the end of painting, and unrealizable in that art. Of "The Scapegoat," Dr. Williamson says: "As a piece of painting, it is one of Hunt's least important works; as an allegory, it ranks very high indeed." Yet the allegory is entirely in the title, and if that and all written commentary were lost, we should have nothing but the portrait of a goat. Who cares, except for curiosity, whether Titian's picture be properly entitled "Sacred and Profane Love" or "Medea and Venus"? It is only by a similar elimination of the unpictorial that one can judge of the proper æsthetic value of the works of Hunt or Watts.

The right of Wilkie to a place among "Great Masters in Painting and Sculpture" (Bell-Macmillan) is far from incontestable. With all the bias of Lord Ronald Sutherland Gower in favor of the brother-Scot and the family protégé, he is forced to admit the failure of Wilkie's later works, and he bases that artist's claim to greatness entirely upon a few pictures in his early manner. Of one of these, in which he thinks Wilkie "attained the high-water mark of his life," "The Letter of Introduction," he says: "It is in every sense a masterpiece; it is redolent of the finest humor, and the technique is as admirable as the humor. . . . It ranks in excellence with Hogarth or the greatest of the Dutch and Flemish *genre* painters." He has already said that Teniers "never gave so much luminosity to any of his pictures as did Wilkie" to "The Blind Fiddler." As to luminosity, color, and handling, the comparison can be made only in presence of the works themselves, but there are qualities of painting, and not the least important ones, that can be judged of in some degree from reproduction; and a very cursory comparison of the reproduction here given of "The Letter of Introduction" with almost any good cut after Ter Borch is enough to show the vast inferiority of the Scotch to the Dutch painter. Wilkie's picture is not disagreeably arranged, but it shows nothing of the Dutchman's admirable instinct for spacing and composition of line and mass. Wilkie's picture is not badly drawn, but Ter Borch was one of the most wonderful draughtsmen that ever lived. And there is nothing in the prints to suggest that Wilkie's work even approached that perfect notation of light which is the marvel of Dutch painting, and which one feels even in half-tone reproductions of the work of Ter Borch and Ver Meer and De Hooge. As an illustrator, Wilkie is more refined than Teniers or Ostade, and he perhaps approached them as a manipulator of paint; but between him and the little masters of Holland is a great gulf fixed.

The same publishers send us a volume of reproductions of the Chatsworth Sketch-book by Van Dyck, with a description of the book by Lionel Cust, Director of the National Portrait Gallery. This book is supposed to have been used by Van Dyck in Italy from 1621 to 1627, and contains 125 pages of rapid sketches, mostly from pictures by Italian masters. Forty-seven pages, or double pages, have been selected for reproduction, and the work is admirably done. A few of the sketches are from nature, but nearly all of them are such scrawled notes of compositions as supplied a technical memory in the days when photography was not. Some are from known works, but many more are of unknown or unidentified originals, and these may at any time prove valuable in the attribution of rediscovered works. The drawings are too hasty and too careless to have any great artistic value in themselves, and some of them are amazingly bad, even for what they are; but their historical interest is considerable.

In 'The Hesperian Tree: A Souvenir of the Ohio Valley,' edited by John James Piatt, and published by John Scott & Co., Three Rivers Elm, North Bend, O., the editor's aim has been "to offer to the public a magazine of literary miscellany in prose and verse—comprising original stories, sketches, essays, and poems—the contributors to which should be native to or identified with the Ohio valley; and to have the same accompanied by or illustrated with reproductions by the best current processes of pictures and drawings, as well as works in sculpture, by artists also native to or identified with that region." For such a work, "so far as he knows, there has been no literary precedent in this country—at any rate, none so limited geographically in its contributors, while at the same time largely representing writers and artists whose reputation has no such limitation." From a few such writers and artists of more than local reputation Mr. Piatt has succeeded in securing contributions, but with many more he has, apparently, failed; and the general level of the work given is hardly such as to interest other than a local public.

Mr. J. H. Huddilston's 'Lessons from Greek Pottery' (Macmillan) is a little book of 144 pages, intended to show, in a general way, what may be learned from the pictures on Greek vases by students of Greek history, religion, life, and literature, there being chapters devoted to different branches of each of these departments. It is, however, rather an argument for the study of the vases than an introduction to it, and addressed more to those who are not aware of the vast stores of material which the Greek potters have left for the student of their civilization than to those who are aware of the fact, but do not know how to make use of it. We are told, for example, that the vase-paintings give us many more details about the story of the death of Troilus than are preserved in literature, and that more than thirty of these paintings are known which are based upon various parts of the legend; but the author does not tell us how to get at them, nor does he show us how they may be recognized among the many thousand vase-paintings that exist. This is disappointing because, admirably as Mr. Huddilston has performed the task he set himself, there would seem to be more present need of a book which should give those "who are interested in all things Greek" a start in the study of Greek pottery than one which is limited to urging that study upon them. To many the most valuable part of the book will be the excellent bibliography which follows the text, occupying more than forty pages. This has been most carefully prepared and classified, and will be found both useful and convenient for advanced students as well as beginners. The book contains seventeen illustrations, among which are reproductions of the three plates of shapes of Greek vases from Furtwängler's catalogue of the Berlin collection.

The sheets of Professor Edward Arber's series of British anthologies are now presented in a new binding, with the running title "Selections from the British Poets." The eighth and tenth volumes of the set in this form, which have just come to our table, differ from Pope and Cowper Anthologies as previously noticed only by the insertion of tolerably well-selected and reproduced portraits of the major poets. Thus embellished, the series may prove not devoid of utility to the anthological student. The publisher is Henry Frowde.

Mr. Thomas Willing Balch of the Philadelphia bar has reprinted from the *Journal* of the Franklin Institute for March his article on the boundary lines of southeastern Alaska and Canada. To monograph the subject in all its details would require a somewhat bulky volume, but for those who would inform themselves of the main outlines of the case, Mr. Balch's article offers a convenient and reliable summary. It comprises some forty-five pages of text, with reduced facsimiles of the most important charts bearing on the subject, and is entitled 'The Alasko-Canadian Frontier.'

It would be difficult to find an American teacher, whether in the village school or in the university lecture-room, who would not find matter of special interest in the annual report of the Commissioner of Education. Yet there is evidence that too few are making use of this means of information and enlightenment in their own field of labor. The two heavy volumes recently issued are for the academic year 1899-1900, and, like their predecessors, contain a number of treatises—historical, critical, technical—of permanent value. The occasional lists of articles on a certain subject published in previous reports are a great help to those seriously interested in the subject. The new "dependencies" are, in these reports at least, not denied their rights, though the backwardness of the information, in their case especially, is trying to the reader's interest. Portions of the statistical matter are peculiar to each annual issue, but in some of the tables the changes from year to year are comparatively slight, and if delay in the publication of the en-

tire reports could be partly remedied by substituting quinquennial for some of the annual statistics, many might be glad of the change.

Adalbert von Hanstein's 'Das Jüngste Deutschland: Zwei Jahrzehnte miterlebter Litteraturgeschichte' (Leipzig: R. Voigtländer), first issued in the autumn of 1900, appeared last year in a second, though essentially unchanged, edition. As its title implies, it is a history of the new factors in German literature since the early eighties. Writers whose beginnings belong to an earlier period cut no figure in its pages, except so far as they may have fallen in with the new literary movement. With commendable diligence, the compiler has gathered together an immense mass of facts, most of which have been hitherto inaccessible. Information about the lives and literary development of a host of young German littérateurs, their grouping into schools, and the tendencies of these schools, together with numerous extracts from their writings, are here set forth in orderly historical array and supplemented by more than a hundred portraits. Hanstein writes good clear, readable German, and strives to approach his subject in a candid scientific spirit. Unfortunately, his tremendous conceit about his own literary work (which has played absolutely no part in the development of modern German literature) often blinds his judgment and leads him to take very distorted views. Striking evidence of this defect may be found in his treatment of Sudermann, Hauptmann, Holz, and George, who, though they may not belong to the immortals, are certainly leaders in their own generation. The book is nevertheless to be commended.

The long list of works dealing with the Greek tragedian Euripides has been increased by a substantial volume by Wilhelm Nestle, called 'Euripides, der Dichter der griechischen Aufklärung' (Stuttgart: Kohlhammer). Beginning with a consideration of the life, personality, and character of the poet, the author proceeds to a long and exhaustive examination of his attitude towards the doctrines of his countrymen. His ideas of life in general, his theology, natural philosophy, psychology, ethics, sociology, and politics are fully examined and illustrated by means of copious quotations from his extant works. The conclusion is, as one might guess from the title of the book, that Euripides is representative of the spirit of enlightenment and progress which was changing Hellenism from a national to a cosmopolitan basis. The work reads well, and cannot fail to interest others than the Euripides specialists. The frontispiece is a reproduction of the Naples bust of the tragedian. The indices are excellent, and the notes, which cover two hundred of the five hundred and fifty pages of the book, show that the author has collated and sifted his authorities in a thorough manner.

The dethroning of an ancient manuscript once regarded as next in value to the lost original is, to the enthusiast in textual criticism, something not much less important and perhaps more interesting than the fall of a dynasty. Such an event is announced and substantiated by Dr. William Peterson, Principal of the McGill University, Montreal, in his remarkable monograph on a ninth-century manuscript of Cicero in Lord Leicester's library at Holkham, for which, although hitherto neglected, he now vindicates the primacy among all manuscripts of the orations contained in it. No editor can hereafter safely ignore this new revelation. The monograph is from the Clarendon Press (New York: H. Frowde), from which we have also received two more volumes of the Oxford Classics, 'Propertius,' by J. S. Phillimore, and 'Cicero de Oratore,' by Prof. A. S. Wilkins, both well deserving the same praise which we have already given to earlier volumes of this series.

Mr. La Farge's article on Rembrandt lends distinction to the current number of *McClure's Magazine*, as it would, of itself, distinguish any publication in which it might appear. It is the third of a series of articles on the "Great Artists," which the editors have been most wise and most fortunate to secure. The first, on Michelangelo, was somewhat disappointing; in the second, Mr. La Farge fully found himself, and gave us a beautiful and rounded appreciation. The present article is, if anything, still better, and such as no other living writer could produce. Mr. La Farge writes with the authority of an accomplished painter, the sympathy of a deep and subtle critic, and the grace of a finished literary artist, and comes nearer than one would have thought possible to describing the indescribable, and to putting into words what only Rembrandt himself could ever express in paint or the etched line. If he shall be often so felicitous, we shall have, when the series is completed, such a book of art criticism as hardly exists in any language—a book to be thankful for, and of which America may be as proud as of its author's own varied contribution to the art he celebrates.

The supply of diaries kept by the German mercenaries in our Revolutionary war seems inexhaustible, and each one makes some contribution of importance to historical detail. Mr. J. G. Rosengarten begins in the April number of the *Pennsylvania Magazine of History and Biography* a translation of one kept from 1777 to 1783 by Stephan Popp, who served in the Bayreuth Regiment, coming over at the age of twenty-two. The desertions already recorded in the present instalment from this and its fellow, the Anspach Regiment, harmonize with the account of the mutiny when they were forced on shipboard. Two of the three pencil maps accompanying the narrative are here reproduced. Another curiosity of this issue is the facsimile reprint of the first number of the rare *Philadelphische Zeitung*, published by Franklin on May 6, 1732.

In the March-April number of the *Revue Historique*, the editor, M. Monod, criticises unsparingly in detail the new Leygues-Ribot proposals for the reform of French secondary instruction. In his view, every French boy should attend the primary and advanced primary schools, in both of which thorough instruction in modern languages should be given; then he should choose between three courses, in which preponderance should be given to the classics, to modern languages, and to science respectively. The aim of French secondary instruction seems to him to be the accumulation of facts, not ability to think independently. Forty years ago, he feels, teaching was more thorough, if narrower, and the crying evils of to-day, carelessness and superficiality, had not appeared. The crowning iniquity of the new proposals is the repeal of the Falloux legislation guaranteeing freedom of speech.

—The April *Atlantic* presents a somewhat bewildering profusion of interesting and instructive matter. The leading position is given to Mr. Oswald Garrison Villard's statement of the abuses which have grown up in our army system, and the measures initiated by Secretary Root for their removal. "An Athenian" contributes his confessions as to the working of "Our State University," but one finds nothing so sensational as the anonymous authorship and the titles suggest, in the wake of the various State University storms of the past few years. Regents are sometimes wise and sometimes unwise, professors sometimes all that could be expected and sometimes not, irate parents occasionally annoy, thoughtless girls and boys commit distressing indiscretions—in short, we have simply the typical Western State University. If there is anything new, it is the writer's opinion that Western college girls are much less earnest in their work, much more given to regarding their college as a good place for a good time, than their sisters in Eastern schools. With boys, at least, there is a pretty widespread impression that the tendency is rather the reverse. Elizabeth McCracken, under the heading of "The Play and the Gallery," takes us into another kind of school, the theatre, and tells of its effect upon the tenement-house population with which she is brought into contact in her settlement work. One boy is impressed, on hearing "The Gay Lord Quex," with the thought that "the people are a bad lot, but they get out all right"; a young woman is somewhat more seriously disturbed by a similar reflection concerning Nell Gwynn; a Polish girl is led to read and study the plays of Shakspere which she has heard from the gallery, and is almost thrown into a panic by her first encounter at the public library with the Baconian theory. On the whole, one gets from the article a new idea of what the cheap gallery in the theatre really means as a social factor in the tenement life of a great city. We can merely call attention to a highly valuable paper by John W. Foster on "Pan-American Diplomacy," marred only by its incidental support of the ship-subsidy scheme for working up an increased trade with the Southern republics.

—In the *Century*, Noah Brooks draws a vivid picture of the rush across the plains to California a half century ago. It is a story often told, but the necessities of the situation and the ready ingenuity with which they were met insure something new in every retelling. M. Patrice Dillon, who came to California by sea late in 1849, and described the situation in a vivacious contribution to the *Revue des Deux Mondes*, was a little envious of this American ingenuity. "Throw three Americans upon a desert island, with but a single spring of water: two of them will take possession of it, levy a tribute on the third, and then boast loudly of their 'Yankee trick.'" Mr. Brooks writes, of course, of his own experience, and thus makes a genuine addition to the store of first-hand material from which is some day to be written an adequate history of the great Western movement of our population. The promo-

tion of "civic beauty," so popular a subject of late with the best magazines, receives another impulse in an article by Sylvester Baxter on "The Beautifying of Village and Town." Perhaps Mr. Baxter is a trifle over-enthusiastic when he describes a certain Western city as having become, by ten years of artistic improvement, "the seat of a genuine civilization." Civic beauty is no doubt a strong elevating influence, under most conditions, but it will hardly do as yet for a test of civilization. The most suggestive article of the number is that of John Burroughs on "Literary Values."

—Dr. Gilman continues his reminiscences in *Scribner's*, under the heading of "Some Noteworthy Scholars." Of those permanently connected with Johns Hopkins, he speaks chiefly of Rowland, the physicist, and Sylvester, the eccentric mathematician. The peculiarities of Professor Sylvester gave rise to so many apocryphal anecdotes that one is pleased to find a few with the satisfactory attestation of Dr. Gilman's signature. It is of deeper interest, however, to know that Dr. Gilman was repeatedly warned, both in this country and abroad, of Professor Sylvester's idiosyncrasies and irascibility of temper, and yet preferred to disregard all these things rather than lose the chance to secure for the new university his brilliant mathematical genius. It was the secret of the success of Johns Hopkins that its President lived up to the advice with which he closes this chapter of his reminiscences: "In the conduct of a university, secure the ablest men as professors, regardless of all other qualifications excepting those of personal merit and adaptation to the chairs that are to be filled. Borrow if you cannot enlist. Give them freedom, give them auxiliaries, give them liberal support." Lowell, Child, Freeman, Cayley, and Stanley were examples of President Gilman's skill in borrowing; and interesting incidents of their sojourning at Baltimore, some new and some which have seen the light before, are woven into the present article. One can hardly be pleased with the statement that these reminiscences are to close with the next number. James B. Connolly contributes a twenty-page sketch of the night-seining and winter trawling of the Gloucester fishermen, and Alfred Mathews begins a study of the early westward expansion of Connecticut.

—One finds in the April *Harper's* rather a multiplicity of fairly good things than any one feature of striking interest. Carl Snyder gives a brief account of the achievements in synthetic chemistry which earned for M. Berthelot such imposing recognition at the end of the half-century since the beginning of his connection with the Collège de France, and Professor Shaler writes still more briefly of the important and intricate relations between plant and animal life, with the various modifications in each resulting therefrom. Prof. Morris Jastrow, jr., gives an outline of the recent German explorations on the site of ancient Babylon, particularly the ruins of the palace of Nebuchadnezzar and the temple of Marduk, and Henrietta Dana Skinner presents letters from John Adams to her great-grandfather, Francis Dana, throwing new light upon the diplomacy of the Revolution. These articles one and all are suited to raise the question whether the price which magazine editors seem willing to pay for brevity is not too great. Bret Harte contributes one of his California stories, characteristic in its essential features, but far below the level of his best, and not likely to spoil the sale of California oranges or depress the price of California lands, as some of his work has been said to do.

—'The Decorative Art of the Amur Tribes,' by Berthold Laufer, is the title of the seventh memoir of the American Museum of Natural History relating to the work done by the expeditions sent out by Prof. F. W. Putnam through the liberal aid given by Mr. Jesup of New York. The memoir contains 86 large quarto pages, and is abundantly supplied with illustrations. It relates principally to the Goldi and Gilyaks, who occupy the lower part of the Sungari and the middle portion of the Amur valleys. While there are many signs of the influence upon them of Chinese art, this has not been by any means overshadowing, but a great amount of originality has been preserved and a really high sense of beauty displayed in their ornamentation of implements and of their articles of dress. Of the animal forms which are woven into their decorations, the butterfly, the bear, the cock, and the fish are most numerous, while the skill with which groups of reindeer heads are carved upon their wooden dishes is really surprising. It is interesting also to see how frequently the "svastika" cross appears, and the artistic variations with which it is treated. Indeed, so beautiful are these forms that it will not be surprising to see the patterns of the Goldi liberally copied in the decorative art of Western nations. Those who devise patterns for calico prints can find no more suggestive book than this. The report goes far to sustain Mr. Putnam's theory that realistic art is among the earliest developments of human effort, often long preceding any other signs of progress. Mr. Laufer well closes his memoir with the question "whether people, like the Goldi, who are able to produce such fine work, may justly be classified among primitive tribes," adding that "there is no doubt but that they are chosen for their share in civilization, and that they will have a future, if only the Russian Government will continue to lend its assistance in improving the economic life conditions of this intelligent tribe, which numbers so many good-natured and highly gifted individuals."

—The late Grant Allen tried his hand at almost every kind of literary composition, but he is not usually remembered as an historical writer. At the same time he had a keen interest in men as well as in science, and his alert intelligence enabled him to deal cleverly with every subject which occupied his attention. He devoted more of his leisure to historical reading than those may have supposed who knew him only through his publications; moreover, he had strong historical instincts. After this word of preface, we may say that Prof. York Powell has recently edited, with an introduction, a posthumous volume of Allen's which is entitled 'County and Town in England' (Dutton). The various chapters of which it is made up were first printed, twenty years ago, in the *Pall Mall Gazette*. The author considered them unfinished, and for this reason declined to reprint them until he should be able to complete the series. As it is, however, they do not create the impression of being fragmentary. They disclose a distinct method of approaching local history, and, either directly or indirectly, they deal with more than three-quarters of England. Allen might easily have made himself an expert archæologist, and it may be that some readers who are looking out for a guide-book will find the antiquarian motive a little strong in the present collection of essays. He had a keen eye to economic and social conditions, and, most of all, to ethnology. "He was the first English historian," says Prof. York Powell, "to put forward in a convincing way the fact that the Teutonic element is not the only important element (perhaps not even the chief element) in the present population. He welcomed the arrival of the 'præ-Celtic theory,' which he had foreseen." One very interesting feature of this book is a sketch which is called "Annals of Churnside." Here Allen goes back to very early times, indeed. Churnside is a fictitious place which is made to lie near the sea in a southern shire. How ancient its annals are may be gathered from the following sentence: "The little Euskarian colony which occupied the lower Churn Valley entered Britain, like the rest of their race, by a broad bridge of land which still connected the modern island with the mainland of France and Belgium." Proceeding from this distant point, Allen touches upon the Celtic invasion, the Roman road, the Roman villa, Domesday Book, and the neighboring Cistercian Abbey of Churney. All this is well conceived, and carried out in a manner which will appeal to mature students of English history.

—The study of Greek vases in recent years has thrown many interesting sidelights on the civilization of the ancients. The frescoes of the Italian Renaissance might be made to yield no less valuable results. Their intrinsic beauty, however, has led the spectator to regard these works of art from the purely æsthetic point of view rather than as documents in the history of culture. So great a wealth of material exists in approaching the study of the Renaissance that this neglect is perhaps excusable. At the same time rich mines have been discovered in the few instances where art has been considered from the standpoint of what it represents. It may well be hoped, therefore, that other books will be written similar to Dr. Warburg's 'Bildniskunst und Florentinisches Bürgertum' (Leipzig: Seeman), a study of the portraits in the "Confirmation of the Rule of Saint Francis" by Ghirlandajo in the Sassetti Chapel of Santa Trinità in Florence. It had long been known that Lorenzo de' Medici was in this fresco depicted standing between the two Sassettis, the donors of the chapel. The identity of the other portraits remained, however, unknown. It was left to Dr. Warburg to recognize in them Poliziano, the poet-scholar; Luigi Pulci, the humorist and forerunner of Ariosto; and Giuliano, Piero, and Giovanni de' Medici, the three sons of Lorenzo. He himself is convinced that the remaining head is that of Matteo Franco, best known for his interchange of scurrilous sonnets with Pulci. While there is every probability that this is true, no real

proof, unfortunately, exists. Dr. Warburg promises further studies of a similar nature, illustrations and evidences of the interest taken in art by the cultivated bourgeoisie of democratic Florence. He himself modestly professes only to follow in the footsteps of Burckhardt, and add a chapter to his essay on the "Portrait" contained in the posthumous 'Beiträge'—a work which still remains almost unknown outside of Germany. Highly commendable are the illustrations, typography, and good taste shown in the execution of this book, which is in striking contrast to so many German contributions to the history of art.

LANG'S MYSTERY OF MARY STUART.

The Mystery of Mary Stuart. By Andrew Lang. With illustrations. Longmans, Green & Co. 1901.

More than three hundred years ago, controversy was raging around the character of Mary Stuart, and never since that time has it ceased to rage. For many, the subject possesses a perpetual interest, which is due mainly to the Queen's gifts and misfortunes, but also in part to the disputed evidence regarding her career. Mr. Lang sets out by likening her tragedy to the "Agamemnon" of Æschylus, and the example is one to which he recurs. Schiller's "Maria Stuart," he thinks, would come more near to reality than anything else, if only the facts were real. Alas, here lies the crux, not only with Schiller but with every other writer, in both poetry and prose, who has ventured to offer a solution! There is no dearth of evidence. Information of greater or less value keeps accumulating about her and the other *dramatis personæ*. But while every new document helps to confirm some theory, the tangle of theories grows ever more intricate, until scoffers may well call into question the credibility of any. Mr. Henderson, in his 'Side-Lights on English History,' has reproduced that singular picture of her which was engraved by Goltz at the time of her execution. According to Goltz she was a wanton; according to Chalmers she was a paragon; and between these extremes may be found a multitude of judgments, more or less qualified.

It is the opinion of Mr. Lang that "increasing knowledge of facts, new emergence of old MSS., have, on the whole, weakened the position of the defence." The stage of hypothesis has not yet been left behind. The appearance of the evidence may still, at any moment, change the whole face of the situation. But just now the Queen's case seems less plausible than before. In 1889 Mr. Henderson, by publishing for the first time Morton's sworn declaration concerning the discovery, inspection, and safekeeping of the Casket Letters, added to the weight of testimony against her, and Sir John Skelton's criticism of the damaging document has been unable to destroy the impression it created.

Though Mr. Lang's aims, in the present volume, are not unpleasantly pretentious, they are by no means inconsiderable. After generations of discussion, the points at issue have grown numerous and complicated. Of course the main question is outlined with sufficient clearness. Did Mary know that a plot existed against Darnley's life, and did she assist his murderers? This is the real issue around which the battle-royal is fought. And hardly second to it, if, indeed, a distinction between the two matters can be drawn, is the nature of her relations with Bothwell before the Kirk o' Field was blown up. Firstly, should Mary have been burned at the stake, according to the laws of that time, when she was a prisoner at Loch Leven? Secondly, are the stories which George Buchanan and others have told about an intrigue between Mary and Bothwell during Darnley's lifetime, truthful or lying?

Mr. Lang is not so ambitious as to put forward a theory which demands implicit acceptance, but in certain respects his book aims high. He begins by portraying the leading figures of the court at Holyrood—not with bare enumeration of facts or qualities, but dashingly and to the life. Mary, her lovers, and her foes must be made more than mere names before the unfolding of their plots and counterplots begins. Even the Queen's dresses and jewels are described: "the ruff from which rose the snowy neck; the brocaded bodice, with puffed and jewelled sleeves and stomacher; the diamonds, gifts of Henry II. or of Diane."

"Many of her jewels—the ruby tortoise, given by Riccio; the enamel of the mouse and the ensnared lioness, passed by Lethington as a token into her dungeon of Loch Leven; the diamonds bequeathed by her to one whom she might not name; the red enamelled wedding-ring, the gift of Darnley; the diamond worn in her bosom, the betrothal present of Norfolk—are, to our fancy, like the fabled star-ruby of Helen of Troy, that dripped with bloodgouts, which vanished as they fell."

All this delineation of character and setting forth of circumstances is done with a refinement of literary art, which yet remains in close touch with recorded fact. Mary, Darnley, Bothwell, Moray, and Maitland of Lethington form a group of major characters, after whom come Morton, Archibald Douglas, the two Melvilles, John Wood, the Secretary of Moray, Kirkcaldy of Grange, Huntly and Darnley's father, the Earl of Lennox. These are but a few of the personages. The action is as crowded as it is rapid.

With Mr. Lang, however, the vivid portrayal of Mary's *entourage* is simply a step on the way. Men and places must be clothed with actual existence if the narrative of intrigue and danger is to have a meaning. Then comes the development of the plot, with "mystery" enough to justify the title and satisfy the most romantic taste. As Mr. Lang gets deeper and deeper into the intricacies of the story, he becomes less picturesque and more analytical. Here his object would seem to be not the defence of an infallible theory, but the close scrutiny of views that have been already advanced. It is only little by little, as he demolishes the legends of George Buchanan, on the one hand, and the pleadings of Mr. Hosack on the other, that his own position becomes clear. Concerning his attitude towards the Queen we shall speak in a moment. At present it is well to observe that he makes a distinctly ambitious effort when he goes over the whole ground, which is covered by the controversy of the Casket Letters, and scrutinizes the reliability of the witnesses on either side.

Mr. Lang manifestly admires the Queen, and defends the course she took at several important moments of her reign. None the less he fixes upon her the stigma of having known that Darnley's life was threatened by the nobles. He brushes aside "the special and specious" excuses with which her conduct before her husband's murder have so often been covered—the excuses that she brought him from Glasgow to Edinburgh for the good of their child or for his own protection beneath "the ægis of the royal presence." According to the conception of her innocence, Mary "was a weak, ailing, timid, and silly woman, with 'a heart of wax.' On the hypothesis of her guilt, though ailing, worn, wretched, she had 'a heart of diamond,' strong to scheme and act a Clytæmnestra's part, even *contre son naturel*. The *naturel* of Clytæmnestra, too, was good, says Zeus in the Odyssey." The strongest link in the chain against Mary is a letter of Archibald Douglas regarding the meeting of Morton, Lethington, and Bothwell at Whittingham, which shows that Mary knew in January, 1567, of *some* plot against Darnley. He was killed on the 10th of February.

"Had she not brought him from Glasgow to Edinburgh under a semblance of a cordial reconciliation, he might, in some way or another, have escaped from his enemies. The one measure which made his destruction certain was the measure that Mary executed, though she was well aware that a conspiracy had been framed against the unhappy lad. Even if he wished to come to Edinburgh uninvited by her, she ought to have refused to bring him."

What was the Queen's motive in wishing to be quit of Darnley? Leaving the Casket Letters aside, Mr. Lang can find no contemporary evidence which shows that she was mastered by passion for Bothwell. Moray hated Bothwell, and in politics the Queen had been following her brother's lead from the date of Rizzio's murder to that of Darnley's. She had restored Lethington to favor at Moray's instance, and in spite of Bothwell's remonstrances. At Craigmillar, Moray and Lethington, not Bothwell, had by her favor taken the lead. The learned Buchanan has added the weight of his authority to the revelations of the Casket Letters, but he did not write his scandals until the affair was quite over, and in important details they are demonstrably false. If the Casket Letters should be rejected, Mr. Lang finds no reason to think that Mary's action at the time of Darnley's murder was dictated by anything more than resentment against her husband for his insults, his part in Rizzio's murder, and his general wretchedness of character.

But to leave the Casket Letters aside is impossible, or possible only in a rhetorical sense "for the sake of argument." The discussion of Mary's character must always come back to the authenticity of the documents which the Lords used in working up their case against her. If she actually wrote to Bothwell in the terms of the letters as they were finally published, she becomes so culpable that few will care to justify her politics or her morals. The best ground of the defence is in the black dishonesty of the Scottish nobles, the Queen's triumphant enemies. Estimated by their previous conduct, and, indeed, by the whole course of their lives, they cannot be placed above suspicion of forgery. At the same time it is most difficult to bring such a charge home, and, moreover, in some respects the letters appear so genuine that the concoction of them would be almost

beyond the cleverness of the forger. The handwriting might have been imitated, but a forger could only by a triumph of genius have grasped that yielding side of Mary's nature which appears in the Casket Letters. As Mr. Lang says: "That any forger should have known Mary so well as to place her, imaginatively, as regarded Bothwell, in the very attitude which we see that, on occasion, she chose later to adopt in fact as regarded Norfolk, is perhaps beyond belief. To myself the internal evidence of style seems rather in favor of considerable and compromising portions of the letters." Besides the Casket Letters, there are the Casket Sonnets, and, though these were rejected by Brantôme and Ronsard, who thought from Mary's previous verses that she could not have written so uncouthly, the prima-facie reasons for accepting them are not slight.

Notwithstanding his willingness to look adverse evidence squarely in the face, Mr. Lang must be called a friend of Mary Stuart. Either from forethought or incidentally, he does her service by representing in such an unfavorable light the men against whom she strove for power. Lethington he admires on the score of superior cleverness, though morally as bad as the rest. "Few are the good men, rare are the good deeds, that must meet us in this tragic History. 'There is none that doeth good; no, not one.'" In politics, murder was a rule of the game; in the pursuit of pleasure, every one followed his own devices. Moray was a shifty hypocrite, "looking through his fingers" at murder whereby he profited. Morton was born with falseness in the blood, and "his sanctimonious snuffle is audible still." Mary at least was born with a good heart. "She was no natural dissembler, and with difficulty came to understand that others could be false. Her sense of honor might become perverted, but she had a strong native sense of honor."

Mr. Lang is a hard hitter, and this volume is not one which will command anything like universal assent. It is bound to displease Mary's champions, while it runs even more counter to the strictly Calvinist view of the Queen and her generation. At present a settlement of the debate is out of the question, and it may long remain so. In the meantime, it is enough that Mr. Lang should have written a very clever, exhaustive, and well-informed account of Mary's struggles with her enemies and with her fate.

GIDDINGS'S INDUCTIVE SOCIOLOGY.

Inductive Sociology: A Syllabus of Methods, Analyses, and Classifications, and Provisionally Formulated Laws. By Franklin Henry Giddings. The Macmillan Co. 8vo, pp. xviii, 302.

Perhaps the best way to convey to our readers an idea of what they may expect to find in this volume will be to give a brief account of the contents of one of its more elaborate chapters, that upon Concerted Volition. We find this chapter to be divided into four parts: (1) The Rise of Concerted Volition; (2) On Coöperation; (3) On the Modes of Concerted Volition; (4) The Laws of Concerted Volition. Under the head of the Rise of Concerted Volition are considered, first, its subjective conditions, and, secondly, its objective conditions. The latter are said to be principally, (1) Developed Communication (the press, etc.), and (2) Association in meetings. Since it is our business to criticise and doubt, we ask ourselves whether this enumeration of the objective conditions evinces a thorough historical study. Volition is not desire nor passion; it is action. Now does history show that a passionate state of public temper is transmuted into volition by those two influences alone; or does it show that, upon the top of them, some startling act of apparent violence is usually requisite besides? Was our civil war brought from smoke to flame by the attack on Fort Sumter, or the Franco-German war by the supposed insult to the French Ambassador, or our difficulty with Spain by the destruction of the *Maine*?

Under the head of Coöperation, we note that Professor Giddings is not one of those who would make this the essential fact of society. But, on the other hand, neither is he one of those who conceive that it, like responses to stimuli, is divisible into the two grand divisions of coöperative volition and competitive volition, and who opine that these two are pendants to one another; roughly speaking, of equal importance in sociology. So far is he from accepting this view that no chapter of his book is devoted to competition. In all his pages there are but a dozen lines in which the word occurs, and there only as one of two topics. Is this factor of human society, then, not worth any special study? The nature of coöperation is analyzed and found to involve four factors—common interest, perception of what others are doing, intercommunication, and mutual confidence. Its causes are inquired into with the result that men first find that they are virtually coöperating, and then do deliberately what they began to do instinctively or accidentally. Other influences, however, are recognized as secondary. Coöperation is found to have four forms. Two are simple—that in which all do the same thing, and that in which there is division of labor. Two are complex; but the definitions are not very clear, and the division, though possibly useful, is somewhat artificial. Perhaps we should say that the line of demarcation is artificial; for two classes may be as really separate as two branches of a tree, and yet it may be equally impossible to find any real defining line between them. Distinctions in the extent of coöperation are noticed, as well as the distinction between public and private coöperation.

There follows a somewhat elaborate analysis of the work of coöperation. The practical activities of a social population are said to have four modes, Appreciation, Utilization, Characterization, Socialization. This had been said in an earlier chapter. Appreciation is liking or disliking a thing. By Characterization is meant adapting ourselves to things; by Socialization, adapting ourselves to our social environment. Now, granting that this is a good division of the results of our activity, can it be truly said, or not, that these four results of activity give rise to four forms of cooperative work? To make this out, the author first defines Culture as the coöperative development of appreciation. We must all admit there is such a thing. Perhaps it is what is commonly called fashion or the prevailing taste of an historic period. Professor Giddings says there are three orders of ideas belonging to it—the linguistic, the animistic, and the scientific. Apparently, this is where Science is pigeon-holed in his scheme of society. But if there be anything more distinctly foreign to science than another, it is appreciation, in the sense of liking or disliking. The scientific interest of things disgusting is just as great as that of the most sugared sweets.

We now come to the third division of the chapter, on Modes of Concerted Volition. The like-mindedness is either Instinctive, Sympathetic, Dogmatic, or Deliberative. The instinctive is seen or read of in the squatter. Of the sympathetic, the subjective factors are said to be (1) impulsive like-response; (2) suggestibility; (3) reciprocal consciousness of kind; (4) the suggestions of shibboleth, etc.; (5) imitativeness; (6) contagious emotion. The objective factors are communication with physical conditions, and the crowd. Sympathetic likemindedness especially enriches cultural activities. It is manifested especially in panics, revivals, sympathetic strikes, riots, and similar phenomena. Dogmatic likemindedness is traditional, customary, and conservative. Its subjective factors are belief and deductive reasoning. Its objective factors are the communication of common beliefs and authoritative instruction. Its contribution to coöperation lies chiefly in its conversion of common ideas into differentiated traditions and of common activities into customs. It is marked by partisanship, reliance on legislation to regulate private conduct, deference to tradition, and some other phenomena. Deliberative likemindedness is characterized by critical thought and well-coördinated action. Its chief subjective factors are public opinion and inductive research. Its objective conditions are freedom of speech and of meeting. Without giving all Professor Giddings's items, we may sum them up by saying that he conceives that this kind of likemindedness brings rationality into every department of coöperative work. It is found in the most advanced modern nations. Now follow thirteen pages of tables of questions to be investigated as to the state of concerted volition in any society.

Finally, we reach the fourth division of the chapter, that on the Laws of Concerted Volition. The formulation of these betrays imitation of a bad model, that of Tarde, who is one of that well-known type of Frenchmen who copy the phraseology of mathematics, as if that possessed, in itself, a secret virtue of rendering vague ideas precise. Thus, we are told that "impulsive social action tends to extend and to intensify in a geometrical progression." Mathematicians, we are aware, speak of one variable increasing geometrically, while another increases arithmetically; but what (if anything) may be meant by saying that a quantity varies in geometrical progression without reference to any second quantity, we must confess transcends our powers to divine. Nor do we see that imitation can be so measured that it is worth while to attempt to say what the mathematical nature of the function is that connects it with another quantity. For the present, such ideas seem irrelevant. At any rate, the meaningless expression must excuse our suspecting that there is nothing more val-

uable beneath it than the simple remark that where there is a tendency to imitate, the imitation of imitations will multiply imitations. The second law is, that "Impulsive social action varies inversely with the habit of attaining ends by indirect and complex means." Here again, the language is to a mathematician repellent. Is anything more meant than the truism that when men are in the habit of acting reflectively, they are less under the dominion of impulse? If so, why should it not be expressed non-mathematically? So, likewise, why cannot a sociologist content himself with saying that, other things being the same, the older a tradition is, the more it overawes men, instead of laying it down that "tradition is authoritative and coercive in proportion to its antiquity"? The use of mathematical phrases in the other laws leads the reader to suppose a mathematical proportion is intended here. There are several other laws which the reader will find in the book. If this class of writers would study the mathematical theory of measurement — say, Clifford's 'Analytical Metric'—sufficiently to perceive how such talk as theirs must appear to those who understand what quantity is, we believe that all such phrases would disappear from their pages. Prof. Giddings's work would only be strengthened if this were done.

Perhaps there may be persons who do not reckon the syllabus as a distinct form of literary composition, but there is none which calls for a severer classicality, meaning by that the effect resulting from an abhorrence of the too much, and from long pondering every sentence, as if papyrus were costly and the use of the stylus laborious. It has been the mathematicians who have most excelled in it. A syllabus needs to be a feat of intellectual strength, under pain of sinking to an exhibition of a wooden model, less like science than a painter's mannikin is like a man, by far; for a mannikin may take an expressive pose. The specimen we have given will have convinced the reader that Prof. Giddings is a man of no mean analytic power. Such a scheme as he has drawn up will have its utility in the incipient state of sociological science, even if it is not what a syllabus of sociology ought to be. The index is like the book itself. It is not perfect; but it is much more than pretty good.

Scottish Men of Letters in the Eighteenth Century. By Henry Grey Graham. Macmillan. 1901.

It was the intent of Plutarch, as he tells us in beginning his life of Alexander, not to write histories, but only lives. For, he explains, the noblest deeds do not always show men's virtues and vices, but oftentimes a light occasion, a word, or some sport makes men's natural dispositions and manners appear more plain than the famous battles won, wherein are slain ten thousand men, or the great armies, or cities won by siege or assault. So Mr. Graham declares his aim to be not so much to give a history of the literature produced by Scotsmen in the eighteenth century as an account of the men who made it. In this undertaking he has been helped very little by such diaries and correspondence as abounded in England and have enabled us to reconstruct the social life of that age, for the Scots were not addicted to diaries, and if letters were written, few were preserved.

Nor is much to be gained from biographies, for those who wrote them thought it beneath the dignity of literature to mention such trivialities as Plutarch eagerly caught up. Dugald Stewart wrote the Lives of Reid, of Robertson, and of Adam Smith; but he was careful not to draw their frailties from their dread abode, and disclosed their merits only in sounding platitudes and stately periods. Even in 1811, when the relatives of Dr. Carlyle of Inveresk thought of publishing his autobiography, which is a mine of instructive gossip, "they were discouraged by those whom they consulted—Adam Ferguson among the number—on the ground that the incidents and anecdotes were too unimportant to interest the public." Adam Smith, it is true, said in his lectures on rhetoric that he was glad to know that Milton wore latchets in his shoes instead of buckles; but this Plutarchian touch must have offended the pedantic taste of the day. Fortunately, before it was too late, the artificial proprieties of Lord Kames ceased to shackle literature, and a few inquisitive spirits rescued some of the oral traditions, which, like the old ballads, were on the point of sinking into oblivion. What was thus preserved Mr. Graham has cleverly sifted and assorted to make this entertaining volume.

It must be said, however, that he goes rather too far in omitting the noblest deeds and dwelling on the "light occasions." It is well enough to describe the clothes, the gait, the manners, the foibles, the personal oddities and defects of by-gone worthies; but more than this is necessary to understand a "character." Mr. Graham is very rigorous in his exposure of corpulency. Some of his heroes were indisputably gaunt; but he eagerly notes all tendency to adipose deposit, and "paunchy" is his favorite epithet. We are told much about Hume; but the chief impression that we receive is that he was fat. On page 35 he is called "the obese philosopher"; at page 36 he is "becoming fatter"; he is "portly"; his "physical exuberance" is to pass into "unwieldy corpulence." At page 39 he has a "broad, fat face," and his corpulence is "vast." On page 42 we read of his "bulky body," and on page 43 of his "unwieldy self." At page 45 he is a "portly man"; at page 46 he is "ponderous"; his face is "broad and fat," his person "corpulent"; he distributes "fat, amiable smiles." His face continues "broad" on the next page, on the next he is "ponderous," then he is a "corpulent pagan," then he is "fat," and his "fatness" and "corpulence" are again referred to, as well as his "huge paunch" and "ponderous frame," and at last the grave closes over his "huge, corpulent form." That should end the matter, but when he is mentioned in other parts of the book we have to be reminded of his fleshiness.

This illustrates the vice of Mr. Graham's style. Often he fails to be sympathetic and appreciative because he is trying to be effective. He has a jaunty, superior manner, and looks down on his subjects with amused and sometimes contemptuous condescension. He has acquired Macaulay's tricks of style, and it is no more than fair to say that he does the tricks nearly as well as his master. Nor can we deny that he is graphic; his pictures of individuals and of society are vivid and impressive. After we overcome our annoyance at his affectations, we are fairly captivated by his entertaining stories, his incisive criticisms, his lively descriptions. Never was there such an age for "characters"; uniformity was not expected, nor even conformity. Every one was poor, and even those who passed for rich lived on incomes which day laborers would now think meant starvation. The muse was cultivated literally on oatmeal, and little of that; although drink was a prime necessity. With a moderate excise and active smuggling it was abundant, and was, according to our standards, almost the only luxury of the time.

The housing of the better class was mean, gloomy, and cold, and the general filth was appalling. To get a suit of clothes was the event of a lifetime, and people could no more vary their raiment according to fashion than leopards can change their spots. It signifies much when men can count on finding their friends wearing the same coats for years, and every coat as distinguishable as the features of the wearer. It means that men have opinions and habits of their own, and care not whether they suit the prevailing taste. Even George III. could appreciate sturdy individuality, and we are ready to forgive the awful misdeeds enumerated by our forefathers in justifying the Declaration of Independence, when we read of his message to that Jacobite of Jacobites, Laurence Oliphant, the laird of the "Auld House of Gask" and father of the gifted Lady Nairne: "The Elector of Hanover presents compliments to the laird of Gask, and wishes to tell him how much the Elector respects the laird for the steadiness of his principles."

None of these sketches is better than that of Lord Monboddo, whose whims were only less amazing than the sincerity with which he believed in them. He was to be seen in court, sitting among the clerks, having quarrelled with his fellow-judges because they had found against him in a case wherein he was personally interested. He held that all knowledge was of Greek origin, and, following ancient customs, daily anointed himself with oil, after bathing; the latter practice being as much out of vogue with his contemporaries as the former. Carriages and sedan-chairs being unknown to the Greeks, he would not enter them, although if it rained when he came out of the Parliament house, he would put his wig into a chair and walk by its side. He held to our descent from simian ancestors, questioning travellers as to their meeting with survivals of the lost appendage, and even watching at bedroom doors, when children were expected, to catch the midwives snipping off their tails. He was well mated on the bench with Lord Hailes, who once dismissed a cause because a document had the word "justice" spelt without the final "e," and with Lord Hermand, who would smite his bosom as he gave an opinion, exclaiming: "My laards, I feel my law—I feel it here." Worthy of their company was Lord Kames of the 'Elements of Criticism,' who was interested in everything from law to letters, and so devoted to agriculture that he allowed a pet pig to sleep in the same bed with him. His industry and inquisitiveness never flagged, and two days

before he died he declared that he was eager to be away, because he was exceedingly curious to learn the nature and manners of the other world.

The most interesting of these sketches are those which deal with the less famous men. Hume, Smith, Boswell, and Burns have been abundantly described, and we are glad to read of the minor but not less remarkable characters whose works have passed almost out of recollection. Thomson and Smollett are treated with really sympathetic appreciation, and Robertson, Hutcheson, Ferguson, Macpherson, and others are well portrayed. The chapter on "Women of Letters" is capital, although these women were as careful to avoid fame for their writings as the men were to win it. Lady Anne Barnard has lately been revived in her letters from South Africa; but Lady Griselle Baillie, Mrs. Cockburn, Jane Elliot, and Lady Nairne deserve to be remembered with her.

We have not hesitated to complain of some of Mr. Graham's faults, to which we must add a vexatiously meagre index; and he has perhaps told nothing that other writers had not told before. But he has chosen, culled, and condensed with excellent judgment and with really admirable skill. We owe him hearty thanks for a very entertaining book about a number of the most interesting characters of a most interesting period. Whatever the future may bring forth, we shall not see such men and such times again.

Fame and Fiction: An Enquiry into Certain Popularities. By E. A. Bennett. London: Grant Richards; New York: E. P. Dutton & Co.

Mr. Bennett pursues his interesting and timely inquiry in a series of short articles which are not sedate enough to be called essays, but are lively, peremptory, pointed, altogether in the best style of literary journalism. His gravity is often captured by irony and converted into gayety; he is perfectly sensible, and sometimes witty. His first article, entitled "The Average Reader," sets forth the chief aim of his work, which is, "to explain to the minority why the majority likes or dislikes certain modern novelists." He imagines a reciprocal attitude, the smaller faction arrogating to itself a monopoly of "artistic feeling," refusing to consider the tastes and sympathies of the larger, which becomes, in consequence, defiant and bitterly resentful of leading-strings. His benevolent purpose is to readjust the minority's point of view, and to bring about a compromise whereby the multitude may be detached from its Miss Corelli and its Mr. Silas Hocking (the most popular novelist in England), and gently led—towards whom? No living novelist is definitely named as the goal of progress, but there is no doubt that to Mr. Bennett's mind that desirable position is at present adequately filled by Mr. George Moore, whose 'Mummer's Wife' is described as "more than a masterpiece—one of the supreme novels of the century."

Though Mr. Bennett's notion of a great public ranged to defend to the death its cherished purveyors of fiction seems to us heated, his intervention is proffered in an excellent spirit. It is a pity that his analysis of the "average reader" does not promote confidence in a happy result. The best he can say for this composite person is that he is unaffected and honest in his preferences, and can never be driven to buy a book because those who pretend to a superior taste say he should. Additionally to his credit, it is affirmed that he demands imperatively some "central righteousness"—a vague phrase, which, whether it be taken to imply mental or moral virtue, we are not able to perceive conspicuously shining in many of the objects of his delight. Mr. Bennett's spirits perceptibly rise when he abandons the ground of reasonable presumption and speaks as one having conviction about the defects of the average reader. We learn that he has some of the instincts of the untutored savage, "loving noise and glare and crude sentiment; that he hates to have the basic ideas of his existence disturbed," and is so dull that he doesn't know when he is bored. But what seems to us to make him a hopeless object for artistic missionaries, however resolute, looking upward and onward to Mr. George Moore, is, that "he has no sense of beauty—that is, beauty of form. He ignores it not only in imaginative literature, but in every art and in life. The most atrocious ugliness does not annoy him, and he has a blind spot in his eye for beauty."

Thus, almost vindictively, does Mr. Bennett vitiate his own plea, and when he announces triumphantly that Mr. Moore's artistic ideal, with its incorruptible and implacable perfection, is "positively distasteful to the English temperament," he gives his case for compromise away. An artistic minority struggling to overcome national temperament shows itself bold but not wise. The attempt has been made several times in England, in more than one art, and we think it has always failed. The greatness of English literature abides in the matter rather than in the form, and a conceivable novelist, with a conscience not so exclusively artistic as Mr. Moore's, would, we think, be a more hopeful instrument, or bait, for attracting the Average Reader. We cannot see the slightest chance for a compromise to be based on the agreement of a British public to accept ideals and methods which are French to the point of servile imitation.

Mr. Bennett's conclusion, that the public demands sincerity in its novels, and can easily detect fraud, is not infallible. The public that makes ostentatious popularity has only recently learned to read, cannot think, and wants both to be diverted and to be informed. It is just in the condition to be taken in by clever, unscrupulous jugglers who have gauged its capacity and guessed its desire. To-day, to have ability for combining a story with incorrect information about history, or science, or society, or a future life, is to be potentially a popular novelist; but by the middle of the century this state of things will have changed. Labors of a regenerating minority are not to be despised, but it should not insist too much; it must give the people time.

Japan: A Record in Colour. By Mortimer Menpes. London: Adam & Charles Black; New York: Macmillan.

To attempt to transfer one's impressions of a country and people so distant both in space and in the inheritances of civilization as are the Japanese, by means of one hundred colored sketches or pictures, is the bold enterprise of an artist. No doubt, in foggy and sooty London, this book will stir up objectors and unbelievers. Nevertheless those who, from years of residence, can recall both the variety of the coloring and the richness of nature in this ocean-girdled land of mountains and valleys, will heartily appreciate Mr. Menpes's attempt to tell a story in colors. One may be inclined to consider the text somewhat in the light of rhapsody, but will be slow to charge exaggeration upon these pictures.

This English artist, as we remember well, was in no hurry when he came to Japan. He took his time, he dwelt among artists and artisans, he found out where the fountains of artistic power were, and where the streams of appreciation of the beautiful among the lowly ran. He saw that the native finger, predestinated to do fine work, matched the head, able and trained to think out artistic surprises; and that continual observation of nature was the secret of the freshness and absence of monotony so characteristic of the work of the Japanese artisan. He realized also the depth of rascality to which the Japanese shop-keeper can normally descend, especially when he has the conceited, the blatant, and the purse-proud for his game. The end justifies the means, it is argued, for the bland native, assuming innocence or ignorance, dearly loves to take down the lofty alien. Mr. Menpes also discovered, what is patent to one dwelling among the Japanese artisans, gardeners, painters, children, and even geisha of the old school, how intensely the love of beauty is part of their lives.

Some of the mistakes in the text, due, perhaps, to imperfect hearing, or possibly to a delight in orthographic mutiny, are very amusing, as are also some of the artist's prejudices against Americans, and his occasional little preachments and moralizing, when he reminds one of a spoiled child. Yet these slight blemishes do not for one moment militate against the fact that he has in this book given us a wonderfully true and fascinating picture of Japan. Of the general trustworthiness of his statements there can be no reasonable doubt. From beginning to end, there is a childlike delight in the ways of the working people, who toil with head and hand to make the land they live in lovely, every object of use comely, and their surroundings attractive.

Of course, the attempt to put his original paintings into page spaces of five by four inches is much like that of breaking up grand oratorios into hymn tunes and the melodies of street songs. Nevertheless, the delicacy, richness, and brilliancy of still life are here wonderfully reproduced. Besides being a joy in themselves, these drawings stimulate the delights of memory. Whatever exaggeration there may occasionally be in the text, Mr. Menpes has not overcolored his pictures, nor has he failed to be realistic in rendering the countenances of his human subjects. He has not attempted to make his *mousmes*, or peasant girls, too exalted, or his babies and little folks too wise-looking, or his artisans too remote from common and even sordid care, while yet showing the joy which not only lightens but sweetens their toil. His chapters on the drama, on art

in practical life, and on gardens, besides the very suggestive one on "placing," will be approved even by the most sober critics who know the facts. If, in treating of the geisha, he walks in the broad road with the mob of writers on Japan, and overstates perhaps, one is less inclined even here to find fault with him because his comments, criticisms, and even appreciations are not those of the globe-trotter or the mercantile traveller, but of the true and genuine artist. The work is a veritable triumph of expression by means of most appropriate media.

School Architecture: A General Treatise for the Use of Architects and Others. By Edmund March Wheelwright. Boston: Rogers & Manson. 1901.

Mr. Edmund M. Wheelwright became known as the official architect of the city of Boston, not merely by the excellence of the buildings which he designed, but by his fearless honesty in everything connected with their erection. During his tenure of office it was his duty to design and supervise the erection of many schoolhouses, and he acquired in this way, as well as from his general practice, a knowledge of school architecture that has enabled him to speak with authority in his recently issued work bearing the above title. The fact that a book comes from a recognized expert is by no means an assurance that it will treat its subject satisfactorily. Too often the expert fails to get beyond the limits of his own experience or prejudices; he cannot see his subject whole. But in the present case there is no such trouble. It is not a view of school architecture in Boston or even in the United States that Mr. Wheelwright gives us, but rather a view of typical examples of the schools of most of the countries in which public education is well developed. He displays the plans of a very large number of schools, so arranged and so connected by the text that the reader is able quickly to grasp the typical solutions of the schoolhouse problem to which the system of any of the more important countries has given rise. Thus, for instance, in dealing with German schools, we have first a few words on the origin and history of the system and on its present condition, an enumeration of the sundry kinds of schools in use throughout the Empire, and finally examples of each of these, with intelligent comment and explanation. Similarly, but in a less extended way, France, England, and Scandinavia are treated, and finally the United States, to the schools of which more space is given than to those of any other country. The division of the work is not, however, purely geographical, since it is the elementary school in various countries that is first considered, then the secondary school, and finally manual-training schools, mechanic-arts high schools, and training schools for teachers.

At the end of the section devoted to elementary schools, Mr. Wheelwright institutes some interesting comparisons between those of our own country and those of Europe; and because the elementary schools are frequented by far more pupils than all other schools put together, and because it is on them that our whole educational system rests, it will be interesting to review the deliberate judgment of our author regarding them. He selects for his comparison the best examples, the most recent types, whether at home or abroad, and very properly neglects antiquated or discredited systems. In the matter of equipment for gymnastic exercises, for bathing facilities, for instruction in cooking, and in manual training, he finds that American elementary schools are not generally as well provided as are those of Northern Europe, or even of England. The feature of the school garden, already widely in use in Northern Europe, is practically unknown in the United States. In the area and treatment of their playgrounds, American schools are deficient when compared with those of Europe. On the other hand, however, in our elementary class-rooms, we allow a greater floor area per pupil and a greater number of cubic feet of air per pupil than are found in those of any other country. Excepting, perhaps, in the Swiss and in a few recent English schools, American practice provides an ampler supply of warmed fresh air and larger ducts for ventilation than may be found elsewhere. In the best American examples a more satisfactory provision for the disposal of outdoor clothing is made than is the case anywhere except in Switzerland and Scandinavia. A more generous provision of individual desks for pupils is made in America than in any other country.

In one very important way, Mr. Wheelwright finds our elementary schools inferior to those of Europe, and that is in the matter of the distribution of daylight in their class-rooms. In Germany and in Europe generally it is very properly held that light, while abundant, should be admitted to the class-room only from the left of the pupils. Now light, even under such high ceilings as are usual in school-rooms, will not carry satisfactorily in a room wider than twenty-four feet. At the same time a limit of usefulness is soon reached in the length of the room, beyond which pupils are so far from the teacher as to be out of control. It follows, therefore, if the class unit is fixed at a high number, that either efficient control by the teacher or the proper diffusion of light must be sacrificed. In America, since the unit of elementary classes is generally fifty-six pupils, it has been found necessary to make the width of rooms twenty-eight feet, resulting, except in corner rooms, in a dark area along the hall-side of the room, and, in corner rooms, in the introduction of windows in the wall opposite the teacher—a practice as fatal to the teachers' eyesight as would be the use of windows in the opposite wall to that of the pupils. This is a state of affairs over which our architects have manifestly no control, and until our system is modified by the adoption of a class unit of forty-eight or, better, forty pupils, we cannot hope that, in the very important matter of their lighting, our schools will compare favorably with those of Europe.

Mr. Wheelwright's book is intended not alone for architects, but for all who are interested in the deeply important problem of the proper housing of schoolchildren.

The Art and Craft of Garden-Making. By Thomas H. Mawson, Garden Architect. London: B. T. Batsford; New York: Charles Scribner's Sons. 1891.

Of the making of gardens there is no end; neither is there any end of the making of books about gardens. Among the latest is this by Mr. Mawson, an Englishman—or, rather, the second edition of it, for the first edition was soon exhausted. The author treats his subject from the point of view of the professional garden architect. He holds the happy medium between the extreme formalism of the architect's garden and the complete formlessness too often characteristic of the landscape garden. He deals with such subjects as the choice of site for a garden and the way to treat it, of fences and gates suitable for parks and gardens, of gateways, carriage courts and drives; curbing the fancy of the artist with the practical experience of the engineer. To flower-gardens he naturally gives large space, for gardens are the heart of his matter. Such useful things as kitchen-gardens and orchards do not escape his attention. Thus, from a brief outline of its contents, it will be seen that his work is devoted to the design of gardens and of the surroundings of houses rather than to horticulture; yet that side of the subject is not entirely neglected, since the various trees and flowers grown in Great Britain are treated in some concluding chapters.

The essay, though it lacks high inspiration and delicate touch, fills a useful niche, and is on a far higher plane than the literary output of the average landscape-gardener. Mr. Mawson shows himself in sympathy with the best, both of the old methods and of the new, nor is his work as an artist without its own peculiar attractiveness. His volume is well illustrated—here by photographs of existing gardens, there by pen-and-ink sketches or perspective drawings. In brief, 'The Art and Craft of Garden-Making' is one of the best among recent publications of its kind.

James McNeill Whistler: The Man and his Work. By W. G. Bowdoin. M. F. Mansfield & Co.

The author of 'The Gentle Art of Making Enemies' is the reviewer who could best do justice to the above work, and to his tender mercies we should like to recommend it. Like "Rusty Christopher," Mr. Bowdoin "mingles praise and blame," and it is his praise that we should expect Mr. Whistler's delicate temper to find the more intolerable. In its externals the book is got up to resemble its hero's own publications, but the resemblance does not extend to the writer's style. Imagine the fastidious Whistler reading such sentences as this: "It is but a portrait, and yet it conjures up all that is finest in a young girl, and renders the composition most satisfactory, and makes of it one that is seldom equalled and more rarely excelled." Or this: "While Whistler's art has immortalized Chelsea, the works of both Rossetti and Swinburne have not had similar and appreciable inspiration thus."

One more paragraph we are tempted to give in full, as a sample of both style and reasoning. It is as follows:

"It is possibly as an etcher that Whistler has received the apogee of appreciation and acceptance. There is, it must be said, a

strength of contrast in mere black and white, which when skilfully arranged, combined and massed, in light and shade, and that which is intermediate, produces, at least under the inspiration of the Whistler needle, an art result in an etching that is, generally speaking, more readily accepted by the masses than is the work into which the more elaborate and more intricately complex element of color has been introduced. When one has revelled in admiration for black and white and studied the charm that is inherent, the way is somewhat prepared for the better and more ample understanding of the subtleties that belong to color. The portrayal results that lie within attainment grasp are very great. There is a brilliant firmness and emphasis of touch compassed by the etcher and his lines. They frequently suggest far more than they directly reveal, all of which easily spells fascination to a larger extent even for the observer who entirely lacks art education, and is minus advanced culture, than is the case with more elaborate essays in color and color combination."

Why one of the seven plates should be devoted to a photographic portrait of Lady Eden it is difficult to see.

Samoa, Bismarckarchipel und Neuguinea: Drei deutsche Kolonien in der Südsee. Von Ernst von Hesse-Wartegg. Mit 36 Vollbildern, 113 in dem Text gedruckten Abbildungen, und 2 Karten. Leipzig: J. J. Weber. 1902. 8vo, pp. viii, 329.

Seventeen years ago Germany suddenly proclaimed a protectorate over a large part of New Guinea and the archipelago of New Britain. This action was not taken in order to defend other neighboring German territory, or because of great commercial interests in these regions, for none existed, but simply in a fever for colonial expansion to forestall its annexation by Great Britain. If Prince Bismarck was also actuated by a belief that there was great natural wealth in these tropical lands which would speedily be developed by his enterprising countrymen, he was grievously disappointed. The German nation has remained not only without interest in but profoundly ignorant of its South Sea colonies, and the Government has systematically neglected them since they have proved, instead of a source of wealth, merely an additional burden upon the Empire. The estimated revenue for 1900 was in round numbers $18,000, the expenditure $200,000. There seems to be no inherent reason, however, why New Guinea should not prove as profitable a possession as Java, if the right means to develop its resources are taken. To show this, and also to arouse the interest of his countrymen in the little isolated band of officials, traders, and missionaries on these lonely shores, is the main object of the book before us. Herr von Hesse-Wartegg brings to his patriotic task well-trained powers of observation, gained from extensive travel, and considerable descriptive ability. He has been thoroughly conscientious in his work also, for to inform himself of the conditions he visited nearly every place in the two colonies, however remote or difficult of access, where a white man was stationed.

His starting-point was Singapore, and he calls attention to the fact that the voyager from the East, after leaving the Moluccas, finds no trace of the white man until he reaches the German station, Berlinhafen, a thousand miles distant. In the western half of New Guinea, over which Holland has claimed sovereignty for three-quarters of a century, there is not a white settler nor a Government representative, and during the four days' steaming along its shores, not even a canoe was seen. In Kaiser Wilhelm's Land, as the German colony is called, there are seven trading and mission stations, which are struggling for existence under great difficulties, the chief of which now are the remoteness from a market and the scarcity of labor. The cultivators of the tobacco, cotton, and coffee plantations are Melanesians and Chinese, the few natives being averse to any work save the gathering of cocoanuts. Our author was most impressed with the remarkable beauty, surpassing anything he had ever seen elsewhere, of the neighboring colony, Bismarck Archipelago, as New Britain has been renamed, and expresses his surprise that these "island paradises" should still remain far aside from the stream of world travel. The inhabitants, who are addicted to cannibalism, are apparently of a higher degree of intelligence than the Papuans, and many interesting particulars are cited in respect to their life and peculiar customs. The music of several of their songs is given, doubtless on the assumption of their being characteristic. Two of the Samoan, however, are unmistakably revival tunes taught the islanders by the missionaries. The Germans are slowly forming friendly relations with these people, and Hesse-Wartegg was one of the Governor's companions on a first visit of white men to the island of St. Matthias. The ship came to anchor at nightfall off the shore, and, in order to detect any hostile designs of the natives, a searchlight was cast upon the beach and adjacent water.

"When the blinding white light fell on the dark, mirror-like surface of the sea, there sprang from the illumined circle thousands and tens of thousands of frightened fishes seeking with great leaps refuge from the strange disturber of their rest in the dark water beyond. Their bodies shone and glistened like electric lights, and the falling drops as well as the upspringing spray of the agitated sea glowed like a continuous shower of diamonds in indescribably dazzling beauty. . . . On the disappearance of the fish from the lighted spot, it was only necessary to turn the ray upon another place to produce the same spectacle. Now here, now there, now in the immediate neighborhood, now in the far distance, the spectral illumination was repeated to our unwearied gaze."

These islands are subject to frequent earthquakes, and the natives have a remarkable prescience of their coming. In the early morning of September 11, 1900, the whites at one of the stations saw the natives rushing from the bush to the sea without any apparent reason. For nearly two hours they stood waist deep in the water, and then the shock, of which they had had mysterious warning, came.

At Samoa our author is on comparatively familiar ground, but he has much that is interesting to tell of his excursions to the different German stations, and of the impression which the attractive natives made upon him. In describing their habits and social customs he offends, at least in one instance, against good taste by giving unnecessarily minute details. Another blemish is the bitter anti-English spirit manifested throughout, which would be amusing if it had not its serious side. He continually resents the prevalence of "Pidgen-Englisch," and impliedly finds fault with the English and American missionaries, who have been laboring in these regions for half a century, because they teach in English and not in German. He actually accuses those in Samoa of "spreading the belief among the natives that England would reconquer Samoa as soon as the South African war was ended." For the French Roman Catholic missionaries, on the other hand, he has nothing but commendation for their self-denying work. The first two questions which the colonists put when a ship arrives are, "Have the Navy-Increase and Colonial Bills passed? Have the English had more trouncings from the Boers?" This hatred, born apparently of simple jealousy of England's success in colonization, has not prevented the Germans from imitating English methods. In these colonies there is little or none of the despotic militarism which chokes the growth of German East Africa. The few officials have great freedom of action, due largely to the fact that it takes four months to communicate with the home Government and get an answer, even by cable. A very great obstacle to the substantial growth of the colonies, to which repeated reference is made, is the unwillingness of the German women to share in the toils and privations of the men. In the three colonies, containing some five hundred Germans, mostly young men, there were, at the time of our author's visit, only two German women; in Samoa, not one.

A most instructive feature of this entertaining volume is the beautiful illustrations, which enable one to form the best possible conception of the appearance of the natives, their houses and customs. They also show very effectively the marked distinctions of type between the brutal Papuan and the beautiful and intelligent Samoan, and fill one with astonishment that such differences could exist between people living in almost the same conditions. There are some excellent maps showing each mission and trading station, and in Samoa the lands belonging to the different companies. We have noted a slight error in the account of the Solomon Islands, which were discovered, not, as is stated, in 1566, but in 1568.

Chapters on English Metre. By Joseph B. Mayor, M.A. Second edition, revised and enlarged. Cambridge (Eng.): University Press; New York: Macmillan. 1901.

The first edition of this book (1886) we reviewed in the following year. We are concerned here with chapters vii., xiv., and xv., which are added in the second edition. Chapter vii. consists of the examination and criticism of two recent metrical systems. The former is that of Mr. Robert Bridges in his 'Milton's Prosody' (Oxford, 1893); the latter, that of Dr. Skeat on the Scansion of English Poetry, in the Transactions of the London Philological Society for 1897-1898 (pp. 484-503). These two systems are taken up, scrutinized, weighed, valued, and, one may say, disposed of. Mr. Bridges possesses much insight, fine feeling for the verse he expounds, and unquestionable comprehension of Milton's subtler beauties in handling the heroic line. This chapter leaves our admiration for Mr. Bridges's qualities undisturbed, but makes it difficult, if not impossible, to have any

faith in the system which he has devised for expressing his ideas of metrification. Dr. Skeat is handled more roughly. His system is riddled; we might almost say it has been demolished by the hot shot of these strictures. Even more, we are left little regard for his capacity to discriminate between the rhythms of English verse, and less for his feeling for the poetic lilt of admirable lines.

Dr. Mayor has not merely the appearance of entire fairness in what he says in this chapter; fairness itself is manifest throughout, and many of his utterances are admirable, as, for instance, on page 104:

"The type of the metre is ascertained, like a botanical or anatomical type, by comparison of a large number of recognized examples. It is the musical air or theme on which different variations are composed. It is Plato's one in the many, the permanent in the changeable, the persistent background in the mind of the poet and the reader."

Chapter xiv., on Shelley's metre, exhibits the results of careful study, guided by sound sense. Read understandingly, it will be for any beginner an adequate introduction to the study of English verse. A questionable device in scanning is the dissyllabizing of such words as "dares," p. 245, and "tears," page 251. At one point only does the analysis fail. No writer on English verse has yet acknowledged the existence in English of pæonic rhythms. Not recognizing that such is the cadence of the stanzas considered on pp. 251, 252. Mr. Mayor naturally fails to detect and explain the nature of their movement—very tumultuous and varied, indeed; but quite obvious when one has the key.

Chapter xv., on the hexameter and pentameter, is scholarly and satisfying. It does not, to be sure, give an opportunity for trenchant crispness like that of chapter vii., nor does it attain to the well-rounded completeness of the chapter on Shelley. Yet it has some delicious bits, as when (p. 284) we read of dactyls "woolly with harsh elisions." It is surprising that Mr. Mayor considers the fine free hexameters of Swinburne's 'Hesperia' to be "metre . . . not dactylic, but anapæstic"; still more astonishing that he takes them for elegiacs (pp. 292, 293). But this is a small matter, whereas, taken as a whole, this book, of all existing works on English versification, is the most helpful, the sanest, and the best.

The Golden Poppy. By Emory Evans Smith. Palo Alto, Cal.

This book, devoted to the State flower of California, is unique in conception and execution. So far as we know, it is the first attempt to present a full popular account of the artistic capabilities and of the characteristic features of a State floral emblem. The author secured the active service of a hundred willing hands. Some of the scientific helpers brought to him their contributions as to the earliest history, the distribution, and the chief botanical peculiarities of Eschscholtzia, the golden poppy. They have given even a copy of Chamisso's original sketch and of the Latin description, and have traced, in an extremely interesting manner, the course pursued by the first comers, who were either too far south or too far north, perhaps, to see the wonderful bronzing of the hills. Professor Rattan says:

"The first European who came anywhere near the region of Eschscholtzia was Cortez, who visited the peninsula of California in 1534. It is scarcely possible that he saw our plant. Cabrillo, the Portuguese, may have seen it when he landed at San Diego, in 1542; but it is not likely that he knew it from a buttercup. Thirty-seven years later, Sir Francis Drake may have crushed Eschscholtzias when he landed on this coast. It must have been two hundred years after Drake's visit that civilized people—the founders of our first missions—began to notice our State flower, and to talk about it under some Indian name or one of their own making."

And so on down to the coming of the poet, Chamisso, the first botanist who described the plant.

The different species of the genus and the allied genera are indicated with sufficient fulness, so that the book is really a good short treatise on the Californian poppies generally. The giant poppy, the cream-cups, the tree-poppy, and Canbya, all find due place. The author has succeeded in giving, by his fine plates, a clear idea of the vastness of the prodigal wealth of bloom, in its season, and shows how prominent a part the flower plays in the scenery of certain portions of the State. He has been equally fortunate in obtaining photographs of single flowers and in the application of their distinctive features to decorative purposes. Our readers will be surprised at the effects which the dissected foliage and graceful curves of all parts produce, and at the skilful way in which the artistic elements are handled.

The literature is represented, also, in a fairly well-proportioned way (no doubt a most difficult bit of editing), and poems are contributed from many sources, all of which indicate at least the devotion of the people to this interesting blossom. The quatrain, by Philip Morse, which closes the book, shall also close our notice:

"When Israel's captain bade the sun stand still,
Loosed from the orb a million flakes of flame
Were wafted down on meadow, vale, and hill;
And so to earth the golden poppy came."

ELEMENTARY EXPERIMENTAL CHEMISTRY

By W. F. WATSON, A.M.,

Professor of Chemistry and Biology, Furman University, Greenville, S. C.

"It is modern and sound and will form an excellent introduction to the study of chemistry, as it combines theory and practice in wise proportions. The illustrations not only add much to the attractiveness of the book but also to its usefulness."—Dr. CHARLES E. MUNROE, *Dean of Columbian University.*

"It is a most admirable text-book; one of the best, in fact, we have ever seen on the subject. The scheme of illustration can be highly commended, and is on an entirely new plan. Instead of scattering cuts through the text as heretofore, there are twenty full-page cuts, showing all the apparatus and chemicals used in the experiments, giving the student a comprehensive view of the subject. The text is clear, concise and admirably written."—*Scientific American.*

12mo, cloth, xvii+320 Pages. 20 Full-Page Illustrations. Price, $1.25 Net.

A. S. Barnes & Company, Publishers, 156 5th Ave., New York.

VOLUME FIVE

OF THE

New and Scientific in Plan, Scheme and Representation

The History of the World

Edited by DR. H. F. HELMOLT

ARRANGEMENT OF MATERIAL.—Classified from a purely geographical point of view. *Constructed on an entirely new plan and widened conception.* Over thirty thousand titles in the index.

COMPREHENSIVE, UNIVERSAL.—No race or tribe of man or link in the chain of reciprocal influences is omitted. Every fraction of humanity, every nation or country, even the remote isle, is included. *It is not merely the entrance to but the temple of history.*

MATERIALS SUITABLE to the MAGNITUDE of the UNDERTAKING.—The materials now possessed for the study of the political history, the ethnology, the languages and the culture of all nations, are *ample and incomparably better* than those at the disposal of earlier historians.

AUTHORITATIVE.—More than thirty of the world's best historians were engaged in the preparation of this work. It will be accepted as the *supreme authority.* "Each of these volumes—indeed each of their chapters—will be found to *illustrate the advantages enjoyed by the scholar of to-day.*"—*James Bryce, D.C.L., LL.D., F.R.S.*

STYLE.—*Full of brightness and charm of presentation.* No invention of fancy or legend or fiction more enlivening or entertaining.

SPECIAL INTRODUCTORY TERMS.—Ask for special terms as a reader of *The Nation.* The special reduced prices will be withdrawn as soon as the work is complete.

Eight Royal Octavo Volumes, including about 40 maps and 250 full-page illustrations, many in colors.

Illustrated booklet of sample pages free on application.

Text-Books of Real Importance

THE HISTORY OF ENGLISH LITERATURE

By William Vaughn Moody and Robert Morss Lovett, of the University of Chicago. 12mo; about 450 pages. (Ready April 22.)

An account of English letters covering especially the period from which requirements are taken for college entrance examinations. Besides giving secondary school students a correct understanding of the origin and meaning of English literature, the book is designed particularly to place before them in perspective the greater personalities and their significance. There are admirable discussions of Spenser, Shakespeare, Milton, Dryden, Pope, Wordsworth, and the Georgian and Victorian poets and novelists, with full commentaries and reviews of their more important work. The bibliography is more comprehensive, complete and practical than that in any other similar book, and will be of inestimable value to teacher and pupil. The whole undertaking is one greatly to be welcomed for its scholastic excellence and for its utility to the teacher.

GOVERNMENT IN STATE AND NATION

By J. A. James, Ph.D., Professor of History in Northwestern University, and A. H. Sanford, M.A., Professor of History in the Stevens Point, Wis., Normal School. 12mo; 383 pages. $1.00 net.

The authors have endeavored to present to teachers of Civil Government a book on the same plane with the best texts in History, Literature and Science. Emphasis is placed upon the *actual workings* of the government in its various departments, and prominence is given to *practical problems* of local government, such as arise in connection with elections, trials, taxation and the like. The Suggestive Questions in connection with each chapter, and the multitude of references, giving not only title of book or magazine, but the exact page, makes this an improvement over other texts on the subject.

The Outlook says of it: "Fine in plan, in style, in scholarship, and in spirit. In treating every subject there is not only information as to how affairs are now being managed, but as to how progressive men think they should be managed, and there is also a bibliography referring to the best things to be read about it both in books and magazines. An admirable piece of work."

ELEMENTARY PHYSICAL GEOGRAPHY

An Outline of Physiography. By Jacques W. Redway, F. R. G. S. 12mo; with maps and colored plates; 383 pages. $1.25 net.

This is an *Elementary* book; it is designed for high, normal and secondary schools and not for the college and university student. Thought questions, individual exercises and field work are abundantly provided. The author's familiarity both with educational and geographic science makes the book unusually strong.

Has displaced every other text on the subject in one place or another, and is everywhere giving the best of satisfaction.

Journal of Education says: "Nowhere have Mr. Redway's knowledge and skill appeared to better advantage, to say the least, than in this book. The analysis of the subject is remarkably clear, scientific and usable; the arrangement of each chapter is pedagogical, with exercises and questions admirably prepared. The wealth of material is specially noticeable. In the final twenty-five pages are given the industrial regions and interests of the United States."

REDWAY'S COMMERCIAL GEOGRAPHY

IN PREPARATION.

Recent Educational Publications

THE AMERICAN FEDERAL STATE

A TEXT-BOOK IN CIVICS FOR HIGH SCHOOLS AND ACADEMIES.

By ROSCOE LEWIS ASHLEY. Cloth 8vo. **$2.00** *net.* (Postage 15c.)

"Admirably planned and well executed, . . . it covers the whole domain (of civics) with a thoroughness altogether remarkable."—THE OUTLOOK.

AN ELEMENTARY BOOK ON

ELECTRICITY AND MAGNETISM AND THEIR APPLICATIONS

A TEXT-BOOK FOR MANUAL TRAINING SCHOOLS AND HIGH SCHOOLS, AND A MANUAL FOR ARTISANS, APPRENTICES AND HOME READERS. Cloth, cr. 8vo. **$1.40** *net.*

By DUGALD C. JACKSON and JOHN P. JACKSON (Postage 16 cts.)

Prof. of Electrical Engineering, Univ. of Wis. Prof. Elect. Engineering Pa. State College.

Clearly stated, fully illustrated, and following a rational order of sequence, very nearly the same as the order of discoveries and industrial applications.

A LABORATORY MANUAL OF PHYSICS

FOR USE IN HIGH SCHOOLS

By HENRY CREW, Ph.D., Professor of Physics in Northwestern University; and ROBERT R. TATNALL, Ph.D., Instructor of Physics in Northwestern University. Cloth, 12mo, Illustrated, **90 cents** *net.* (Postage 11 cts.)

"It is an excellent book in every way."—Prof. E. H. LOOMIS, Princeton University.

THE ELEMENTS OF PHYSICAL CHEMISTRY

By HARRY JONES Cloth, 8vo. **$4.00** *net.*

Associate Professor of Physical Chemistry, Johns Hopkins University. (Postage 23 cts.)

"The first thorough and complete treatise on physical chemistry that has appeared in the English language, . . . it possesses almost fascinating interest for those familiar with the principles of chemistry, physics and electro dynamics."—*Electrical Review.*

Standard Works of Reference

Cyclopedia of American Horticulture

Edited by L. H. BAILEY, assisted by WILHELM MILLER and many expert Cultivators and Botanists. 2,000 pp. with 2,800 illustrations. Four Volumes. Cloth, **$20** *net;* half morocco, **$32** *net.*

"In range, treatment and editing, emphatically useful—worthy of ranking by the side of the Century Dictionary."—*The Nation.*

A Dictionary of Architecture and Building

By RUSSELL STURGIS, Author of "European Architecture," etc.

And many Architects, Painters, Engineers, and other Expert Writers, American and Foreign.

"The work shows a well-studied scheme and careful, conscientious execution by able hands. It is one of great magnitude, and will prove a most valuable contribution to the professional and technical literature of the language."—*Architects' and Builders' Magazine,* New York.

Three volumes, super royal 8vo, cloth, **$18.00** *net;* half morocco, **$30.00** *net.*

Dictionary of Philosophy and Psychology

Edited by J. MARK BALDWIN, Ph.D., Stuart Professor of Psychology, Princeton Univ., with an international body of collaborators.

Three vols., $15.00 *net;* **Vols. I. and II., $10.00** *net.* **Vol. I. Ready.**

A dictionary containing concise definitions of all the terms in use in the whole range of philosophical study and such historical matter under each term as may be necessary to justify the definition given.

Dr. RAND, of Harvard University, has prepared selected BIBLIOGRAPHIES (comprising the material included in the third volume of the above) which may be ordered separately at **$5.00 net.**

Books published at NET prices are sold by booksellers everywhere at the advertised NET prices. When delivered from the publishers, carriage, either postage or expressage, is an extra charge.

THE MACMILLAN COMPANY, 66 5th Ave., New York.

The Nation.

NEW YORK, THURSDAY, APRIL 10, 1902.

The Week.

President-elect Palma explicitly declared, in his address to the Chamber of Commerce, on Thursday, that the tariff measure for Cuba proposed by the Ways and Means Committee "will in no way afford any relief to the present distress of the Cuban producers." This is in line with his article in last week's *Independent*, in which he asserts that, with anything less than 33 per cent. reduction on Cuban sugar, "the attempt, for us, is hopeless." With that our own Military Governor, Gen. Wood, agrees. He publicly stated, before leaving Washington the other day, that the 20 per cent. reduction would not do. Yet no larger concession will a Republican House grant, and then only after endless wrangles and delays, and with most onerous conditions attached. Already, too, the Senate is preparing to loiter about the business in its most approved fashion. Indeed, Senator Burrows is now urging the President to have the whole thing put over till next December, with a commission of Congress to be appointed to ascertain "the facts." But it is not facts that Congress lacks. Leadership and consistency are what it wants, with the courage to legislate for a dependent people, instead of for Oxnard. Meanwhile, the country has grown exceedingly weary, not of the well doing of Congress, but of its doing nothing at all; and in place of our old fine glow in behalf of the wronged Cubans, we hear it muttered that they always were a nuisance anyhow, and are now a set of unblushing beggars. It is American protectionists who say this now. It used to be the Spanish protectionists who said it. But we heroically freed Cuba from *their* oppression.

We congratulate the infant and struggling Beet-Sugar Trust on its flattering financial statement covering the past year's operations. An increase in gross profits of $185,853 over the previous year, on a product more than doubled; the most rosy estimates for "the campaign of 1902," and not a word about any danger of competition by Cuban sugar, or fear of what Congress may do—can the Oxnard who lays all this good news before the world be the same friend of the beet who is striving at Washington to show that he will be a ruined man if Cuban reciprocity prevails? It must have been some nefarious use of a proxy that attached his name to this annual report. As it stands, it is a document as awkward to the rescuers of the imperilled beet as was that famous Oxnard-Cutting circular maintaining that beet sugar could be profitably manufactured in this country, even if Cuban sugar were to come in absolutely free.

The Oleomargarine Bill has passed the Senate by a vote of 39 to 31. It is an application of the principles of "protection" to our internal trade, and it is capable of indefinite extension. The pretence originally set up against oleomargarine that it was injurious to health has been abandoned, but not without a struggle. The creameries and the manufacturers of "process butter" clung to the theory that oleomargarine was a deleterious compound until they were thrown out of court by their own witnesses, the experts of the Department of Agriculture. The regulations and the Government inspection which have been enforced for several years past have had consequences the very opposite of what were intended by the promoters. They have improved the quality of oleomargarine, and they have given it reputation and popularity which it would not have gained so soon or so easily in any other way. This warfare against it has advertised oleomargarine throughout the world as a wholesome and cheap article of diet to millions of people who would never have thought of eating it if its merits had not been thrust before their eyes and dinned in their ears through successive sessions of Congress. According to the testimony of the anti-oleomargarine Senators, this "fraudulent butter" has become so popular that its sale is increasing, in spite of the most stringent laws of the several States. Hence the necessity of new and severer laws on the part of the Federal Government.

The law provides that any person selling oleomargarine and furnishing it for the use of others, except his own family, who shall mix with it any artificial coloration that causes it to look like butter, shall be held to be a manufacturer of it, and shall be subject to the tax provided by existing law; that upon oleomargarine colored so as to resemble butter a tax of 10 cents a pound shall be levied, but upon oleomargarine not colored the tax shall be one-fourth of one cent per pound; that upon adulterated butter a tax of 10 cents a pound shall be levied; and that upon all process or renovated butter the tax shall be one-fourth of one cent per pound. The only article in the list that is really injurious to health is "process butter," which is a mixture of old and new butter, sweet and rancid butter, chemicals, salt, and coloring matter, produced largely in various parts of the country. This stuff is taxed only one-fourth of a cent per pound, and there is no prohibition of artificial coloring matter. Any amount of deception may be employed to work this off upon the public, but if any person colors oleomargarine which is perfectly fresh and sweet he must pay a tax of 10 cents per pound.

The American sailor suddenly took a hand in the discussion of the Chinese Exclusion Bill in the House on Monday. An amendment was offered to exclude Chinese sailors entering American ports on American ships. This seems logical. If Chinese competition is too strong ashore, it must also be on shipboard. Moreover, here was a direct way to aid the American sailor, for whom the shipping interests have such a tender concern—when they are asking for a subsidy. Curiously enough, however, they strenuously objected to this form of Chinese exclusion, saying that it would compel them to transfer their vessels to the British flag. The amendment was adopted by the House, nevertheless; but it will probably be squeezed out before the bill finally gets through Congress. Yet it has served to display, in a strong light, the sincerity of the subsidy-seekers in their assertion that their hearts bleed when they think of the American sailor, and that the high wages they desire to pay him explain their raid on the Treasury.

The Chicago *Tribune* animadverts on a clause in the Ship-Subsidy Bill which was offered as an amendment by Senator Hanna just before the passage of the measure in the Senate. It is at the end of section 17, the last one in the bill, and in these words:

> "Nothing contained in this act, or in any other act of Congress, shall be construed to prevent any citizen or corporation of the United States or of any State from contracting for, acquiring, holding, or operating any interest in one or more steamship lines engaged in foreign commerce; but no foreign-built ship of any such line shall hereafter be admitted to American registry."

This amendment was adopted without debate. The Chicago *Tribune* thinks that it is intended to open the way to the purchase and control of foreign steamship lines by American railway companies, and to exempt them from the provisions of the Sherman Anti-Trust Law. This would seem to be the effect of the words employed, since the exemption is made applicable to former acts of Congress, as well as to this particular one. The Chicago *Tribune* rightly calls it a dangerous and audacious proposition.

The *Tribune*, by the way, has been a consistent and untiring opponent of the bill from the beginning, and has rendered conspicuous service to sound principles

of government by repeated exposure of its swindling features. Its Washington correspondent has made an informal poll of the House, and finds that if the bill were brought to a vote at the present session, it would be defeated, and that in the short session beginning next December it will meet the cold shoulder of Speaker Henderson and other House leaders, who will find means to stave it off altogether. The Washington bureau of the New York *Herald* reaches the same conclusion, after a personal canvass of the House. It quotes the opinions of Hepburn and Cousins of Iowa, Corliss and Smith of Michigan, Crumpacker and Robertson of Indiana, Mann of Illinois, Loud of California, and Cushman of Washington, as strongly opposed to it, either now or at any other session. Congressman Bartlett of Georgia is quoted as saying that "Speaker Henderson will not allow it to come to a vote," but, of course, that must be a mere guess. Gen. Grosvenor, the champion of the bill in the House, made the remark, according to the *Herald's* correspondent, that "all he hoped for this session was a report from the Committee," but it seems doubtful whether even this can be obtained.

Signs of doubt and hints of heresy, on the subject of protection, have long been multiplying among its supposed beneficiaries, but few declarations in favor of a modified confession of protectionist faith have been more frank and decided than those lately made public in a number of letters from manufacturers to the editor of the *American Machinist*. They embody the views of some fifty-eight leading makers of machine tools, and may be taken as the fruit of the business experience of men employing more than 21,000 artisans, and with more than $35,000,000 of invested capital. Of the fifty-eight who were willing that their views should be put into print, no less than thirty-eight endorsed, without qualification, the opinion as to the necessity of reciprocity treaties laid down by the late President McKinley in his last speech at Buffalo; seven approved it with some qualifications, and none disagreed. Thirty-four openly acknowledged that on their own products they need no protective tariff, while only two asserted that there is still such a need. On the question whether to modify or do away with the present tariff on machine tools, there were forty-two for and but three against a change. Thirty-eight expressed the belief that the tariff now in force restricts our foreign trade in machinery.

Hardly less revolutionary are the reasons assigned by the manufacturers for their present belief. Conditions, they make bold to pretend, have changed. "We have largely outgrown the need" of protection, says one; "it is already beginning to hamper and injure our industries by retarding the growth of our foreign trade." Another adds, "We are out of our infancy as a manufacturing country, and have very few industries that cannot stand alone. What we want is markets, not protection." Protection is but "a course of training for that industrial and financial battle for the world's supremacy which it is our determination to win." Says one letter: "The alarm about the tariff is an inheritance which became rooted at a time when conditions were almost directly the reverse of what they are to-day." Labor is no gainer from protection, believes a Philadelphia manufacturer of gear-wheels. "Tariff can protect only investors of capital. Labor cannot profit by it, for it tends to increase wages only in the measure in which it tends to increase prices." So the comments run. Gentle or harsh, the criticisms passed on existing laws are manifestly the result of no idle web-spinning, but rather the product of long and often costly experience in broad commercial fields. Yet to champions of the so-called American system, this practical repudiation must seem both unkind and ungrateful.

Senator Hansbrough on Monday week introduced an amendment to the Army Appropriation Bill which provides one million dollars for the construction of post exchanges—that is, recreation buildings for army posts. In a letter to the *Evening Post* which has been widely copied, Capt. Edward C. Brooks of the Eleventh Cavalry urged, some months ago, that just this action should be taken by Congress as a means of keeping the soldiers contented, without the sale of intoxicating liquors by the Government. Hitherto one of the strongest arguments for the canteen has been that out of its profits billiard tables, reading-matter, gymnasium outfits, etc., could be purchased for the use of the enlisted men. At the same time the desire to make a good showing along these lines has led many a canteen officer to allow indiscriminate and excessive drinking, to the detriment of the morals of the troops. Gen. A. S. Daggett is another officer who has been urging that the Government should supply a post club out of its own means in the interest of temperance and morality. Indeed, Senator Hansbrough's proposal will have the endorsement of men of both schools in the army—of those who favor the sale of beer, and of those who are opposed to it on principle and in practice. It is an interesting fact that some of the officers who have recently returned from the Philippines are not nearly as enthusiastic about the canteen as they were.

In the matter of army promotions to generalcies, President Roosevelt has had to choose between two classes of candidates—those who are comparatively young and still vigorous, and those who are near retirement and worn out by forty years of service. It has been his desire, where possible, to put young and vigorous officers in responsible positions—men who could be counted on for at least ten years of energetic service, and who were in hearty sympathy with the progressive ideas which have come to prevail in the War Department under Secretary Root's régime. On the other hand, Mr. Roosevelt has recognized the desirability of rewarding men even at the close of long and faithful careers, and this feeling dictated the promotions last week of Brig-Gen. Hughes and Cols. De Russy, Burt, and Sheridan. Gen. Hughes's service in the southern Philippine Islands is still fresh in mind. In recognition of this and his approaching retirement for age, he was jumped over five other generals. Cols. De Russy and Burt were the senior colonels of infantry, and Col. Sheridan the ranking officer in the Adjutant-General's Department, next to Gen. Corbin. It is expected that all of the new brigadier-generals will shortly retire at their own request, thus leaving the President free either to promote and retire other old officers, or to fill their places with some of the younger men who have come to the front since 1898. Congress has, however, shown little sympathy for the former procedure, on the ground that it rapidly loads up the retired list with officers of high rank. Singularly enough, it does not object to a similar process of weeding out the older naval officers now going on right merrily, any more than it does to putting numberless loafers and deserters upon the pension lists. The promotions made last week stimulate the hopes and ambition of every officer by demonstrating that long and faithful service will not be overlooked.

Secretary Shaw's proposed regulations for the inspection of baggage belonging to returning American travellers probably go as far as is possible under the law. His plan is, in the first place, to hand each outgoing tourist a circular, fully setting forth the statutes as respects duties and declarations. Then the repatriated American is to pack his trunk so that the dutiable goods he has to declare will be on top and ready to the inspector's hand. That official is to credit the passenger's oath, to collect duty only on the articles declared, and to refrain from delving into trunks except in cases where the service has information that smuggling is being attempted. Even then the examination is to be conducted on a part of the dock screened off from the public, so that the spectacle of baggage gutted as by looters, and underwear flung about the pier, will no more remain as the first introduction of foreigners to Ameri-

can official delicacy. Mr. Shaw is to be highly commended for having so far listened to the prayer of the ladies who have been memorializing him for a modification of the existing barbarous regulations. He has acted like a man of sense; and if Congress would only muster an equal amount, and return to the McKinley baggage law altogether, a national reproach would be removed.

If Boss Platt was to be canonized at all, it cannot be denied that the "Amen-Corner" tributes to him on Friday last were paid with fitting accompaniments of harlequin and circus clown. Mr. Depew, in his character of machine jester, thought it infinitely amusing to tell the company how Platt absorbs all the powers and perquisites of that Senatorship which he contemptuously flung to "Our Chauncey," as a cook would throw a crust to an importunate beggar. Ex-Gov. Black joined the merry-making with a handsome certificate to Platt as the boss who "never betrayed," and whose position was "never in doubt." This came trippingly from the tongue of the man who, in 1897, told all the world of Platt's treachery to him and treason to the party. But the greatest mirth-producer of them all was Secretary Root, who, amid screams of laughter, we should suppose, produced a "glowing eulogy" of Senator Platt. The aim of the speakers seemed to be to see who could most completely throw decency and character to the winds. First prize should go to Secretary Root, so far as we can make out from the report of the speeches in praise of a man whose political influence he has himself declared to have been wholly bad.

More complete details of the election in Chicago on April 1 indicate that the outcome may well be regarded as highly gratifying to the friends of good government, there and elsewhere. Unfortunately for the general understanding of the result, the Chicago correspondents insisted upon "featuring" in the early reports the reëlection of that bizarre character, "Bath-house" John Coughlin, whose absurd notoriety throughout the country furnished a pretext for headlines dear to the yellow heart. The fact is that the Municipal Voters' League went into the eight supposedly hopeless wards, and, out of the eight, succeeded in defeating four of the notorious corruptionists of the Board of Aldermen. On account of these efforts, and the excellent results in other parts of the city, three-fourths of the members of the new Board of Aldermen are men who have either already behaved with credit in the Council, or who have such a standing in the community as to afford a reasonable presumption that they will work in the public interests. Not the least of the causes for joy over the result is the final abolition of the township system that existed within the city, which has been a source of endless scandal. Altogether the League has a right to congratulate itself. As a result of more than six years of persistent fighting, it has carried the city safely through a critical period of its history, and the outlook was never brighter than it is to-day.

That "British camp" near New Orleans, which the Governor of Louisiana excitedly reports to Secretary Hay, must be peopled by ghostly visitants from the graves in that vicinity which Andrew Jackson filled with British soldiers. If the British Government is buying horses and mules and fodder and provisions in this country, it is acting perfectly within its rights, as are those American citizens who embrace the opportunity to dispose of their produce to a good cash purchaser. In order to ship horses and cattle, there must be some sort of place to receive and keep them, and to call it a "camp" does not make it a military occupation of our soil by a foreign Power, as Gov. Heard seems to imagine. Nor in all this is there any violation of our neutrality laws. Americans could even sell munitions of war to Great Britain, and this Government could not interfere. A naval or military expedition fitted out on our shores against a foreign country we should be bound to prevent; but the rest is simply lawful commerce, which it is our duty to protect, not suppress, and the British Minister is justified in asking, as he is said to have done, that his agents in Louisiana be protected in their lawful pursuits.

That extraordinary human document, the last will and testament of Cecil Rhodes, is based upon a single idea—the advancement of the English-speaking race towards the domination of the world. It is needless at this time to discuss this theory of a conquering Anglo-Saxondom. It is a political axiom which we utterly distrust, and we recall who it was that told the first earth-dwellers, "Ye shall be as gods." Mr. Rhodes never learned that this was rather a temptation to mankind in general than a promise to the Anglo-Saxon race. What he has done is to endow lavishly upwards of a hundred scholarships at his own university, Oxford. This shows, to begin with, the confidence of a very shrewd and absolutely unsentimental promoter of vast financial schemes, in what is usually regarded as a dilettante and ultra-academic education. Mr. Rhodes believed that leaders of men like himself were best bred among the leisurely studies and the frank comradeship in sport of the English college. That he had in mind a kind of moral efficiency, rather than mere intellectual alertness and culture, is shown in the very curious provisions under which the beneficiaries of his scholarships are to be selected. To intellectual capacity only a minority account of four-tenths is to be allotted; the remaining six points are based upon love of sport, "manly qualities, and moral force." One can see here an echo of Mr. Rhodes's own academic career, and the desire, natural and even pathetic, to create strenuous passmen after his own image. The assignment of two scholarships to every State and Territory of the United States is the most striking feature of the plan. It is an inspiring idea, to bring together in the close companionship of English college life, an élite of American and English students. One may doubt that such association will produce numbers of Cecil Rhodeses for the militant purposes of the two great English-speaking nations, but one cannot doubt that it will lead to a greater friendliness between two nations which should be friends.

Every one is delighted to find that Lord Rosebery's name leads the list of trustees, even if it appears somewhat incongruously upon the same board with Dr. Jameson and Mr. Beit. At Oxford there is naturally only one voice—and that of commendation. But the Masters of the various colleges are beginning to ponder the practical implications of this astounding gift. The aristocratic Christ Church practically warns off all Rhodes Scholars unless they are willing to spend the whole of the $1,500 stipend in term time—an interesting, because unconscious, opinion as to the average cost of living at this famous college. New College and Magdalen, which divide with Christ Church the honors for numbers and social prestige, have not been heard from. All Souls', which, by deed of foundation, accepts only four undergraduates, is not affected by the new dispensation. Balliol, from a scholar's point of view the foremost of the Oxford colleges, is friendly to the project. In general, it may be said that Oxford, and especially the smaller colleges, will welcome the Rhodes Scholars heartily. No thoughtful educator will fail to see, however, that there are great practical difficulties in applying to candidates the kind of tests which the will stipulates. The authorities of the Oxford colleges also remind the public that the Rhodes scholarships, as is almost inevitably the case with this form of benefaction, add to the charges of the colleges without supplying sufficient additional revenue. In general there is a large idealism and, possibly, impracticability about the bequest, surprising in view of Mr. Rhodes's great practical achievements. Dealing with these high questions of education and of international conciliation, he leaves the somewhat pathetic impression of one who "wanders in a world unrealized." But let our readers turn to our London letter.

SINCERITY WITH CUBA.

All public policy ought to be sincere and straightforward, but there are peculiar reasons why our dealings with Cuba should be free from the suspicion of tortuousness. In addition to the special and solemn obligations which we took upon ourselves in regard to that island, at the beginning of the Spanish war, we have a very delicate political and governmental problem on our hands. We are proposing to solve it by one of those legal fictions so dear to the Anglo-Saxon mind. Cuba is to be treated as if she were independent; yet we all know, and the Cubans know, that it is only a quasi-independence that is in contemplation. The American protectorate over the island is not to be declared, but is to be tacitly exercised nevertheless. Obviously, the relations of the two countries, under such circumstances, will have to be very circumspectly managed and nicely balanced. This makes the case one for absolute good faith and proceedings, within the limits mutually agreed upon, entirely above board. Failing such a course, there will be certain fiasco.

We rehearse these simple truths merely in order to apply them to the latest proposal respecting Cuba. Admiral Bradford has returned from his naval survey of Cuban harbors, and is to urge our Government to demand a naval station at Havana. The reasons he gives are partly based on that "high-priori" naval strategy into which the mind of the awe-stricken layman cannot, of course, pretend to venture. But his excuse for passing by the magnificent harbors of Guantánamo and Nipe sounds very much like the argument of one who asks, with Franklin, why man is a reasonable being unless for the purpose of inventing a reason for what he wants to do. It seems that in neither of the otherwise perfectly satisfactory sites would "labor be available in time of peace" to erect the necessary shops, docks, etc. Therefore, concludes Admiral Bradford, Havana must be the naval station which the Cubans, under the Platt amendment, are to be asked to sell or lease to the United States.

Now, what are the objections to this proposal, and why should the President overrule it at this time? We pass by the large question of transcendental naval strategy, simply remarking that, if the President and Congress were to let the strategists have their way, we should soon fall to fortifying every spare island in the seven seas, and should have frowning fortifications on every headland. It is enough to point to the exceptional circumstances at Havana which make this particular scheme wholly inadvisable. Strategy is all very well, but statecraft is something higher; and unless Mr. Roosevelt wishes to see the Cubans wrought to a high pitch of suspicion and distrust and cynical despair, and to have his whole Cuban policy put in imminent peril, he will quietly order Admiral Bradford to pigeon-hole his report on Cuban coaling and naval stations.

Why the demand for a naval station at Havana would appear to the Cubans to be an outrage, is clear to any one who looks at the situation as they must view it, and as the Havana press pictures it from day to day. The natives remain, in spite of all we have said, and notwithstanding all our Presidential proclamations, highly incredulous about our withdrawal from Cuba. They doubt if our flag over Morro Castle will ever come down. What would they say if it did come down, only to be run up again a little further around the bay over an American naval station? They would call it a trick, a cheat, an insult; and the look of the thing would justify such language. In the very issue of the *Tribune* containing Admiral Bradford's cool proposals, appears a letter from a Havana correspondent showing how inflammable is Cuban public opinion on this question. President-elect Palma has protested against a naval station at Havana, and "in this," says the correspondent, "he is sustained by so unanimous and so pronounced a sentiment that to attempt such a concession, after having once declared against it, would wreck his Administration."

In that single statement of fact, which is undoubtedly correct, the President would find his warrant in calling a halt upon our impatient naval strategists. To let them go ahead would be to doom President Palma to failure in advance, and if he fails, the announced American policy is also a failure. This is what we have to bear in mind. The Cuban question is, at best, intricate and delicate. The rôle we have undertaken is extremely difficult. For success in it, we require perfect sincerity and absolute truthfulness in all our dealings with the Cubans. If we attempt to be sly, to overreach them, to have unrevealed plans and purposes in the back of our heads, to drive a sharp bargain, to go upon the theory that they cannot be trusted, but that they will trust us no matter how circuitous a route we follow—we shall surely make a botch of it.

The Cubans need no instruction in craft and cunning from us. To undertake the astute and subtle line of policy with them would be as great a mistake as was the dispatch of Lord Palmerston's agent to Italy to teach, as Disraeli said, the countrymen of Machiavelli how to play the game of unscrupulous politics. If we have any hidden Jesuitical schemes concerning Cuba, we shall do ill to attempt to impose them upon the countrymen of Loyola and Molina and Suarez. They can give us points in double dealing and casuistry and beat us hollow. Our only hope is in simple faith and manly honor; and our Cuban policy can succeed only as the Cubans are convinced that we have those qualities and mean to act upon them. Our Cuban diplomacy will be wholly at fault if it resolves itself into "veiled menace or tart lecturing," and does not show itself, rather, what John Morley declares diplomacy to be at its best, when it is "the beneficent art of so reconciling interests, soothing jealous suceptibilities, allaying apprehensions, organizing influences, inventing solutions, that the world may move with something like steadiness along the grooves of deep pacific policy."

"LABOR" AND PRINCIPLE.

The late President McKinley was persuaded by the politicians of the Keystone State to appoint Mr. Terence V. Powderly to the office of Commissioner of Immigration. Powderly had been for some years the head of the organization styled the Knights of Labor. He was not known to possess any qualifications for the office for which he was named, but was believed to possess efficiency as a politician. Shortly after he assumed his new responsibilities at Washington he vindicated his reputation as a "hustler" by writing a letter to Mr. Thomas Fitchie, the head of the Immigration Office in New York, urging him to send his subordinate officer, Mr. McSweeney, to Connecticut to work for the President's private secretary, Mr. Porter, who was a candidate for the nomination for Governor of that State. The method by which Mr. McSweeney was to assist in this enterprise was original and interesting. He was to get Democrats to vote at the Republican primaries. The letter was as follows:

"TREASURY DEPARTMENT, OFFICE OF COMMISSIONER-GENERAL OF IMMIGRATION, WASHINGTON, D. C., AUGUST 5, 1898.

"MY DEAR MR. FITCHIE:

"I have just had a long interview with Mr. Porter, the President's private secretary, who is a candidate for Governor of Connecticut. He wants help to carry the primaries, and it is, in a sense, an Administration fight. In Bridgeport they have taken snap action in calling the caucuses for to-morrow night; this he did not know until after he arranged for the interview with me. Under the rules of the party in that State, this year, any one who 'believes in the principles of the Republican party and who will vote for the nominees' may vote in caucuses; and now to the point. Can you reach any one in that city who will assist Mr. Porter to-morrow evening? I know the time is short. The Mayor of Bridgeport, Mayor Taylor, is friendly to Porter, but he is a candidate. Can't Mr. McSweeney run over and get some of his Democratic friends to get into the caucuses and help our friends out? I make this suggestion, and ask you to do what you can. I am writing other friends on the subject. If you have any other one who understands Connecticut politics, who can be trusted, get him to work.

"With best wishes, I remain sincerely yours, T. V. POWDERLY."

We have the best reason to believe that Mr. Fitchie did not make to his subordinate, Mr. McSweeney, the suggestion which his chief, Mr. Powderly, desired, and that no steps were taken by the Immigration Office in New York

to pack the Republican primaries in Bridgeport with Democratic voters.

Other difficulties arose between Powderly and Fitchie, from time to time. About January 1, 1900, Powderly sent a certain George Sladovich to Ellis Island to serve as interpreter. Shortly after reporting for duty he gave evidence of being on terms of too great intimacy with shyster lawyers, ticket scalpers, and other harpies who infest the immigration station, and at the same time newspaper clippings and letters making complaint about his past life were received by Commissioner Fitchie. His appointment was a temporary one, and when the complaints became so frequent and so circumstantial, Mr. Fitchie wrote to the Austro-Hungarian Consul, asking him if there was any truth in them. After some delay, the Austro-Hungarian Consulate reported that Sladovich was, if not a criminal, a fugitive from justice. His temporary appointment being about to expire, the correspondence was transmitted to the Bureau without comment, and immediately Mr. Powderly commenced a series of letters in which the facts were distorted, demanding that Sladovich be continued in the service, and pressure was brought to bear to this end. A civil-service list of three names was received for interpreter in the Serbo-Croatian languages, which contained Sladovich's name. In reply to question 10, which relates to whether the applicant has ever been indicted for a crime, Sladovich falsely answered "No." These facts were reported by Mr. Fitchie to the Commissioner-General, with the request that the matter be reported to the Civil-Service Commissioners, and Sladovich's name crossed from the civil-service list; on which request no action was taken.

The next move was the receipt of a letter by Commissioner Fitchie from Mr. Powderly, enclosing a copy of the original transcript of court proceedings from Croatia, with a sworn translation made by Sladovich himself, in which it was made to appear that he was entirely innocent of crime, and that, while he had been indicted, the court had reversed itself and had given him a triumphant acquittal. This translation was found, upon examination, to be false; the very documents which he had submitted, when properly translated, showed that he had been convicted of a crime, with two others; that he had, with the others, been granted a new trial; that the two had remained and were reconvicted, but that Sladovich had fled from the jurisdiction of the court. Mr. Fitchie's response to this letter was an appeal to the Secretary of the Treasury, stating the facts, and asking him to protect him from such attempts to foist criminals upon the service. The only reply was a vague and indefinite letter from Powderly, which said that he was trying to do justice.

Subsequently Mr. Powderly got his man appointed inspector at New Orleans, where he now is. The inspector formerly in charge at New Orleans, Mr. John A. Wright, now stationed in New York, has stated repeatedly that one of his reasons for applying to be transferred from New Orleans was the action of Sladovich. A New Orleans paper recently stated that Doctor Sladovich had examined a ship with over 700 Italians aboard, and that not a single one had been held up. In view of the notorious fact that those Italians are sent to New Orleans who are afraid to pass the inspection at New York, and that the best Italian ship coming to this port always contains a certain percentage of immigrants who are not only held up, but finally deported, such a general delivery furnishes presumptive evidence that the immigration laws at New Orleans are not being enforced.

Meanwhile, the differences between Powderly and Fitchie have led the President to make a clean sweep at Ellis Island, by an infraction of the principles of civil-service reform which ought not to pass unchallenged. In order to get rid of McSweeney, the Assistant Commissioner, without giving reasons, it was necessary to take his place out of the classified service. That the good of the service was not promoted by this act may be inferred from more than one circumstance. If Powderly was an unfit man for his place, the fact that he was in a constant quarrel with Fitchie and McSweeney was creditable to them. It was presumptive evidence that they were doing right, and it pointed to the clear duty on the President's part to find out on which side justice lay, and to satisfy the public that he was doing right also. The regular and usual procedure in such a case, if the Ellis Island office really needed "cleaning out," would have been to remove the responsible chief of the office and put somebody in the place who would be the real head, and not, as was alleged of Mr. Fitchie, a mere figurehead. That could have been done without violation of the principles of the civil service to which the President has been so strongly committed in the past. Instead of taking this unequivocal course, the President first removed the office of Assistant Commissioner out of the classified service, then called for McSweeney's resignation, and appointed, or caused to be appointed, or intends to appoint, his own friend Murray to McSweeney's place. We know nothing against Mr. Murray, but his merits cannot render harmless the subterfuge to which he owes his appointment.

THE STEEL COMPANY'S FINANCES.

The quarterly report of the Steel Corporation reflects, as was to be expected, the great prosperity of the iron trade. The past quarter's profits, $26,200,000, are, it is true, the smallest of any quarter in the twelvemonth, but this was sufficiently foreshadowed in the January statement, where it was clearly pointed out that the closing of lake navigation cut off the company's mining and transportation earnings. The publication of this report gives occasion to speak again of the two important services which the company's management has rendered to sound finance. It might have suppressed reports, except when convenient to itself, leaving the public to imagine that October's $12,000,000 monthly earnings were to be indefinitely repeated. It might, in the language of the trade, have "forced the market," by joining hands with its only too willing competitors, and driving the price of steel and iron to figures which would have actually repeated last autumn's heavy profits. For either policy it might have found abundant precedent, but it rejected both. It adopted a form of statement of earnings far more complete than any which an industrial concern had previously ventured, and adhered to that policy in the face of decreasing monthly profits. It set its face steadfastly against the efforts of fellow-manufacturers who insisted, angrily and persistently, on putting up prices in full proportion to urgent trade demands. These are services to which, whatever occurs in industrial finance hereafter, the public should give generous recognition.

We have frequently pointed out that the more serious pitfalls in the way of this notable undertaking were financial, not industrial. The directors last week approved the proposition to issue $250,000,000 bonds, of which $50,000,000 go to raise money for needed improvement to the mills, and $200,000,000 to take up an equal amount of preferred share capital. As to the first appropriation, we have already expressed the opinion that the money should have come, in part at least, from the funds diverted into dividends on the common stock. The plan for converting one-fifth of the company's share capital into bonds, however, raises a more serious question. The main objection to this project has been tersely expressed by so sound and experienced a trade organ as the *Engineering and Mining Journal*, which remarks:

> "In a business which is subject to such fluctuations as the iron and steel trade, it is never wise nor safe to substitute fixed charges, which must be met, for dividend payments, which can be postponed in a bad year. This is an axiom which even so powerful a company cannot disregard."

The conversion of share capital into bonds is an experiment always to be undertaken with the utmost regard to future possibilities of diminished earnings, and to be rejected, in our judgment, unless circumstances make it imperatively necessary. Had there, for instance, been an adjacent property which the Steel Corporation absolutely needed for its business purposes, and had the money market been in such condition that the requisite capital could not be raised ex-

cept through the sale of bonds, we think the expedient would have been defensible.

But the Steel Corporation's proposed conversion is not a case in point. The $200,000,000 funded debt to be created adds not a dollar's worth of property to the company. It saves, undoubtedly, in annual outlay as compared with the fiscal year just closed. The transformation of two hundred million dollars' capital from 7 per cent. preferred shares into 5 per cent. second-mortgage bonds will save four million dollars annually to the company, so long as the dividend on the existing preferred share capital is earned. The directors were also careful to point out that conversion is not compulsory. No one who chooses to take his chances for future 7 per cent. dividends on his stock will be forced to accept a 5 per cent. bond instead. But that phase of the matter is, we should say, somewhat beside the question.

It is the financial wisdom of the policy, from a corporation's own point of view, which is under debate. The Chicago, Milwaukee and St. Paul Railway has outstanding upwards of forty millions' worth of 7 per cent. preferred shares. The conversion of this respectable sum of capital into 5 per cents would save $800,000 annually, and enable the company to pay nearly 2 per cent. extra on its common shares. Instead of proposing such a policy, even when the stock was selling at low prices, the company made some older mortgages convertible into stock, and has thus converted thirty millions of its funded debt in the past generation. The Chicago and Northwestern's $22,000,000 7 per cent. preferred stock would have offered a similar annual saving of some $400,000 through such a funding plan. The Lackawanna Company pays 7 per cent. on $26,000,000 common shares. If it had funded half of this capital into bonds at 5 per cent., it could obviously pay 9 per cent. on what was left. Why have these companies, with their shrewd and alert financial management, failed, in the numerous vicissitudes of trade and prices, to make use of this philosopher's stone of profit? If the expedient was wise for the Steel Corporation, surely the railway companies have been remiss in their duty to their shareholders.

We have had a number of striking illustrations, very lately, of the possibilities involved in such a policy. Each month emphasizes the conviction that these huge industrial corporations are experiments. We are confronted, on the other hand, with perfectly unmistakable evidence that the tendency of the time, in many quarters, is to fling aside all restraint imposed by the bitter recollections of 1893, and to pile up the liabilities of ambitious corporations as if the present industrial "boom" were to last for ever. We say, therefore, that, wholly irrespective of the result on the Steel Corporation's own finances, its move in this line is a very serious thing. There are interests to consider, it must not be forgotten, quite apart from the interests of the Steel Corporation's constituency. Glancing over the list at random, we can point out nineteen separate industrial companies, with aggregate preferred share capital of $238,000,000, every dollar of which draws 7 per cent. annual dividends, largely cumulative, and every dollar of which has as much *prima-facie* right to conversion into bonds as the Steel preferred. People who argue that the Steel Corporation's action, as ratified by its Board of Directors, will not exert a most baleful influence on these other corporations, show that they do not understand the history of American finance. For we wish to make this point emphatically, that the inducement to such conversion, in the case of a board of managers which suspects disaster, will be ten-fold greater than in a sound and solvent corporation.

ACADEMIC STUDIES AND DEGREES.

A Ministerial scheme for the reorganization of secondary education in France bears striking analogies to the recent development of collegiate training in this country. At present the secondary schools, which correspond roughly in their later years to our colleges, are conducted upon the principle of "bifurcation"—that is, scientific and humanistic studies are separated from the first, and each course has its appropriate degree—respectively, Bachelier ès Sciences and Bachelier ès Lettres. Practically, the latter degree has been the most valued; it has, in fact, been required for entrance into the liberal professions, and it carries something of the social prestige of the traditional degree in arts. Against this degree, with its requirements of the ancient languages and philosophy, the same complaints have been made that were used against the traditional college course in America—its impracticability, and its failure to recognize science and modern languages, with its lack of application to an industrial democracy.

Just how the French Ministry proposes to secure the "democratization" of secondary education is aside from our present purpose. Suffice it to say that the older scientific and modern-language courses are to be of seven years' duration, like the classical course; that each course is to be subdivided into periods of four and three years, so that those who have no marked scholarly capacity may withdraw with a sufficient general education, and even enter upon their professional studies, at the end of the first "cycle"; while those who continue to the baccalaureate degree may follow either the traditional courses in philology and philosophy, or reach the same goal after three years' study in the sciences and the modern languages. Criticism of a plan which resembles strikingly the American college course under the elective system, would point out the confusion of two wholly different kinds of education—one absolute and humanistic, one mediatory and utilitarian.

This confusion, if confusion it be, we have in practically every American college to-day. Wherever the elective system has been fully established we see, beside the students who follow "humane letters" in the old sense, and come out of college educated, to be sure, but unprepared for any particular profession, students who are following natural science to the practical exclusion of the so-called "humanities." These students are often in their upper-class years following strictly professional studies; in fact, the practice of several universities allows them to enter the professional school at the end of their junior year. Now, it is not the time to plead the cause of one education against the other, but it does seem fair that somewhere or other the difference of intention should be recognized. For centuries the degree of Bachelor of Arts has stood for disinterested and "clerkly" study, and there is a real confusion of ideals in applying this historic degree to a candidate who offers a modicum of modern languages and history to adorn a four years' period spent over a laboratory table. The training of such a student has been in science, and he is a Bachelor of Science. To call him otherwise is to class him where he does not belong.

We are aware of the theory of academic equivalents, which is fairly admissible for the university studies. President Gilman, in starting the "group system" in the undergraduate department of Johns Hopkins University, practically gave his assent to the theory that it matters little what is taught; much how it is taught. President Eliot of Harvard has forced upon this entire country, with something very like genius, his belief that all subjects of college study are of essentially equal educative value, so they be taught equally well. It is due to his influence that the colleges have generally yielded Greek, and are likely to yield Latin. He, too, is responsible for the tendency to crown the most diverse college courses with the single degree of Bachelor of Arts. With such an authority one differs with great reluctance; as against a condition which has pretty thoroughly established itself, one probably protests in vain. But it is well to see if a course in the humanities does not yet mean something, not necessarily superior to but different from the great variety of curricula which borrow its name and degree.

It is hard to see how any uniform style of nomenclature or any system of academic polity which treats different things as if they were the same, can

do away with the prime distinction between the humanities and the sciences—the studies that lead to knowledge of man, with the flexibility of mind which we call culture, and the studies that lead to knowledge of nature, with immediate practical efficiency. This is a very real difference which is in danger of being obscured. There is no true quarrel between the two ideals. The liberally educated man must in his own time and way become specially educated, and the specially educated man must in life, if not in college walls, seek his liberal education. Only it is absurd to take the two at graduation and affirm by the letters of their degree that both are liberally educated, when one is not.

It should not be forgotten that the degree of Bachelor of Arts has always been in its essence an aristocratic or, if you will, a "clerkly" degree. Until very recent times it has been sought after only by students who had in view the scholar's life or some learned profession. A state of things where the greater majority of Bachelors go into commerce or industry is of yesterday. The influx of those who brought no scholarly ideals and abundant practical needs has changed the whole aspect of college education. In many ways it has quickened it to new life, in other ways it has forced the changing of standards which should have been immutable. These new comers in the colleges were and are welcome. It was fitting that a democratic education adapted to their needs should be worked out, and that the traditional courses in humane letters should gain from this contact with actuality. The mistake was in allowing this new and democratic training to borrow the name and seriously affect the character of the course in arts. The two should have, as they do in several institutions, lived together each under its appropriate name and degree. As things go in our American society, only a few college-bred men are in any fair sense—only a few need to be—Bachelors of Arts. The great majority are Bachelors of Science or Bachelors of Letters, and the institutions which have the courage to call them so have severe logic on their side as well as common sense. The attempt in France or elsewhere to democratize the degree in arts, which is essentially aristocratic, must bring with it no small danger of "plebification."

MR. CECIL RHODES.

LONDON, March 27, 1902.

The death of Mr. Cecil Rhodes does not for the moment affect the situation in South Africa. So long as the war lasted, he was resolved to remain in private life, seeing no means of useful interference. But his departure is nevertheless a momentous event, for, had he outlived the war, he would doubtless have thrown himself into the task of pacifying the hostile elements in the country, and of trying to rebuild the shattered fabric of colonial government. He was by far the strongest personality in South Africa; and although the Dutch had become profoundly alienated from him since the raid of 1895, he had not abandoned the hope of recovering some measure of their confidence, and of inducing them to work in harmony with their fellow-citizens of English stock, as in the days when he was Prime Minister of Cape Colony. Personally, he liked the Dutch, for whose strength of character and sense of personal dignity he was fond of expressing his admiration. He was a strenuous advocate of colonial self-government, and would have done his best to secure its immediate restoration to Cape Colony. His disappearance may thus be regarded as a loss to the prospects, in no case very bright, of reconcilement in South Africa.

Cecil Rhodes was the son of a clergyman of the Church of England, rector of Bishop's Stortford, a small town half way between London and Cambridge. He was educated at the grammar school of the town, and is thus another instance to be added to the many which show how little ground there is for the notion, sedulously propagated and generally accepted by the English, that what is called a "public-school training" is specially favorable to the development of energy, boldness, and the talent for ruling men. His lungs were so weak that at nineteen he was sent to live with a brother in Natal, whence he presently drifted to the recently discovered diamond mines at Kimberley, and spent a number of years there acquiring "claims," and laying the foundations of his immense fortune, while returning from time to time to England to keep his terms and pass his examinations at Oxford. Ultimately he effected a consolidation of all the numerous interests at the diamond mines into one huge company, of which he became the ruling spirit, and turned to politics. His career thereafter is known to all the world.

The characteristic note of his intellect was its power of concentration. He had no very wide range of tastes and interests, nor did his mind play freely upon different subjects. It was absorbed by a few ideas, was accustomed to brood upon them, and was not easily drawn off, even in general society, to other topics. Literature and art seemed to have no great attraction for him. The only department of history which he cared for was the history of the Roman Empire, apparently because it touched his imagination and suggested to him analogies with the history of the British Empire as it has grown during the last two centuries. Indeed, he was so fond of it as to have special translations made for his own use of the works of those more obscure historians of the later imperial period who had not been turned into English; for though he had taken his degree at Oxford, he had no special turn for languages, and had allowed his Latin and Greek to grow rusty. But though he did not shine in general conversation, those who talked with him were always impressed by the force with which he spoke on any practical question. He had always formed his views for himself; he held them with tenacity; he stated them with an air of almost passionate conviction, reiterating them again and again in almost the same words, and seldom seeming to recognize the worth of any objections that might be brought against them. He could, when it was necessary, attend carefully to details and be patient in working them out. No such success as he achieved in business and (for a time) in politics would have been possible without a mastery of details. But he liked better to deal with large conceptions, and to dwell upon a few dominant facts or forces, as if these were the only things that needed to be regarded.

Though he sat for many years in the Cape Parliament and led it as Prime Minister, he lacked the ordinary accomplishments of the practical politician. He was a powerful rather than a persuasive speaker, and by no means skilful in debate; sometimes offending people whom he ought to have conciliated, and often blurting out opinions which it would have been prudent to conceal. His colleagues in the Ministry were always nervous when he rose, though his talent for going straight to the vital issues, and the force of his personality, made him effective. He might in this respect be compared to Bismarck (although the latter was a much greater master of expression), and while not an orator in the recognized sense of the word, he often struck out phrases of extraordinary strength and point.

Although Cecil Rhodes was a sociable man, hospitable and always surrounded by friends, his intellectual life was solitary and isolated. He did not seem to profit much by the counsel of others, nor indeed to feel the need of consulting others. He thought things out for himself, brooding upon them in a half-dreamy way, which seemed in contrast to the steady direction of his thoughts to practical aims. This habit constituted part of his strength. It gave his views consistency and solidity. He had reflected so deeply that he felt sure of himself, and was not easily turned from his purpose. But it had also a weak side: it gave him an undue confidence in his own star, a confidence fostered by the deference which he received from all those who surrounded him, among whom he found no equal. And by putting him out of sympathy with the persons he had to deal with, it affected his judgment. He was so self-absorbed as not always to foresee how his action would strike other people. There can be little doubt that the anger which the colonial Dutch showed against him after the raid of December, 1895, was not foreseen by him, and that, even as late as 1897, he expected to win over enough of their votes to recover his political position in the colony. Men far inferior to himself perceived that this was not to be hoped for.

This mistake—the capital mistake of his life—which brought his political career to a close, was largely due to a singular feature of his character. He had a clear view and a firm grasp of all material forces. He knew how to use money and how to appeal to men's interests; but he did not equally appreciate the influence of sentiment. He had carried the bulk of the colonial Dutch with him in his struggle against President Kruger, because the colonial farmers resented the tariff which the Transvaal Government had placed on their produce, and thus he had come to look upon the whole question as one of economic interests. When the racial feeling of the Dutch burst into a strong flame on hearing of the attack upon the republic of their

kinsfolk, and when this feeling continued to burn strong against himself, effacing from their minds the recollection of their old grudges against the Kruger Government, he was taken by surprise. A force was at work of which his philosophy had made but slight account.

It was said of him by one of his South African colleagues that, proud as they were of his abilities, and much as they found to like in his character, he had done something to lower the tone of their political life by his constant appeal to material considerations. Yet, highly as he valued money for the political uses to which it could be put, he had a soul above money, and never thought of turning aside from his larger aims in order to accumulate wealth. He had no taste for vulgar luxury, and spent little upon his own enjoyment. He was generous in his gifts, and lavish in carrying out any purpose which appealed to his imagination. Neither was there anything petty or malignant about his nature. He roused strong antagonisms as well as inspired strong attachments; but he did not seem to be moved by personal resentments, and would often speak in a genial and liberal way of those who had attacked or opposed him most bitterly. The love of fame and the love of power did no doubt largely influence his course, but they were not separated in his mind from the desire to extend the dominion and consolidate the power of England.

One of the most incontestable proofs that he had a kind of greatness is to be found in the sort of fascination which he exerted over most of those with whom he came in contact. He found it natural to lead and influence men because he had initiative. He made the impression of knowing exactly what he wanted, of knowing how he meant to attain it, of being quite determined to attain it by one means or another. His frankness and directness, which had something Bismarckian about them, heightened this impression. Nothing so much disposes men to follow as the self-confidence of a leader with a record of success. Cecil Rhodes did not boast, but it was easy to see that he had faith in himself.

He belonged to a type of man less common in modern times and civilized countries, because the conditions are less favorable to their development than they were in the Middle Ages or have been in Asia—the type which may be called in no unfavorable sense that of the Adventurer, the man whose imagination is fired by ambition, and whose power of seeing and grasping facts becomes effective by being united to boldness in execution. This type most usually appeared in war, and carried to greatness men whose talent lay in military leadership. Now it has other engines of power available. Mr. Rhodes is the first person who has conspicuously known how to use finance and financial combinations on a large scale as a means of attaining political power and pursuing large political aims. He is a new form of the type, a form suited to the conditions of a still undeveloped country like South Africa. Even those who censure some of his acts cannot but admit that his aims were not solely personal, that he was cast in a large mould, and that an unkind fate denied him the chance which he desired of retrieving the chief error of his life. He will certainly be remembered as one of the most striking and brilliant figures of his time.

THE AMERICAN ORIENTAL SOCIETY.

BOSTON, April 5, 1902.

The one hundred and fourteenth Meeting of the Oriental Society took place on April 3 to 5, under the auspices of the trustees of the Boston Public Library, who were good enough to lend the lecture-hall of the Library for the sessions of the Society. While the attendance was not unusually large, the number of papers presented (over sixty altogether) exceeded precedent, and it was necessary to cut down some of the communications to the shortest measure consistent with a clear explanation of the contents, in order to allow any time for discussion between the papers, to each of which in any circumstances a scant quarter of an hour is allotted.

As usual, the papers fell into two main groups, Aryan and Semitic; but there was also a sprinkling of information interesting to both sides, which fell gratefully upon the specialists present. A refreshing study of this sort was one by Dr. Scott, on the Owls and Parrots of Polynesia, from which, although political questions are by mutual consent usually not discussed in the meetings of the Society, allusions to the Eagle also were not omitted, but they were inserted so delicately that neither Imperialist nor anti-Imperialist felt offended at the happy comparison of that bird's expanded wings to these Expanded States. From Manila itself came a letter acquainting the Society with the fact that a number of valuable manuscripts written by the Spanish friars in regard to Polynesian dialects had been discovered by the Department of Education, and papers on these dialects and on Tagálog grammar were read by Dr. Blake.

Some general reports and announcements made to the Society were of more than usual interest. Dr. Casanowicz sent an account of the exhibit of Oriental antiquities in the National Museum at Washington, which has a good collection of Egyptian, Assyrian, and Indian relics. Professor Jackson reported that the Parsi Panchayat of Bombay had kindly sent to the Society a gift of valuable manuscripts, and the Rev. Mr. Yohannan sent a description of the new Persian manuscripts at Columbia. Professor Moore, now of Harvard, distributed advance copies of the long-expected Index to the first twenty volumes of the Society's Journal, his modest announcement of its completion scarcely doing justice to himself as regards the skill and labor expended upon it. The Society has every reason to be thankful to Professor Moore and to Mrs. Moore, who aided him in this arduous work, though it was unable to show its appreciation in any other way than by electing Mrs. Moore to membership in the Society; which it was very glad to do in recognition both of her scholarly ability and of her devotion to the interests of the Society.

The collection of Arabic manuscripts at Yale was reviewed by Professor Torrey, who showed that it was the most important collection in the country after that at Princeton, and cordially invited all Arabic scholars to make use of it.

Professor Lanman, who is the successor of Professor Whitney in the Atharva Veda work which occupied the last years of Professor Whitney's life, announced the speedy completion of the translation of the Atharva with a critical commentary. This translation was made by Professor Whitney, and he had already done some of the exegetical labor required for its completion when he died. Professor Lanman assumed the responsibility of completing the volume, and has spent several years in bringing it to its present perfect form. As it comes now from the press, it is the most complete and exhaustive text critique and translation that has yet appeared in the field of Vedic criticism. Professor Lanman and the little world of Sanskrit scholars are alike to be congratulated on the result of his toil.

Another successor of Professor Whitney, in being a continuator of work begun by him, Professor Oertel, spoke of his renewed investigations of the Jaiminīya Brāhmana, a text prepared by Professor Whitney, but only now reviewed and critically compared with similar texts. Still another announcement (and exhibit) was made by Professor Bloomfield, who described himself also as a successor of Professor Whitney. In conjunction with Professor Garbe, he has just brought out a photographic reproduction of the Kashmirian text of the same Veda, a masterpiece of mechanical skill, and very creditable to the scholars who were willing to spend their time in overseeing so nice a piece of photography, though of course the scholar's work begins where the photographer's leaves off, and there is still to follow a critical edition of the text so handsomely put into permanent form by the aid of modern science.

To speak of the special papers: On the Semitic side, not courtesy alone puts foremost the able paper on the text of the archaic tablet of the E. A. Hoffman collection, presented by Miss Ogden and interpreted by Professor Barton. Two other ladies, members of the Society, also read papers, Miss Lucia Grieve offering a contribution on the evidence of the practice of suttee among the ancient Greeks, and Miss Runkle discussing a Pâli text. As indicated by their titles these papers belonged to the Aryan division, but further papers of general interest on the Semitic side were a handful of literary parallels to the Song of Songs, Professor Haupt leading with a paper on "Biblical Love-Dities"; an account of Syriac wedding and funeral songs by Mr. Huxley of Harvard; a paper on the name of the ferryman in the Babylonian story of the flood, by Mr. Langdon of Columbia, and Professor Wright's report on the excavation of Gezer. Other papers in the same department were offered by Dr. Ward, Dr. Arnold, and Dr. Foote (text critique); Professor Torrey, a Phœnician inscription; the Rev. Mr. Oussani, on a Christian Arabic legend; the Rev. Mr. Yohannan, on the influence of foreign languages on modern Syriac sounds, and by others. Another, which brought out considerable discussion, was by Professor Moore, on Hebrew metre.

On the Aryan side, further studies were presented by Professor Jackson, Indo-Iranian Notes; Professor Hopkins, on the numerical categories in the great Hindu epic and their historical significance; Dr. Gray, on the inscription of Behistun; Dr. Bolling, on the Vedic dual; Dr. Ryder, on Çakuntalâ; Dr. Woods, on the Mândûkya Upanishad; and others.

As has been customary for several years, papers relating to the study of religions were all read on Friday afternoon, before

an audience composed in part of those to whom the more technical essays of specialists are indigestible. The chief paper of that class presented this year was one by Professor Toy, on Creator gods, a searching critique of the Langian system of theogony, as affecting the development of moral gods —a critique that merited far more time for discussion than could be given to it. Professor Jackson, at the same session, gave another instalment of his researches in regard to the religion of the Achæmenians, and, with the help of some excellent photographs, recalled very pleasantly for the Society's benefit his visit to the little-known "Avon of India," Ujjain. Some of the papers already enumerated were read at this session—that, for example, by Professor Haupt, who also brought three more technical studies. Professor Hopkins gave illustrations of epic beast fables in India, presenting at the same time some smaller contributions; popular superstitions in Arabia had been collected and were explained by the Rev. Mr. Oussani; and the Rev. Mr. Sanders of Aintab sent a contribution on Jupiter Dolichenus; while the Rev. Mr. Kohut contributed a paper on Jewish folklore—to name only some of those read at length or in condensed form.

Not the least valuable parts of the communications read at the annual Meeting are the papers from scholars abroad, sometimes missionaries in active service, sometimes students who take this opportunity of acquainting the Society with the latest facts, or it may be fancies, that have come under their observation. At the present Meeting the Society heard from Mr. Stratton, the Principal of Punjâb University, that he had recently been studying a Gandhâra (Kandahar) figure bearing a date which shows the work to have been made about 191 A. D. The most important of these communications came from Dr. Grierson in the form of a letter to the Secretary of the Society; and as the subject-matter is one of general interest, it may be spoken of somewhat fully. For several years Dr. Grierson has been the head of a great scientific enterprise which shows its character by its name, The Linguistic Survey. Out of the data furnished by this Survey, the first attempt thoroughly to coördinate the heterogeneous masses of dialects and languages in British India, have come new facts of ethnographical as well as linguistic bearing. In adjusting these facts and fitting them into their proper historical relations Dr. Grierson has shown a marked ability, and though the results of his keen combinations are not, as he admits, indisputable, yet he has furnished strong evidence in support of the belief that, besides repeated invasions from the Northwest, through the western passes of the Hindu Kush, and so on across Kandahar and Afghanistan into the Punjâb, there was another line of invasion from the headwaters of the Oxus down through the Chitral and Gilgit country, and that this northern invasion was conducted by tribes dialectically different from those which came directly from the West; that it was the latter who first broke into the Punjâb, and that the northern tribes, who eventually entered and conquered the same territory, split apart the homogeneous mass of first settlers, driving them east and south and into the northern hills, while they themselves formed with this semicircle a compact circle of Aryan tribes, differing in dialect but not in race from the earlier inhabitants thus pressed to the wall. The latter were the Vedic Aryans, while the inner circle were the ancestors of the later Sanskrit-speaking people, who called all this inner circle the holy Middle Land in antithesis to the outer rim of Aryan but not Sanskritized people.

It is impossible to display here the linguistic evidence for this theory, which has much in its favor. If, as seems likely, it shall prove the working hypothesis of the future, these Aryans must be credited with having repeated among themselves, on a small scale inside their own racial limits, exactly the procedure of the Aryans as a whole in respect to the Dravidians, who also were beaten southward and eastward and into the hill-country by the superior ability of the Aryans. Dr. Grierson, it may be added, gives a reserved approval—but who would speak with certainty of events so doubtful?—to the theory that these Dravidians formed a connecting link between the Finnish and Australian languages.

The Society had to regret the absence of its President for the second time in two years, the pressure of new duties and his immediate departure for Europe preventing Dr. Gilman from attending. Apart from this, the place of Chairman being well filled by Dr. Ward and Professor Toy in turn, the social side of the Meeting was as pleasant as the scientific was helpful and encouraging. In the latter regard, the number of young scholars who come bringing papers is a good omen for the continued activity of this now venerable society.

E. W. H.

Correspondence.

A BRITISH ACADEMY.

To the Editor of The Nation:

Sir: With regard to your recent article on "A British Academy," permit me to quote a few paragraphs from an address which I delivered last Christmas as President of the Pacific Coast Branch of the American Philological Association, on the "History of English Philology." These paragraphs, incomplete as they are, represent, I think, the first attempt to outline the earlier history of a British Academy. I submit them here with the distinct hope of eliciting some additions and corrections from some of your learned readers:

"The opposition against the opinion of 'rudeness' and 'barbarism' cast by some on the English Language and repudiated by English patriots from the time of Sir Thomas More and Ascham, led to an interesting movement, as far as I know not noticed in the histories of English literature and thought; a movement in favor of following the example set by Richelieu's foundation of the Académie Française (1635). If the purity of the language, its grammar, its orthography needed looking after, why not do this officially? *James Howell* writes in 1650: 'The new Academy of wits call'd l'Academie de beaux esprits, which the late Cardinall de Richelieu founded in Paris, is now in hand to reform the French Language in this particular [viz., in Orthography], and to weed it of all superfluous Letters, which makes the Toung differ so much from the Pen, etc.' (Letters, Sect. II., ed. 1650, p. 257; repeated in, if not quoted from, his ed. of Cotgrave, 1650). Howell writes this to justify his own orthographical 'weeding' out of superfluous letters, and perhaps in the hope of stimulating the foundation of a similar institution in England. It is the same Howell who, in 1630, despaired of calling English 'a regular language in regard, though often attempted by some choice wits, ther could never any Grammar or exact Syntaxis be made of it.' (What this lack of a grammar meant in the eyes of pedants, for centuries, show the words of Royal Ben, and his attempt to 'free' the language from such a blame! But Howell could not know of this first English syntax in 1630!)

"*Dryden* hopes in 1664, two years after the establishment of the Royal Society, for such an Academy to keep foreign words on the other side of the Channel, and to sanction the recent 'refinements' of the language. 'I am sorry,' he says, 'that (speaking so noble a language as we do) we have not a more certain measure of it, as they have in France, where they have an Academy erected for that purpose, and endowed with large privileges by the present King' (Epistle Dedic. Rival Ladies, 1664).

"The *Spectator* (No. 135, Aug. 4, 1711) despairs as to the leaving out of the relative pronoun, a question which 'will never be decided till we have something like an Academy that, by the best authorities and rules drawn from the analogy of language, shall settle all controversies between Grammar and Idiom.' And in May, 1712, follows what Dr. Johnson called the 'petty treatise' of *Swift*, viz, 'A Proposal for Correcting, Improving, and Ascertaining the English Tongue.' This expressed its author's desire for an 'Academy,' to correct and 'fix' the English language; 'a Society or an Academy to provide that no words which it shall give a sanction to be afterwards antiquated,' because the English language, 'so defective in Grammar,' was to be 'settled.' Perhaps the climax of Swift's statements is contained in the following words, which show how little he knew of the historical conditions of the development of language: 'I see no absolute necessity why any language should be perpetually changing'—a statement, though, which Swift may have merely copied from a man whose name even a modern philologist does not mention without humility and reverence, *Bentley*, who winds up a paragraph in the *earlier* dissertation (ed. Dyce 2, 13): 'Nay, it were no difficult contrivance, if the public had any regard to it, to make the English tongue immutable, unless hereafter some foreign nation shall invade and overrun it.'

"It required the services of a new St. George to kill these follies and 'Academic' dangers; and *Dr. Johnson* arose as the champion of English liberty, and as a man with an insight, at least, into the main fact of the history of language. He banished at least for a hundred years the dreams of 'regulating the language,' and he did it because he knew that the Germanic mind is not made of a fibre to submit to the dictations of an 'Academy.' He writes: 'If an Academy should be established for the cultivation of our style, which I, *who can never wish to see dependence multiplied, hope the spirit of English liberty will hinder or destroy*, let them, instead of compiling grammars and dictionaries, . . . stop the license of translators' (a humble service, to be sure, for an Academy!)."

Let me add to these remarks that we find an interesting early criticism on the French (?) Academy given innocently in Howell's edition of 'Cotgrave's Dictionary' (1650), *s. v.* "*Academié*, masc., *ée* fem. Besotted, puzled, or plundered with too much skill, or studying." We need not be astonished at not finding this word in the 'Dictionnaire de l'Académie'!

Let me add further to the above that an Academy, or rather several English Academies, were suggested long before the time of Howell and Dryden, by the eminent Antiquary *R. Carew of Anthony*, who, after

becoming a member of what he calls the "Antiquarum" Society (the earliest Elizabethan attempt at an English Academy of the historical sciences), writes in 1605: "It imports no little disgrace to our nation that others have so many Academyes and wee none at all" (Letters of Eminent Literary Men, ed. Camden Soc., p. 99). This last quotation, as well as the one from Dryden, precedes considerably the earliest one in the New English Dictionary (given under 6) from 1691.

The foundation of the Royal Society in 1662 ought to have put an official end, directly or indirectly, to all these desires, if it had carried out fully what was one of its duties, viz., the inclusion of men from fields of learning other than the natural sciences. But the English conception of "science," the unjustifiable narrowing, so abhorrent to the German mind, of this large and universal conception in English, has proved a curse for centuries—a curse not only for the mother country, but also for America. What we need almost as much as a "British Academy" is the getting rid of the narrow application of the word "science," and I think we *are* gradually getting rid of it.

If, therefore, eminent English scholars are calling now for such a supplement to the Royal Society, for an Academy not to give its official stamp to productions in the field of belles-lettres, poetry, and fiction, but to represent the highest scholarship of the country in the field of the historical sciences itself (a *German* conception), it should be hailed as an excellent movement, to which a wonderful future might be promised—a future which would give the quietus to all the unacademic dilettantism which, in spite of brilliant exceptions, has been the curse of the history of the "historical sciences" in England during the past.—Yours respectfully,

EWALD FLÜGEL.

STANFORD UNIVERSITY, CAL., March 28, 1902.

THE RHYTHM OF EMOTIONAL EXPRESSION.

TO THE EDITOR OF THE NATION:

SIR: I have been much interested by the remarks on metrical cadences in Greek prose in your review of Professor Goodwin's edition of Demosthenes on the Crown. It would be instructive to learn whether the rhythms in this and other orations occur in passages of strong emotion, where language naturally runs into verse. If so, it would seem to follow that, as the speeches were composed for delivery, the orators either wrote under the influence of such emotions, or, with exquisite forethought and discernment, adapted their language to the requirements of the case.

A remarkable instance of the tendency of strong feeling to run into verse may be produced from the last quarter where one would have thought of looking for it—the proceedings of the Parliamentary Committee which inquired into the British Museum in 1835 and 1836. One of the principal witnesses is Professor Robert Edward Grant, Professor of Zoölogy and Comparative Anatomy in University College, London, who is described by Darwin as "a man of much enthusiasm beneath his outer crust." Such must have been the case, for, although his evidence is in general sufficiently prosaic, when he approaches the deeply moving subject of the deplorable and disreputable condition of the stuffed animals in the national collection,

> "The wild language of his grief is high,
> Such as in measure were called poetry."

Nay, more than that, for it *is* measure and poetry. With but a few trifling liberties of omission, substitution, and transposition, Professor Grant's lamentation becomes a sustained passage of sonorous blank verse:

We have in the Museum some stuffed skins
That once resembled the giraffe. But now,
In hideous rents that stretch along the carcase,
The straw and beams of wood are visible
Through the wide openings of disfigured hides
Whence characters and forms and hues are gone.
The naked blistered hides have been exposed
To dust and insects many a long year
Without the least protection. They have served
Their time long since, and, zoölogically,
Their characters are now completely gone.
That slender tapering nose that once was straight
Is twisted to the left. The soft smooth skin
That once with beauty spots was coverèd,
Melting into a light and pleasing ground,
Is now hard, naked, tanned, and uniform.
The cords by which the skin was stretched have torn
That skin by their contraction into rents.
Those slender limbs, in their proportiöns
As in their movements graceful once, are now
But as distorted pillars, stretched asunder
Like pyramids to prop the rotten fabric.

After which Professor Grant relapses into prose, nor does the sacred fire descend upon him again.

I am not aware whether Professor Blass has made any reference to the 'Lives of the Sophists,' by Philostratus, where several passages may be found throwing light on the employment of rhythm by Greek orators—of a much later date, certainly, but still, in all probability, following traditional rules. Phœnix Thessalus, for instance, is censured for not being sufficiently rhythmical; and Apollonius Atheniensis is taxed with having fallen into downright poetry, like Professor Grant. It is added, however, that he is not always open to this imputation, and a passage from him is quoted in proof which probably shows to what extent rhythmical diction was thought permissible by a Greek of taste in the time of Philostratus.

I am, dear sir, very truly yours,

R. GARNETT.

HAMPSTEAD, LONDON, March 27, 1902.

ANOTHER FIRST-RATE GERMAN THEATRE.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* of March 27 contains an article on Ludwig Fulda, by Edward Stockton Meyer, in which the statement occurs that the Irving Place Theatre, New York, is "the one theatre with a real literary and artistic standard in this country." I beg leave to call the writer's attention to the Pabst Theatre of Milwaukee. Mr. Meyer may loathe, perhaps, to associate the name of this theatre with art and artists, but Leon Wachsner of the Pabst Theatre keeps an able corps of European artists busy producing such plays as Hauptmann's "Versunkene Glocke," Fulda's "Talisman," Tolstoi's "Die Macht der Finsternis," and a score of others of equal real literary value. If the ensemble of a theatre and the literary productions staged are a measure, then the artistic standard of the "Pabst" is fully equal, if not superior, to Conried's Irving Place Theatre.

Very respectfully, PAUL GERISCH.

NAT. GER. AM. TEACHERS' SEMINARY, MILWAUKEE, April 3, 1902.

A STRIKING LIKENESS.

TO THE EDITOR OF THE NATION:

SIR: Authors occasionally fall into inexplicable similarities of ideas and expressions. Notice the following:

From 'The City of Washington,' by John Addison Porter (Johns Hopkins University Studies, page 14. Published in 1885).

After the first influx of speculators—among whom none bought more largely or lost more heavily than Robert Morris — the "Superintendent of finance" and friend of the government during the dark days of 1781—the sale of real estate languished. Foreigners seemed to have more confidence than natives in the success of the experiment. Engraved plans of the city had been well distributed abroad; Congress passed a law allowing aliens to hold land in the city; and for a time lots brought absurdly high prices in London. But after 1794 the home trade ceased almost entirely. There were some legal difficulties in transferring real estate. One of the main reasons, however, why the city did not grow faster, was that Congress could not remove thither for a number of years.

From 'Washington: The Capital City,' by Rufus Rockwell Wilson (Lippincott, pages 32-33. Published in 1901.)

After the first influx of speculators—among whom none bought more largely and lost more heavily than Robert Morris, the "superintendent of finance" and friend of the government in the dark days of 1781—the sale of real estate languished. Foreigners had more confidence than natives in the success of the experiment. Engraved plans of the city were widely distributed abroad; Congress passed a law allowing aliens to hold land in the city; and for a time lots brought absurdly high prices in London. The home trade, however, ceased almost entirely after 1794, while many of the earlier contracts for lots were repudiated by buyers unable to fulfil their agreements or who had taken alarm from the hurtful rumor, industriously spread, that Congress would never remove to the Potomac, but would remain in Philadelphia.

Q. E. D.

April 3, 1902.

Notes.

Augustus De Morgan's paper 'On the Difficulty of Correct Description of Books,' contributed in 1853 to the *Companion to the Almanac*, has never since been republished. The Bibliographical Society of Chicago now contemplates a reprint of it, "(possibly the first of a series of reprints and translations)," in an edition of 300 copies, for which they invite subscriptions at a dollar each. The work will be elegantly produced by the Blue Sky Press of Chicago. The treasurer of the society, Carl B. Roden, should be addressed at the Chicago Public Library.

'True Tales of Birds and Beasts,' edited by President Jordan of Stanford University, and illustrated by Miss Mary Weldman, is in the press of D. C. Heath & Co.

Charles E. Goodspeed, Boston, has nearly ready 'Iolaüs: An Anthology of Friendship,' by Edward Carpenter.

'Five Great Painters of the Victorian Era' (Leighton, Millais, Burne-Jones, Watts, and Holman Hunt) is the subject of a work by Sir Wyke Bayliss, President of the Royal Society, illustrated with twenty-two characteristic examples, which will be issued in this country by James Pott & Co.

'The West Indies and the Empire,' by H. de R. Walker, and 'The Domain of Art,' by Sir W. Martin Conway, are to be marketed here by E. P. Dutton & Co.

Two additional books on Macmillan Co.'s list are Sir John Lubbock's 'Scenery of England' and 'The Lower South in American History,' by William Garrott Brown.

'Roman Law and History in the New Testament,' by the Rev. Septimus Buss (Rivingtons), is a book of excellent intentions but poor workmanship. Something of the kind is much needed to elucidate the legal and historical points which are so plentiful in the New Testament. That this book, however, does not supply the need, may at once be seen from the fact that the ambiguous Greek term which we translate "testament," as it occurs in the difficult passage of Heb. ix., 15-17, and elsewhere, is not explained at all. Nor is anything said about the Roman will or the Roman system of inheritance, as treated by St. Paul; and his allusions to the Roman law of adoption are most inadequately dealt with. A certain number of useful facts respecting Roman taxation, army organization, judicial procedure, provincial administration, and the like, have indeed been collected, but the author's information is antiquated, and the works on which he relies are seldom referred to. He appears to think that Ewald, Zumpt, and Strauss are sufficiently modern, and discusses difficult questions of historical criticism, such as that of "Cyrenius and the Taxing," too often without regard to the most recent scholarship. Sometimes he is painfully picturesque, after the fashion of Dean Farrar and General Lew Wallace; and sometimes we find him deficient in the sense of humor no less than in learning, as when he accounts for the varied epithets "purple" and "scarlet" applied to the robe of Christ, by stating that the ancients were "not so careful in the discrimination of colors as we are, they having been partially color-blind" (p. 233). We have seldom read a more disappointing book.

'St. Paul and the Roman Law,' by Dr. W. E. Ball (Edinburgh: Clark; New York: Scribners), is a recent publication in the same field, far better written than that of Mr. Buss, yet by no means worthy of its interesting subject. The first three chapters, expanded from the *Contemporary Review* of August, 1891, are the only ones described in the title. The nine remaining chapters treat of Roman Law in the early theologians, of the much vexed "Logos" controversy, and of the New Testament quotation of canonical and uncanonical scripture. Each essay makes excellent reading, but the topics handled are so many and so large, in proportion to the size of the volume, that their treatment is necessarily superficial. Moreover, it is nowadays scarcely possible to regard any book as a solid or even serious contribution to learning when its author sees fit to eschew footnotes and to give no index. These omissions are probably due to the fact that Dr. Ball intended merely to write readable and suggestive articles. Viewing these essays in that light, we may say that the work has been well done. The common defect of such writings is that the reader is seldom warned of there being "another side," and this defect is particularly noticeable in the essays on the "Logos" and Philo-Judæus.

Seven years ago we referred with unqualified praise to a 'Text-Book of Anatomy and Physiology for Nurses,' by Diana Clifford Kimber (Macmillan). After numerous reprints, a revised edition has just appeared. The chief change is a practically new chapter upon the nervous system, credited to Dr. P. M. Dawson of Johns Hopkins. Metric equivalents are now entered wherever English measures are used, and in a number of illustrations the arteries, which formerly were plain, are colored. A curious error of the pen has been retained on p. xvi., where "contents" stands for "branches" of the aorta. We reiterate our former comment, that to limit the use of this admirable book to nurses would be to neglect other deserving students, especially those in high-grade schools and colleges for young women, where it might be studied to great advantage.

Sir Henry Thompson's widely known 'Diet in Relation to Age and Activity' (F. Warne & Co.) reappears in a revised and enlarged edition, well deserving its established popularity. The burden of his essay is that, with advancing years and diminished strength and exertion, the powers of assimilation and elimination are lessened, and the character and amount of food should be correspondingly reduced. While some of the advice bears particularly upon English habits and the English climate, the general instructions for attaining comfortable longevity are adapted to all intelligent people, and they are the more acceptable from their felicitous style.

Dr. C. G. Kerley makes, in 'Short Talks with Young Mothers' (Putnams), another contribution to the rapidly increasing library of popular information upon the care of children. If "to" replaced "with," the title would better show that these familiar, easily apprehended, and judicious observations are monologues.

'The Baby,' by Marianna Wheeler (Harpers), a little volume upon care and training, is plain and sensible in the last degree. If the chapter on measles and scarlet fever alone were absorbed by parents, the saving of life should be great and the limitation of sickness greater.

A popular summary in 170 pages of what is thought to be known about the planet Mars at the present day ('Mars: Eine Welt in Kampf ums Dasein'), by Otto Dross, has recently been issued by Hartleben (Vienna). The work is beautifully printed, though but charily illustrated, chiefly from the published sketches of Schiaparelli and Brenner. The earlier observations of Kaiser, Dawes, Green, and others are not neglected, nor the bearing of them on the modern researches which were so admirably summarized and collected by Flammarion ten years ago. The strange canal system, of which Dawes may be said to have been the real discoverer, not Schiaparelli, occupies nearly a third of the entire work; but the author does not advance any theory accounting for either the canals themselves or their very remarkable gemination in a fashion more satisfactory than that of his predecessors. Herr Dross concludes with a few brief sketches of the lives of very eminent astronomers—Copernicus, Galileo, Kepler, Tycho, Newton, and W. Herschel; but on the whole it cannot be said that he adds more than a mite to our knowledge of an absorbingly interesting and baffling problem.

In a volume of clear, if not always tasteful, typography have been gathered 'The Proceedings of the Webster Centennial of Dartmouth College,' issued by the College. The date commemorated was that of Webster's graduation, September 24, 25, 1801, and a good deal of the matter naturally relates to the future statesman's college career. This has been looked after with some research and a few gleanings by Prof. Charles F. Richardson. The formal oration was by Representative McCall of Massachusetts, and here, as in most of the speeches, Webster's 7th of March defection was smoothed down into a virtue. Senator Hoar easily surpassed this speaker by his recipe for annulling the just censure of contemporaries: "Each man has given to him his own light. He is a laggard or a dastard if he do not follow it. But he is nowhere commanded to sit in judgment on the motives of other men." Amid these apologies for Webster's support of the Fugitive Slave Law, the College honored with the degree of LL.D. *in absentia* Booker Washington, who, if born earlier, might, as a slave *in absentia*, have heard Webster invoke Northern man-hunters to perform a "disagreeable duty" "with alacrity," and who may now read the letter of Dartmouth's former President, Dr. Nathan Lord, asking Calhoun for references to authorities in the "argument for the Divine Right of Slavery in general or Negro Slavery in particular."

The Proceedings of the Bostonian Society contains, besides President Guild's reminiscent address, extracts from the diary of Dr. William Read for April, 1851. The principal events noted are the great storm in which Minot's Ledge lighthouse was destroyed; Daniel Webster's speech in Bowdoin Square, when the Mayor and Aldermen refused him the use of Faneuil Hall; and the election of Charles Sumner to the Senate. Dr. Read's reference to this result of a coalition deemed unholy shows the bitter feeling at that day on the part of the Whigs: "This election has been accomplished by one of the most barefaced and unblushing sacrifices of principle ever made by any party. . . . If he [Sumner] has any sensibility, and is a man of honorable feelings, the price at which he has purchased his seat must sting him to the quick." Dr. Read closes by saying that the "detected fraudulent voting and bribery . . . will render this transaction to the end of time a standing disgrace to the Legislature of Massachusetts, and a monument of political infamy too great to be soon forgotten." Nevertheless, the diarist lived to become an enthusiastic supporter of Mr. Sumner. The frontispiece is a reproduction of an original hand-colored engraving of Paul Revere's "View of Part of the Town of Boston in New England, and British Ships of War Landing their Troops, 1768."

Many lists of children's books have been prepared for school use, but none on a scale to compare with that just issued by the Buffalo Public Library. 'Class-Room Libraries for Schools' is the title of the pamphlet, of which the scheme is this: The nine grades of the grammar schools have each a "library" marked out

for them, "suggestively and approximately"; to these lists succeed an author-title index, and a subject-index (the kernel of the catalogue), and finally a list of books desirable for reference libraries in connection with school work. The execution of this scheme is to our mind wholly praiseworthy, and we cannot think that any serious charges of omission will be brought against it. Stress is laid in the subject-index on American history and historical personages, and to the latter a pithy quotation in prose or verse is allotted by way of introduction. We do not doubt that this aid to juvenile reading and study will be welcomed in many a home as well as in schools, to satisfy the cravings of young minds for specific guidance. Whether parents, too, like teachers and librarians, may procure it for thirty cents (the cost price), we do not know. It will, at all events, serve to knit the alliance between the home, the school, and the public library.

The agricultural possibilities of Alaska are described by Prof. C. C. Georgeson of Sitka in the *National Geographic Magazine* for March as of a high order. In the interior, hardy vegetables and grain can be grown, and much land is good for stock-raising. He believes its conditions to be more favorable from an agricultural standpoint than those of Finland, which, in the same latitude, has a population of two and a half millions, mostly cultivators of the soil. The chief hindrance to the development of these resources is that settlers cannot acquire land titles without prohibitive expense. A series of pictures, with explanatory notes, show in a graphic way how Havana has become a city with a better bill of health than Washington. "By the end of the second year of American occupation, every house in the city had been cleaned from top to bottom at least once," the floors with electrozone and the walls with a solution of bichloride of mercury. By this means and by the cleansing of the sewers, "which had not been touched since they were built, long ago," the deaths from yellow fever, which in 1896 were 1,262, in 1901 were only 5. We will mention further a detailed description of the rare Sarichef's Atlas of the far northern Pacific and the adjacent coasts published by the Russian Hydrographic Office in 1826, and an account, by Dr. L. A. Bauer, of the objects and work of the magnetic survey of the United States.

The most important article in the *Geographical Journal* for March is a study of the Isthmian Canal from a commercial point of view by Col. G. E. Church. He begins by briefly sketching the various South American transcontinental routes, as to which he is probably the greatest living authority, as well as the history of the Spanish explorations in search of the strait which was supposed to exist between the two oceans. After a technical description of the rival canal projects, he gives tables of distances from and to prominent ports in both hemispheres, and a careful summary of the South American trade upon which a canal must depend. Attention is, however, directed to the extremely problematical character of statistics, especially those of tonnage: "A single 2,000-ton vessel, running from Panama to Valparaiso, and, during every trip, *entered* and *cleared* perhaps at a dozen ports, picking up or discharging a few tons of freight at each, may add yearly 200,000 to 300,000 tons of *entrances* and *clearances* to the commercial record." Col. Church's conclusion is, that the canal is not a commercial necessity; that its traffic will be far less than is anticipated, and that, if constructed, it will prove for many years a heavy burden to this country. A narrative of a journey through southwestern China impresses one with the great industrial future of the country, especially when railway communication with Burma is established. Cheng-tu Plain is described as probably the most intensively cultivated portion of the earth's surface. It is about 70 miles by 40 in area, and supports a population of four millions. "It often grows seven crops a year, and it pays to borrow money at 30 per cent. to cultivate it." The scheme of artificial irrigation, to which this marvellous fertility is due, was devised two thousand years ago by an engineer who has been assigned by his grateful countrymen a place in the Chinese Pantheon, a magnificent temple having been erected in his honor. Mr. Stanley Gardiner gives the results of his explorations in the Maldives to determine the interdependence of the physical and biological factors in the formation of atolls. The indications are that their base is of volcanic origin, and it is hoped that the investigations of Mr. Alexander Agassiz, who has been at work in the same group of islands, will settle the vexed question.

The Royal Medallists for this year of the Royal Geographical Society are Sir F. D. Lugard, High Commissioner of Northern Nigeria, and Major Molesworth Sykes, late British Consul in southeastern Persia. This honor is, of course, due to their notable contributions to the accurate geographical knowledge of the countries in which they have been stationed, but they both have done far more than this. They have studied sympathetically the native life, customs, beliefs, points of view, and laws in the interest of the native himself. The conviction of the urgent necessity of this knowledge for the enlightened government of the inferior races has led two British scientific societies to petition the Government to order a full and systematic inquiry into the laws and customs of the natives of South Africa. Such inquiry, they affirm, must precede any comprehensive attempt to solve by legislation that most difficult problem, the relations of the white population to the native and of the natives to one another.

The English are having considerable trouble in circulating on the Continent the various translations of Dr. Conan Doyle's 'Cause and Conduct of the War in South Africa,' a semi-official apology. Translations into eight European languages have been made, but it has been impossible to secure publishers in Germany and Holland. Accordingly, it has been found necessary to print these two translations in England, and a German edition of 5,000 copies has already been issued in London. The French and Italian editions have appeared in those countries, and the Scandinavian version is about ready, while the Russian, Spanish, Hungarian, and Portuguese editions are in rapid preparation. The list of subscribers for the spread of this book is headed by Lord Rosebery, with a donation of fifty pounds.

The leading papers of Italy are engaged in a rather bitter controversy over the recent reorganization of the National Museum of Naples, which is of more than local interest, as it involves the entire scientific management of this famous depository of the finds of Herculaneum and Pompeii. Nearly a year ago, Prof. Ettore Pais, who holds the chair of history in the University of Naples, was appointed to the directorship by the Cultus Minister in the place of Petra, who had been regarded as "an offensive partisan" by those in power. Pais went to work radically to rearrange the whole museum, expending 50,000 lire, it is alleged, for useless buildings, and discharging tried helpers in the scientific department, until the press resounded with denunciations, the chief critic being Professor Ceci of the University of Rome, seconded, in a measure, by the Archæological Committee of the Museum in Naples itself. The new Cultus Minister, Nasi, has now ordered an investigation of the charges of incompetency against the new director. Special personal interest attaches to this controversy, as it was Ceci who made the sharp attack on the foreign archæologists in 1900, and Pais is Chairman of the Committee of Arrangements for the International Congress of Historians to assemble in the near future in Rome.

For twenty-five years the indefatigable Catholic priest, Father Delattre, has been engaged in archæological researches on the site of ancient Carthage, and now reports what he declares the best find made during this period. It is a white marble sarcophagus, 2.09 metres in length, partially covered with designs, that on the lid being a relief portrait of a woman, of rare artistic beauty. The sarcophagus belongs to the Punic period, and is the work of a Greek artist. It is now regarded as the *pièce de résistance* in the well-stocked museum of the Pères Blancs in Carthage. The find was made in the necropolis near Ste. Monique.

The Herbarium and Botanical Institute of Bucharest has begun the publication of a quarterly *Buletinul*, edited by Michel C. Vladesco, professor of botany in the University. The initial number contains five articles in parallel columns of Rumanian and French or Rumanian and German. They comprise contributions on the bryological flora and the vascular cryptogams of Rumania, and on the flora of Ceahlu, together with the first instalment of a Rumanian botanical vocabulary.

The *Verhandlungen* and the *Zeitschrift* of the Geographical Society of Berlin have been united in one publication, entitled *Zeitschrift der Gesellschaft für Erdkunde*, of which ten numbers will appear during the year. The first number contains papers on the Somali coast, on the physical geography of Honduras, and on the German North Polar expedition.

Beginning with 1902, the *Mémoires* of the Society of Physics and Natural History of Geneva will not appear, as heretofore, in semi-annual parts, but will be made up of several numbers published at irregular intervals.

The Astronomical Observatory of La Plata has begun the publication of *Anales* of the meteorological bureau of the province of Buenos Aires. The first volume is devoted to a record of meteorological observations made at La Plata between 1886 and 1894, and at outlying stations during 1894.

—Concerning the subject of historical series it is not necessary that we should speak, save to observe that they must be profitable, or else there would not be so many of them. One other remark may also be offered, namely, that two distinct types of composition are mainly represented. The first may be termed a piece of "vulgarization," the second is the independent monograph. We have before us three volumes which represent two well-known and bulky series—the "Story of the Nations" and the "Heroes of the Nations" (Putnams). They are 'Mediæval Rome,' by Mr. William Miller, 'Wales,' by Mr. Owen M. Edwards, and 'Henry V.,' by Mr. C. L. Kingsford. Though they all bear strong marks of resemblance in point of length and illustration, they differ widely in other respects. For example, Mr. Miller's 'Mediæval Rome' is an attempt, in the main, to abridge a celebrated work of German erudition, while Mr. Kingsford's 'Henry V.' is a careful study which has cost the author a good deal of research. To say that this book on 'Mediæval Rome' is frankly derived from Gregorovius, with embellishments drawn from Reumont, is not necessarily to condemn it. In such a case abridgment is quite justified if it is well done. But in this instance we cannot refrain from saying that the title which has been chosen is most misleading. The period covered is 1073-1600, and as half of the text is occupied with a narrative of events which lie between Nicholas V. and Clement VIII., we must reconstruct our historical terminology in order to give the title an adequate meaning. That is to say, Mr. Miller writes the history of Rome during the Renaissance quite as much as during the Middle Ages, and in this way he fails to bring out the characteristic features of the mediæval period. We may even term this an organic weakness in the structure of the volume, because from it there results a hasty and inadequate treatment of constitutional history and social life during the era which purports to have been chosen. Though the dates 1073-1600 are given on the title-page, the general reader will be captured by the words 'Mediæval Rome.'

—On the contrary, Mr. Edwards's 'Wales' deserves to be specially praised for the clearness of its arrangement and for the skill with which it distinguishes between the salient features of Welsh history. It comprehends everything from the Roman occupation of Britain to the present day, and, although fulness of detail is rendered impossible by the rigid requirements of the series, one sees that the author has a firm grasp of his subject. The main points are clearly articulated, and all the topics chosen are treated in strict subordination to the general theme. Mr. Edwards's principal task is to distinguish between that earlier period in Welsh history when national life was dominated by the power of the princes, and that later period in which the peasants come to the fore in both power and social influence. "The princes were crushed by the Plantagenets, their descendants dispossessed by the Lancastrians or Anglicized by the Tudors. On their disappearance, a lower subject class became prominent, inheriting their changing traditions and feebly imitating their decaying literature." The earlier age is that of the Mabinogion and the odes of Davydd ap Gwilym; the latter is that of the evangelical movement and of growing liberalism. It will be seen that these eras differ greatly in length, and that the first is not only longer but much more intricate. The decline of local independence produced a degree of social uniformity which was wholly lacking in the Middle Ages. Ever since the Tudor period, prosperity has tended to increase at the expense of picturesqueness in the land of the Cymry. The burning question of Disestablishment finds no place in Mr. Edwards's pages—probably on account of its controversial character, since space is found for some notice of the political struggle between landlord and farmer in 1867, and of the industrial revolution which has been caused by the opening up of Welsh mines. Mr. Edwards concludes in these interesting words: "The first period of Welsh history ends with the poet's lament for its fallen princes; the second ends with the poet's vision of a future of more self-conscious life and of greater service. The motto of Wales is to be that of its Prince—'Ich dien.'"

—Mr. Kingsford's 'Henry V.,' in the "Heroes of the Nations" series, is founded upon an article which the author contributed to the 'Dictionary of National Biography'; but this study has since been greatly extended, and the present book also embodies the results of further research. "If I cannot claim," says Mr. Kingsford, "to have exhausted all sources of information, I have nevertheless sought throughout to base my narrative on chronicles and documents of contemporary, or nearly contemporary, date." It is inevitable that military operations should occupy a large share of the space, but they are not permitted to overshadow altogether the civil acts of the reign. Thus, Mr. Kingsford devotes one chapter, entitled "The Unity of the Church," to the Council of Constance, and another, entitled "The State of England," to the social condition of the realm. In all essential respects the book is an excellent one. Our only adverse criticism is that delineation of the "hero's" character is inclined to yield place for the political history of the time. We must state, however, that the balance is almost restored by the *Conclusion*, which consists purely of criticism. In it are discussed, among other things, the questions of Henry's cruelty and of his real attitude towards the French war. The persecution of the Lollards and the execution of prisoners are accounted for by sincere conviction in the first case and a sense of justice in the second. Henry was another Frederick Barbarossa, who had a reverence for principle, but who looked upon the maintenance of prerogative as a capital duty. With regard to the conquest of France, Mr. Kingsford remembers the King's death-bed declaration, "that he had entered upon the war from a desire to establish lasting peace," rather than from the mere love of territorial acquisition. The statement derives a good deal of color from the undoubted idealism of Henry's character. Had he lived, Agincourt might have been made the first step towards a general crusade against the Ottoman.

—Many American teachers of Greek have known for some time of the new plan of Greek instruction in the German gymnasia proposed by the noted philologian, Professor Ulrich von Wilamowitz-Moellendorff at a conference held in Berlin year before last and published in 'Verhandlungen über Fragen des höheren Unterrichtes, 1900.' This plan involved the preparation of a new Greek chrestomathy, of which Professor von Wilamowitz-Moellendorff, as the representative of a commission appointed by the Minister of Education, had the making. This book, which has been awaited with much interest, is at last published, under the title 'Griechisches Lesebuch' (Berlin: Weidmann). With characteristic German regard for the weight which the schoolboy is to carry in his satchel, the book is divided into four volumes, two of text and two of notes. The selections are mainly prose; for the editor takes it for granted that the student has already read the poetry of Homer and the tragedians. Familiarity with the New Testament and some of the works of Plato is also presupposed, while the writings of Herodotus are entirely omitted, for the reason that they should be read in large quantity and rapidly. The preface states that the book is designed for students who have learned enough Greek to be able to read a book for what there is in it. In the belief that one learns Greek only for the sake of reading it, and reads it only to understand a world period during which Greek was the dominant language of the spirit, the editor includes in his reader extracts from the works of every century from the sixth before Christ to the fourth of our era, without regard to the dialect or nationality of the author. An examination of the contents will show the wide range of the selections. They are grouped under ten headings: Fables and Stories, History, Politics, Geography and Astronomy, Mathematics and Mechanics, Medicine, Philosophy, Early Christian, Æsthetics and Grammar, and Documents and Letters—which last is a collection of eighteen pieces of various dates. The variety in dialect and origin is apparent from a list of the authors excerpted—too long to reproduce here, but a formidable one for the ordinary teacher of Greek. The introductions, however, with which each extract is furnished, and the full notes, which aim to make good the deficiencies of the grammars and dictionaries in common use, will help him out of many difficulties. He will find the book useful for a survey of Greek literature and culture, and well adapted to the correlation of Greek to other branches of study. Whatever be the final decision as to its practical use with classes, either as a whole or in parts, it is of interest to Americans as a contribution to the classical question, and a worthy addition to the library of the teacher, both for its selection of texts and for the preface and concluding remarks of its gifted editor.

—Dr. Baelz, a German physician in Tokio, who has been repeatedly decorated by the Mikado, upon whom he has attended, seems to have made a discovery of great interest in anthropology (twenty years ago, but recently reinforced and ably defended in a controversy carried on in the Japan *Times*). Others before him had noticed the blue spots which Japanese babies have on the lower part of their spine and elsewhere, and which usually disappear before the age of six, but no one before him, so far as is known, had interpreted and set forth this phenomenon as a peculiarity of the yellow race in contradistinction to the white race.

In Korean and Chinese children, in Malays and Eskimos, these blue spots have also been found. They are not visible on European children, but the pigment cells have been found microscopically. Dr. Baelz says: "The white, the yellow, and the black man have all the same kind of coloring matter in their skins; the difference is only a matter of degree. In the white the pigment does not show, or hardly shows at all, to the naked eye; in the yellow it is a little more abundant, hence the yellow tint; and the more abundant it is, the darker the skin will look until we reach the negro." In Euro-Japanese children, if the offspring resembles the fair-haired, blue-eyed parent, it has no spots at all; if the influence of the Japanese and the foreign parent is about equal, the spots are there though more or less indistinct. But if the Japanese characteristics prevail generally, the spots are almost as well marked as in a Japanese baby. While apes have the same blue spots, and certain monkeys blue callosities on the buttocks, Japanese children have sometimes one-half of their bodies covered with them. Dr. Bälz believes that the blue spots form a most important racial characteristic, and will not acknowledge that the configuration of eyelids or of the earlobes is of anything like equal value. Dr. Baelz wrote on "The Physical Qualities of the Japanese," in Tokio, in 1882-3, since which time little seems to have been done seriously in the field of Japanese anthropology.

ITALY'S "DECADENCE" AND ITALY'S MISSION.

La Missione dell' Italia. Per G. Novicow. Traduzione di A. Tassone. Milan: Fratelli Treves. 1901.

In an age of commercial monopolies and great combinations of capital and labor, when attempts are being made to "syndicate" even artistic and literary output, it is not strange that the idea should gain currency of a racial monopoly of the forces which stand for human progress. Such phrases as "Anglo-Saxon superiority" and "Latin decadence" have become the stock in trade not only of many popular speakers and writers, but of men whose scholarship warranted the expectation of careful consideration. Anthropological data in the hands of pseudo-scientists has resulted in flooding the scientific market with attractive but overbold generalizations; the criminal anthropologists, especially, have raised to the dignity of a science the stray bits of observations gathered by a few enthusiasts during less than a decade. All this is very ably combated in a recent book by a distinguished sociologist, which bears the unmistakable marks of wide scholarship and calm and dispassionate treatment. Fortunately for the cause he defends, the author is not a "Latin" but a Russian, G. Novikoff.

He justly selects the Italian nation for his counter-argument, for no nation except Greece has exercised a greater influence upon civilization than Italy; no European nation has an older history, and, hence, no other "Latin" nation ought to be nearer "racial death" than this nation of past glories. At the outset the question naturally suggests itself, "Is there, in fact, such a thing as a 'Latin' race?" Novikoff's answer to this query takes up a large part of his book and is worthy of careful consideration. "The theory of races," he says, "is a colossal aberration due to a singular confusion between morphological and psychological phenomena." What constitutes a "race"? The only possible answer, says the author, is "a combination of morphologic or physiologic marks." If morphologic, what is the concrete, external fact which we may use as a basis for the classification of races? In nature, all living beings present an uninterrupted chain composed of elements in every conceivable state of transition. It is only the human mind that divides them up into grades and sets; in other words, it is a purely subjective division. The best proof of this is that it changes from age to age. We used to classify races according to the color of the skin; then we divided mankind according to the growth of their hair; in our day the favorite division is that based on cranial formation. But this is probably the most arbitrary method, and one bound to be supplanted by a better one. It is arbitrary because it starts out with a conventional cephalic index, a fragile foundation upon which to base some of the "terrible sentences" pronounced by certain of the strenuous anthropologists of the day. They tell the French and Italians, for instance: "Ye are brachicephalous; hence, an inferior race, doomed to decay"; and they as glibly tell the "Anglo-Saxons" that, being "dolicocephalous," they are a superior race and hold the future in their grasp. What proof is there of the inferiority of brachicephalic people? Is this not, asks Novikoff, "one of the most colossal mystifications ever produced?" As a matter of fact, observation shows that there is no "racial" cranial difference; that from remote ages very varied cranial forms have coexisted in European countries. At all events, if race is the one factor in social progress, two phenomena would of necessity have resulted—the "superior" races of to-day would have been such in every age, and the representatives of such "superior" races should all have reached the same level of civilization. The history of mankind, however, is to the contrary.

Now, races (and their subdivision into species) are either changeable or not. If they are immutable, how could the dolicocephalous "Anglo-Saxon" ever reach an initial civilized condition? When the brachicephalous Egyptians were at the height of their glory, the blond Saxons were mere savages. Inasmuch as the Anglo-Saxon is now civilized, the Anglo-Saxon "race" must be changeable. Biologic laws must apply, if at all, not to a few, but to all human beings, and hence the "negro race," for example, is as much susceptible of development and perfection as the "white." If it is claimed that the "negro race" is not so susceptible, then races are immutable. But if they are unchangeable, how can they or any of them ever decay? The fact is, that all races and all species are variable; that all progress and all retrogression in nations depend on innumerable causes, geographic, biologic, psychologic, and social. Nations under fortunate contingencies have progressed rapidly; those not so favored have progressed slowly. There are no *chosen* races and no *doomed* ones. "The Italians in other days have led Europe. It is not the shape of their skulls nor their being labelled 'Latin' . . . that will prevent their again reaching that place of eminence occupied by them in the past."

The poverty of Italy is cited by the pessimist as a sign of the lack of energy and progressiveness in Italians, and consequently of decay. But there are young "non-Latin" nations (Russia, for instance) which are poorer than Italy. If it is contended that her decadence is shown by the fact that Italy was once the richest country in Europe, it is because the contention overlooks the circumstances of relativity. Italy to-day is poorer than France, but she is wealthier than she was in the fourteenth and fifteenth centuries, when she was the wealthiest of nations. The Lord of Verona in 1335 had an annual income of 8,400,000 francs, which was more than any sovereign had, except the King of France, but to-day the whole of Italy has an income of 1,726 million francs. So that the facts show not that Italy has become poorer, but that, though she has become richer, France has become even more so. And this brings us to the consideration of another fact: countries which have developed only in recent times, will necessarily show a rapidity of development which old countries cannot possibly show. To regard a condition of growth as a sign of decay is as absurd as to say that a man at thirty is on his decline because his growth is less rapid than it was at ten. When our country is as thickly populated as Italy, our population will not double in fifty years, nor will new cities rise out of nothing in a few days. They will then develop as slowly as Florence or Naples.

Italians seem much less active than Americans, and this is cited as a sign of decay. But Italians work less because they have less to do, having already done so much in the way of adjusting their country to their needs. Thus, the traveller in our Western cities is struck by the number of churches in process of construction. But Italy has already all the churches she needs. Orvieto, with 16,000 souls, has a larger and more beautiful cathedral than Chicago has, with a population 100 times as large. Florence and Venice build fewer houses than Philadelphia or San Francisco, for the simple reason that the latter cities were a wilderness when the former had built their magnificent palaces. And again, when ugly and inartistic churches in our country are torn down to make room for new and better ones, the pessimists claim it is a sign of our progressiveness as a people. But would we tear down a Church of St. Mark if we had one?

Is there aught to prevent "decadent" Italy from winning in the future the position of greatness she held in the past? There is no more geographically favored country in the world. No point in the entire peninsula is more than 200 miles from the sea; this is an immense advantage. Her agricultural resources are well known, and there is nothing to prevent her becoming a great industrial Power like England or the United States. She has no coal, but this will militate only against her metallurgical industries. For other industries, the electricity, or "white coal," which Italy can obtain in superabundance from her myriad mountain streams, is superior to coal in supplying motive power. As to machinery, it is technical perfection and excellence of products which count, and in this respect Italy is already forging ahead. Nor need

Italy fear for her financial resources; she may, indeed, be proud of the manner with which she has kept her obligations to her creditors. Despite the heavy taxes she has had to impose to meet the tremendous demands made by her youth, as a united nation, in the work of unification and national construction, Italy has never admitted the possibility of bankruptcy; and, unlike Russia, has never paid her national debt in paper.

Novikoff lays special stress upon the intellectual powers of the Italians in comparison with that of the "young Anglo-Saxon" peoples. He sets forth the remarkable paucity of ideas, the great ignorance, of the English bourgeoisie, and the "Gothic" characteristics of many of the modern Germans. Here he draws a striking comparison between Bismarck and Cavour—to the latter's advantage, who, "merely by the stress of intellectual charm, could lead the most opposing and undisciplined parliamentary parties." The great Italian names of the past are cited as proof of her present decadence. But are they not rather an earnest of her future greatness? The foreigner has so much of the past to see in Italy that he has no time to examine what is new, and he draws the conclusion that there is nothing new. During the century just closed, the mind of Italy was absorbed in the work of national reconstruction, which for her meant also the conquest of political liberty. In this work the Italians displayed the genius shown by their fathers in other fields. "Italian unification is one of the most marvellous pages of European history. A king like Victor Emmanuel, a statesman like Cavour, gave Italy the political primacy, as Dante gave her the literary and Michelangelo the artistic leadership."

In conclusion, our author, after showing that no "race" in general, and the Italian nation in particular, is bound by any law to stagnation or decay, that all peoples possess powers of growth and development, sketches rapidly the possibility of what a nation like Italy may in future do for humanity. "Nature and history," he says, "impose upon Italy the duty of intellectual leadership." "Her natural beauties will ever make her the rendezvous of all that is best in the world; with the spread of civilization, men will look to her more and more as the mother of harmonies." All the finest spirits, all the best mentalities will seek her as an intellectual refuge. "She will become the intellectual and moral sanatorium of the world." To Italy, Novikoff looks for the political mission of European federation. She was the first to introduce the plébiscite, the greatest weapon against war. Twice already has she accomplished the unity of the Western peoples—the first time, by the political domination of Rome; the second time, by the spiritual domination of the Popes. If Italy can work out this great destiny of European unity, she will become for the third time the centre of Western civilization. The days of Augustus and Innocent III. would be hers again. "But this third glory would be far more lasting than the others, because it would be based, not upon brute force, . . . but upon respect and justice—that is to say, upon the most solid and unassailable foundation upon which any human institution can be built."

HALF-A-DOZEN NOVELS.

Patricia of the Hills. By Charles Kennett Burrow. G. P. Putnam's Sons.

The Winding Road. By Elizabeth Godfrey. Henry Holt & Company.

The Crimson Wing. By H. C. Chatfield-Taylor. Chicago: Herbert S. Stone & Co.

Michael Ross, Minister. By Annie E. Holdsworth. Dodd, Mead & Co.

Alabama Sketches. By Samuel Minturn Peck. Chicago: A. C. McClurg & Co.

The Battle-Ground. By Ellen Glasgow. Doubleday, Page & Co.

'Patricia of the Hills' is an engaging little story; Irish, but not wild Irish. We find in it patriotism without unreasonableness; love of the open air and the free hills without exaggeration; romance without overgush; humor and melancholy side by side without morbidness; Irish dialect stopping short of nausea. In short, while many notes of the Celtic temperament are sounded, not one is forced beyond the limits of sympathy; this, too, with the moderation of restraint, and not of hesitancy. The story —of love, mortgage, and election—is slight, but full of sincere feeling. There is absolutely no mention of a purpose, but the book makes closer appeal, even considered as race literature, than many larger works written more directly under the constellation of the Howling Dog.

'The Winding Road' is a winningly fantastic story of a gypsy wanderer, a gypsy fiddle, and a girl who was not a gypsy. We have sung, danced, wandered, and wept with this trio before in story and in opera, but Miss Godfrey has contrived to combine and expand her materials in a fresh and original way, and has made a new and pretty tale. So pretty is it that she could well have afforded to hold her hand in the matter of decoration. She need not have laid on the landscape so thick; she might have limited herself in the matter of headings to one verse at a time rather than processions of verses from Stevenson, Yeats, Bliss Carman, Josephine Daskam, Longfellow, Browning, and Le Gallienne. On the other hand, though borrowing has dulled the edge of her husbandry, it might have been profitable in the case of music, and we should have been spared reading about chords that "emerged in a simple clef" and then made "an excursion into another clef."

'The Crimson Wing' is a story of the Franco-Prussian war of 1870. It gives a good idea of the struggle, of its personages, its diplomacies, its treacheries, heroisms, and imbecilities, and so far is meritorious. The fiction-reading world of to-day is growing used to the dazzling light of distinguished society. But even though we of late have sat down with kings, and hobnobbed with patriarchs of the infant world, we experience a mental jolt at overhearing heart-to-heart talks with Gen. Sheridan and Frederick of Prussia. We tremble lest the next new novel shall deal with Edward the Seventh or Mayor Low. The natural unnaturalnesses of a story of war-times are to be accepted uncomplainingly. Indeed, in 'The Crimson Wing' they are interesting throughout, and are not particularly overstrained, unless it be in the case of what is accomplished by the two young women concerned. With them the improbabilities are impartially divided. The good angel achieves miracles of horsemanship and leadership; the bad angel not only turns Red Cross nurse, which was to be expected, but becomes good angel besides, and makes the hero over to the other lady, though she wants him very much for herself. We must think the whole *Ewig-Weibliche* of the novel a little overdone—a tax on belief, in short, which makes for weakness in the end, however painstakingly elaborated and however amiable its motive.

A celebrated oculist once said of novels printed in very small type, "if publishers had not invented them, oculists would." The type of 'Michael Ross, Minister' is excellent. But there is renewed hope for the oculist in this novel (and in fact, in most novels nowadays), in the treatment accorded in the text to the human eye. It is enough to give the reader sympathetic oculitis to read of eyes that leap and burn and compel and entreat and rebound and glaze; that are cruel and haggard; that have their light quenched with awful horror, and swoon, and are like hands around his heart, clinging desperately. These be but mannerisms, but it is time to look to them. Another sign of the bad times is the impertinent natural history. " 'You will let me stay?' A crow lighted beside the nest," etc., etc. This sort of interpolated bird, beast, and flower is like nothing so much as the columns of the domestic press, "as she is written"—"Home must be hallowed by sacrifice," "The best way to curry eggs is," etc. The affected landscape is painful, too. Of the whiteness after a snowfall we read: "No broken lights of faith and hope mosaiced the church-yard graves." "Furniture of golded brown" takes the fault indoors, but it is a mistaken coddling. The Rev. Michael's conscience and Ruth's affections do almost as much rolling and twisting as the thousand eyes aforesaid. Welcome as terra-firma to the seasick is the firmer handling of some of the other characters. And now, keeping the best for the last, we turn to the excellent side of this novel. Its interest as a story never flags, while its portraits of the queer, the despicable, the kindly in an independent parish on English sea-coast are full of freshness and entertainment. "The more we have, the more we had ought to cling to it," says wily Jacob Yates; "it's only them as has nothing as can afford to give." Worthy Mrs. Nettlefold, the Deacon's wife, should win immortality if only for saying, "Bear your wife's burdens, and so fulfil the law, is a text that comforts me when domestic things are hard for the Deacon." And there is a lovely cat.

Mr. Peck's stories of western Alabama are noticeably bright little sketches. "The Trouble at St. James's" is perhaps the best, being a capital account by the negro sexton of the vicissitudes attending the ministry of the Rev. Mr. Crofton. "Sister Taylor's Registered Letter" is a close second; and "Pap's Mules" an entirely charming story of a boy's rescue of the two most important members of the household from Yankee raiders and mule-thieves. A few of the sketches lean toward farce, and over a few hovers a soft, idyllic aroma suiting the land and the day when Annie sewed in the old summer-house under the myrtles, and Tom read 'Lalla Rookh' aloud to her.

Miss Glasgow's books improve with each deeper plunge into the past and into the South. Her story of Reconstruction was better than her novel of New York, and best of the three is 'The Battle-Ground,' which shuns even small towns, and tells of Virginia before and during the civil war. Two or three of the portraits are masterly. Of these are the heroine, Betty, and the two old men, the Governor and the Major. Secondary, but as lifelike, are the studies of the mountaineer known as "Pinetop"; the faithful old slave, "Big Abel," who follows his young master to the war; Aunt Molly, reading 'The Mysteries of Udolpho' in bed, a tall silver candlestick standing on her breast; Aunt Lydia tending her old garden, and liking apple-toddy, though she regarded the taste "as an indelicate one, and would as soon have admitted, before gentlemen, a liking for cabbage." As to the young hero, his attractiveness is more insisted on than patent. However, if not a very positive character himself, he is the cause of much excellent characterization in others, being the chief object of much and varied loving, petting, and cursing. The South—say rather the Virginia—of a generation ago has found a most sympathetic reproduction, with its neighborhood amenities and the manners of an age of chivalry. The women (always excepting the spicy Betty) are an irresistible compound of the seraphic and the silly; the men roystering, tender-hearted, elegant, readers of Horace and Addison, but none the wider for it; vehement declaimers upon the rights and duties of gentlemen. What is a gentleman, by the way? As many different things, seemingly, as there are communities and professions. Major Lightfoot's creed declared, "There's no man alive that shall question the divine right of slavery in my presence; but—but it is an institution for gentlemen, and you, sir [to a nobody white who had struck his slave] are a damned scoundrel." When he finds his grandson, as he thinks, fickle, he roars, "Would you trifle with a lady from your own State, sir?" And his reproach to the hotheaded youth for duelling in a chivalrous cause is that he has "tried to murder a Virginia gentleman for the sake of a barroom hussy." The old Major, indeed, is a very fine example of a local product. With the Governor, the strictly Virginian idea is enlarged to a wider patriotism. Incurring his friend the Major's unrestrained wrath, the Governor sadly hopes to save the Union, not as one who loves his State less, but his country more.

Coming to the second generation, we find Dan Montjoy, in the stress of camp life, forming a warm friendship with a despised mountaineer as they fight side by side, the young patrician for the right to hold slaves, the other to "keep Virginia." The war half of the book is vivid; moving, as always, is the story of the beardless boys who made up the army of the South, especially the followers of Gen. Lee, their justly adored "Marse Robert." The writer writes whereof she evidently knows. But intimacy has not dulled her perception. She takes heed of tragic and humorous as one who writes from without, though she has seen from within. We must except the natural scenery, which looms too large. At times, like that in "Parsifal," it sustains the entire action while the figures are stationary.

Miscellanies (Second Series). By Austin Dobson. Dodd, Mead & Co. 1901.

There is, in the circle of distinctive and admirable literary qualities, one grace too rarely seen—perhaps, nowadays, too rarely sought. This, which, for want of any generally accepted tag, may be defined as virile delicacy, is the peculiar and conspicuous charm of Mr. Austin Dobson's slight, often occasional, but always delightful, miscellanies in prose and verse. The present eight papers, chiefly upon themes drawn from the life and letters of eighteenth-century England, are marked by the intimacy which springs not from the violent exenteration of a subject, but from wide and exact knowledge, long cogitated and pleasantly remembered; all are composed in a graceful style of Addisonian clarity and ease, as devoid of colloquialism as of pedantry. As for the verse, one would like to round upon Mr. Dobson with an appreciative *tu quoque* when he writes of another,

> "Pope taught him rhythm. Prior ease,
> Praed buoyancy and banter." . . .

The essays are all so pleasant and so discursive that detailed criticism is out of the question, and selection among them a disagreeable renunciation. Even the footnotes are filled with "lures of laughter." Thus, it is hard to be too grateful for a note appended to the paper on Fielding's 'Convent Garden Journal,' which recalls the friend of Joseph Cradock's who returned to him his copy of 'Hermes'—that inchoate, tremendous philological work by James Harris of Salisbury—with a mild deprecation of "these imitations of Tristram Shandy."

Perhaps the essays which will be generally read with most pleasure are those "On Certain Quotations in Walton's Angler," and on "Vader Cats." At this time of year, when to many the subsidence of snow water is the most momentous of matters, Walton is an author often taken from the shelf. Mr. Dobson has been at the pains of running down some of Piscator's many quotations, and has been delighted to find that all are singularly inaccurate, amplified and amended quite at the sweet will of gentle Izaak. But Mr. Dobson does not promulgate his discovery in the temper of the "severe, sowre complexion'd" critic; rather he uses it to exalt the more the real Walton—"the Walton of the cheerful spirit and the clean morality, of the frank old words that smell of the soil and the fresh-turned furrows."

There may be some who do not know that "Vader Cats" is none other than Jacob Cats, who may be described as the typical Tupper of Holland, whose poetry, as Mr. Dobson says engagingly, is not "a trickling rill from Helicon," but "an inundation *à la mode du pays*." Upon the fat, copiously illustrated folio of his works, Mr. Dobson has written a remarkably felicitous paper. Many collectors will aspire to possess that stately volume, wherein are inserted such plates as that which depicts Jacob (the Scriptural Jacob) carving upon a tree trunk "La Belle Rachell," and "Vive l'Amour."

Mr. Dobson's verse is so well known that the occasional pieces here printed, or reprinted, need little comment. But we cannot forbear quoting his sound critical praise of Dr. Johnson:

> "Read him for style and dismiss from your thoughts
> The crowd of compilers who copied his faults.
> Say, where is there English so full and so clear,
> So weighty, so dignified, manly, sincere?
> So strong in expression, conviction, persuasion?
> So prompt to take color from place or occasion?
> So widely removed from the doubtful, the tentative;
> So truly—and in the best sense—argumentative?"

The only regret with which one concludes the reading of these 'Miscellanies' is that the "correctness" of Mr. Dobson's faultless pen should, in this edition, be sometimes obscured by the incontinent proof-reading.

Our National Parks. By John Muir. Boston: Houghton, Mifflin & Co.

Charles Dudley Warner once wrote that ignorance of America was one of the branches taught in English schools. In view of the proverbial ignorance of their own country displayed by most Americans who spend their summers abroad, the English attitude is perhaps not surprising. That great Alpine specialist, Mr. Whymper, declared in a recent lecture that there are fifty Switzerlands in British Columbia alone. This region, to be sure, is at present for the most part inaccessible to ordinary tourists; but how many of us know that there are now in the United States five great national parks and thirty-eight reservations, most of them easily accessible? These regions have scenic beauties and wonders that Europe cannot match, yet the visitors to most of them are few.

A book calling attention to the manifold charms of these parks was a real desideratum, and it is most fortunate that it was written by such a genuine lover of nature as John Muir, who knows more about the forests and streams, the mountains and glaciers, the flowers and animals, of the Pacific Slope than any other living person. He has spent his life tracing rivers to their sources, climbing peaks, botanizing, studying the habits of animals, and camping wherever night happened to overtake him, often next door to mountain sheep or deer. The food question seems to have been his chief source of trouble. He envies the hardy grouse which are able to spend even the winter in the forests of the California mountains:

"Able to live on the buds of pines, spruce, and fir, they are for ever independent in the matter of food supply, which gives so many of us trouble, dragging us here and there away from our best work. How gladly I would live on pine buds, however pitchy, for the sake of this grand independence!"

Usually this indefatigable naturalist has wandered alone, and so well are his habits known all over the Pacific Slope that it has repeatedly happened to him, on coming across some logger or hermit in the densest forests, to be accosted with the words, "You must be John Muir." Once he allowed himself to be persuaded to take along a beast of burden to carry his food and a pair of blankets; and the account of his Travels with a Donkey is as interesting as Stevenson's, though much shorter. He never repeated the experiment, as he found the poor beast in the long run more of a burden than a help:

"Tough as he was, and accomplished as a climber, many a time in the course of our journey when he was jaded and hungry, wedged fast in rocks or struggling in cha-

parral like a fly in a spiderweb, his troubles were sad to see, and I wished he would leave me and find his way home alone."

Of the ten chapters in Mr. Muir's book, two are devoted to the American parks and forest reservations in general, one to the Yellowstone, the others to the fountains and streams, the forests and big trees, the wild gardens and animals of the Yosemite. He grows enthusiastic over the vast tundras of Alaska as being "the most extensive, least spoiled, and most unspoilable of the gardens of the continent." Nowhere else on his travels has he seen "so much warm-blooded rejoicing life as in this grand Arctic reservation, by so many regarded as desolate." He urges tourists to give a month at least to the Flathead Reserve in Montana, with Lake McDonald and "the best care-killing scenery on the continent." Most inviting, too, are his remarks on the Mount Ranier forest reserve in Washington, which includes not only a sublime snow mountain over 14,000 feet in height, with glaciers radiating in every direction, but forests reaching to a height of over 6,000 feet, and above them a zone of the loveliest flowers, fifty miles in circuit and two miles wide, of which Mr. Muir says: "Altogether this is the richest subalpine garden I ever found, a perfect floral elysium." The wonders of the Yellowstone also have never had a more eloquent and graphic portrayer, and altogether the author has succeeded admirably in his object of showing forth "the beauty, grandeur, and all-embracing usefulness of our wild mountain forest reservations and parks, with a view to inciting the people to come and enjoy, and get them into their hearts, that so at length their preservation and right use might be made sure."

That the Yosemite should be specially favored in a book by John Muir was to have been expected, for the Sierra Nevada has been his headquarters, to which he always returned after excursions elsewhere; and he admits that of all the mountain ranges he has climbed, he likes this the best. Here there are no wild beasts and fevers trying to kill the adventurous traveller, as in many other parts of the world. Here everything is hospitable and kind; even the storms are friendly; the weather is mostly sunshine, both winter and summer, and

"Even the heaviest portions of the main forest belt, where the trees are tallest and stand closest, are not in the least gloomy. . . . The gardens and beds of underbrush, once devastated by sheep, are blooming again in all their wild glory, and the park is a paradise that makes even the loss of Eden seem insignificant. . . . Even the blind must enjoy these woods, drinking their fragrance, listening to the music of the winds in their groves, and fingering their flowers and plumes and cones and richly furrowed boles."

Mr. Muir scouts the charge, so often made, that there are no animals in these Sierra forests. They simply shun the noisy tourists. He has never had any trouble in finding them, and gives many charming descriptions of their habits as observed at close range. A page (173) is devoted to an amusing catalogue of the diverse things a bear will eat, from ants and snakes to strawberries and acorns, besides sugar, bacon, the mountaineer's bed, and a hundred other things. Bears never troubled the author during all his solitary wanderings; nor has any Yosemite tourist ever been bitten by snakes, though among these there are rattlers, with which Mr. Muir had some interesting adventures. "No American wilderness that I know of is," he says, "so dangerous as a city home, 'with all the modern improvements.'" It will surprise many to read that, while settlers are usually destructive of animal life, one of the loveliest species of California birds, the quail, has vastly increased in numbers, because the ravages of the pot-hunters are more than offset by the killing off of the quail's natural enemies—coyotes, skunks, foxes, hawks, owls, etc.—which not only kill the birds, but plunder their nests.

How do birds know that winter is coming? We usually say an instinct tells them, but perhaps the secret is simply this, that, like John Muir, they have keener senses than most of us, and are guided by the silky streamers on the peaks, the warning tones of the wind, and the strange whisperings among the tree-tops he speaks of (p. 283) in one of the many poetic passages in this book, which affect one like the surging waves of sound in a Wagner opera. His descriptions of forest fires, of Yellowstone geysers, of the outbursts of tree-bloom covering a thousand mountains, of earthquakes and avalanches, of the grinding, sculpturing, scenery-making glaciers, of the giant sequoias, "the auld lang syne of trees," looking as strange in aspect among other trees as would the mastodon among the homely bears and deer—are admirable specimens of prose poetry.

Throughout this volume there is a mixture of æsthetic appreciation, scientific knowledge, and personal adventure that gives it a unique charm. There are also amusing pages, among them an account of the author's vain endeavor to cure Emerson of the house habit and the strange dread of pure night air. The philosopher would have none of it, though his guide praised the beauty and fragrance of the sequoia camp-fire, and told how the great trees would stand about them transfigured in the purple light, while the stars looked down between the great domes. So Muir, after his visitor had left, sauntered back into the heart of the grove, made a bed of sequoia plumes and ferns by the side of a stream, built a great fire after sundown, and, as usual, had it all to himself.

The Scotch-Irish; or, The Scot in North Britain, North Ireland, and North America. By Charles A. Hanna. 2 vols. G. P. Putnam's Sons. 1902.

In these large octavos there are twelve hundred pages of miscellaneous information, much of which is of a character to make the reader suspect that Mr. Hanna would have printed the names of all the Scots that ever lived could he have ascertained them. We have not only long lists of the settlers in Ulster, and of those who emigrated to this country, but also the "Ragman Roll," the names of most of the families of Scotland, of the peers and members of Parliament, the baronets, the bishops, the judges, and apparently of all other functionaries whose names are of record. Mingled among these catalogues are long extracts from the Norse Sagas, the Irish annalists, the 'Cloud of Witnesses,' the Montgomery, Hamilton, and Adair manuscripts, and numberless other chronicles and histories. All this, we are told, is not intended as a history of the Scotch-Irish people, but as an introduction to a series of historical collections which Mr. Hanna expects to publish hereafter. The prospective magnitude of this work would certainly daunt any one not of the indomitable race that it celebrates; but, knowing what Scotsmen have done and endured in the way of sermons, we may infer that they are "capables de tout."

While we think that Mr. Hanna has not made the best use of his materials, it would be ungracious not to recognize the value of his work. He is no doubt correct in supposing that many "native-born Americans" are ignorant of the details of Scottish history; and the epitome which he presents contains full citations from records not accessible here. The religious history of Scotland has a very direct connection with the remarkable extension of the Presbyterian system of church government in this country—a connection which has not been sufficiently noticed by our historians, and which Mr. Hanna illustrates with many striking facts. He suggests that the Revolution was due in no small degree to the hatred of England inherited from their persecuted forefathers by the Scottish immigrants, and he shows that this stock was prominent in both military and civil affairs. At the time of the Revolution there were more than 500 of their communities scattered from Maine to Georgia, but bound together by their representative system of church government. Long before the Revolution, there was a general synod holding annual meetings, attended by representatives of presbyteries in all parts of the land, an organization which might well contain the germ of a national union. Mr. Hanna brings out many facts supporting his general claim that the part played by this race in developing our country has not been duly appreciated, and complains that the achievements of the New England Puritans have been made too prominent. There is a chance for controversy here, but we shall not stir up strife.

We must observe, however, that Mr. Hanna's sweeping charges against the "Quaker Oligarchy" of Pennsylvania cannot bear the light turned on the subject by the recent books of Mr. Isaac Sharpless. Whatever else Mr. Hanna does, he proves that, from the earliest times, the Scots have been distinguished for their ferocity, and that slaughtering and being slaughtered by Indians in this country was nothing more than what they had been used to in the feuds and forays of Scotland. Such a people could no more adopt Quaker methods of dealing with the Indians than the Hebrew priests could extend mercy to the Canaanites. Mr. Hanna gives an account of the massacre of the Conestoga Indians who had taken refuge in the jail at Lancaster, and of the still more atrocious slaughter of the Moravian Indians at Gnadenhütten. He remarks that the Scotch-Irish may be blamed for thus introducing lynch law in America, and comments as follows:

"This atavistic tendency is further illustrated in our own day by the lynching of negroes in the South, the frequency of which is probably due to the fact that the Southern white population is chiefly of Scotch-Irish descent; these examples of perverted administration of justice finding many parallels in the annals of mediæval Scotland. The family feuds of Kentucky, which, for the most part, seem peculiar to families bearing Scottish names, may also be cited as examples

and counterparts in America of the clan and family feuds formerly so common in Scotland."

The "perverted administration of justice" displayed in the murder of Indians guilty of no crime is further explained by Mr. Hanna as really a vicarious sacrifice. The Indians were befriended by the Quakers, whom the Scots hated; and as they could not directly attack the Quakers, they killed their defenceless wards. It is worth notice that a minister who had tried to restrain the Paxtang Rangers—the band which broke open the Conestoga jail and killed the Indians who had taken refuge there, men, women, and children—spoke of the affair precisely as the lynchings of negroes are now spoken of. The men, he says, "were in private life virtuous and respectable—not cruel, but mild and merciful. . . . This deed, magnified into the blackest of crimes, shall be considered one of those youthful ebullitions of wrath caused by momentary excitement, to which human infirmity is subjected." But the perpetrators of the deed scorned to apologize for it, and the statement made by their leader of the attitude of his people towards the Indians well deserves to be preserved as defining the general policy of "civilized" governments in dealing with inferior races even to this day. But we can hardly believe this worthy when he complains that the failure of the Quaker Government to offer rewards for Indian scalps had "damped the spirits of many brave men." It is a clever touch, and no doubt a canny Scot would be glad to turn an honest penny by killing an enemy; but the pleasure of killing would be a sufficient inducement.

It should be said that these Scots were forced to the frontiers in all the colonies, and thus had to bear the brunt of the collision with the natives. They immigrated when the lands near the coast had been taken up by earlier settlers, and were thus obliged to become pioneers. Their onward march has many features of sublimity, and no one will deny their courage and vigor. But they were a stern, almost a savage race, and their religion was that of a "peculiar people." Apart from racial considerations, Mr. Hanna's compilation has much genealogical value, and it is in this direction that his researches may be most advantageously prosecuted. These volumes cannot be said to be readable, although they contain much readable matter; but they will be found very serviceable for reference, and should find a place in our public libraries.

The Land of Nome. By Lanier McKee. New York: The Grafton Press. 1902. Pp. xii, 260.

Mr. McKee and a companion went to seek their fortunes in the Nome region of Alaska after the discovery of gold. They reached the town on June 20, 1900, and, after looking about, proceeded to Council City, a mining camp in the interior reached by ascending a shallow stream which falls into Golovin Sound, on the south shore of the peninsula. Here Mr. McKee undertook to practise law while his associate took to surveying mining claims. The former returned to San Francisco for the winter, and reached Council City again the following spring. Mr. McKee is a resident of Washington, D. C., and a graduate of the Harvard Law School; also, it would appear from his narrative, a level-headed and businesslike person, who, with his partner, scored a fair measure of success.

The account of the journey to their destination is a very straightforward, unsensational narrative of experiences such as have been the lot of thousands since the gold excitement began. It is true to life, and all the more welcome since the average returned Alaskan gold-seeker is prone to exercise a traveller's privilege of picturesque embroidery in his tales of adventure. The real interest of the book, however, lies in its first-hand details of the most remarkable and shameful conspiracy to defraud by wholesale the members of a mining community by process of law which has ever been exposed. The discovery of the gold near Nome was made by some of the Lapps engaged by the Government in the attempt to train the resident natives of Port Clarence and vicinity in the handling and use of domesticated reindeer. These Lapps were not citizens of the United States, and it was questioned by some whether they had a right to take up mining claims in United States territory. When the first news of the strike reached St. Michael, a number of traders and others hurried to the ground, and staked out a multitude of claims for themselves, and also, by power of attorney, for an enormous number of persons who had never been in the new gold-field. There was some doubt as to the legality of the title to claims based on these powers of attorney, and of the titles gained by corporations who had purchased and were working claims derived from the Lapps and the "attorneys." The inception of the conspiracy is wrapped in mystery, and has not been investigated by any court. A version which we are informed is current in Alaska, but of the truth of which it is impossible to be certain, is to the effect that a "member of the Board of Aldermen of the District of Columbia," and a political "striker" to whom he was indebted, arranged that the former should obtain the appointment of a judge for the Third District of Alaska (which included the Nome region) who would enter into the plan of recognizing "jumpers" of the claims aforesaid, making the "striker" a receiver for the properties in dispute under nominal bonds, and working the claims, so sequestered, to the incidental profit of the conspirators, the ruin of the original claim-holders, and, should the legal questions be finally decided against the latter, to the fabulous enrichment of the "gang." Thus robbery was to be brazenly perpetrated under the forms of law, and the fountain of justice poisoned at its source.

The injunction issued by the Circuit Court of Appeals in San Francisco, its defiance by the judge and his associates in Alaska, the final arrest, conviction, and imprisonment of the Alaskan members of the "gang" for contempt of court, and their dismissal from office in disgrace, are matters of legal record and beyond dispute. Senator Stewart has placed the complete history of the receivership proceedings, together with the opinion and judgment of the Circuit Court of Appeals, in the *Congressional Record*, where it may be consulted by any one, and the more essential facts are recapitulated in the volume before us. It is much to be desired that the public should inform themselves of this culminating outrage on the rights of Alaskan settlers and miners, and that a little of the indignation, fruitlessly if righteously expended on affairs in the Philippines, should be brought to bear on matters nearer home, in the interest of a community which has suffered from neglect and ill-treatment incredible in a civilized country, for more than thirty years.

The Pavement Masters of Siena (1369-1562). By Robert H. Hobart Cust, M.A., Oxford. Being the first volume of Handbooks of the Great Craftsmen, edited by G. C. Williamson, Litt.D. London: George Bell & Sons; New York: Macmillan. 1901. pp. xxiii, 159.

The Ivory-Workers of the Middle Ages. By A. M. Cust. Same publishers. 1902. Pp. xix, 170.

The famous Cathedral of Siena is distinguished from all other churches in having an inlaid and encrusted pavement. This prodigious achievement is not a mere pattern of triangles and lozenges arranged in circles or otherwise — it is not mere *opus musivum*, or *opus Alexandrinum;* it is an elaborate series of pictures, in monochrome or nearly so, but still pictorial in the extreme, framed in and set off by borders of checker and zigzag. With this elaborate pictorial surface adornment the whole flooring of the church is composed. Unfortunately, it has to be covered again by a flooring of planks, and these, though made so as to be removable in large square divisions, are taken up by the servants of the church only piece by piece, and in return for fees, nor is it possible to have any idea of the general effect of the whole church, with its pavement affecting the general design. This, which is, of course, the only very important point of view—the only way in which the pavement is really worth considering—is rendered unobtainable, except on certain days of the year, when, and for an occasion, the plank coverings are stowed away; but then the crowd fills the church, and few are they who in modern times have seen this great work in its entirety. Obviously the great artistic undertaking has proved a mistake, and the pavement is a thing not to be imitated or followed by future cathedral builders.

For the student of ancient art there is, however, no choice. He must become as familiar with the significance of these separate designs and with the general conception which holds them together in one composition as if they were in evidence daily, displayed upon the walls as one wishes that they had been displayed; and Mr. Hobart Cust's book is the only attempt made with any persistence and on any intelligible system to explain it—in short, to serve as a guide to the pavement, which much needs a guide. The work is divided into five chapters. The first gives the history of the pavement; chapter ii. describes it; chapter iii. deals with the artists who have worked upon it (these two chapters are much the longest, and include in themselves three-fourths of the book); chapter iv. refers to other important pavements in Italy; chapter v. comes back to the Siena floor, and describes, though too briefly, the materials and the workmanship with special attention to the gradually increasing introduction, during the many years spent upon the pavement, of colored marbles into the designs. There are tables of the pave-

ment and its designers, with reference to a skeleton plan; there is a list of authorities consulted, and there are many half-tone prints, one of which is from a drawing in black and white of the whole pavement; unless, indeed, it is made from a series of separate photographs taken vertically from above. We should not dare make this guess were it not that a precisely similar case is before us, in which a most elaborate architectural composition was reproduced in 140-odd photographs, which were then brought together edge to edge, and held on an enormous stretcher, that single photographs of the whole might be taken, with a very useful result. Another picture should be named, however, the most important single thing in the book—a plate showing the whole interior of the church from near the entrance door, with the plank floor removed, and the pavement showing in perspective, as it was intended to be seen—as it cannot be seen in modern times.

Another volume of this series is that on Ivory Workers of the Middle Ages, by A. M. Cust. It contains a number of successful half-tone illustrations, from well-chosen subjects, sufficiently varied, and expressive of the styles which they represent, if not very novel to the student of such matters. Such a student will miss certain important pieces, but that is not a thing to visit with much reprobation. The Paris Exposition of 1900 is mentioned, and two pieces that were there are named, while a third, the wonderful Virgin of Villeneuve, passes without being named; but it is easy to understand that reproduction of objects in that retrospective exhibition was forbidden except to those who had the contract, or the privilege, of producing one of the great books already published or in hand concerning that remarkable collection of works of ancient art.

There is really no fault to be found with the illustrations. As for the text, it is unfortunately slight, disfigured by a disagreeably jocose tone, as if really the matter were too trivial to be considered gravely; it is also quite devoid of systematic treatment. A little stream of historical narrative runs through it, with comments on each ivory, which serve as an explanation of why this and that bit of history is introduced; but evidently the attempt to treat the subject in a popular way has been too much for the author. There are better books on the same subject already, and when it was determined to make an inexpensive manual, it was much to be desired that this should be done in the most thorough manner possible. It is not easy to write a small book on a great subject.

Dutch Life in Town and Country. By P. M. Hough. G. P. Putnam's Sons.

Usually "it is dark at the base of the lantern," so far as Holland is concerned, with the Britisher, whether he be historian, statesman, or the man on the street. He is apt to mix up the Dutch and the German, as if they were one people dwelling in one country. Nor does the Englishman go to Holland for ideas, for he is thoroughly persuaded that the Dutch are "slow." Hence, as a matter of course, we expect English books to be full of glaring inaccuracies when Holland is the theme. In the one before us we have a happy exception.

Mr. Hough has evidently lived long in the land and is familiar with the intellectual and social atmosphere. From cover to cover he is thoroughly accurate in word and idea. There is no other book which gives one so clear a picture of actual life in the Netherlands of 1901. He is so far up to date that he explains the recent phases of political parties and fusions, and the resulting election of Dr. Abraham Kuyper, the stalwart Calvinist, as premier of the kingdom. Again, he shows grasp and insight touching Dutch colonial problems in his chapter on "Holland over Sea." He believes that the Atchin war is practically over, and that the next few years are likely to see greater advances in the commerce and industries of Netherlands India, and a rush of emigrants to the colonies. In just opposition to some of our inaccurate dictionaries that profess to be standards, he does not spell the name of a Reformed Dutch clergyman in Scotch style, "dominie," which is the word for a "stickit minister," but uses the correct Dutch form in unaltered Latin, "domine." The same accuracy in details marks the author's presentation of his thoroughly comprehensive surveys of court and society, the professional classes, art and letters, school and school life, the army and navy, rural customs, and the other topics pictured in his twenty-one chapters. His general view, as especially noticeable in treating matters ecclesiastic and scholastic, is that of the orthodox Englishman, so that from some of his verdicts the American would make considerable deduction for personal equation. From what we know of the Dutch universities, one could hardly accept his chapter on these as fully satisfactory. He is remarkably fair and judicial-minded concerning religious life and thought, though in regard to the "Frye Gemeenten" or Free Congregations (rather than "Communities") the author is hardly correct, for of the fifty or more of these in the Netherlands, about fifteen are genuine Congregational churches, in which, with independence and the greatest freedom of organization, there is a tenacious holding to strictly evangelical doctrine and forms of church life. To read the chapter on "The Peasant at Home" will give to any one familiar with the indoor architecture and habits of the people who settled the Hudson, Raritan, and Mohawk valleys, a revelation of ancestral traits still persistently maintained in America.

Among the illustrations, most of them commonplace though well reproduced, is one giving "the interior of the church at Delftshaven where the Pilgrim fathers worshipped before leaving for New England." For this pleasing supposition there is no written proof, and our own researches on the ground show not only an absence of all record—the church book covering the history of the time having been lost in a "twist," or quarrel, between the domine and the town authorities—but the assertion is intrinsically improbable, for the State Church of Holland in 1620 looked upon Congregationalists as little better than Anabaptists, by which name, indeed, the Puritans of Salem usually spoke of the Plymouth colonists. However, the author does not make in his text assertion of the legend attached to the picture. For its accurate presentation of the Dutch situation in art, letters, learning, and politics, as well as in the round of common life in town and city, this book deserves the heartiest praise.

Mellick's Latin Composition **$.40**
By Anna Cole Mellick, A.B., Brearley School, New York.

Harkness & Forbes's Caesar's Gallic War

$1.25

With Introduction, Notes and Vocabulary. By Albert Harkness, Ph.D., LL.D., Professor Emeritus, Brown University; assisted by Charles H. Forbes, A.B., Professor of Latin, Phillips Academy, Andover, Mass.

While remarkable for its simplicity, this book contains everything needed by the student in reading the Commentaries. The introduction contains an outline of the life of Caesar, a description in brief of the scenes of his military operations, and a short treatise on the military system of the Romans. The notes, while sufficiently helpful, do not invade the province of the living teacher. The illustrations are entirely appropriate, and unlike those in other works of a similar nature.

A copy of our new illustrated High School Catalogue for 1902 will be sent to any address on request.

Annotated Editions with Vocabularies of Texts recommended by the Modern Language Association, including

Riehl's Das Spielmannskind and Der stumme Ratsherr (Priest)

JUST PUBLISHED

Studies in History and Jurisprudence

By JAMES BRYCE, D.C.L. 8vo, cloth, $3.50 *net;* half morocco, $6.00 *net;* postage, 27 cts.

"Taken as a whole, these essays constitute an incomparable treatise on the legal aspects of history."—*N. Y. Nation*, February 20, 1902.

"It is no exaggeration to say that no man living is better qualified to write upon these and kindred topics than the author of 'The American Commonwealth.' The essays are all distinguished by that careful, painstaking research, profound learning, and scrupulous fairness and impartiality that have given Mr. Bryce's previous works such remarkable vogue among the learned and cultured of both hemispheres. The study entitled 'Hamilton and Tocqueville' will undoubtedly possess peculiar interest for American readers."—*Albany Law Journal*, January, 1902.

The Cambridge Platonists

Being selections from the writings of Benjamin Whichcote, John Smith, and Nathanael Culverwel. With Introduction by E. T. CAMPAGNAC, M.A. Crown 8vo, cloth, $2.15.

The Relations of Geography and History

By the Rev. H. B. GEORGE, M.A. With Maps. Crown 8vo, cloth, $1.10.

"Mr. George deserves special congratulation on his success in overcoming the temptation to political partisanship which must be a serious difficulty in the way of any writer who deals with such subjects as are treated here. Each topic is discussed with absolute impartiality in this respect, the historic and scientific conscience being everywhere followed as the only guide."—*New York Evening Post*, August 7, 1901.

"It is a remarkable book, and it seems to me that the author grasps the fundamentals of his problem with the hand of a master. My best endorsement lies in the fact that I have decided to refer my students to the book."—Prof. A. C. FLICK, *Syracuse University*, Syracuse, N. Y.

ALSO PUBLISHED BY HENRY FROWDE:

Selections from the English Poets

Dunbar, Surrey, and Wyatt, Spenser, Shakespeare, Jonson, Milton, Dryden, Pope, Goldsmith, Cowper.
In ten volumes, with portraits, cloth extra, gilt top, $1.25 per volume.

FOR SALE BY ALL BOOKSELLERS. SEND FOR CATALOGUE.

OXFORD UNIVERSITY PRESS (American Branch) 91 & 93 Fifth Avenue, New York

"Deserves the heartiest of welcomes and ought to be read by everybody from the President down. Nothing on the subject has been published for years so effective, clear, and popular."—*The Literary World.*

IRRIGATION

By FREDERICK HAYNES NEWELL, Chief Hydrographer, United States Geological Survey.

Published one month ago, this book has had an extended and notable sale, being largely purchased by Congressmen, Senators, and others interested in the public welfare of this country. The book deals clearly and interestingly with a problem now before our lawmakers' minds: How best to develop our vacant desert lands (two-fifths of our national territory) and make them fit for the home-seeker.

"A candid statement of unvarnished facts."—*Forestry and Irrigation.*

"Will be taken as authority."—*Dallas* (Texas) *Times-Herald.*

"The first comprehensive work of a popular character concerning an industry greater than the largest industrial combination of modern times."—*Kansas City Star.*

"Should have an important influence on the practice of irrigation, and also on legislation dealing with methods of land surveying and of water distribution."—ISRAEL C. RUSSELL, Professor of Geology in the University of Michigan.

"A clear, simple, comprehensive, well-illustrated work by one who thoroughly understands all the conditions as they actually exist."—E. C. MURPHY, Hydrographer, U. S. G. S.

"If there is a man in the entire United States who is fully competent to write a work upon Irrigation it is Prof. Newell."—W. M. WOOLDRIDGE, U. S. Commissioner, Industrial Agent G. N. Ry.

With 156 Illustrations. $2 net. (By mail, $2.20.)

SCHOOL TRUSTEES,

PRINCIPALS,

TEACHERS,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

The Ablest Reviews in America and England Commend

Frederique

MARCEL PREVOST'S powerful novel of The "Bachelor Women."

London Daily News: "Scenes of great truthfulness and intensity. Well worth reading."

Glasgow Herald: "A human document of high interest."

Outlook (New York): "A vigorous book, well worth translating. The translation is notably well done."

Public Opinion: "This is the novel that caused M. Prevost to be hailed as the 'apostle of feminism' by his admiring countrywomen."

San Francisco Chronicle: "Treated with the talent for which M. Prevost is famous."

Translated by Ellen Marriage. $1.50

"The strongest romance of its type since 'Ben Hur.'"

Deborah

By JAMES M. LUDLOW. Illustrated, cloth, $1.50.

NEW PUBLICATIONS

"RICHARD WAGNER'S RHEINGOLD." An artistic, interesting and scholarly manual for opera-goers and music-lovers. It contains the German text of Wagner's masterpiece, with voluminous English notes and a critical explanation of the motifs. The introduction treats of Wagner as a man and an artist, analyzes the trilogy, and details the story of the "Rheingold."

This volume is the first of a series of German Opera Texts, edited by Richard A. von Minckwitz, which purpose meeting the needs of students of the language and opera, as well as furnishing attractive interesting manuals for opera-goers. 122 pages; Portrait of Wagner; Illustrations, pictorial and musical; cloth, 75 cents.

"FRENCH DAILY LIFE." A Reader giving in simple French full information on the various topics of French Life, Manners and Institutions. A guide for the pupil as well as the traveller. By Dr. R. KRON. 173 pages, flexible cloth binding. Price, 75 cents.

"'French Daily Life' as far as I know is the only book that gives to a student the real French that is used in daily life in Paris, and I know from experience that I would have given a great deal to have studied this little book before going to Paris."—*Edwin W. Rand, Principal Princeton University Academy, Princeton, N. J.*

"GERMAN DAILY LIFE." A Reader giving in simple German full information on the various topics of German Life, Manners and Institutions. By Dr. R. KRON. 269 pages, flexible cloth binding. Price, 75 cents.

"We shall certainly use the book after Christmas. It fairly teems with what is interesting and suggestive."—*Prof. H. P. Jones, Hobart College, Geneva, N. Y.*

NEWSON & COMPANY, 15 E. 17th St., N. Y. City.

THRILLING : : SPIRITED : : EXCITING

VIVID

MANY WATERS

A STORY OF NEW YORK

FUNNY

LIVELY : : BRIGHT : : HEALTHY

12mo. Cloth | *By ROBERT SHACKLETON* | Price, $1.50

A Story of the Building of the West.

THE OUTLAWS

By LE ROY ARMSTRONG.

Indiana seventy years ago. The building of the Wabash Canal which bankrupted the State. Raids by outlaws. Amusing house raisings. A story of American pluck, courage and energy.

12mo, Cloth, $1.25

A Damsel or Two

A Novel. By F. FRANKFORT MOORE, Author of "The Jessamy Bride," "A Nest of Linnets," etc.

An officer and a gentleman and a Napoleon of finance are two of the types contrasted in Mr. Moore's interesting story of modern London, suggesting some of the "promotions" and consequent entanglements of recent years, involving a tale of loyal friendship and love.

12mo, Cloth, $1.50

THE PAGEANT and Ceremony of the CORONATION of their Majesties King Edward VII. and Queen Alexandra in Westminster Abbey.

By CHARLES EYRE PASCOE, *Author of "London of To-day."*

A complete compendium of the Coronation rites and ceremonies and State Pageant.

NUMEROUS ILLUSTRATIONS.

8 pages in colors. 12mo. Cloth, $1.40, net. (Postage 11 cents additional.)

Another Masterpiece by Miss Laut.

Heralds of Empire

By A. C. LAUT, Author of "Lords of the North."

A story of Prince Rupert's Hudson Bay Fur Company and of Pierre Radisson, that picturesque adventurer, who played a game with nations for opponents, with empires for the stakes, and with men and women for the pawns.

12mo, Cloth, $1.50

Deep-Sea Plunderings

By FRANK T. BULLEN, Author of "The Cruise of the Cachelot," "The Apostles of the Southeast," etc. Illustrated.

Mr. Bullen, who has proved himself a past master of deep-water literature, presents a series of brilliant and often dramatic pictures of the sailor's life and adventures. He deals also with the stern verities of fo'c'sle life, and the many bewildering phases of deep-water adventuring.

Leavitt's Outlines of Botany $1.00
By Robert Greenleaf Leavitt, A.M., of the Ames Botanical Laboratory.

The Same. With Gray's Field, Forest, and Garden Flora..... 1.80

Dryer's Physical Geography..... 1.20
By Charles R. Dryer, M.A., F.G.S.A., Professor of Geography Indiana State Normal School

Laughlin's Elements of Political Economy.. 1.20
Revised Edition. By J. Laurence Laughlin, Ph.D., Head Professor of Political Economy in the University of Chicago.

Hoxie's Civics for New York State..... 1.00
By Charles De Forest Hoxie, Member of the New York Bar.

Milne's Academic Algebra..... 1.25
By William J. Milne, Ph.D., LL.D., President New York State Normal College, Albany, N. Y.

Smith's Elementary Calculus..... 1.25
By Percey F. Smith, Ph.D., Professor of Mathematics in the Sheffield Scientific School of Yale University.

Sanders's Plane Geometry..... .75
By Alan Sanders, Hughes High School, Cincinnati.

Modern Illustrative Bookkeeping.
Introductory..... 1.00
Complete..... 1.50

Richards's Elementary Navigation and Nautical Astronomy.... .75
By Eugene L. Richards, M.A., Professor of Mathematics, Yale University.

Shaw's Laboratory Exercises in Chemistry .40
By G. W. Shaw, A.M., formerly Professor of Chemistry, Oregon State Agricultural College.

Putnam's Text-Book of Psychology..... 1.00
By Daniel Putnam, LL.D., Professor of Psychology and Pedagogy, Michigan State Normal College.

Catholic Controversy in Fiction

A TRIO OF NOVELS, demonstrating in enlightened and just discussion the influence of **ROMAN CATHOLICISM** on social life to-day.

1. Casting of Nets
By Richard Bagot
12mo. Price $1.50

Opinion of Rabbi Joseph Krauskopf, D.D.:
"The story is excellently written; it holds the reader spellbound from first to last."

Purpose: Showing Rome's Proselytizing Methods

2. A Roman Mystery
By Richard Bagot
12mo. Price $1.50

Opinion of Literature:
"'A Roman Mystery' shows a very accurate observation of the social atmosphere of the Italian capital; so true a glimpse of the inner life of the Roman aristocracy."

Subject: Temporal Power of the Pope

3. The Catholic
By an Anonymous Writer
12mo. Price $1.50

Author's Advertisement:
This is a "picture of life," not a novel with a purpose. The story is the record of a proud Englishwoman under the influence of a great spiritual power. She is not held up to the admiration or to the reprobation of the reader; judgment is not passed upon her by the author; she is merely presented

Scope: Conversion Among the "Upper Ten"

JOHN LANE THE BODLEY HEAD 67 Fifth Avenue **NEW YORK**

THREE NEW IMPORTANT PUBLICATIONS

THE LAND OF THE WINE
By A. J. Drexel Biddle, F. R. G. S., F.G.S.A., F.R.M.S., etc.

An account of the Madeira Islands from a new point of view. Subscribed for by the U. S. Govt., His Majesty, the King of Portugal, and Libraries and Scientific Societies throughout the world.

2 vols., cloth and gold, boxed, $7.50 net.

76 *Full-page illustrations and many colored maps.*

"Mr. Biddle is the leading living authority on subjects pertaining to these important islands."—*Washington Post.*

A SECOND CENTURY SATIRIST; or Dialogues and Stories from Lucian of Samosata
By Winthrop Dudley Sheldon, LL.D., Vice-President of Girard College.

Cloth, 462 pages. $1.50 net.

"A revelation—might well have been written yesterday, and published this morning, for all the point of view."—*Boston Home Journal.*

"Lucian sees things, says things, and is the real final fact, as is Mr. Kipling."—*Book News.*

ENGRAVED GEMS
By Maxwell Sommerville, Professor of Glyptology, University of Penna.

Cloth and Gold, Ill., **$1.50 *net***

A description of the various epochs of gem engraving from the earliest era down to the XVIII. century.

"The book will be a delight and of great assistance to all who are endeavoring to reconstruct the history of the past by means of its art ideals."—*Pittsburgh Times.*

"The author is the foremost glyptologist in this country."—*Nashville American.*

Scientific Publications

Plane Surveying

A text and reference book for the use of students in Engineering and for engineers generally. By PAUL C. NUGENT, A.M., C.E., Associate Professor of Civil Engineering, Syracuse University. 8vo, xvi + 577 pages, 320 figures, cloth, $3.50.

Locomotive Sparks

By W. F. M. GOSS, Dean of the Schools of Engineering and Director of the Engineering Laboratory, Purdue University. 8vo, vii. + 172 pages, 69 figures, cloth, $2.00.

Sewage and the Bacterial Purification of Sewage

By SAMUEL RIDEAL, D.Sc. (Lond.) Second edition. 8vo, 316 pages, cloth, $3.50.

Water-Supply Engineering

The Designing, Construction, and Maintenance of Water-Supply Systems, Both City and Irrigation. By A. PRESCOTT FOLWELL. Second edition. 8vo, xiv + 570 pages, 95 figures and 19 full-page plates, cloth, $4.00.

The Elements of Physical Chemistry

By J. LIVINGSTON R. MORGAN, Ph.D., Adjunct Professor of Physical Chemistry, Columbia University. Second edition, revised and enlarged, x + 352 pages. 12mo, cloth, $2.00.

A Text-Book on Roads and Pavements

By FREDERICK P. SPALDING, Professor of Civil Engineering, University of Missouri; Member American Society of Civil Engineers. Second edition, revised and enlarged. 12mo, viii + 235 pages, 44 figures, cloth, $2.00.

Moulders' Text-Book

Being Part II. of American Foundry Practice. By THOMAS D. WEST. 9th edition. Fully illustrated. 12mo, x + 518 pages, profusely illustrated, cloth, $2.50.

The Theory and Practice of Surveying

By J. B. JOHNSON, C.E. 16th edition, revised and enlarged. 8vo, xxx + 838 pages, cloth, $4.00.

The Dietary Computer

Consisting of an Explanatory Pamphlet and Computing Rack. By ELLEN H. RICHARDS and LOUISE H. WILLIAMS. 8vo, cloth, $1.50, *net*.

Sewerage

The Designing, Construction, and Maintenance of Sewerage Systems. By A. PRESCOTT FOLWELL. 5th edition. 8vo, x + 455 pages, cloth, $3.00.

Bridge Design

Being Part III. of a Text Book of Roofs and Bridges. By Professor MANSFIELD MERRIMAN and Professor HAROLD S. JACOBY. 4th edition, Rewritten. viii + 374 pages, 8vo, cloth, $2.50.

Indicators and Test Papers

Their Source, Preparation, Application, and Tests for Sensitiveness. By ALFRED I. COHN, Ph.G. Second edition revised to date. ix. + 267 pages, 12mo, cloth, $2.00.

IN PREPARATION

Water Supply

Considered Principally from a Sanitary Standpoint by WILLIAM PITT MASON. Third edition, Rewritten. 8vo, vii + 448 pages, 40 figures, 22 half-tone plates, $4.00. (May 1st.)

American Horticultural Manual

In two parts, Part I. Comprising the Leading Principles and Practices connected with the Propagation, Culture, and Improvement of Fruits, Nuts, Ornamental Trees, Shrubs, and Plants in the United States and Canada. By J. L. BUDD, Professor Emeritus in Horticulture in the Iowa State College of Agriculture and the Mechanic Arts. Assisted by N. E. HANSEN, Professor in the South Dakota Agricultural College. 12mo, xx + 417 pp., 107 figures, cloth, $1.50. (May 1st.)

Part II. *Systematic Pomology.*

Gas and Fuel Analysis for Engineers

By AUGUSTUS H. GILL, Professor of Gas Analysis at the Massachusetts Institute of Technology. Third edition, Revised. v + 109 pages, illustrated, 12mo, cloth, $1.25. (May.)

Handbook for Street Railway Engineers

Containing Geometrical and Trigonometrical Formulæ, Transition Curve Tables, Strength of Wooden Beams and Columns, Electrical Formulæ and Tables, and much other information invaluable in Street Railway Design and Maintenance. By H. B. ANDREWS, C. E. 16mo, morocco, $1.25.

A Text-Book of Inorganic Chemistry

By A. F. HOLLEMAN, Professor Ordinarius of Chemistry in the University of Groningen, Holland. Rendered into English by Hermon C. Cooper, Ph.D., with the Coöperation of the Author. 8vo, viii + 458 pages, cloth, $2.50. (May.)

Properties Characterizing Economically Important Species of Wood

By CHARLES H. SNOW, Dean of the School of Applied Science, University of the City of New York. 8vo, cloth.

A Text-Book of Organic Chemistry

By A. F. HOLLEMAN. Rendered into English by A. JAMIESON WALKER, Head of Department of Chemistry Municipal Technical College, Derby; assisted by Owen E. Mott, Ph. D., Demonstrator in Chemistry in Municipal Technical College, Derby.

Mechanics of Engineering—Vol. II.

Being the twelfth revised edition of Stresses in Framed Structures. By A. J. DUBOIS, Professor of Civil Engineering in Yale Sheffield Scientific School. Small 4to, cloth.

A Short Course in Statics by Graphic and Algebraic Methods

By Professor L. J. JOHNSON, Lawrence Scientific School, Harvard University.

De La Place—Essai Philosophique sur les Probabilities

A translation by Professor F. L. EMORY and FRED W. TRUSCOTT, West Virginia University.

A Text Book of Electrical Machinery

By HARRIS J. RYAN, HENRY H. NORRIS, and GEO. L. HOXIE of Cornell University. 8vo, cloth.

The Heating and Ventilation of Buildings

By Professor ROLLA C. CARPENTER, Cornel. University. 4th Edition, thoroughly revised 8vo, cloth.

Insects Injurious to Garden Crops

By Professor E. DWIGHT SANDERSON, Delaware College. 12mo, cloth.

Insects Injuring Fruits

By Professor E. DWIGHT SANDERSON, Delaware College. 12mo, cloth.

Locomotives: Simple, Compound and Electric

Being the 4th edition of Locomotive Mechanism and Engineering, by H. C. REAGAN. 12mo, cloth, illustrated.

The Inspection and Analysis of Food

With special reference to State Control. By ALBERT E. LEACH.

Inorganic Chemistry

With the Elements of Physical and Theoretical Chemistry. By J. I. D. HINDS, Professor of Chemistry in the University of Nashville. 8vo, cloth.

NEW YORK CITY:

JOHN WILEY & SONS, 43 and 45 East 19th St.

GINN & COMPANY'S NEW BOOKS

Nature Study Books

Hodge's Nature Study and Life

By CLIFTON F. HODGE of Clark University, with an introduction by Dr. G. Stanley Hall. List price, $1.50

In the point of view, in the selection of the subject-matter, and in the presentation of methods of conducting the work, this book marks a definite advance over other publications on the subject of nature study.

Long's Wood Folk Series

Ways of Wood Folk	List price	.50

For High Schools and Colleges

Analytical Psychology

A Practical Manual for Colleges, Normal and High Schools, presenting the Facts and Principles of Mental Analysis in the Form of Simple Illustrations and Experiments. By LIGHTNER WITMER of the University of Pennsylvania. List price, $1.50

A Course in Invertebrate Zoölogy

A Guide to the Dissection and Comparative Study of Invertebrate Animals. By HENRY S. PRATT, of Haverford College, Pa., and Instructor in Comparative Anatomy at the Marine Biological Laboratory at Cold Spring Harbor, Long Island. List price, $1.25

Lockwood and Emerson's Composition and Rhetoric List price, $1.00

Myers' Rome: Its Rise and Fall List price, $1.25

Müller and Wenckebach's Glück Auf. A First German Reader List price, .75

Cicero: Select Orations and Letters

Edited by the late J. B. Greenough, Professor of Latin in Harvard University, and George Lyman Kittredge, Professor of English in Harvard University, formerly Professor of Latin in the Phillips Exeter Academy. (Nearly ready.)

In addition to the books mentioned above Ginn & Company publish a complete list of Text-Books for Elementary Schools, High Schools, and Colleges. They will gladly send Circulars, Catalogues, and Bulletins of New Books to any address, postpaid, on application.

· PHYSICS—CHEMISTRY—MATHEMATICS—ZOÖLOGY ·

A Text-Book of Physics

For Colleges and Scientific Schools. By WM. WATSON, A.R.C.S., B.Sc., author of Elementary Practical Physics. Crown 8vo. 918 pp., with 564 illustrations. $3.50.

"It is a book which, I hope, will be used in an increasing number of American colleges. It will certainly lead to a better appreciation of the true principles of physics."—*Prof. J. S. Ames, Johns Hopkins University.*

Adopted at Mass. Inst. of Technology, Drexel Inst., Bradley Poly. Inst., Baltimore Poly. Inst., Worcester Poly. Inst., Clarkson Poly. Inst., Armour Inst., Lewis Inst., Case School of Applied Science, U. S. Naval Academy, University of Chicago, Univ. of Calif., Univ. of Wisconsin, Univ. of Notre Dame, Indiana University, etc. etc.

A Text Book of Inorganic Chemistry

By G. S. NEWTH, F.I.C., F.C.S., Royal College of Science, London. Crown 8vo. 682 pages, with 146 Illustrations, $1.75.

Adopted at Princeton, Dartmouth, Drexel Inst., Worcester Poly. Inst., Lewis Inst., Rensselaer Poly. Inst., Bradley Inst., Northwestern Univ., Amherst College, University of Michigan, Univ. of Missouri, Ohio State Univ., Columbia, Bryn Mawr, Mt. Holyoke, Temple College, etc.

A NEW TRIGONOMETRY

By D. A. MURRAY, Ph.D., Cornell University, author of "An Introductory Course in Differential Equations," "An Elementary Course in the Integral Calculus," etc.

PLANE TRIGONOMETRY, with a Protractor	$ .90
PLANE TRIGONOMETRY AND TABLES	1.25
LOGARITHMIC AND TRIGONOMETRIC TABLES	.60
SPHERICAL TRIGONOMETRY	.60
PLANE AND SPHERICAL TRIGONOMETRY	1.25

"Of course it was a foregone conclusion that Dr. Murray would get out a scholarly work."—*David Eugene Smith, Teachers College.*

"Dr. Murray is to be commended for the full discussions which appear in this book. I am glad we have an author who writes for the student."—*J. L. Gilpatrick, Denison University.*

Adopted at Harvard, Princeton, Leland Stanford, Haverford, University of Michigan, University of Virginia, University of California, University of Maine, McGill University (Montreal), Northwestern University, Friends' Select School, Phila.; Columbia, Trinity, Cornell, Tufts, Cascadilla School, Michigan Military Academy, Stapleton High School, N. Y. City; Manual Training School, Chicago; State Normal School, Oshkosh, Wis.; State Normal School, E. Stroudsburg, Pa., etc., etc.

ANIMAL ACTIVITIES

A First Book in Zoölogy. By NATHANIEL S. FRENCH, Ph.D., Teacher of Zoölogy in the Roxbury High School. 12mo, 282 pages, with 205 Illustrations. $1.20. [*Just Ready.*

"The book here presented is the outgrowth of fifteen years of teaching the subject to large classes in a high school. Its aim is to interest and guide pupils in the study of living animals.

"Although the book is designed for beginning the subject in the fall, the chapters are so planned that, if the class starts at another time, they may be taken up at the time when the living specimens may be most easily collected and observed.

"Much is made of habitat in connection with the manner in which an animal performs its life functions, and adaptation to environment is constantly pointed out.

"The directions for laboratory work are mainly in the form of questions which must be answered from direct observation Comparisons and inferences are constantly required of the pupil. The exercises for review of note-book work enable pupils to systematize their knowledge. Useful vocabularies are frequently inserted."—*From the Preface.*

LONGMANS, GREEN, & CO., 91 93 FIFTH AVENUE, NEW YORK

The Nation.

NEW YORK, THURSDAY, APRIL 17, 1902.

The Week.

Major Waller has been acquitted by the court-martial at Manila, though not unanimously. This can mean only that his defence was accepted. What was that defence? Why, that his shooting of helpless natives, without trial, was done in pursuance of direct orders from Gen. Smith. No denial of the facts was attempted. The men were shot down in cold blood. This was to outdo the Australian murderers in South Africa, who at least went through the pretence of a drum-head court-martial before slaughtering their Boer victims. But Major Waller testified, and in this he had the corroboration of three other officers of the United States, that what he had done was simply to carry out the orders of Gen. Smith, who had directed him to "kill everything over ten." We ourselves do not think this a justification. Major Waller might have thrown up his commission, or deliberately disobeyed such unlawful orders. No officer of the United States army is compelled to become a murderer at the word of command. But however that may be, the duty of putting Gen. Smith on trial is now immediate and imperative. If he gave the orders sworn to, and if a massacre of the innocent resulted, he is as truly a murderer as any man who ever mounted the gallows. The Administration has been forced to order a searching inquiry into the trial and into the tales of army cruelty with which the air is full. In Professor Worcester's book on the Philippines, there is an account of a Spanish expedition to Samar in 1649, to capture a revolted chief named Sumoroy. "They failed to take Sumoroy, but found his mother in a hut, and, *true to Spanish traditions*," adds the complacent American historian, "literally tore the defenceless old woman to pieces." In his next edition, Professor Worcester should have an honest foot-note to say that the villany which the Spanish taught us we executed, and even bettered their instructions, in that same island of Samar.

The existence of the water-cure torture in the Philippines was established on Monday beyond cavil. Before the Senate Committee on the Philippines two eye-witnesses of excellent character and standing told of the application of this inhuman torture to the Presidente of Igbaras in Panay on two successive days. The proceedings, it seems, were supervised by Capt. E. F. Glenn, Twenty-fifth Infantry, and Lieut. A. L. Conger, Eighteenth Infantry, regular army officers, and Dr. Lyons, a contract surgeon. The poor wretch was twice placed upon his back and the water forced down his throat. To hasten matters, and to add to his agony, a handful of salt was thrown into the water. "This," Sergeant Riley testified, "*had the desired effect*," and, as a result of the confession thus procured, the town was burned and the inhabitants turned adrift with nothing but the clothing on their backs. Whether the confession thus secured was the truth or not, no one knows, least of all Capt. Glenn and Lieut. Conger, for what human being could be blamed for rescuing himself from such fiendish treatment by framing any confession that his inquisitors demanded? Private Smith testified that he had witnessed the similar torture of two policemen by Capt. Glenn's directions. A "water-cure" detachment, he declared, was a feature of the organization of the Eighteenth United States Infantry—of that army which Secretary Root declares was moved only by "scrupulous regard for the rules of civilized warfare."

President Schurman contributes an article to the April number of *Gunton's Magazine* on "Philippine Fundamentals." The Philippine question is itself a fundamental one to the American republic, he thinks, being next in gravity among our national issues, past and present, to the slavery question. To discuss such a question he holds to be not merely the right of American citizens, but their solemn and bounden duty. If such discussion stirs up discontent among the Filipinos, even that is "infinitely preferable to our renunciation of free speech, of the sovereignty of public opinion, of government of the people, for the people, by the people, which is the soul and glory of our republic." Then he adds:

> "To attack or belittle popular government, to decry free speech and discussion by which it lives and acts, is to plunge the sword into our mother's bosom because the outgoings of her heart of charity render some remote ward too hopeful and independent to suit our temporary convenience."

Mr. Schurman tells us, further, that the Filipinos want their liberty. "You could not find in all the islands," he says, "a single Filipino who favors colonial dependence on the United States." This is the statement of the President of the first Philippine Commission on a question of fact. It is the unqualified statement of one who must be supposed to know more about the feelings and wishes of the inhabitants of the archipelago than anybody who has not been in the islands. In the latter category must be placed, first of all, Secretary Root. The list of distinguished Filipinos whose names the Secretary made public the other day as those of persons now reconciled to American rule must, if President Schurman is well informed, consist entirely of men who are willing to accept pay as members of the local government, but are no more reconciled to it than the Boers are to British rule in South Africa. And why should they be?

The President, after listening to all the charges and counter-charges affecting Messrs. Powderly, Fitchie, and McSweeney, and without expressing any opinion upon them, is said to have decided that a complete change should be made in the Immigration Bureau, and new men appointed to the places filled by all of them. It is said, further, that Powderly has resigned in response to the President's request, that Mr. Fitchie's term has expired, and that the Secretary of the Treasury is to ask for Mr. McSweeney's resignation and to appoint Mr. Joseph Murray in his place. Since this matter has a bearing upon the merit system as regulated by law, the Civil-Service Reform Association took cognizance of the facts at its regular monthly meeting last week. The office of Assistant Commissioner of Immigration is in the classified service, but it appears that the following order from the President, dated January 18, was filed with the Civil-Service Commission at that time:

> "An appointment to the vacancy now existing in the position of Assistant Commissioner of Immigration, Port of New York, may be made without examination under the civil-service laws."

It was ascertained that there are no specific charges against the present incumbent of this office, and also that he refuses to resign as long as vague and undefined charges are alleged against him, but is willing to resign if all such charges are withdrawn. The Association adopted a resolution saying that it had learned with regret that the office of Assistant Commissioner of Immigration had been withdrawn from the classified list of the civil service, and that it earnestly protested against such action.

Lieut.-Gen. Schofield gave some very valuable testimony before the Senate Military Committee, last week, in favor of Secretary Root's staff bill. Gen. Schofield was commander of the army from the death of Sheridan until his retirement in 1895, and is therefore in a position to speak with knowledge as to the desirability of abolishing the office of Commanding General, and substituting therefor a chief of staff. As was to be expected, he flatly contradicted Gen. Miles by declaring that the change contemplated was in every way desirable.

He pointed out, what is known to every one familiar with the army, that the office of Commanding General has no warrant in law, and that it is absolutely without power. Gen. Miles cannot now order a company to move without the consent of the Secretary, or take any other action without permission except to issue verbose and ridiculous orders. In short, his office is purely ornamental and honorary, and as such would be distasteful to any man not eaten up with vanity and love of show. Gen. Schofield declared that the personal relations between the President, Secretary of War, and senior general were far more important than any law, and dwelt upon the great necessity for harmony between them. This is another sad blow at Gen. Miles, who lacked the confidence of Presidents Cleveland and McKinley, as he now lacks that of President Roosevelt. Gen. Merritt testified that he approved of everything that Gen. Schofield had said, and that he believed every change suggested in Secretary Root's various bills made for the improvement of the army—a "vast improvement," Gen. Schofield called it. Neither of these veterans saw any signs of that "Russianization or Germanification" which fills Gen. Miles with such awful forebodings, Gen. Schofield going so far as to say that he hoped the army would be "Germanized," for the German army is in his opinion the "very best in the world." It is therefore not surprising to hear that the outlook for Mr. Root's legislation is very much better than before. But where does all this leave Gen. Miles?

That the present price of beef is wholly abnormal is generally admitted, and the fact is commonly attributed to the activities of a meat Trust composed of the six greatest packing-houses. This suspicion is credible enough to set the Attorney-General's office investigating the present condition of the meat trade, with the intention of thwarting a possible conspiracy to keep up prices. It is certain that, under the Anti-Trust and Interstate Commerce Laws, an injunction would lie against the parties to such a combination, while, under certain circumstances, a criminal action might be brought. Representative McDermott's resolution to remove the duty on meat strikes, however, at the root of the matter. Here is a remedy which would spare us the tedious delays of investigation and of litigation—a remedy, too, which works automatically; for if the high price of meat is due, as is alleged, to a general scarcity of cattle, the admission of dressed meat, and cattle on the hoof, free will not appreciably lower the price, while if the present suspiciously high prices are due to the fact that certain great packing-houses maintain a virtual monopoly in their allotted territory, the free entry of meat products will soon bring prices to the normal level. It should be remembered, too, that the total importation of meat products can never be large enough to demoralize the market, and that, accordingly, the present duty of two cents a pound is largely nominal. Large importations are possible only under the stimulus of the most alluring prices. It is unlikely that Congress, which shudders at the mere thought of "opening the tariff," will so much as consider Mr. McDermott's resolution. The chances are that the investigation of the whole matter will pursue the usual roundabout way to a futile conclusion, while all the time the Beef Trust is presumably taking it out of the retail dealer and the consumer. The possible sources of an additional meat supply are Canada and Mexico. Any opening of the tariff door should include all substitutes for meat, such as poultry, fish, and game.

Gen. Wade Hampton's death points as sharp a contrast as was ever witnessed in the career of a public man in this country. It is not simply that he had dropped out of active connection with affairs; for this his age would sufficiently account. Gen. Hampton was a type of the public man who had always controlled the fortunes of his State, except during the reconstruction era; and what is remarkable is that his whole class has, during the past decade, disappeared from South Carolina, so far as influence is concerned, almost as though it had been swept from the face of the earth. The old régime of which he was so characteristic a part is now only a memory in his State, and new standards are represented by new men. The rise to power of Tillman was responsible for this latest attempt at a social equilibrium in the South. About the same time, North Carolina was shaken to its foundations by an uprising which dethroned the ruling class, and put in their places men who would never have been thought of for judges, Representatives in Congress, or United States Senators in the old days. However unlovely the results of these overturns, they represent the passing, among the whites, of the last vestiges of the old artificial slaveholding aristocracy.

Close on the heels of Gov. Odell's signing the new anti-anarchy law comes a decision of the Appellate Division sustaining the efficiency of the old statutes. John Most had called on adherents of anarchy "to execute judgment" by killing, "through blood and iron and poison and dynamite," the heads of nations. Under section 675 of the Penal Code, which punishes as a misdemeanor "any act which seriously disturbs or endangers the public peace or health," he was sentenced to imprisonment for a year. This sentence is now reaffirmed. Unless some flaw is discovered by the Court of Appeals, the practical effect of the decision will be to render the new law superfluous, except in the one point of making such an offence as Most's a felony, instead of a misdemeanor. But, as we have more than once pointed out, there is no evidence that a severer penalty will have the slightest effect in checking anarchistic utterances. If an anarchist will run the risk of a year in prison for the sake of freeing his mind, he will quite as cheerfully run the risk of three years or five. Indeed, the extreme of punishment may give him the chance of his life to pose as a martyr before his fellows, and inflame their excitable souls to fiercer zeal for crime.

It is very likely that the Salisbury Government will not seriously press the Educational Bill at this session of Parliament, but the proposed act is of considerable interest, as showing the English official attitude towards popular education. It should be recalled that primary schools in England are managed either by elected school boards or by the directors of voluntary schools. These latter are under ecclesiastical (usually Church of England) control, and have a per-capita subsidy. Board schools are practically under Nonconformist management, and are entirely supported by public rates, but no board school is established except in localities where the central Board of Education decides that the existing educational facilities are insufficient. The new Education Bill proposes to abolish all of the school boards, vesting complete control of the schools in the county and municipal councils—bodies which are partly elective and partly appointive. These councils may, when they so desire, assume control both of the board schools and of the voluntary schools. Both classes of institutions are to be supported by taxation, but the private or voluntary schools will be obliged to keep up their buildings from their own resources. Over the board schools the county and municipal councils will exercise complete control; over the voluntary schools, the right of supervision of studies and of scrutiny of the appointment of teachers. These same councils may organize a system of public secondary education—now quite lacking in England—for which, however, no programme is vouchsafed by the Ministry. The City of London, where the School Board system is firmly established, is excepted from the operation of the law.

Americans will find it difficult to look with any patience upon a project which makes private schools under ecclesiastical control a favored class, yet the charge that the bill is a "Bishop's bill" sounds less grave in England, where the Established Church still includes a majority of the population and has recognized politi-

cal functions. Where the scheme seems inherently weak is in conferring supreme educational authority upon bodies which are constituted for quite other purposes, in leaving it open for the county and municipal councils to refuse such authority if they see fit, and in failing to indicate the lines along which public secondary education is to be organized. The bill, too, disregards utterly the historic fact that the establishment of compulsory primary education in England was a product of the movement which, in the early seventies, found expression in the school boards. It is hard to believe that in a single generation these bodies, which alone represent public education as Americans understand it, can have wholly outlived their usefulness. The bill very largely commits the small control which Parliament now exercises over the schools to the local councils. The measure suggests that the Ministry is willing to shift an unwelcome burden upon the first broad back—not Nonconformist—which offers. This will be more clearly seen as the debate proceeds. It is always possible that Mr. Balfour is about as zealous for the Education Bill as Mr. Chamberlain is for old-age pensions—and no more. Hereupon, even the friendly *Times* put in the word of warning that, "if the Government do not mean to carry their bill, they had better not have introduced it."

The huge and steadily mounting cost of the Boer war can best be displayed by reference to the successive votes demanded of Parliament. The first one dates from October 20, 1899, when £10,000,000 was asked. The Secretary for War spoke of this as a "prudent" estimate of a "superior limit"; and the Chancellor of the Exchequer, while cautiously admitting that it was "possible that these estimates may be exceeded," assured the Commons that they had been framed with the "utmost possible accuracy and care," and said he saw "no reason" why the war might not be brought to a "successful termination" for the sum which Parliament was asked to grant. But Magersfontein and Colenso soon put an end to those dreams. By February 12, 1900, it was necessary to ask for £13,000,000, and by the 5th of March following £37,797,000 additional became necessary. Later came the demands of July 27, 1900, for £8,500,000, of December 11 for £15,500,000, of February 28, 1901, for £3,000,000, and, finally, of March 8, 1901, for £56,070,000. Here is a snug little total of more than $700,000,000, besides what Sir Michael has to ask for this year. But even this sum does not represent the total outlay incurred in subduing the two Boer republics, since a skilled accountant has shown in the *Fortnightly* that the cost of floating loans, supplementary estimates, annuities, and minor expenses, directly chargeable to the war, would foot up something like $150,000,000 more.

That no picturesque element should be lacking to the burial of Cecil Rhodes, Mr. Kipling has written for the event a poem in very nearly his best vein. The audacity which chooses as a burial place the solid granite top of a hill called "the view of the world," which plans a railway for future pilgrims to the tomb, provides a fortune for the maintenance of a last resting-place, and admits no companionship except of those who have deserved well of the Empire—such audacity of self-confidence finds few parallels in the world's history, and is of a kind to stagger all observers who are removed from the immediate impression of the event itself. Whether Mr. Rhodes rightly estimated himself in the light of posterity is necessarily doubtful. That he fairly estimated his relation to his contemporaries in South Africa is shown by the absence of criticism of his grandiose plan for the perpetuation of his own memory. It seems to occur to no one that conspicuous burial is usually conferred by others. The Duke of Wellington and Grant needed to make no provision for tomb or monument. The most striking parallel to the burial of Mr. Rhodes is in the old English epic of Beowulf. After the hero lies stricken he bids his comrades bury him on a great headland, "so that the goers in ships, seeing it from afar, may call it Beowulf's beorh." This may suggest that, whether in his personal emotions or in his policies, Mr. Rhodes, the chief promoter of syndicated politics, was in many respects a very primitive type, partaking of the generous virtues and of the unabashed vices and puerilities of the heroic age.

The recent Socialist Congress at Brussels has left a formidable train of strikes and riots. The presence of a number of manufacturing centres closely packed together facilitates the spread of a riotous movement. One feels that a genuine industrial revolt could not be isolated in Belgium, as such movements have been even in a country as small as England. On the other hand, the very compactness of the country, and the corresponding perfection of the Socialist organization, make it easy to bring pressure to bear upon the Government, and render it always probable that serious grievances will receive prompt relief from Parliament. The ostensible cause of the present disorders, and of the insults to the King on his return to Brussels, is simply the demand for universal suffrage. The highly artificial electoral system of the country does in fact invite criticism. The plural ballot is an offence to the growing democratic feeling of the country. It will be recalled that, while every citizen over twenty-five years of age, and not legally disqualified, has a single vote, those who have real estate valued at 2,000 francs, or an annual income of not less than 100 francs from real estate or Government bonds, have two votes. To this class also belong married men or widowers thirty-five years of age, having legitimate issue, and paying a house tax of 5 francs a year. Such citizens as have received a certificate of higher instruction, have filled public offices, or engaged in the practice of the learned professions, have three votes. In 1897-8 there were, under this system, 1,418,480 voters, and a half more votes—2,175,957. It is the one-vote people who now are agitating for a "one-man, one-vote" plan.

The recent course of legislation and discussion in Australia is likely to clear up, once for all, certain economic problems—such as, Can the state effectually define a day's work and prescribe a living wage? The Democratic (Labor) party is, if not in a majority, in virtual control of Parliament. The eight-hour working day is to be the law of the land, while compulsory conciliation boards are to have plenary power to adjust all disputes as to wages and condition of employment between employers and employed. It remains to fix the living wage, and it is reasonably certain that it will be set at six shillings or seven shillings a day. When this law is passed, Australia will have done practically everything—short of the nationalization of the means of production—which a state can do to regulate the relations of capital and labor. What no Parliament can do is to force an employer to pay men the living wage when he would do so at a loss. As it will stand in Australia, an employer of labor who cannot afford to pay his men the six or seven-shilling wage cannot offer them four or five shillings. He will have the option only of paying them the legal rate or of discharging them incontinently. In time of industrial depression there will be thousands of laborers not badly paid, but not paid at all, by reason of the law passed for their protection. That this contingency has been foreseen is shown by the practice of New South Wales, which engages to find employment upon public work, at seven shillings a day, for all laborers out of work. Already the pressure upon the Government makes itself felt, and this expedient, too, can be of avail only in relatively prosperous times. To spend the people's money in giving the people an artificial wage is a kind of boot-strap levitation which cannot work even in Australia. Incidentally, the living-wage theory strikes directly at industries like pearl-fishing and sugar-growing, which are necessarily conducted by cheap native labor. All in all, it is difficult to see how the Australian labor laws can weather the shock of bad times.

THE SUPPRESSED PHILIPPINE REPORTS.

Secretary Root and Governor Taft come very badly out of this affair of keeping back vital information from Congress. The reports withheld are terribly damaging, but the fact of withholding them is almost more damaging. It is not simply that it argues a lack of candor—it is very nearly a breach of faith, a violation of the implied contract between the Administration, on the one hand, and Congress and the people on the other. In a word, Mr. Root goes to Congress, and appeals to it and to the country in behalf of a certain Philippine policy, and then he keeps under lock and key an official document which shows that that whole policy is tumbling like a house of cards. No wonder that Imperialists are stricken dumb by this revelation. Their boasted eagle of empire, flying in the eye of the sun, is suddenly discovered to be a very silly specimen of ostrich, hiding its foolish head in the sand, and thinking that its fairly conspicuous posteriors are therefore invisible.

Mr. Root is greatly mistaken if he thinks that the airs of a Russian bureaucrat are in place, or will be tolerated, in the conduct of his Department. It is not for him to decide what information it is advisable for the American people to be allowed to have, in making up their minds on this whole question. They say to him, in the language which Burke addressed to an arrogant Minister of his day, "Information is an advantage to us; and we have a right to demand it." Nor need he imagine that he can fall back on the excuse for concealment which Dundas gave to Parliament—that the matter is of "a delicate nature," and that "the state will suffer detriment by the exposure." Mr. Root will remember how Burke shattered that plea. In words which read as if prophetically fitted to the case of the Philippines, as well as to that of India, he exclaimed:

> "A government has been fabricated for that great province; the right honorable gentleman says that, therefore, you ought not to examine into his conduct. Heavens, what an argument is this! Then we are only to examine into the conduct of those who have no conduct to account for. . . . The better part of the proposed establishment was in the *publicity* of its proceedings, in its *perpetual responsibility to Parliament*. Without this check, what is our government at home? But if the scene on the *other side of the globe*, which *tempts, invites, almost compels to tyranny and rapine*, be not inspected with the eye of a severe and unremitting vigilance, *shame and destruction must ensue*."

We are not arguing for the indiscriminate blabbing of military secrets. If Secretary Root thought that those parts of Major Gardener's report which reflected directly on officers of the army ought to be investigated before being made public, he might have kept them back for a time with propriety. But the burden of the report is quite other. It is the contribution of an able and conscientious officer to the large question of Philippine government. Is the present policy the correct one? Is it working well? Ought it to be changed? To all these queries Major Gardener's report gives the most pertinent and significant answers. Nothing so telling and strategic has been brought out by any witness before the Philippine Committee. The document is one which should have been instantly turned over to that committee of inquiry, and given to every American to read and ponder. But what was done with it? Why, Governor Taft concealed it, Secretary Root pigeon-holed it, and nothing but the indiscretion of General Miles gave the public a hint that such a tell-tale report was in existence. This is, to our mind, almost an impeachable offence. It is to treat Congress and the people with contempt. It casts inevitable suspicion on every statement of the case that Secretary Root may make. What cards is he still keeping under the table? General Miles, we note, spoke of "other communications" withheld, as well as the Gardener report. What are they, Mr. Secretary? This fatherly little way of treating us all as children, and doling out only information which is "good" for us, cannot be pursued much longer. Mr. Root had better volunteer his documents, instead of waiting to be further humiliated by having them dragged out of him by Congress.

The one report which has been reluctantly given to the public is, as we have said, a simply crushing arraignment of the course which the Administration has been following in the Philippines. Governor Taft has denied that there was any appreciable friction between the military and civil authorities. What says Major Gardener? Why, that the attitude of the army is "decidedly hostile," even "intensely so among the higher officers," to all forms of "civil government in these islands." The work of Governor Taft's Commission, he adds, is "openly ridiculed" by the soldiers; and when "outrages" are "committed by officers and soldiers in an organized municipality and province," they are "often not punished." This is bad enough, without taking into account the Major's reference to "the torturing of natives by so-called water-cure and other methods," as if those things were a well-known part of army procedure.

What strikes us most in Major Gardener's report is the humane and statesmanlike note of it. He speaks with fine disdain of the notion that it is "weakness" to treat a Filipino justly or kindly, having proved the contrary in his own experience; and his testimony as to the people of his province of Tayabas —namely, that they are "in every way superior in education, intelligence, morals, and civilization" to the Mexicans and Cubans, whom he has known intimately—is in line with much other evidence by our own officers, and puts the fitting brand upon the barbaric and bloodthirsty ravings of men like Funston, who prate about the need of killing half the "niggers" in order to make the rest afraid of us. It is precisely this cruel and overbearing course which is, Major Gardener reports, "sowing the seeds for a perpetual revolution against us hereafter," and making of the Filipinos our "permanent enemies." As it is, he declares that the political situation in his province—one of the richest and most intelligent—is "slowly retrograding," and that "American sentiment is decreasing." It is not strange that Governor Taft, prophet of smooth things, thought this report one which it would be highly inconvenient to publish.

Major Gardener's report ought to make every American indignant, but perhaps the chief part of the indignation should be directed against the authorities for trying to conceal it. This honest officer reported what he felt in duty bound to lay before his "civil superiors," in order that they might be "able intelligently to order what the situation demands." Who are these civil superiors? Governor Taft, Secretary Root, President Roosevelt. But are they supreme? Do they recognize no superiors? Are they so drunk with this new wine of Imperialism that they complacently think they can settle all these things in their own private conclaves, and keep Congress and the American people in tne dark?

THE PHILIPPINE MONEY QUESTION.

The currency situation in the Philippines presents some features of peculiar interest, for it brings the United States face to face with problems similar to those which have for many years tasked the wits of English statesmen dealing with imperial problems in the East. The problem presented to us is that of reconciling two currency systems which are necessarily in conflict. Philippine currency, like Philippine diet and clothing, has been unlike our own; and differences of this kind offer substantial obstacles to any process of "benevolent assimilation." Because of previous and existing relations to other Oriental countries, the Philippines are now dependent in mercantile transactions mainly upon the Mexican silver dollar—in other words, are upon a silver basis. For internal trade or for business with China this dollar has, under ordinary conditions, been fairly satisfactory; but recent events have demonstrated the unwisdom of relying upon a coinage which cannot be regulated—even by the laws of supply and demand—to meet the changing needs of Oriental trade. Furthermore, with the urgent need of establishing sound fiscal relations between the Philippine Government and our own, it has become evident that there must be some

coördination between the Philippine currency system and that of the United States. There is, then, obviously great danger that any projected currency system will either fail to meet the local needs, or will lack the gold basis which is essential to link it to our own monetary system.

Two plans are under discussion in Congress. The House Committee on Insular Affairs has adopted that of Mr. Charles A. Conant, who, in his report to the Secretary of War upon the coinage in the Philippines, has proposed to issue, on Government account, a distinctive Philippine coin, the peso, to contain about 43½ cents' worth of silver and to be legal tender for fifty cents in the gold money of the United States. Such a token coin must obviously be limited in quantity, if its value is to be maintained; but, in order to give it a wide circulation, which must depend on securing for it the confidence of the people, Mr. Conant proposes that this, with the gold money of the United States, shall be the only legal tender, and shall be redeemed in gold, at the discretion of the Government, from a reserve held for that purpose. In this way, according to Mr. Conant, foreign coins will be largely driven from the islands, leaving a comparatively clear field for this silver token coinage, referable to the gold standard. Thus the Filipinos will have a coinage adapted to their peculiar conditions, while the financial relations of the Government and the mercantile community to the gold-standard countries of the world will be made perfectly simple and sound.

The feasibility of this scheme depends upon the effectiveness in meeting two, and only two, general conditions: (1) the new coins must be acceptable to the people; (2) the Government must be able to control the supply.

The coins apparently would be readily received—judging by the ease with which the Bombay dollar has passed into circulation in the East—for local use; but they would obstruct to some extent the trade between the Philippines and those countries which continued to use silver, *i. e.*, China and the Straits Settlements. Adherence to either standard implies, of course, difficulty in trading with those countries which choose the other standard. As it appears that even now the trade of the Philippines is most largely with gold-standard countries, the change would be for the benefit of the more important part of the Philippine commerce.

(2.) Whether the Government would continuously have and properly exercise the power to control the supply, and thus to regulate the value, of the silver coins is a much more difficult question. Under Mr. Conant's scheme, the coinage pays a seigniorage of about 15 per cent., which is to be retained as a gold fund available for the redemption of the silver coins. This amount of seigniorage is regarded as the lowest percentage which would guard against any possible rise in the value of silver that could send the coins to the melting-pot; and, at the same time, it is thought to be the highest percentage which may be taken without leading to counterfeiting. Accordingly, this fund of 15 per cent. is provided at the outset, on the assumption that it would be adequate for meeting ordinary demands; and, in addition, power is to be granted to procure additional supplies of gold when needed for maintaining the parity of the silver coins. The Government, however, is to be vested with discretionary power to refuse to redeem silver with gold.

This is the critical point in Mr. Conant's plan. It presupposes the application to the Philippine money question of a higher intelligence than we have usually bestowed upon the same class of questions at home. It requires, also, the highest character on the part of the officials placed in charge of the mint and the redemption bureau. The men intrusted with these duties will be far from the scrutinizing gaze of the only public opinion they fear or care for. They will be appointed under the régime of party politics, and there is no certainty that they will be superior in morale to Neely, Reeves, and Rathbone. Yet, with all these drawbacks, this plan is to be preferred to that of the silver standard favored by the Senate Philippines Committee. By following the example of British India, the Philippine currency can be safely anchored on the gold standard within a few years, whereas, if the present opportunity is neglected, the country will be tied to China, in a monetary sense, for an indefinite time to come.

THE CHINESE EXCLUSION BILL.

We characterized as "a deliberate sacrifice of self-respect and plighted faith at the behest of low demagogism," the Chinese Exclusion Law of May, 1892. We see no reason now to apply any other language to the Exclusion Bill which has passed the House and to that which is now before the Senate. Both measures practically reënact all the existing exclusion laws, and extend them to the Philippines and our other "colonies." They not only incorporate the existing Treasury regulations, but go a step further than any previous law in the harassing restrictions and obligations which they place upon all Chinese resident within the territory of the United States. It is true that there is perhaps nothing so deliberately insulting in this bill as the clause at one time approved by the House in 1892, to the effect that Chinese desiring to attend the World's Fair at Chicago might do so *under guard*—with shackles and leg-chains, we presume. But the present bills are none the less outrageous in their general tenor and in their utter disregard of solemn treaty obligations, and of a treaty, moreover, which will not expire until 1904. Fortunately for the good name of the House, its bill did not go through without some protests. As in 1892, Representative Hitt of Illinois spoke out against such legislation, and Mr. Cannon was among those who opposed some of the amendments.

In the Senate Mr. Cullom, Mr. Hoar, and others have vigorously protested against the passage of the pending bill, which is practically the same as the House measure. Mr. Cullom is himself in favor of Chinese exclusion, but the drastic provisions of the proposed law are more than he can stomach. "There is," says the Chairman of the Foreign Relations Committee, "nothing in the present situation that makes it either expedient or necessary to pass a law in disregard of our treaty with China." He wishes to continue the present laws until the treaty of 1894 shall expire, and to negotiate a new agreement with China in the meantime. He also points out that, as the present treaty forbids the entrance of Chinese laborers, it would make no difference whatever if Congress should fail to pass any new law until 1904. That the United States Senate should entertain a bill which would make every honest student and teacher from a friendly nation liable to sentence to jail, to deportation, or to branding as a criminal, seems incredible. Yet such treatment is one of the reasons which Senator Cullom gives for his opposition to the bill as it is now drawn.

There are plenty of other iniquitous provisions to arouse the antagonism of Senator Cullom, or of any man not blinded by politics or by racial prejudice. For instance, this bill repeats the old insulting provision that witnesses for a Chinaman must be "other than Chinese," or, as it used to read, "two white men." It also prohibits the entrance into the United States of Chinamen from our insular possessions. What is more, the bill applies not only to full-blooded Chinese, but to men and women of mixed blood as well. That is, the son of an American or a Frenchman or a Russian and of a woman of China may not enter this country with the desire to earn an honest living, either as a skilled or an unskilled laborer. In this respect, as in several others, the bill brings to mind the conditions in this country at the time of the Fugitive Slave Law. Photography was not in use in slavery days for such purposes, but its modern development has led our lawmakers to require that every Chinaman shall attach a picture of himself to the certificate of residence which he must take out within six months after the passage of the bill by Congress. As if he were a leper or an outlaw, our patient Chinaman must have inscribed upon this certificate his

"age, height, and *all physical peculiarities.*"

Not content with thus making every Chinaman legally a marked man in every community, without regard to individual character or standing, the bill requires that the Commissioner-General of Immigration shall make a complete record of the date, place, and circumstances of birth of every Chinaman, that his movements may be traced more easily. This is in line with the rogues' galleries in our large cities, and suggests at once the methods by which the European secret police follow up men whose political beliefs are at variance with those of the reigning governments. A similar procedure has been advocated, in and out of Congress, in the case of anarchists, as a result of the assassination of President McKinley. The anarchist has, however, one advantage over the Chinaman, in that nature has not stamped him as one apart from our own people. But though the Chinaman is not known to contemplate the murder of kings and presidents, or the overthrow of all governments, and is generally thought to be peculiarly law-abiding, the bill which Congress is about to pass marks him as one to be despised, shunned, hounded, and persecuted in excess of the anarchist. As for penalties for those who aid Chinamen to enter the country illegally, the bill abounds in them. Train conductors, masters of vessels, their officers and crews, employees of railroads, and drivers of carts will all render themselves liable to conviction for felony and fines of not less than one thousand nor more than five thousand dollars and imprisonment for not less than one year if they aid, abet, or *"through neglect permit"* the escape of any Chinaman "held in detention."

These are but a few of the features of this extraordinary measure against which Senator Hoar spoke so eloquently on Thursday, but they suffice to show its general character and the absurdity of many of its provisions, of which none is more impractical than that which requires the photographing of every one of the 50,000 Chinese in the Philippines. From water to vinegar, from vinegar to cayenne pepper, and now to vitriol—this was Senator Hoar's description of our Chinese legislation, passed at the behest of labor agitators and professional politicians.

BRITISH FREE TRADE.

We need not wonder that the proposal of the British Chancellor of the Exchequer to put taxes on imported grain and flour has been received with a burst of indignation at home, accompanied with jeers and taunts from abroad. It brings before us one of the most exciting contests of the past—one of the most notable pages of English history—the battle fought by the Anti-Corn Law League for cheap bread for the British workman. The names of Cobden and Bright, Peel and Disraeli, Derby and Bentinck, Fonblanque and Thompson, and a host of lesser lights rise among the memories of 1846, when the free-traders finally gained an overwhelming victory. Is it possible that England has gone back to the protective theory which she abandoned more than half a century ago?

Of course the advocates of protection, both at home and abroad, will say yes. Already they are rolling Sir Michael's budget as a sweet morsel under their tongues, and they will make every possible use of it in future contests for the adjustment of taxation. The fact must be recognized, however, that England is under the dire necessity of taxing everything that she can lay her hands on. It is not a question of protection or free trade that confronts the party in power, but a question of life or death to the Salisbury Government. They brought on the Boer war, and they must foot the bills. The cost has now mounted up to nearly a billion dollars, and the total expenses of the Government for the present year are $800,000,000. What is to be done? asks the bewildered Chancellor. Tax everything in sight. But everything except bread had already been taxed to the utmost limit before; tobacco, wine, spirits, tea, even coal, had had the last farthing squeezed out of them. Sir Michael had stoutly resisted the Tory demand for a bread tax. He had approved himself a worthy disciple and follower of Robert Peel; but, alas, necessity knows no law. The deficit yawning before him must be filled.

It is not quite fair, therefore, to say that Sir Michael has abandoned the principles of free trade. It might be said in like manner that Chairman Payne and Gen. Grosvenor have abandoned the doctrine of protection in having agreed to admit Cuban sugar at a reduced duty, because they have yielded to a necessity, or what they consider such. But in both cases the consequences of what is being done are of more importance than the motives of the doers. The bread tax in England is called temporary by its promoters, but who knows what its duration may be? Who can say what it may lead to? If this is a protective duty in its effect, then no matter what its aims may be—no matter what the motives of Ministers may be—it will lead to demands for other protective duties. First of all, we may expect demands for differential duties in favor of the colonies—that is, that the tax on Canadian wheat, for example, shall be something less than on United States or Argentine wheat. It will be very hard to resist this demand, since Canada already has a differential in favor of English goods—a discrimination, however, which England never asked for and rather deprecated. It will be harder for Sir Michael to resist this demand since Mr. Chamberlain has long been in favor of it. It is a part of his scheme for Imperial federation. But if Sir Michael consents to differential duties in favor of the colonies, he abandons free trade outright. He throws down the bars to every claimant for protection. He goes back to the days of the Anti-Corn Law League. Considering the powerful and growing competition that weighs upon British manufacturing industry, it is a question whether the proposed bread tax may not be the last straw on the camel's back; and when the Chancellor looks at the possibilities of taxes on raw materials yet to come, he may well recoil from the prospect.

Of course, the Liberal party will not miss this opportunity to find an issue with which to pull itself together and to oust the Conservatives. Sir William Harcourt has already given notice of his opposition to the bread tax, and the *Daily News* has sounded a trumpet blast against it. The progress of this Parliamentary battle will be watched in other parts of the world with interest as intense as any part of the Boer war from its beginning to the present time.

THE FORTUNES OF HOME RULE.

DUBLIN, March 22, 1902.

After ten years of disunion consequent on the Parnell split, the country has again pulled itself together; but there are no signs that the masses of the population will ever again, in our time at least, be so profoundly stirred by common hopes towards common ends as they were in the days of Repeal and of the Land League. For one thing, emigration has drained off that half of the population in which the seeds of discontent found most congenial soil; for another, the gospel of trades-unionism rather than political belief has taken firm hold on the artisan class, grievances in many directions have been removed, and disestablishment of the Church, instead of inclining Protestants towards Irish ideas, appears to have attached them more firmly than ever to the English interest.

Some £25,000 has within the past eighteen months been subscribed, largely in small sums, towards the support of a renewed national movement. Such fund, in addition to what it is now hoped may be received from the United States and elsewhere, is likely to be kept replenished. The spectacle of four-fifths of the Parliamentary representation in favor of Home Rule steadily maintained, in the face of all differences, through the past twenty-five years still exists. The impressiveness of this protest is considerably weakened by the degree to which, in Ireland, political opinion, as expressed on the platform and in the columns of the national press, appears to stand apart from that expressed in the daily lives of the people. In ordinary intercourse it is shown only in so far as is consistent with material interests. A stranger visiting Ireland sees little of it. Distinctive Irish opinion in shop windows and otherwise is no more to be remarked than in England. The portraits of Mr. Redmond or Mr. Dillon are not to be seen at the photographers'. Even in back

streets and poor shops the glories of the British arms are displayed; and the children of artisans of the better classes go about with "H. M. S. *Revenge*" or "H. M. S. *Bulldog*" upon their hat-bands. It would not be easy to meet a hotel proprietor, driver, or guide who, without having first discerned Home Rule proclivities in a tourist, would acknowledge Nationalist sympathies in himself, or the existence of general interest on the subject in the country. The Irish members are honorably distinguished by absence of self-seeking on their own account. I can think of but one who, in the course of the past twenty-five years, has sold himself to Government. But on general behalf of constituents in desires concerning quartering of troops, Government contracts, chaplaincies, and treatment of Irish soldiers and officers, there is shown little widespread determination to maintain, where personal or money interests are engaged, stern protest against British rule and British misdoings.

On the general surface of affairs in Ireland, there is apparent little of that attitude we are accustomed to associate with a people profoundly dissatisfied with the institutions under which they live. Perhaps similar inconsistency was to be remarked at crises in the history of other countries. The Irish struggle is, however, perhaps one of the longest of its kind recorded in history, and it is to be feared that the unheroic and spasmodic lines upon which it is maintained may have a permanently deleterious effect upon the character of the people. Their naturally amiable and facile disposition works against their success. In the long run, few in Ireland suffer in mind, body, or estate from their most virulent opposition to national desires; while little is forgiven on the other side. In large towns and business centres a man has everything to lose and little to gain through being a Nationalist. This state of things is partly to be accounted for by the extent to which the well-paid Government official element permeates and influences all sections of society, from the highest to the lowest. As the general population of the country has declined, the bureaucracy has increased in proportion and numbers, and has, through open competition, been recruited from all grades. From the lawyers down to the policemen and the boys and girls on probation in the postal service, they and their near connections are under Government control and surveillance, and cannot call their political souls their own. I know an instance of a man losing a lucrative Government post through having subscribed ten shillings to a Boer ambulance fund. In few countries in the world is the governmental control of the purse more astutely and consistently exercised in stifling or directing public opinion.

In comparing the force of the Irish movement with what it was formerly, we must realize that the Protestant element therein is less and less apparent. It remains to be proved whether Mr. Russell will be able to marshal the agricultural section of it into effective union for land reform, and whether, if successful in that direction, it will have learned to cast away its fear of the mass of its Catholic countrymen, and to sympathize with their political aspirations. The Catholic clergy have withdrawn their countenance to a considerable extent from the agrarian and to a lesser extent from the Home Rule agitation. The university question settled, it is doubtful whether they would desire further radical change. The liquor influence in politics has become more and more powerful and more selfish. It has been strong enough to oust from political life in Ireland some of the men, Catholics and Protestants, whose services on purely national grounds it would have been most desirable to retain. Some of the least worthy representatives owe their seats to publican influence.

A backwash to the political movement has developed from an unexpected quarter —the preservation and study of the Irish language. Strange as it may appear, the Gaelic League is, from certain points of view, being run in opposition to the United Irish League. From small beginnings six years ago, it has attained to widespread influence. Ireland, perhaps influenced by the extent to which ceremony holds place in the church of the majority, delights in political ceremony and procession. Last Sunday the Gaelic League made a display in the streets of Dublin which, for orderliness, character, and numbers, has rarely been equalled. Some years must elapse before we can really judge as to the extent to which this League will forward the general use of Irish. Appearances are at present in its favor. Where formerly nothing was heard of the language, weekly and monthly journals circulate, and columns in the *Freeman* and other daily and weekly papers are devoted to it. Scarcely a week passes that some new work in Irish or some new aid to study is not to be found on booksellers' counters. The language is in evidence as it never was before. It is being studied to their advantage by thousands who would never have applied themselves to the acquisition of any other tongue.

The motto of the movement is "Sinn fein, sinn fein amain"—Our own, our own alone. Doubtless it owes much of its strength and popularity to its being a safe and respectable outlet for Irish feeling, free, to the young official and other classes, from the suspicion of disloyalty. It dare not openly oppose the national movement, it owes part of its power and influence to dependence upon it; but upon the whole it is, as I have said, being run upon lines in opposition to older national ones. It preaches the doctrine that language more than separate political institutions forms the basis of distinctive nationality, and that Irish national movements from the days of Swift have been mistaken in that they sought to follow English rather than Irish ideals. (We are not informed as to the peculiarly Irish ideals in government that we should strive after.) Grattan, O'Connell, and Parnell are no longer to be regarded as prime heroes. "We actually have in our possession a great treasure, more valuable than any of the things which the power of England has taken from us, which ought to be guarded more jealously than fortress or river, viz., national language." If this movement should result in breaking the continuity of national thought, and in intercepting for a generation youthful sympathy from old ideals, more damage would be done to the cause of political nationality than could be accomplished by many Chamberlains; and failures and disappointment have made apparent in the country an unwonted spirit of cynicism in public affairs. This is especially voiced in the *Leader*, a weekly journal that has attained wide circulation among all classes. Talk about Home Rule is declared to be all *Rameis* (shadows), sympathy with the Boers unreal; the politicians are "surfaces"; the only objects worthy real pursuit by Irishmen are the use of the Irish language and Irish manufactures, the revival of Irish manners and customs and Irish ways of thought. In addition to these themes is to be noted much admirable denunciation of drinking usages and of the influence of the liquor interest.

E pur si muove. Home Rule still holds the field here, and even on the other side of the Channel, as a solution of the Irish difficulty. That it does so is largely due to the blindness of the Government itself. Were it content to spend, in buying out the Irish landlords, one-fourth the sum it has already lavished upon the South African war; did it not find it necessary to support the doings of Dublin Castle through thick and thin, to keep men like Judge O'Connor Morris on the bench, and to justify every police outrage, the path of the Home Ruler would be more clouded than it is at present. D. B.

MADAME RÉCAMIER.—II.

PARIS, March 26, 1902.

At the end of the Directory and during the Consulate, Madame Récamier had not yet distinctly attached herself to any political party. France was passing through a period of rapid transformation. The familiar society of Madame Récamier was a sort of mirror of this transformation; new names were mixed up with old names; the Montmorencys met Gen. Murat, Madame Murat and Madame Bacciocchi, the sisters of the First Consul, Eugène de Beauharnais, his step-son. Madame Récamier was anxious to count Gen. Bonaparte in her court, and made advances to Lucien Bonaparte. Lucien, from humble beginnings, had become a member of the Cinq-Cents, and, after the 18th Brumaire, had been appointed Minister of the Interior. He was only twenty-five years old. Without being as handsome as his brother, the First Consul, he had good features; he was extremely vain, and while he conceded to his brother superiority in military matters, he intimated that in political matters he was himself inferior to nobody. He affected to be a sort of Don Juan, and he wished for a moment to put Madame Récamier on his list of the "due mille." She deceived him by her amiable manners, but if she was a coquette, she was nothing more. Madame de Boigne, who knew her well, says even that "the term coquette does not exactly suit Madame Récamier; she exercised coquetry too much *en grand* to be called an ordinary coquette." She went to Lucien's soirées; they became intimate enough to exchange letters. In a recent sale of autographs (May 27, 1895) there were thirty-three letters from Lucien to Madame Récamier, full, says M. Charavay, who made the catalogue, of burning declarations and of incessant complaints of the coldness of Madame Récamier. M. Turquan gives the text of some of these letters.

It is clear, from all we know, that Madame Récamier offered to Lucien only her friendship in return for his love; that she was

afraid to offend too bitterly the brother of the First Consul; and that the affairs of M. Récamier, whom she consulted, exacted some prudence on her part. Lucien was ardent, impatient; he broke with his "banquière," as he called her, and asked for his letters, which she refused to return. It became more difficult for her to enter into relations with the First Consul after she had interrupted her relations with Lucien. Bonaparte was, besides, informed that she opened her salon more and more to Moreau and Bernadotte, whom he considered as his enemies—her house was open to all foreigners, to the members of the diplomatic body—and she received an official hint which obliged her to give up her weekly receptions. It was at that time that the famous painter David made her portrait, which is now in the museum of the Louvre. She is represented half lying on a couch, with a gown which is a mere tunic, and with her feet bare. The head is of an exquisite purity of feature, but rather expressionless. M. Turquan, whose antipathy to Madame Récamier is almost amusing, will have it that she had ugly feet. David's portrait is very interesting, and will always be admired, as well as the portrait made afterwards by Gérard, when Madame Récamier was no longer in the bloom of youth.

After the peace of Amiens, Madame Récamier made a visit to London, and for several weeks the London papers were full of praise of the handsome Frenchwoman. Wherever she went she wore a veil *à l'Iphigénie*, which fell to the ground and enveloped her with a sort of ideal vapor. The arrest of Moreau caused a real terror among the familiar friends of Madame Récamier. She was a friend of Madame Moreau, and she had the courage to go to see her every day, to attend her husband's trial, and to salute him. Bonaparte was advised of it, and Cambacérès, by his order, sent her a letter inviting her not to return to the court. She obeyed, but persisted in going every day to console Madame Moreau. She was thus thrown more and more under the influence of her friends, the two Montmorencys. The execution of the Duke d'Enghien was a great shock to their feelings, as well as to hers.

After the proclamation of the Empire, which took place in May, 1804, the Emperor made up his household and his wife's. Fouché, who was an assiduous frequenter of Madame Récamier's salon, and whose policy at the time was to conciliate the *émigrés*, told her that she did very wrong in maintaining a hostile attitude, and finally offered her the place of lady to the Empress. The same offer was made to her by the Princess Caroline, a sister of the Emperor. These offers were repeated several times, and refused. Récamier's affairs were in a very bad state, and his wife's refusal did not help to lift him out of his difficulties. There was a great financial crisis at the end of 1805, and many people were ruined; Récamier's bank was able to weather the storm for a time, but in October, 1806, its failure was announced. An advance of a million or two to Récamier by the Bank of France would have prevented the failure, but it was not authorized, and when Junot mentioned it to Napoleon, he said, "I am not in love with Madame Récamier." Madame Récamier had to change her whole life. As if her ruin did not satisfy the vengeance of Fouché, he denounced her in his police reports as the incorrigible enemy of the Empire. She was not exiled, but when Madame de Staël, who had really been exiled in 1803, and was living at Coppet, on Lake Geneva, asked her to make her a visit, she gladly accepted the offer.

Coppet was always full of distinguished visitors, and among those whom Madame Récamier found there was Prince Augustus of Prussia, the son of Prince Ferdinand, a nephew of the great Frederick. Prince Augustus had been made a prisoner at Saalfeld, at the beginning of the campaign of 1806; he had been sent to Dijon, to Paris, to Nancy, to Soissons, where he remained till the autumn of 1807. He was then allowed to return to his country. Stopping at Geneva, he saw Madame de Staël at Coppet and accepted her hospitality. There he fell in love with Madame Récamier at first sight. He was tall, handsome, very shy, yet not so shy that he could not confess his passion. Forgetting that she was married, he offered her his hand. She thanked him for the great honor which he paid her, and told him that she was not free. He spoke of a divorce; she knew better than anybody that she had never had a religious marriage, and that M. Récamier's relations to her had never been anything but paternal. But could she forget the great kindness which he had always shown her? She could do nothing without his permission. She wrote to him; he answered her that he consented to the annulment of their marriage if such was decidedly her desire, but asked that the rupture should not take place in Paris, but out of France. He added that perhaps she had not sufficiently considered what her position would be in Prussia if she became the morganatic wife of Prince Augustus.

Madame Récamier was much perturbed on receiving this answer. M. Turquan, on the strength of an unpublished letter which was communicated to him, but which bears no date, and the authenticity of which does not seem to us demonstrated, will have it that for a moment she thought of committing suicide. It is rather curious that Madame de Staël was meditating an essay on suicide, which she published in 1812. Whatever may have been Madame Récamier's doubts, whatever her conversations with Madame de Staël, the situation ended by her refusing the offer of Prince Augustus. He wept copiously and left Coppet, while Madame Récamier returned to France. She sent the Prince a portrait of herself made by Gérard. They maintained a correspondence which no events could interrupt. They saw each other again only in Paris, when Prince Augustus came back to France with a victorious army, and afterwards, in 1818, at Aix-la-Chapelle, during the sitting of the Congress which took place there. At his death Gérard's portrait was returned to Madame Récamier. The Prince wished to be buried with the ring which she, in a moment of imprudence, had given him at Coppet. The long idyll of Madame Récamier and the Prince of Prussia is a romantic chapter in history. M. Turquan's account of it has no romantic touch; he is determined always to put the worst possible construction on what relates to his heroine. But the facts speak for themselves.

Madame Récamier returned to Paris at the end of October, 1807; it was at her home that Benjamin Constant gave the first reading of his novel 'Adolphe,' which is still read by many, as it is a real autobiography, an account of the relations which Benjamin Constant had for several years maintained with Madame de Staël. 'Adolphe' did not please Madame Récamier, and in his *journal intime* Benjamin Constant wrote, on the evening of the day when he had read his novel, "The character of the hero revolts them. Decidedly, they don't know how to understand me." The hero was himself. The seizure by the imperial police of all the printed copies of a new book by Madame de Staël, 'L'Allemagne,' was a great event in Madame Récamier's circle. M. de Montmorency was exiled. Madame Récamier received again an order to leave Paris. She went for a time to Châlons, and later established herself at Lyons, where she made the acquaintance of the philosopher Ballanche, who became one of her admirers and (it may almost be said) slaves. She left Lyons for Italy, stayed some time in Rome, where Ballanche joined her, and in Naples, where she was very well received by Murat and by Queen Caroline. Murat had just signed (January 11, 1814) a treaty with the court of Vienna, in which he engaged himself to detach his cause from that of Napoleon, and to furnish the allies an army of 30,000 men. Madame Récamier became rather unwillingly the confidante of the treason of Napoleon's sister and of the anxieties of his brother-in-law. She told him that she did not herself like Napoleon, but that he ought not to abandon him. It was too late; Murat showed her from the window the English fleet entering the Gulf of Naples.

Correspondence.

LORD MILNER AND THE DUTCH.

To the Editor of The Nation:

Sir: "Manhattan," in the *Evening Post*, criticising my last letter in the *Nation*, sees, in his British fervor, a great deal more in that letter than was really there. He makes me propose "that Great Britain should lead the way to peace by recalling Lord Milner, Lord Kitchener, and all others who are in any way objectionable to the Boers, and, if necessary, humbly suing for peace." I only said that, if peace was desired, it would be wise to withdraw with honor Lord Milner, who has pledged himself in effect to oppose any settlement but that which would enable him to set his foot on the necks of his enemies, the Dutch—an arrangement to which it appears that the Dutch inexorably demur. In Canada, after the rising of 1837, if the British Government had persisted in keeping Sir Francis Bond Head in power, it would have been long before the trouble would have subsided. Lord Durham, a stranger to the quarrel, was sent out to make peace, which he did with the happiest results, not only to the welfare of the colony, but to the interest and honor of the imperial country.

Equity.

April 8, 1902.

A BRITISH ACADEMY.

To the Editor of The Nation:

Sir: In your issue of April 10, pages

287-8, there is an article by Prof. Ewald Flügel of Leland Stanford University, entitled "A British Academy," which, in my judgment, requires revision or modification in at least one essential feature. Professor Flügel is in error when he assumes that no one has anticipated his excellent and scholarly researches in regard to academies that have been proposed or contemplated in England, notably during the Queen Anne or Augustan era of our language. The subject is indirectly discussed in Prof. Henry Morley's 'First Sketch of English Literature' as well as in his 'English Writers,' and is incidentally referred to in the second part of Skeat's 'Principles of English Etymology,' chapter viii. What seems stranger than all is the fact that, in Dr. J. A. H. Murray's Romanes lecture, delivered at Oxford, June, 1900, and most admirably reviewed in the columns of the *Nation* of July 12 by your Oxford correspondent, there is a concise, lucid, and comprehensive presentation of the subject from the hand of the foremost living student of the evolution of English speech.

The present writer also devoted two chapters of his 'History of the English Language' (xxvi. and xxvii.) to the elucidation of this distinctive characteristic of our Augustan age. Dr. Flügel is "not the first That ever burst Into this silent sea," though not even the most malevolent critic can fail to concede the fidelity and the thoroughness of his investigation. I am sure that I need not recall to his consciousness Matthew Arnold's essay upon the "Literary Influence of Academies."

I am, yours sincerely,

H. E. SHEPHERD.

BALTIMORE, April 12, 1902.

Notes.

G. P. Putnam's Sons' most important recent announcement is of an 'Anthology of Russian Literature,' to be edited in two volumes by Prof. Leo Wiener of Harvard University. It will give extracts, but more often complete productions, from writers exemplifying the whole range of Russian letters to the present time. Other works in preparation are 'A Political History of Slavery,' in two volumes, by William Henry Smith, a journalist of large experience; 'Life at West Point,' by H. Irving Hancock; and 'Spanish Life in Town and Country,' by L. Higgin. Add also 'Labor and Capital: A Discussion of the Relations of Employers and Employed,' by labor leaders and master employers, edited by the Rev. John P. Peters. The English translation of Chateaubriand's Memoirs which this firm has just commenced bringing out, will be in six volumes.

D. Appleton & Co.'s April output will include 'Prisoners of Russia,' by Dr. Benjamin Howard; 'Practical Forestry,' by Prof. John Gifford; and 'Those Delightful Americans,' by Mrs. Everard Cotes.

'Mosaics from India,' by Margaret B. Denning; 'Village Work in India,' by Norman Russell; and 'Primitive Semitic Religion of To-day,' by Prof. Dr. Samuel Ives Curtiss of the Chicago Theological Seminary, are in the press of Fleming H. Revell Co.

'Samoa 'Uma: Where Life is Different,' by Llewella Pierce Churchill, with illustrations, is to be published "by advance subscription" by Forest and Stream Publishing Company.

Miss Ellen M. Stone's hard experience is to be narrated by herself in a volume entitled 'Six Months among Macedonian Brigands,' to bear the imprint of McClure, Phillips & Co. It can hardly appear before the autumn.

Doubleday, Page & Co. will shortly publish 'The Building of Character,' by Booker T. Washington.

Tennant & Ward, No. 287 Fourth Avenue, New York, will publish in connection with John Murray a translation of the 'Sacrum Commercium Beati Francisci cum Domina Paupertate,' a thirteenth-century allegory. The rendering, biographical introduction, and appendices of 'The Lady Poverty' are from the hand of Montgomery Carmichael.

Following Yale's Centennial example, the University of Chicago will issue from its own Press a series of Decennial Publications in commemoration of that institution's first ten years of corporate existence. Eight of the ten volumes contemplated will represent original research by representative members of the faculty, beginning with 'The Velocity of Light,' by Prof. Albert A. Michelson.

A fresh crop of Baedeker's guide-books for the current year reaches us from Charles Scribner's Sons—'Southern Germany' in a ninth revised edition; and 'Great Britain' and 'Egypt' each in a fifth, the latter after only four years. They are, with all the increase and change of routes and time-tables and inns, which need periodic overhauling for the tourist, permanent books of reference in their framework. The face of a country remains unaltered save by some Manchester ship-canal or Nile dam, and the maps can never become wholly antiquated and worthless.

Doubleday, Page & Co.'s "Little Masterpieces," edited by Bliss Perry, increase by a half-dozen pocket volumes, prose selections from Bacon, from Swift, from Goldsmith, from Johnson, from Emerson; each with a good portrait frontispiece. The choice is excellent for its range; and where opportunity offers, autobiographical matter is included.

The George Newnes "thin-paper edition" of English classics, of which Messrs. Scribner have the American handling, adds Shakspere in three volumes and Burns in one. This series is for the side-pocket, and very convenient in its oblong shape, with attractive covers of flexible lambskin. The paper is not up to the perfection of the Oxford University Press's thinnest, but it is not too transparent for clear reading. The engraved title-pages and frontispieces are in the best of taste. In short, these are outputs to be commended.

The same Anglo-American publishers send us 'The International Students' Atlas of Modern Geography,' prepared under the direction of J. G. Bartholomew. After the contents, is exhibited a considerable list of foreign words entering into the composition of geographical names as affixes or prefixes; and this is succeeded by a chronological list of the significant world's explorers. An index closes the volume, in whose maps the British Empire is naturally best looked after. There are three and even four maps of the continents—orographical, geological, political, and for vegetation, and this treatment is sometimes extended to smaller divisions. The maps are clear and well executed.

From the Scribners we have also the seventeenth issue of 'Hazell's Annual,' for 1902 (revised to December 6, 1901). The character of this work is established beyond the need of praise or even description, but we observe that purchasers of the present edition are eligible to compete for ten prizes of from one to ten pounds by submitting lists of criticisms, corrections, and suggestions for future betterment. These must reach the Annual at No. 52 Long Acre, London, W. C., by June 30. We select for mention the chronicle of the Boer war for 1900, filling nearly ten pages, including the negotiations for peace with texts in full, and a list of British casualties to date. Under China, likewise, we have the peace protocol. What to call our outlying possessions has been sometimes disputed. Hazell treats of them as "Dependent Territories," beginning with Alaska. They demand a page and a half. The statement, under Wireless Telegraphy, that the electro-magnetic waves "can pass through rock masses and certain other intervening substances," is not one now subscribed to by Marconi, we believe. Important rubrics are Obituary and Literature; and noticeable is the Medical Summary, occupied chiefly with "the pandemic of plague" under which the world is still laboring. Quite new is the survey of the world's navies.

In honor of the Rev. Edward Everett Hale's eightieth birthday, just elapsed, the Outlook Company has published handsomely, in type so bold that it might be thought designed for children, his 'The Man Without a Country.' Though it has received a fresh certificate of beneficence from President Roosevelt, there are some who look upon it as the primer of Jingoism.

By a curious coincidence, the new (fourth) volume of the Transactions of the Mississippi Historical Society (Oxford, Miss.), contains a brief communication from Dr. Hale on "The Real Philip Nolan," a Southerner shown here in business relations with Gen. Wilkinson, Burr's accomplice and agent of Spain. Accompanying it is the translation of the record of the trial of several of Nolan's accomplices by the Spanish authorities in Texas, in 1801, the year in which Nolan met his death—and merited a statue in the Statuary Hall at Washington, according to Dr. Hale. There are several valuable papers relating to the legal status of slaves in Mississippi before the civil war, the war itself, the struggle over secession, and to reconstruction and the legal status of freedmen, in this volume of the Transactions.

The 'Diary and Correspondence of Count Axel Fersen,' translated and edited by Miss Wormeley, with ample explanatory intercalations, for the Versailles Historical Series (Hardy, Pratt & Co.), serves in many passages for the elucidation of the *vie de coulisse* of diplomacy during the wildest years of the French Revolution. The extreme simplicity of the Count's style intensifies, by its abruptness, such passages as the attempted escape of Louis XVI., the arrest at Varennes, and the financial wreck of the Government (p. 81). The introduction of explanatory matter gives continuity to the originally disjointed narrative.

The fifth volume of the 'Remarks and Collections of Thomas Hearne (Dec. 1, 1714

—Dec. 31, 1716),' edited by D. W. Rannie, M.A. (Oxford: Clarendon Press; New York: H. Frowde), forms volume 42 of the Oxford Historical Society's publications, and continues the diary, notes, and correspondence of the famous Jacobite antiquary. It includes the memorable year of the first Jacobite rising, of which, however, Hearne takes less notice than we should have expected. Just at that time he was fully occupied with his political troubles with the Oxford authorities and his pertinacious struggle to hold on to his offices, or at least that of sub-librarian to the Bodleian. But he would not take the oaths, and the "vile Whiggs" at last ousted one of the most learned, if not one of the wisest, men in the University. In addition to a minute chronicle of the rather ludicrous phases of this squabble, the book has many references to Hearne's editorial labors on Alfred of Beverley and Titus Livius—not the glory of Patavium, but Livius Foro-Juliensis (a name which the reviewer is not ashamed to admit sent him to the Encyclopædia)—and is crammed with notices of forgotten old books and MSS., inscriptions, monuments, and other miscellaneous antiquarian lore. Epitaphs of course there are in plenty, including that famous one in Horsham, Sussex, beginning "Quod fuit esse quod est," etc., which we believe disputes the palm of unintelligibility with Aelia Laelia.

A second edition of Fletcher's 'History of Architecture on the Comparative Method' (Scribner) has recently appeared. Much new matter has been added, so that the pages now exceed five hundred. The chief addition to the letterpress is devoted to what are called, with singular inaptitude, "the non-historical styles," *i. e.*, Indian, Chinese, Japanese, and Saracenic architecture. The most important change in the make-up of the book is to be found in its 1,300 illustrations. These now consist of 128 half-tone plates of the chief edifices of the world, and 128 plates specially prepared for the book, each composed of sundry line drawings intended to show the principles of construction and the characteristic ornament of the several styles. The comparative method, as applied to the history of architecture, which in Fletcher's work reaches a high degree of specialization, consists in subjecting each of the important styles in turn to a searching analysis in regard, first, to surrounding influences, whether these be geographical, geological, climatic, religious, social, or political; second, to the peculiar architectural character which it developed; third, to its chief examples; and, fourth, to its structural system, examined under such headings as plan, walls, roofs, openings, columns, mouldings, or ornament. Such a system demands, from each style, answers to an identical series of questions, and these answers, being put in a readable form, constitute the book. Were one disposed to do so, he could easily point out inaccuracies of statement, lack of proportion in the component parts, and amusing insularity in the treatment. Since the book is an excellent one in many ways, it would be at best but an ungracious task to tear down a structure raised with such great pains. As a conspectus of the whole field of architecture, nothing else exists which compresses into such small space so many facts concerning the historic styles, presenting them by both text and illustration. Not the least useful part of the book is the bibliography with which the treatment of each of the several styles is ended.

C. Litton Falkiner gives us in collected form (Longmans, Green & Co.) eight 'Studies in Irish History and Biography,' contributed through late years to the *Edinburgh*, *Quarterly*, and other reviews and magazines. In their plan and scope they remind us of Mr. Lecky's 'Leaders of Public Opinion,' which, published anonymously forty years ago, attracted so much attention. They are written from a Unionist standpoint, ably, fairly, and thoughtfully; and in the presentation of new facts and fresh considerations contain much that is worthy the attention of students of Irish politics and Irish history. Home-Rulers as well as Unionists will be able to draw from them inferences favorable to their views. Turning over the pages of this freshly written and attractively printed book, we are once again impressed with the feeling how far off still is the time when to those vitally interested in Irish affairs it "will be pleasant to remember."

Professor MacMechan of Dalhousie University has added to his admirable edition of 'Sartor' an equally admirable one of 'Heroes and Hero-Worship' (Ginn & Co.). The extensive introduction is marvellously tightly packed with detail, picturesquely stated, and touched with the fervor which is of the good Carlylean faith. The picture of Carlyle's audience is especially vivid. The commentary is restrained but adequate. If any one desires to take 'Heroes' in historical seriousness, and is not content with it as a wonderful piece of English prose, this little book will stand by him faithfully.

It is pitiable to observe the stress laid upon air-space, moderate temperature, and uncontaminated and appropriate nourishment in discussing modes of relief for the serious and prevailing diarrhœa of children, because it is the unavoidable crowding, excessive and prolonged urban heat, and unsuitable if not decomposing food or none at all that lead to an annual slaughter of the innocents more causeless and cruel than Herod's. This is forcibly brought to mind in reading the third and enlarged edition of Dr. Louis Starr's 'Diseases of the Digestive Organs in Children' (Philadelphia: P. Blakiston's Son & Co.), which we may not analyze, but only note, with general commendation for those interested in clinical medicine.

In 'Hygiene for Students' (Macmillan), Dr. E. F. Willoughby does not offer, as the name at first suggests, hygienic instruction for the student-class, but presents a handbook for students in hygiene, especially adapted to English conditions and English sanitary laws. Each chapter is followed by its summary, and groups of questions are material aids in fixing attention on the salient points of every subject. The text, fairly up to the latest knowledge, is non-technical, and should be perfectly intelligible to laymen. It is true that, as Englishmen are prone, the author at least once confounds Sir Douglas Galton and his cousin Francis (p. 219), and he wanders a little when, speaking of maize, he writes (p. 29): "In former days the slaves of the Southern States of North America flourished on a diet almost limited to it, with batatas and pineapples occasionally added."

The second edition of Rideal's 'Water and its Purification' (London: Lockwood; Philadelphia: Lippincott), has been revised and enlarged, and gives clear information and sound doctrine regarding the characteristics of natural waters and their analysis by chemical and bacteriological methods. On the purification of water by filtration the book needs further extension, as only 62 pages out of the total 346 are devoted to this subject, and these give no details of filter-bed construction. The divining-rod as an instrument for locating springs is described and illustrated, and the author justifies its use by a comparison with magnetism, saying that it is perfectly possible that such a rod may move under the "induction" of running water. On the whole, the book, compared with the best American works on the subject, appears at a disadvantage.

Newell's 'Irrigation in the United States' (New York: Crowell) is a well-written and well-illustrated volume, dealing with a subject which is yearly becoming more and more important throughout that extensive region once known as the Great American Desert. The methods of storing the water of streams and distributing it upon the farms, and the marvellous results that follow, are set forth in a manner intelligible to the public at large, technical details being generally avoided. The author, who is the hydraulic engineer of the United States Geological Survey, contends that the irrigation of the arid regions is the most important public work which the Government can undertake. Since private enterprise has already utilized nearly the whole available stream flow during the irrigation seasons, the work of the Government must be mainly in the direction of constructing reservoirs for the storage of the flood waters. The fact that these reservoirs will cost large sums of money is well known to engineers, but the author dwells only upon the glorious development which will result. It is fair to say, however, that these arguments are not obtrusively set forth throughout the book, which is an excellent one for the general reader, as it gives in condensed form information scattered through many Government reports.

The third volume of 'The Engineering Index,' covering the years 1896-1900 (New York: *Engineering Magazine*), contains 1,030 large octavo pages, closely printed in double-column. It gives the titles of papers appearing in about 350 technical periodicals, with descriptive notes regarding the scope of the papers and the number of words in each. The general headings are subdivided into minor ones, and cross-references are frequently given. The classification and typography are excellent, and the entire volume is a good example of indexing carefully done on a comprehensive plan.

A timely publication in D. C. Heath & Co.'s "Modern Language Series" is Fulda's play, "Der Talisman," of which our readers have heard much lately. Professor Prettyman of Dickinson College supplies the introduction and notes, and reproduces Andersen's tale, "The Emperor's New Clothes," in German, as the basis of the drama.

Two unique impressions of Franklin's "Advice to a Young Tradesman" are the theme of Mr. Worthington Ford's paper in the March *Bibliographer* (Dodd, Mead & Co.). The one is owned by the British Museum,

and was printed in Philadelphia by Daniel Humphreys, about 1750, as the Museum authorities conjecture (the date of composition being 1748); but Mr. Ford demonstrates the improbability of this printer's name having been attached to any production before 1784. He ceased printing in Philadelphia in 1811. The other impression is now in the possession of the Boston Public Library, and it appears to have issued from the press of Benjamin Mecom, a nephew of Franklin, between 1758 and 1762. One conclusive consideration against the date 1750 for the Museum broadside is the modernization of the typography, in the matter both of capitalization and of punctuation, as compared with Mecom's. Mr. Ford does not make use of this argument, but any printer would employ it, and would, we think, infer a nineteenth-century date rather than an eighteenth. This agrees with Mr. Ford's noticing that the word "necessary" prefixed to "Hints to those that would be Rich" (from *Poor Richard*), which Humphreys added to the "Advice," by way of filling out his sheet, is first found in a London edition of *Poor Richard* dated 1805—six years before Humphreys quitted printing.

The International Congress of Historical Sciences that was to have been held at Rome under the auspices of the King of Italy, has been postponed for some reason, but not abandoned, as may shortly appear.

—It is well to call attention occasionally to the growing abuses of public printing at Washington. We have before us a copy of Senate Document No. 137, of the present Congress, entitled "Some Reasons for Chinese Exclusion." It has no indication of having been presented to the Senate, as no member of that body stands sponsor for it. The title-page expressly says, "Published by the American Federation of Labor," and the reader is requested to address the Federation for "further information." A poor caricature, and thirty pages of poor reading matter, with an introduction containing a touch of apology—this is in no sense a public document, but has been foisted upon the Government Printing-Office to secure a low cost of printing and the privilege of sending it free (franked) through the mails.

—Those who have occasion to use the public documents issued by Congress will welcome any assistance in the form of a reasonably complete, systematic, and intelligent list. It is not possible to arrive at completeness, for no single collection of United States documents is complete; and a coöperative list can take no account of what escapes its compilers. The sorry results of Poore's scheme were discouraging; and the efforts of individual cataloguers to make good his omissions have been partial and unsatisfactory. The Superintendent of Public Documents now grapples with the problem, and the first of a three-volume list is ready for distribution. It bears the title, "Tables of and Annotated Index to the Congressional Series of United States Public Documents," and covers the issues of the Fifteenth to the Fifty-second Congress. The documents of the first fourteen Congresses will be treated in a separate volume, as will the publications of departments, bureaus, and other offices of the Government, printed without Congressional numbers. Beginning with the Fifty-third Congress, the existing lists of the Superintendent of Public Documents cover the field. When the three volumes are completed, they and the annual list will afford a serviceable index to this great collection of public documents, and far better than any that has yet been prepared. It is understood that Mr. William L. Post prepared this index under the Superintendent's direction, though his name nowhere appears in the volume.

—So far as trial has been made of it, we find the Index convenient, not too elaborate, and yet full for the great items. By adopting the serial numbers first suggested by Dr. Ames and carried into effect by Mr. Crandall, reference to any volume is a simple matter, doing away with the clumsy jargon of Poore, with its complicated references to Congress, session, description of document, and number. By the side of the earlier systems the serial number is simplicity itself. Mr. Post's indexes will show the location of each of the annual reports of a department or bureau from the first issue—a great gain in itself. When it comes to a more complicated subject, the treatment is not so clear or satisfactory. The title "Tariff," for example, must be supplemented by "Duties," "Revenue," "Customs," and others, and cross-references are not always given. Under "Army" and "Navy" the arrangement is more simple, and clearly develops the advantages of the present Index. After a long experience in handling these documents, the present writer can but feel that no index will be entirely competent, since the inquirer so often approaches his subject with a hazy idea of what he wants, and an unwillingness to undertake the drudgery of spelling his way through the mass of material offered. Mr. Post's work is, however, a distinct improvement on former lists.

—In Scudder's Life of Lowell, at p. 103 of volume ii., there is quoted, without comment, from a private letter of the poet's (about 1867-8), an astonishingly mistaken affirmation that "Shakspere does not tack his 'lesses' to nouns, but to verbs. . . . I admit that *less* ought to be joined to a noun (as in German *los* always is), but I think one may sin with Shakspere or Milton." We say nothing of the German portion of this statement, though the form *leblos*, lifeless, occurs to us as at least requiring explanation; but five minutes with Mary Cowden Clarke would have shown that, aside from all equivocal examples, Shakspere uses beardless, eyeless, faultless, headless, heartless, lifeless, peerless, sightless, worthless, etc. Milton has "causeless suffering," "eyeless in Gaza," "fearless, unfeared," "loveless harlots," "numberless offences," "remediless doom," etc. In the April instalment (Leisureness—Lief) of the Oxford English Dictionary (H. Frowde) Mr. Henry Bradley has a note on the suffix -less, showing that it was originally attached to substantives to form adjectives in a privative sense. In many instances the substantive "was a noun of action, coincident in form with the stem of a related verb, and some of the adjectives so formed had the sense 'not to be ——ed,' 'un- ——able,' as in *countless, numberless*. On the supposed analogy of these words, the suffix has been appended to many verbs, as in *abashless*," etc. Another suffix, -let, which is confined to substantives, was slow to prove its serviceability, but is now very active. "From the first half of the eighteenth century we have *streamlet* (Thomson), from near the end of it, *cloudlet, leaflet*." "It is now perhaps the most frequent of diminutive endings." The verb *let* demands many pages. We will instance only its restriction, in the once general sense of 'cause to,' to the verb *know*. A dwindling development is also curiously manifested in the case of the adjective *lewd*, from meaning 'lay, non-clerical,' in the translation of Bede's 'Historia Ecclesiastica' (890), to 'lascivious,' in Chaucer (1386), and now this alone. The intermediate stages were 'unlearned,' socially 'common, low, vulgar, base,' 'ill-bred,' 'bad, evil, unprincipled' (persons and things), 'unchaste.' In the large proportion of obsolete words here gathered together, we cannot, if we would, expect to recall *librar, librarian*, or *librarier* for 'bookseller'; but the versifier may regret this. It would not, on the contrary, require great boldness even in prose to reëmploy *level* in the sense of 'aim, calculate, design,' as in "levelled to destroy the Constitution."

—A difference in English and American usage appears in the accentuation of *levee* (a reception). "All our [Dictionary's] verse quotations place the stress on the first syllable. In England this is the court pronunciation, and prevails in educated use." Walker's stressing on the final syllable "is occasionally heard in Great Britain, and appears to be generally preferred in the United States." Our American derivatives *licensable* and *licensure* afford, says Mr. Bradley, some argument for differentiating the verb *license* from the noun *licence*, in addition to analogy (as, *practice practise, prophecy prophesy*, etc.), "although the spelling *licence* is etymologically unobjectionable." "Recent dictionaries, however, almost universally have *license*, both for substantive and verb, either without alternative or in the first place." Some Philadelphian, from his "Northern Liberties," might have furnished an American quotation for *liberties*—"of a city: the district, extending beyond the bounds of the city, which is subject to the control of the municipal authority." Per contra, the invasion of England by Americanisms is manifested in several instances, and it is apparent that British safety lies solely in shutting eyes to them. Before the last century, *lengthy* was employed only by Americans, notably by the fathers of the Revolution, including our first three Presidents and Thomas Paine. In a fatal moment, the *British Critic* (1793) objected to the word as coming from across seas; of course Southey takes it up (1812), and Bentham (1816). *Lengthily*, likewise, used by Jefferson in 1787, was banned by *Blackwood* forty years later, when it must have been insidiously making its way. Naturally, George Eliot adopts it in 1866, and now it is "hands all around." We could say more of this interesting if thin number of the Dictionary, but we will conclude by noticing the remark that *lex* (*talionis*) is no longer declined according to the context. We shall see, some years hence, what will be said of *statu* (*quo*) in this particular.

—On February 22 the eminent physician Adolf Kussmaul, who for forty years was professor of clinical medicine in different German universities, celebrated his eightieth birthday at Heidelberg, where he has lived in retirement since 1895. Additional interest is given to this anniversary by the

recent publication of the octogenarian's youthful reminiscences in a volume entitled 'Jugenderinnerungen einer alten Arztes' (Stuttgart: Bonz & Co.). This autobiography is not only an exceedingly entertaining record of a remarkable career, but also a valuable contribution to the history of the evolution of academic instruction and scientific research, especially in the department of medicine, during the first half of the nineteenth century. Kussmaul's father began life as a poor Suabian peasant boy, and rose to the position of a very capable country doctor with a high average of general culture, gentlemanly manners and fine social qualities rare in a person of such an origin. The son inherited these traits of character, as well as a predilection for the healing art, which he was able to foster under more favorable conditions. His name Kussmaul (Kissmouth, or, more literally, Kissmuzzle) did not tend to promote his advancement, and never failed to excite the astonishment and hilarity of his North German colleagues and acquaintances. As a student he bid in at an auction a volume of Béranger's 'Chansons,' and, on mentioning his name, was rebuked by the auctioneer for indulging in ill-timed jests. In Baden and Alsatia, family names implying osculation are by no means uncommon. It is said that at a ball in Carlsruhe the three most prominent persons present were two gentlemen, Kuss and Kussmaul, and a young lady named Küsswieder (Kissagain). When urged by a friend to change his name, he refused to do so, on the ground that few persons could show such an ancient and illustrious pedigree as his, averring that it could be traced back fifteen centuries to the famous Oribasius, physician in ordinary to Julian the Apostate, who, after the Emperor's death, suffered banishment and took refuge among the Goths on the Danube, where he was called Kussmaul. This fictitious etymology was accepted as a good joke even by philologists. Kussmaul's humor found expression in genial verses written before his exclusive devotion to science; these were afterwards printed for his friends as 'The Puerile Poetic Pecadillos of Dr. Oribasius,' and several are published in his autobiography.

—The Dutch have been celebrating the hundredth anniversary (March 24) of the birthday of Jacob van Lennep, who has often been called the Walter Scott of Holland. Sprung from a family already renowned in learning and the law, Jacob became also a lawyer, achieved fame and had an extensive practice, but, like our Oliver Wendell Holmes, he had an avocation in literature. In 1829, at twenty-seven, he published his first novel, 'The Adopted Son,' and a work on the national legends, following these in 1830 by two comedies, "The Frontier Village" and "The Village over the Frontier." His knowledge of the English language was extraordinary, and his translations of Shakspere, Byron, and Tennyson are strong and felicitous. Foreigners suppose that Sir Walter Scott was both his inspirer and model, but he himself ascribed the impulse to romance to his Swiss governess, Madame Wägeli. Of his romantic works, the translations in English have been, besides the books named above, 'The Rose of Decama,' 'The Abduction,' and others. In his excursions in the field of romance, he went so far afield as Venice, Turkey, Java, and the South Seas, writing tragedies, comedies, and operas which enjoyed great favor upon the stage. He spent some years upon a critical edition of Vondel's writings. The works by which he will in all probability be best remembered, are the historical novels illustrating the mediæval history of the northern Netherlands. Most valuable to the library of the student are his antiquarian writings, especially his superbly illustrated essay, in six volumes, upon the Castles of the Netherlands, upon which he wrought in conjunction with his friend Hofdijk and with the coöperation of able artists. This not only shows a great deal of exact painstaking investigation, but is penetrated throughout with brilliant imagination, and forms a wonderful window into the past. A Liberal in politics, Van Lennep died at Oosterbeek in 1868, a generation before the "monster verbond" (as he named the political compact between the Calvinists and Roman Catholics) had triumphed at the polls.

—Prof. Finnur Jónsson of Copenhagen has just finished the third and last volume of his 'History of the Old Norwegian and Old Icelandic Literature,' of which the first part of volume one appeared in 1893. This work is, beyond comparison, the most complete and exhaustive treatment of the subject thus far published. The literature from its earliest inception in Eddic and Scaldic poetry (about the year 850), through sagas, laws, translations, and reproductions down to about the year 1450, is embraced in three volumes—the first, in three parts amounting to 650 pages; the second, in five parts of 1,009 pages; and the third, in one part of 126 pages. The disparity in size is due to the fact that the first two volumes deal with the productive periods of the literature, while the last volume treats of a period which was to a large extent characterized by a merely mechanical reproduction. It may cause surprise that a subject so abstruse as Icelandic literature would seem to us to be, should have a sufficient number of devotees, even among Scandinavian book-buyers, to warrant any publisher bringing out a work of such dimensions. The fact is, however, that Denmark is the happy possessor of a fund, called the Carlsberg Fund, endowed by the well-known patron of literature and art, the brewer Jacobsen, in its scope somewhat similar to the recently endowed Carnegie Fund in Washington. By this means the work has been enabled to see the light.

—It has already occasioned several monographs in opposition. Thus, Prof. Bugge of Christiania has earnestly disputed the author's acceptance of the Icelandic tradition as a reliable guide in judging the age of the oldest Norwegian scalds, none of whom Bugge believes to be older than the tenth century, whereas tradition carries them up to the middle of the ninth. Bugge's chief argument is taken from the linguistic characteristics of these poets, their use of foreign words of Celtic and Romance origin, etc.—characteristics which presuppose an extensive intercourse between the Norsemen and their western and southern neighbors. The dispute cannot as yet be said to have been authoritatively settled. Another moot point is Jónsson's localization of the Eddic poems. Whereas Vigfusson and, more recently, Bugge have held the opinion that these poems were, with perhaps one or two exceptions, produced in the Norwegian settlements in the Western Isles, Jónsson has come to the conclusion that their home is for the greater part to be sought for in Norway proper, and, for a couple of the poems, in the Icelandic colony in Greenland. Previous works dealing with old Norse and old Icelandic literature had become more or less antiquated, besides laboring under other defects, such as excessive partiality due to patriotism, etc. Professor Jónsson has aimed at completeness, thoroughness, and an objective treatment.

BRINKLEY'S JAPAN.

Oriental Series: Japan and China. In twelve volumes. Vols. I.-IV.: Japan, its History, Arts and Literature. By Captain F. Brinkley. Boston and Tokyo: J. B. Millet Co.

A work like this in four volumes, the product of ripe scholarship and the unremitting industry of thirty years or more of life in Japan by one long since recognized as an authority, deserves more space than our limits will allow. The present handsomely printed edition is copiously illustrated with wood engravings, photographic reproductions, and brightly colored pictures, which, nevertheless, do not in the main correspond nor altogether harmonize with the seriousness of the text. The writing is that of a master of a great subject. He treats his theme with dignity, profundity, ease, and attractiveness. The pictures, on the other hand, are almost wholly of modern things with which the tourist is familiar. Many of them are commonplace because of their great familiarity. The exceptions are the state interiors and excellent costumes historically correct. From the artistic side one might suppose this publication to be for the parlor table, whereas it is worthy of the library of the severest critic, except that the literary apparatus is of the most meagre sort. It is to be hoped that the same work, properly considered for the student and general reader who cannot purchase the more expensive edition, will be prepared.

While so many persons are writing upon Japan, most of them with only ordinary knowledge, and some with conceit of shallowest information, it is well to have the personality of this author set forth, in order that the value of his work may be known. In the late sixties, when the disturbed condition of Japan made the British Government think it necessary to land armed forces in a camp at Yokohama and to keep them there for several years, Capt. Brinkley, an artillery officer, instead of devoting himself to the fascinations of Japanese nature and humanity, gave himself to the study of the language, art, and native learning with a thoroughness known to few besides "the three great lights of Japanese scholarship"—Satow, Aston, and Chamberlain—to whom he dedicates his work. It is not too much to say that the "lights" are four, and Brinkley is one. Others might excel in linguistics, art, belles-lettres, or in the special phases of a subject whose richness is a constant surprise, but it is safe to say that probably no one living has covered so thoroughly the whole ground of Japanese achievement, from prehistoric days to the assassination

of Hoshi Toru. Our guide handles with ready familiarity and firm touch every subject which he brings before us. His style is pleasing, and such mistakes in the text as we have been able to find are manifest slips of penman or printer. The transliteration of Japanese words is that of an accurate scholar. Wherein the author seems blind or purposely omissive, is in not giving to modern external influences their deserved credit. Knowing how thoroughly the American teachers in Japan not only trained up many of the men now most active and influential in Japanese politics in the spirit and practice of the deliberative assembly, which was unknown in Japan until they came, it seems absurd to make no reference to these potencies. The American reader will also find that almost all the references to his own country are sinister, and, if ever complimentary, of microscopic dimensions. The "Tammany Hall boss" we know, but the "scheister" ascribed to America seems to have been made in Germany. Pretty much all the "modern instances" are English, rather even than British, revealing the author's limitations.

The author quite rarely quotes from any other writer, having perhaps little need to do so; but his bald statement that "Griffin" —a misprint for the author of 'The Mikado's Empire'—"was content to think that they [the Japanese] are modern Ainu," is not just to that writer, especially as another critic of equal eminence finds fault with the same American for deriving the Japanese from Malaysia. Capt. Brinkley, like most modest investigators, concedes the fact "that the Japanese are not a pure race. They present several easily distinguishable types, notably the patrician and the plebeian." Indeed, the Japanese are a very mixed race, and "the theory which seems to fit the facts best is that the Japanese are compounded of elements from central and southern Asia." The conquering immigrants arrived by way of Korea, though they were neither Koreans nor Chinese, while the south Asian immigrants drifted to Japan from the Philippine region and below, along the strange current called The Black Tide.

At the end of each volume the author gives in an appendix several pages of notes and references, all of them very interesting, and showing fulness and nicety in scholarship. Concerning the mythology which the educated intelligent Japanese resolves not to scrutinize too closely, it is hardly a correct intimation that "neither a Colenso nor a Huxley has yet arisen to attack [it] publicly," for it is a fact which, in the light of scholarship and of Japanese professions of intellectual liberality, is not at all creditable, that a native professor in the Imperial University was, not so long ago, first officially silenced and then retired for venturing to criticise the mythology on which theories of government still current were based. Capt. Brinkley himself (p. 81) suggests that written "history" in Japan began only when books and writings reached the continent. Those Japanese who became scholars, found in Chinese history, when its pages were first opened for their inspection, an explanation of the Japanese nation's origin. In all probability, the first historiographers in Nippon derived the idea of an "age of the gods" and of a divinely descended emperor from the stories found in the Chinese fabulists. In other words, just as the first European settlers of America brought to this continent the old-world myths of the Amazons, the Seven Cities, and the Antilles, and roamed westward chasing the shadows of their own fancy, so the first Japanese users of writing took continental fiction, and gave it a local habitation and new names. They invented that great system of mythology out of which has emerged the serviceable political doctrine that the Japanese emperors, being of divine origin, rule by heavenly right—a doctrine incorporated in the preamble and first article of the Constitution of the Empire. On the official text of a "line of emperors unbroken for ages eternal," the Marquis Ito, in his famous Commentaries, sets forth this notion gravely and with intensest dogmatism, in apparently childlike faith. And this, though the 'Nihongi' (Chronicles of Japan), composed 720 A. D., shows repeatedly transparent imitations, and even extended copying, of ancient Chinese writings.

It is Capt. Brinkley's method to omit purposely the details of battles and sieges, and give a social, intellectual, and literary history. In volume i. he treats of the primeval Japanese, Japan on the verge of history, the early eras, and, most felicitously and luminously, of that wonderful epoch of Nara (709-784), when Buddhism was the new teacher and nurse of civilization. The Hei-an epoch lasted from the eighth to the middle of the twelfth century, when Kioto was the capital, the centre of all refining influences and civil power, when the Fujiwara nobles ruled the court, while the Minamoto and Taira generals were asserting Imperialism, and carrying the bounds of the empire to the farthest islands. No author has yet treated this period with such consummate ability and grace.

Volume ii. is devoted to military life and the military epoch, in which civil life, so splendid in the capital, formed its own code, and in which elegance in art, costume, literature reached among the nobles (*kugé*) the highest pitch, while the military families (*buké*) were in the field and on the frontiers devoting themselves to arms, armor, and physical training without letters. The nation was, in fact, divided into three factions, the court nobles, the military families, and the priests. The æsthetic tendencies and delight in nature and art were as manifest, though in smaller compass, as now, among the Japanese. Of the manners and customs, the weapons and operations of war, the refinements and pastimes of the military epoch, Capt. Brinkley writes with the exactness of an expert. He expounds in one chapter the Bushi-do, the warrior's way, or code of chivalry, unwritten, indeed, but mightily influencing Japan in the twentieth century, and making her people unique among Asian nations. Indeed, the aim of government since 1868 has been to lift up the whole nation into knightly ideals and privileges, and this is the secret of the morale of its sailors and soldiers.

The subject of the military classes is continued in the third volume, which, however, is mainly devoted to the splendid era of the Tokugawas, from rise to fall. In the fourth and concluding volume, the author handles with masterly power every subject likely to interest an inquirer into the springs of life and action, and the secrets of Japanese potency. He treats of the court, manners and customs, and of criminal procedure and criminal classes, and every page of his text shows familiarity with both recondite sources, standard fiction, and popular notions. The chapter on personal liberty, justice, slavery, and checks of vice, corrects many shallow Western notions about the Japanese, and proves the earnestness of the statesmen of the Tokugawa times, who, within the limits of their knowledge and possibilities, strove manfully to solve social problems.

The movements of the native religions, Buddhism and Shinto, and the influence of philosophy are finely set forth, ponderated and measured. The work closes with a chapter on Méiji, or the era of enlightened government, in which the story, from 1868 to the fall of the last Ito cabinet, is told by one who seems to hold all the threads, weaving them into a bright texture, rich in color, which corresponds to the pattern of reality. Probably no other foreigner living has a keener insight and closer understanding of Japanese parties and politics, of which the former as yet are built on persons rather than on ideas or principles. The author is eminently judicial, sparing neither severity of language nor hearty appreciation. He awards high meed of praise to the great constructive statesmen, and understands well the motives of their noisy detractors. He does not hesitate to lay open the abysses of sensualism and the barbarism that prevailed in days gone by, and that still exist under the name of civilization, while showing the great ability of this nation that "adopts nothing but adapts everything."

It is clear from this long view of Japan's evolution that, from the very first, the Japanese have been ready to try experiments. They have always been willing to learn, and have ever proved themselves apt pupils. Even Buddhism, essentially a creed of compromises, in grafting other faiths upon its own system rather than seeking to uproot them, has helped the Japanese to adapt themselves docilely to radical changes, and to become expert in adjustment and compromise. It has thus been solidly serviceable to the Japanese in their modern career. On the other hand, the moral limpness of such a creed, inducing weakness of moral fibre, may explain why Japanese enterprise often seems to flag on the threshold of attainment. It is perhaps Buddhism, also, that has taught in the people a patience almost unlimited, inducing the profoundest faith in time. As we all know, in the story of the Forty-seven Ronins, the marked victim, just when he ought to have been sleeplessly vigilant, supposed his enemy had abandoned the field altogether. On the contrary, the victim found him waiting at his post, the result being that his own head soon decorated the tomb of the avenged, where a perpetual decoration day is kept amid perfume and homage. What the Japanese cannot gain through collision he will often attain by sheer insistence.

MAHAN'S TYPES OF NAVAL OFFICERS.

Types of Naval Officers. By Capt. A. T. Mahan, United States Navy. Boston: Little, Brown & Co. 1901.

The American reader will naturally ask why Capt. Mahan should have thought that the lives of the six British admirals, selected as types of the naval officer, needed

to be rewritten and subjected to comparative analysis. The answer to this query will doubtless be found in the author's desire to complete his treatment of the great subject of sea power (especially in the eighteenth century), begun in his initial work and illuminated in broad outlines by his Life of Nelson, but still requiring that detailed elucidation which Hawke and Rodney, Howe and Jervis, Saumarez and Pellew, through their characters and deeds, seemed best adapted to furnish.

In the present volume are described the changes in naval warfare which, introduced by Hawke, galvanized into vigorous activity the British navy, then moss-grown and suffering from the dry-rot of formal Fighting Instructions that cost poor Mathews whatever of reputation he possessed, and Byng his life itself. Fifty years later, these changes reached a magnificent culmination under the genius of Nelson. Nowhere else, by the way, has Byng's action off Minorca in 1756 been made so clear to the layman; nowhere else has Mathews's action in 1744 been so ably analyzed. If any demonstration were needed of the folly of laying down minute regulations as to how to engage an enemy, and of attempting, by Governmental order, to eliminate personal initiative, these pages should suffice. The apparently incidental discussion of the difference between "errors of conduct" and "errors of judgment" was evidently written with one eye turned towards the wretched Schley matter—a circumstance which somewhat lessens its weight. We are still too near that dreadful subject to gain a just perspective.

Few naval heroes are so inspiring as Hawke (Mahan's first type), whose career is almost unrivalled in its lack of incidents to regret. He came first into prominence in Mathews's action, when, breaking with the old traditions and the Fighting Instructions, he boldly captured the Spanish *Poder*, after having severely crippled the *Neptuno*. The story of his victory over Conflans in Quiberon Bay in 1759 is one of the most dramatic in naval history. From Horace Walpole it extorted this unwilling tribute:

> "It was the 20th of November; the shortness of the day prevented the total demolition of the enemy; but neither darkness nor a dreadful tempest that ensued could call off Sir Edward Hawke from pursuing his blow. The roaring of the elements was redoubled by the thunder from our ships; and both concurred in that scene of horror to put a period to the navy and the hopes of France."

Hawke's greatest feat was, unquestionably, the establishing and maintaining of an efficient blockade of the French naval port of Brest, "prolonged through six months of closest watching, into the period of the winter gales, in face of which it had been hitherto thought impossible to keep the sea with heavy ships massed in fleets." This policy afterwards, under St. Vincent, had no small share in wrecking Napoleon's scheme of universal dominion.

Capt. Mahan's treatment of Rodney's character and career is especially commendable, for Rodney's was not a simple nature like Hawke's, but complex in the extreme. To Americans Rodney is of surpassing interest. It was his distinction to see with the eye of the strategist, and to assume great responsibilities in obedience to his sense of duty. By his coming from the West Indies in 1780 (without orders) to North America, and assuming general command, the well-laid plans of Washington were brought to naught and our War of Independence prolonged. The approval of this action by his Government is a splendid tribute: "It is impossible for us to have a superior fleet in every part, and unless our commanders-in-chief will take the great line, as you do, and consider the King's whole dominions as under their care, our enemies must find us unprepared somewhere, and carry their point against us." Rodney's professional reputation is based on his defeat of Langara, an action whose circumstances lose little even in comparison with Hawke's fierce onslaught at Quiberon, on his affair with De Guichen off Martinique in 1780, wherein the fruits of victory were lost through the incompetence of some of his subordinates, and on his battle with De Grasse on April 12, 1782. The less pleasing side of his disposition is shown in his reluctance to leave the spoils of St. Eustatia, which he gathered to the extent of £3,000,000, and in his failure to press home his advantage after De Grasse and the French flagship had been captured. "What he had won, he had won; what more he might and should do, he would not see, nor would he risk." He had grave personal faults, which were not generous like Nelson's, and which were increased by the financial straits in which the greater part of his life was passed. We think Capt. Mahan has not sufficiently appreciated the exceptional capacity in strategy displayed by the only Englishman of his day who, like Washington alone on our side, grasped the situation, and realized that upon naval supremacy hung the issue of our struggle for independence.

Like all other writers in their turn, Mahan has fallen a victim to the engaging personality of Lord Howe, that warm-hearted, bluff, and capable sailor. Howe was a close student of his profession in a faithful and dogged way, but he certainly was not brilliant. To read about him is to be inevitably drawn towards him in affection. He could not bear the thought of fighting the colonists in 1778—a circumstance which Americans are not likely to forget; and the very kindliness of his nature caused the one conspicuous failure in his career. Said Admiral Codrington: "It was want of discipline which led to the discontent and mutiny in the Channel fleet. Lord Howe got rid of the mutiny by granting the men all they asked; but discipline was not restored until the ships most remarkable for misconduct had been, one after the other, placed under the command of Lord St. Vincent."

Lord Howe has always been accepted as a tactician, but his operations against D'Estaing, off our own coast, which brought despair into American hearts in 1778, were more characterized by an unexpected energy in the refitting of Byron's storm-tossed reinforcement than by evolutions; while his great fight of the "First of June," 1794, was waged, in spite of himself, on the traditional lines of ship to ship. Although the prior manœuvres in this campaign compare favorably with Rodney's striving to wrest the weather gauge from De Guichen, nevertheless Howe's reputation is based chiefly upon his well-known and constant study. Conditions beyond his control forbade his ever demonstrating in a skilful sea fight how great was his real mastery over this branch of naval science.

No navy ever produced an abler "all-around" officer than John Jervis, Lord St. Vincent. His influence upon the British fleet cannot be measured. He licked it into shape, and he made of it the instrument which eventually wrought the downfall of Napoleon. His victory off Cape St. Vincent in 1797, fifteen ships against twenty-seven, gained him fame and an earldom. "A victory is very essential to England at this moment," he said, as the Spaniards came out of the fog. When the mutinies in the Channel Fleet, which Howe had sought to allay rather than to crush, extended to the vessels off Cadiz, St. Vincent stood like a rock. He rejected the suggestion that suspicious letters should not be delivered, with this grim comment: "Should any disturbance arise, the Commander-in-chief will know how to repress it." He made the mutinous crew of the *Marlborough* man the yard-arm whips to hang two of their shipmates, condemned to death, although their captain feared they would refuse to obey his orders. "Do you mean to tell me, Captain Ellison, that you cannot *command* his Majesty's ship the *Marlborough?* for if that is the case, sir, I will immediately send on board an officer who can." The men were hanged and in the manner St. Vincent had prescribed. "The law was satisfied, and, said Lord St. Vincent at the moment, perhaps one of the greatest of his life, 'Discipline is preserved, sir!'" He was conspicuous for the care of the health of his men, "by instructed sanitary measures, by provision of suitable diet, and by well-ordered hospital service"; it "was his proudest boast among the services to which he laid claim." "To St. Vincent, more than to any one man, is due the enforcement and maintenance" of Hawke's system of blockade; "and in this sense . . . he is fairly and fully entitled to be considered the organizer of ultimate victory." Stern in his conception of duty, rigid in exacting all the forms of professional etiquette, inflexible in determination, and merciless towards the incompetent, he was generous in his praise for faithful and honorable service, and he bound men to him by a devotion in which professional respect went hand in hand with personal esteem. Among British admirals he ranks second only to Nelson.

Admiral Lord de Saumarez appears to have been a man of singularly balanced character, and to have exhibited a rare combination of physical, mental, and moral attractions. Handsome in person, of exceptional ability, he was as brave as Hawke, a better seaman than Nelson, and as close a student of his profession as Howe. His ship was always noted for efficiency, for contentment at a time when the fleet was infected with mutiny—a contentment shown by the fact that his crew followed him from vessel to vessel as long as they were permitted to do so. His best work was as a squadron commander. He was next in rank to Nelson at the Nile, and he did notable duty at Brest, anchoring at will close in shore and just clear of the range of the French batteries. "With you there," wrote St. Vincent, "I sleep as sound as if I had the key of Brest in my pocket." Fate denied him the full measure of opportunity when in chief command, although his last fight was a brilliant victory against heavy odds, and after a reverse which would have disheartened a less determined and self-reliant officer. A sort of mystery of pathos seems to cloud his relations with Nelson, between whom and him-

self there was loyalty and respect, but never warm friendship.

Lord Exmouth's largest operation was the bombardment of Algiers in 1816. He had refused additional vessels, pressed upon him by the Admiralty, accepting complete responsibility for the outcome of his plans; and he distributed his small force with so much skill that he broke for ever the spirit and the power of the piratical Dey. This was the professional culmination of a life full of hairbreadth escapes, foolhardy adventures, instances of cool pluck and marvellous presence of mind, of stubborn fighting and daring seamanship, which cast fiction quite into the shade. His scarcely challenged superiority as a sailor brought him safely through dangers which would have wrecked almost any other captain. From his sailing in 1775, as Midshipman Pellew, on board the *Blonde*, which carried Burgoyne to our shores, he passed from one thrilling episode to another. In Canada; on Lake Champlain, where he distinguished himself against Benedict Arnold (no light task), to share Burgoyne's fate at Saratoga; in command of a frigate on the coast of France; commander-in-chief in the East Indies and the Mediterranean, he is almost as picturesque a character as our own even more brilliant Paul Jones.

We cannot refrain from expressing the hope that Capt. Mahan will take up a few native types that seem to need his friendly ministrations, and do that justice which only his talents can compel to some of his compatriots and predecessors, such as Barney, Biddle, Decatur, Morris, Perry, Foote, Cushing. His own Life of Farragut might well be rewritten in the light of his wider knowledge and larger experience. May we add that it would be well if our author shunned the blandishments of a rhetorical temptress, who makes him at times involved and obscure? "There was prefigured the ultimate predominance of the traditions of the English-speaking races throughout this continent, which in our own momentous period stands mediator between the two ancient and contrasted civilizations of Europe, that so long moved apart, but are now brought into close, if not threatening contact"—is a sentence typical of Capt. Mahan's occasional strayings from a generally lucid style. What it means, he doubtless knows, but the reader can only surmise.

The Great Persian War and its Preliminaries: A Study of the Evidence, Literary and Topographical. By G. B. Grundy. Charles Scribner's Sons. 1901.

This volume treats of the relations between Greece and the Eastern nations—especially Persia—from the rise of the Lydian kingdom to the end of the year 479 B.C. The first twelve chapters discuss the events in their order; the thirteenth sums up the war as a whole; and the final chapter is devoted to Herodotus as the historian of the conflict. The analysis of the sources and method of Herodotus is sound and sufficiently detailed for the purpose. The author concludes that Herodotus is remarkably accurate in his statements of fact, but lacks information as to personal motives. Although Mr. Grundy claims this as the result of his own investigation, the judgment, with more or less modification, applies to nearly all extant classical historians, and is, in fact, the first thing to be noticed in the criticism of these authors. It may not be well known in England or America, but to the German scholar it is as familiar as the alphabet.

In citing his sources, Mr. Grundy should have mentioned book and chapter. If the reader is to be won to a new point of view by the authority, for instance, of Aristophanes, he has a right to know what particular passage is to effect this mental change. Perhaps Mr. Grundy could not conveniently supply the information; but vague impressions from studies pursued long ago are not enough for scholarly purposes. As to modern authorities, the author admits that he does not know from whom he has borrowed or to what extent. "I cannot acknowledge the written sources of assistance to which I have had recourse in compiling this volume, because I cannot recall the whole of a course of reading which has extended over a period of ten years." Oxford ought to teach a more systematic method of reading and research. In a work of this kind, it is unfortunate that the reader should be denied the advantage of knowing how far the author is indebted to his predecessors. Mr. Grundy should have made it clear that he is working in a field already well mapped out by others. H. Delbrück ('Die Perserkriege und Burgunderkriege,' 1887), began the careful, scientific study of the military affairs of this period. It is an epoch-making work, to which those who now write on the subject are consciously or unconsciously under great obligations. Mr. Grundy cites the work two or three times, only to differ from the author. He says, too, that he has read Busolt, but makes no reference to special passages. In cases in which he differs from historians of the first rank like Busolt, it would have been better to compare views, and to show why his own should be preferred.

The subject-matter is both political and military. The political narrative, however, is superficial and one-sided; the author's peculiar views of men and of parties are not well sustained by facts. For instance, he assumes that, in the period ending with the battle of Marathon, the democrats at Athens were intriguing with Persia, and that this victory was a defeat for the party. His assumption explains nothing, and is self-contradictory. The political history of the period is presented far better by Holm, Busolt, and Meyer.

The chief feature of the book, however, is the military narrative. To prepare himself for this part of his task the author first learned the art of surveying, and then, going to Greece, examined carefully the topography of battlefields, roads, and passes. In some cases he has drawn plans based upon personal surveys. His diligence and zeal in this difficult work are admirable. The maps and topographical discussions are an important contribution to the history of the war between Greece and Persia, and are highly appreciated by scholars: "Ueber die Topographie," says E. Meyer, "ist grundlegend die sehr gründliche Untersuchung von Grundy, The Topography of the Battle of Platææ, 1894, mit vortrefflicher Karte." This material will doubtless be of great service in rewriting the history of the war. The task is not for the mere classical student, however, but for one who has at once a thorough knowledge of military affairs and a constructive genius. It would certainly be unwise to assume that Mr. Grundy's reconstruction of the period is final, or is distinctly better than that, for instance, of E. Meyer, 'Geschichte des Altertums,' iii (1901).

In point of fact, recent writers have left our knowledge of the battles of the war and of the size of the armies in a deplorable condition. We do not know, for instance, whether at Marathon the Athenians were posted on Mount Agrieliki (Meyer), or high up in the valley of the Avlona (Grundy); whether the battle was fought in that valley (Delbrück) or in the plain (Grundy); or whether the Greeks (Busolt) or the Persians (Grundy) stood on the defensive. The estimates of the Persian force range from ten thousand to sixty thousand. There are as great differences as to the size of Xerxes's army. Delbrück estimates it at 65-75,000, Meyer at 100,000, Busolt (following Niebuhr) at 300,000, and Grundy at half a million. The reasoning of any one of these writers might convince us, were it not for the equally cogent arguments of the others. Mr. Grundy's reasoning is the least satisfactory. He assumes that any number less than half a million would be too small in view of the vast resources and thorough organization of the Persian empire. But thereupon he marvels at the great ability of the Persian Government which could bring so vast a host into Greece and maintain it there so long in excellent condition. Interesting in this connection is Meyer's remark that Antiochus the Great, who ruled an empire nearly as large as the Persian, could muster at Magnesia hardly more than seventy thousand men. A writer who wishes his own view to prevail must undertake the disagreeable task of refuting opposing views. So far from attempting this line of procedure, Mr. Grundy leaves it uncertain whether he is acquainted with recent literature in the field. But if he has settled nothing, at least he has raised a number of interesting questions, and has suggested many new views of the relations between events; and, most important of all, his geographical knowledge will illuminate the whole history of the period which he treats.

London Afternoons: Chapters on the Social Life, Architecture, and Records of the Great City and its Neighbourhood. By W. J. Loftie. Brentano's.

There is no need for Mr. Loftie to apologize for adding to the list of books on London this delightful volume. It is not wholly about London, seeing that, for some reason which has escaped us, Mr. Loftie includes chapters on Berkhampstead, Tring, Guildford, and King's Langley. Mr. Loftie has for more than a quarter of a century studied old London, both in its monuments and in its records, and in this book he gives us the cream of his studies. We have chapters on London five centuries ago, and at the beginning of the century just ended; on Newgate, St. Paul's, Old and New; the older city churches, and on other subjects scarcely less interesting. Perhaps that on the older city churches will be found most interesting by the majority of readers. American visitors should know that the best time to

view these edifices is on Saturday afternoons, when they are being prepared for the services of the morrow. The bustle of the city has then in great part subsided, and the functionary who looks after the church is to be found—not, as at other times, when a long search has perhaps to be made to get the keys of the church. A visit should also be made to one of the less important churches on a Sunday morning. We know no more striking contrast than that between the roar and turmoil of the city on a week-day and the unspeakable calm of a morning service in one of these deserted churches in a deserted city. Then there are at some of them quaint occasional services, like the "flower sermons," when the old sleepy church blossoms out into a gay show of flowers. Most curious is the service at St. Katherine Cree, in Leadenhall Street, on October 16, when the "Lion Sermon" is preached, in remembrance of the delivery of a worthy Alderman from a lion as he was traversing the desert with a caravan. The lessons, the psalms, the text are chosen for their references to lions. This church is additionally interesting on two accounts—it is believed to be the work of Inigo Jones, and it is also believed that here the great painter Holbein found his last resting-place. Neither point is well established; Mr. Loftie examines both, and in each case, we are glad to find, pronounces in favor of the tradition. St. Olave's, Hart Street, is another church of great interest. It is one of the few which escaped the Great Fire, and here lies buried Samuel Pepys, the author of the famous Diary.

Another interesting chapter is that on the ancient rivers of London, now imprisoned as underground sewers. Times are changed since the old chronicler Fitzstephen could write of the excellent springs round London, especially on the northern side, that they were "visited as well by the scholars from the schools as by the youth of the city, when they go out to take the air in the summer evenings." The only remembrance of these pleasant streams now to be discovered above ground is the name of a street, half of it shorn away by the Metropolitan Railway. One may still read the name, Turnmill Street, from the Turnmill Brook—so called "for that divers mills were erected upon it, as appeareth by a fair register-book, containing the foundation of the Priory at Clerkenwell." Mr. Loftie follows for us the course of the Hole-Bourne—dismissing Stow's derivation of the name Holborn from Old-Bourne—the Lang-Bourne, the Ty-Bourne, the West-Bourne, and other ancient streams.

Although Mr. Loftie has to condemn many of Stow's derivations, he has, as might be expected from so earnest and learned a student of Old London, a great veneration for London's greatest historian. In writing of St. Andrew Undershaft, which contains Stow's monument, he writes: "John Stow, the historian of London, occupies a unique position among the authors of the great Elizabethan age. Little, indeed, should we know of the appearance of London before the Fire were it not for his descriptions. . . . In reading his book one has to remember that his guesses are as erroneous as those of any of his contemporaries; but when he quotes an ancient document, or narrates a fact of his own knowledge, he may be depended upon as absolutely accurate." Stow's 'Survay of London' is indeed a book the product of marvellous industry; but it is more than this. It is one of those books that create feelings of personal affection for the writer. No better tribute to Stow could be paid than to reprint the text of his great work, copiously indexed and annotated, so as to give the best results of the research into ancient documents—a research which, as Mr. Loftie reminds us, was neglected from Stow's days till our own time.

We cannot have everything in a volume of 300 pages, but we wish that Mr. Loftie could have given us a chapter on the Charterhouse. With its history, as a monastery, the palace of a great nobleman, and finally as a hospital and school, it is almost the most interesting relic of Old London, and no one could have told us its story better than Mr. Loftie. The book has many illustrations, some of them reproductions, others original. Of the latter, we like best that of the angel in the vestry of St. Olave's Church, Hart Street, the church at which Pepys was wont to worship.

Premières Années. Par Jules Simon. Paris: Ernest Flammarion.

These memoirs of Jules Simon, edited by his two sons, cover the period of childhood and early manhood, to the year 1848, which was the thirty-fourth of his life. Readers familiar with the writer's earlier volumes of memoirs ('Mémoires des Autres,' etc.) will need no word of encouragement to take up this new posthumous volume. They will find here the same charming style, and also, in spite of the greater prominence of the writer's own personality, that abundance of anecdote which, dealing largely with men well known in public life, gives the book a semi-historical character. This feature, we presume, will be even more marked in another volume, 'Le Soir de ma Journée,' which, we are glad to know, is to follow the present one.

Meanwhile, strange though it may seem, the description of life in an out-of-the-way village in Brittany during the Restoration, the *milieu* in which several years of Jules Simon's childhood were spent, is fascinating. There was neither a notary, nor a school-teacher, nor a physician at Saint-Jean-Brévelay. The people hardly knew that there were physicians in the world. The peasants spoke only Breton, and were illiterate almost without exception. They were Royalists because the priests bade them be. (The insurrection of the Chouans had also been the work of the priests.) The great event of each year was the representation of a passion play or some other religious tragedy of the most realistic type, in which the boy Jules played the part of an angel. His family, however, was not of the same low level as the rest of the population. They had moved to the village from Lorient, and Jules's mother, though she had but a "fort mince bagage," taught him reading and writing, as well as the use of figures. She was his only teacher in his childhood, for the father scarcely ever spoke to the members of his family, and spent most of his time fishing in the brook. But the precocious boy found books, a motley collection, and reading became his dominant passion. He read 'Robinson Crusoe' many times with delight, but did not stop short at 'L'Esprit des Lois.' He also found many volumes of novels, and, having read them against his mother's will, relieved his heart of the burden of this transgression at his first confession, at the age of ten.

Speaking of these early years, Jules Simon complains less of the poor instruction he received than of his isolation. He had no schoolmates till he entered the college at Lorient, which he soon after exchanged for that of Vannes, where he became a boarding pupil. He speaks of this school as "a poor and ignorant family," and of the teachers, whom he loved and who loved him, as "those excellent people [who] are the cause of my never having known anything. For one cannot repair one's education; it is a mistake to believe that one can. I suffer daily from the ignorance which I owe to them, and I shall be grateful to them for it all my life." His family had in some way been totally ruined, and, aside from the poor instruction, he had to contend with material hardships which would have discouraged a boy of less energetic temperament. Nevertheless, he succeeded in being admitted to the École Normale in Paris, of which Cousin was then the leading spirit. This unexpected success made him the "happiest man in creation," though it took him a long time to overcome the defects of his previous training, which, he says, he received a hundred and fifty years before his comrades at the École Normale.

Looking back upon this period of student life, after an interval of fifty years, he calls it his "real life." He had, since then, published thirty volumes and written articles enough to fill a hundred volumes more; he had been professor in the École Normale and at the Sorbonne; had represented successively four departments in the Assembly; had been Councillor of State and Minister; at the time of writing, he was Senator for life. He had been a member of academies and of numberless societies, and had addressed countless meetings in the departments and in the capital. All these varied activities fatigue, exhaust him. "Qu'est-ce que cela," he exclaims, "auprès de la vie véritable, auprès de ma vie d'il y a cinquante ans!"

After spending three years in study at the École Normale and two in teaching in the colleges of Caen and Versailles, Jules Simon suddenly lost his position through a whim of Cousin's, and, having spent most of his income in assisting his family, found himself *sur le pavé*. An article on the "School of Alexandria," contributed to the *Revue des Deux Mondes*, saved him from starvation. He continued to write for the *Revue*, and, not long after, Cousin had him appointed his substitute, and, in 1839, at the age of twenty-five, he became professor of philosophy at the Sorbonne—a position which proved a great disadvantage to him five or six years later, during his first political campaign in Brittany, as a candidate for election to the Chambers. What hurt his prospects more, however, was a false report, spread by his opponents, that he was not a native of Brittany. As most of his electors could not read French, they were easily duped by a priest, who held under their noses a written statement establishing beyond question Simon's birth at Lorient, but understood by them to declare the very opposite—possibly because they were not aware that Lorient was in Brittany. He was defeated by three votes. The story

of this election in Brittany, involving personal visits to the 263 electors, in midwinter, and in a country district whose abominable roads were often impassable even for horses, is told with delightful humor, and reads much more like a novel than like real history.

Jules Simon became a Deputy three years later, in 1848. He was now thirty-three, and had already become acquainted with or won the friendship of many men of note. In the final chapter of the volume, "La Révolution de 1848," he refers to several of these, always without bitterness, using sarcasm never, irony occasionally, humor frequently—the humor of a man of generous disposition, of great wisdom, and of noble principles. It is thus that he speaks of the popularity of Lamartine and of Louis Blanc: "Each of the great leaders had his court. Lamartine's was the most numerous, Louis Blanc's the most noisy." When Lamartine showed himself, "the women vied with each other in their eagerness to kiss his hand. He was neither surprised nor moved, thinking that matters had resumed their ordinary course, and that an antique chorus naturally belonged to Tyrtæus." With Louis Blanc it was different. "There was no kissing of hands; his friends insisted upon carrying him on their shoulders. It was not comfortable for him, but he submitted, out of patriotism."

The Apostles' Creed. By Prof. S. C. McGiffert. Charles Scribner's Sons.

The old Roman Symbol from which, by accretions, grew the so-called Apostles' Creed in its present form, is discussed in this volume with independence and thoroughness. The more popular presentation of the author's views is given in a lecture first delivered at the Harvard University Summer School of Theology in July, 1899. But the positions therein stated are reinforced by critical notes, which form the body of the work.

The textual discussion is full, and rendered more valuable by accurate citations from the authorities. The date assigned to the original form is the third quarter of the second century, and the Roman origin is regarded as proved. But the main contribution of the author respects its purpose. Here he opposes both Harnack and Kattenbusch—a hopeful sign for American scholarship. The contention is that the symbol was framed as a baptismal formula, but specifically in opposition to the teachings of Marcion, then causing so much trouble at Rome. Every phrase is discussed in its bearing on this purpose, and a very strong case is made in favor of this view. The argument in regard to the relation of the Symbol to the Baptismal Formula (Matt. 28:19) is not so convincing. Dr. McGiffert thinks that the original formula was: "Into the name of the Father, and of Jesus Christ, and of the Holy Spirit"; the second reference being to the Incarnate Redeemer. Such a form did exist in early times, but it is hazardous to suggest that the form in Matthew "is perhaps due to the influence of the Johannine type of thought"; for the Johannine writings, so far as a polemic purpose appears, are directed against the denial of the Incarnation. Moreover, there are no textual variations to indicate any modification of the formula in Matthew, and modern criticism, as a rule, finds no Johannine influence in Matthew's Gospel, but emphasizes the dissimilarity of the two types.

A brief but sufficient statement of the present text of the Apostles' Creed closes the volume. Here are indicated the sources of the various additions. The author properly dismisses summarily the legend that the apostles respectively contributed the several articles of the creed.

The Speckled Brook Trout (Salvelinus Fontinalis). By Various Experts with Rod and Reel. Edited and illustrated by Louis Rhead, with an introduction by Charles Hallock. New York: R. H. Russell.

This is a collection of unrelated articles, largely on the subject of brook trout. Some of them have been published before, notably two out of the three from the pen of Charles Hallock, who has also contributed some verses, called the "Baptism of the Brook Trout," which will not add to the well-established reputation of the author for his accurate knowledge as to fish and his ability to express it. The late Nelson Cheney is represented by an excellent article on "Trout Propagation," from the State report, and Mr. W. C. Harris and *Town Topics* by interesting chapters on "The Habits of the Trout" and "The Old and the New Adirondacks." Illustrating this part of the book are reproductions of two old photographs, showing "Bartlett's Sportsman's Home, Saranac Lake," and "Paul Smith's"—on the St. Regis, both taken in 1873. These will awaken early recollections in many a frequenter of the Adirondacks. The chapter by E. D. T. Chambers on "The Big Trout of the Nepigon, Lake Edward, Lake Batiscan, etc.," is well written, and gives information, which will be new to most readers, about the best trout-fishing district in the world, in the Province of Quebec, among the mountains of the Laurentian chain—Lake Edward, for instance, where, during the last of August and the whole of September, trout of from two and one-half to seven pounds rise freely to the fly in the outlet, and Lake Batiscan, half way between Quebec and Lake St. John. In describing these, Mr. Chambers fills two pages with the scores of anglers who apparently had no trouble in catching quantities of trout from four to ten pounds in weight.

Mr. Rhead devotes eight pages to "Notes on Cooking Brook Trout," which doubtless convey much useful information to such as are going to the remote regions where good trout-fishing is to be had, and also can take with them the various culinary accessories mentioned by the editor. Mr. Rhead, however, is entitled to unstinted praise for the artistic arrangement of the book; from the paper wrapper in which it is sold, and which reveals, when taken off, a cover in exquisite imitation of birch bark, with half-a-dozen flies scattered over its surface, so well done that they seem fit for immediate use in angling; for the numerous illustrations, head-pieces, tail-pieces, full-page drawings, etc., all so good and lifelike that one may excuse the fact of many of them bearing no relation whatever to the adjacent text. There is a large-paper edition of the book which should be even more worthy of preservation than the ordinary one under notice.

BOOKS OF THE WEEK.

American Baptist Year-Book, 1902. Philadelphia: American Baptist Publication Society. 25 cents.
Arkwith, E. H. An Introduction to the Thessalonian Epistles. Macmillan. $1.25.
Baldwin, J. M. Fragments in Philosophy and Science. Scribners. $2.50.
Boethius's Consolation of Philosophy. (The Temple Classics.) London: J. M. Dent & Co.; New York: Macmillan. 50 cents.
Bourget, Paul. Monica, and Other Stories. Scribners. $1.50.
Brady, C. T. Hohenzollern. Century Co. $1.50.
Brooks, Hildegard. The Master of Caxton. Scribners. $1.50.
Carnegie, Andrew. The Empire of Business. Doubleday, Page & Co.
Chaytor, H. J. The Troubadours of Dante. Henry Frowde. $1.90.
Coleridge, E. H. The Works of Lord Byron, Vol. V.: Poetry. London: John Murray; New York: Scribners. $2.
Conway, W. M. The Domain of Art. London: John Murray; New York: E. P. Dutton & Co. $2.50.
Denison, Louisa E. Fifty Years at East Brent; The Letters of George Anthony Denison, 1845-1896. London: John Murray; New York: E. P. Dutton & Co.
Einstein, Lewis. The Italian Renaissance in England. The Columbia University Press. Macmillan. $1.50.
Fletcher, W. I., and Bowker, R. R. The Annual Literary Index, 1901. Publishers' Weekly.
Fosdick, J. W. The Honor of the Braxtons. J. F. Taylor & Co. $1.50.
Fredericksen, N. C. Finland: Its Public and Private Economy. London: Edward Arnold; New York: Longmans, Green & Co.
Frost, T. G. A Treatise on Guaranty Insurance. Boston: Little, Brown & Co.
Fry, H. B. Little Italy. R. H. Russell.
Gordon, G. B. The Hieroglyphic Stairway: Ruins of Copan. Cambridge (Mass.): Peabody Museum.
Grenell, Z. The Sandals; A Tale of Palestine. Funk & Wagnalls Co. 40 cents.
Hamilton-King, Harriet E. The Hours of the Passion, and Other Poems. London: Grant Richards; New York: E. P. Dutton & Co. $1.50.
Harland, Henry. The Lady Paramount. John Lane. $1.50.
Herbert B. Adams: Tributes of Friends. Baltimore: The Johns Hopkins Press.
Herkless, J. Hebrews, and the Epistles General of Peter, James, and Jude. (Temple Bible.) London: J. M. Dent & Co.; Philadelphia: J. B. Lippincott Co.
Hiatt, Charles. Westminster Abbey. London: George Bell & Sons; New York: Macmillan.
Hopkins, E. M. The Proceedings of the Webster Centennial (Dartmouth College). Hanover (N. H.): Dartmouth College. $1.50.
Hoyt, Eleanor. The Misdemeanors of Nancy. Doubleday, Page & Co. $1.50.
Hughes, R. E. Schools at Home and Abroad. London: Swan Sonnenschein & Co.; New York: E. P. Dutton.
Hugues-Krafft. A travers le Turkestan Russe. Paris: Hachette & Cie.
Latimer, Elizabeth W. The Prince Incognito. Chicago: A. C. McClurg & Co.
Macdougal, D. T. Elementary Plant Physiology. Longmans, Green & Co. $1.20.
Mackenzie, J. S. Outlines of Metaphysics. Macmillan. $1.10.
Macnab, Frances. A Ride in Morocco among Believers and Traders. London: Edward Arnold; New York, Longmans, Green & Co.
Maeterlinck, Maurice. Sister Beatrice, and Ardiane and Barbe Bleue. (Translated by Bernard Miall.) Dodd, Mead & Co. $1.20.
Manning, Marie. Lord Alingham, Bankrupt. Dodd, Mead & Co. $1.50.
McIlvaine, J. H. St. Francis of Assisi. Dodd, Mead & Co. 85 cents.
Paget, Stephen. Selected Essays and Addresses by Sir James Paget. Longmans, Green & Co.
Partridge, W. O. Nathan Hale, the Ideal Patriot. Funk & Wagnalls Co. $1.
Patterson, Virginia S. Dickey Downy: The Autobiography of a Bird. Philadelphia: A. J. Rowland.
Payne, W. M. (1) Little Leaders, (2) Editorial Echoes. Chicago: A. C. McClurg & Co.
Pemberton, T. E. Ellen Terry and her Sisters. Dodd, Mead & Co. $3.50.
Quiller-Couch, A. T. The Westcotes. Philadelphia: Henry T. Coates & Co. $1.
Robertson, Harrison. The Opponents. Scribners. $1.50.
Röthlisberger-Bern, Ernst. Gesetze über das Urheberrecht in allen Ländern. Leipzig: G. Hedeler.
Schurman, J. G. Philippine Affairs. New ed. Scribners.
Sears, Hamblen. None but the Brave. Dodd, Mead & Co. $1.50.
Shaw, Adèle M. The Coast of Freedom. Doubleday, Page & Co. $1.50.
Sommerville, Maxwell. Engraved Gems. Philadelphia: Drexel Biddle. $1.50.
Studies in Honor of Basil L. Gildersleeve. Baltimore: The Johns Hopkins Press.
Thackeray, W. M. Henry Esmond. 2 vols. London: J. M. Dent & Co.; New York: Macmillan. $2.
Tuckwell, W. A. W. Kinglake. London: George Bell & Sons; New York: Macmillan.
Turk, M. H. Selections from De Quincey. Boston: Ginn & Co.
Twain, Mark. A Double-Barrelled Detective Story. Harpers. $1.50.
Van Vorst, Marie. Philip Longstreth. Harpers. $1.50.
Westcott, B. F. Words of Faith and Hope. Macmillan. $1.25.
Wheelock, Irene G. Nestlings of Forest and Marsh. Chicago: A. C. McClurg & Co.
Wilson, J. G. The Presidents of the United States. D. Appleton & Co.
Wood-Martin, W. G. Traces of the Elder Faiths of Ireland. 2 vols. Longmans, Green & Co.
Year-Book of the Pennsylvania Society of New York. Published by the Society.

NEW BOOKS IN SCIENCE, ETC.

Aikins's Manual of Logic

By Prof. HERBERT AUSTIN AIKINS, Western Reserve University. 498 pp. 12mo. (April.)

Logic is treated, not as a "science of the laws of thought," and still less as a set of rules for verbal manipulation, but rather as an account of the most general relations that all thinking takes for granted; and on this basis the traditional rules are explained and restated. There are abundant exercises.

Remsen's College Chemistry

By Pres't REMSEN of Johns Hopkins University. 689 pp. 8vo. $2.00 *net.*

An entirely new work, intermediate between the author's *Introduction to the Study of Chemistry* and his *Inorganic Chemistry*, following in general the plan of the latter.

"In selection of subject matter, scope, and clearness of statement this work leaves nothing to be desired. More space is given to the metals, their compounds and uses than is usually devoted to them in works of this class. . . . I think this work by Professor Remsen is the best text-book on general chemistry at present before us in the English language."—PROF. C. F. MABERY, Case School, Cleveland, O.

Kellogg's Elements of Zoölogy New School Edition

By Prof. V. L. KELLOGG, Stanford University. 429 pp. 12mo, $1.20 *net.*

"An excellent book, with useful directions for laboratory work, and the kind of information that both teachers and students require, also with abundance of fine illustrations. After careful examination I can bear testimony that its statements are reliable and clearly put; so that I would recommend it as one of the best introductory books in Zoölogy."—*Prof. George Macloskie of Princeton.*

"I consider it one of the most rational text-books of Zoölogy that have come to my notice. I should like to put it to the test of our work in Zoölogy."—*Emily Curtis Robbins, Springfield (Mass.) High School.*

Sanford's Elements of Physics

By Prof. FERNANDO SANFORD, Stanford University. (*July.*)

A text-book for the use of high schools, adapted to the laboratory method of instruction, and designed to include all necessary material for both text-book and laboratory manual.

Ganong's Laboratory Course in Plant Physiology

Especially as a basis for Ecology. By Prof. W. F. GANONG, Smith College. 147 pp. 8vo. $1.00 *net.*

"I think it will be a most useful manual for physiological laboratories. The careful directions for the well-selected experiments, and particularly the suggestive questions, which demand thought on the part of the student in relating his observations and results to principles, make the book the best guide now available for beginners in plant physiology."—Prof. C. R. Barnes, University of Chicago.

Noyes's Introduction to the General Principles of Chemistry

By Prof. A. A. NOYES of the Mass. Institute of Technology. (*June.*)

Four Place Logarithmic Tables

Containing the LOGARITHMS OF NUMBERS and of the TRIGONOMETRIC FUNCTIONS, arranged for use in the entrance examinations of the Sheffield Scientific School of Yale University. 29 pp. 8vo, 50c. *net.*

THE REPUBLIC OF PLATO

Is now for the first time offered to American readers in attractive form at a low price. The translation is by **Alexander Kerr**, Professor of Greek in the University of Wisconsin, whose metrical translation of Euripides's Bacchæ has won general recognition. Book I. of this edition of the Republic appeared in 1901; Book II. is now ready.

Mr. **Horace White**, editor of the *New York Evening Post*, writes: "I thank you for sending me your translation of the first part of Plato's Republic. I have read it with the greatest satisfaction, and have compared it with the original here and there. I think that you have imparted the true aroma of the text to the English version."

Book I., in fancy paper cover, 15 cents., postpaid; Book II., uniform style, same price. Other parts will follow.

We Buy School Books

Have you any school books, new or second hand—few or many, which you would like to convert into cash? Send List. Hinds & Noble, Cooper Institute, New York City.

Maine Coast.

FOR SALE—On Penobscot Bay. A beautiful tract of 400 acres, with nearly four miles of shore front. The property comprises a number of bold headlands, fine rocks, coves, and beaches; is much diversified in its surface with woodland and open fields, and commands everywhere most exquisite views of bay, islands, mountains, and ocean. There is a steamboat landing near the tract, giving daily connection with trains and boats to and from Boston. The property is on the main land, within five miles of Islesboro and Castine. It has several farm-houses, a pond, and trout brook. It will be sold at a low price per acre to settle a joint account, and offers an exceptional opportunity for a gentleman wishing an independent estate, or for subdivision. Address,

J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

Islesboro, Maine.

FOR SALE.—A nice farmhouse of 8 rooms in perfect repair and order. Splendid situation, facing the Camden Mountains; 4 acres of land, barn and carriage house, nice orchard, and well. Shore privilege and boat landing in front of house. Fine chance to enlarge into a summer cottage at small expense. Price $2,350, if bought before May 15. Part mortgage if desired. Address L. N. GILKEY, Executor, Islesboro, Maine.

OLD BOOKS AND MAGAZINES.—Complete Libraries bought for cash. Old and Out-of-Print Books and Back Numbers of Magazines supplied. Send for catalogue. Old Books and Pamphlets for sale. JOSEPH SILK, 147 Sixth Ave., New York.

ANY BOOKS, OLD OR NEW, SUPPLIED to out-of-town residents. Questions answered. Orders promptly filled. Liberal discounts. I. BAYLIES, 418 Putnam Ave. (Brooklyn), New York City.

Books of Permanent Value

Fashions in Literature

By CHARLES DUDLEY WARNER Net, $1.40

This volume contains some of the most interesting of Mr. Warner's essays; and it was in the essay form that his pen moved with the greatest ease and grace. The same genial humor is here that abounds in "Back-Log Studies," etc. With his literary essays are grouped a number of social addresses, in which he has demonstrated the possibility of putting life into subjects usually treated with funereal gravity.

Miscellanies

2d Series. By AUSTIN DOBSON, Net, $1.00

A little volume of prose and poetry, in two parts. The first is devoted to eight exquisite bits of literary reminiscence under the general caption, "Essays and Introductions." Part II., "Occasional Verses and Inscriptions," is quite as delightful in its way, and is given over mainly to inscriptions, dedications, epistles, etc., nearly all stamped with Dobson's fine tolerant wit, and all breathing unobtrusive knowledge of books.

The Autobiography of Sir Walter Besant

Net, $2.40

Sir Walter Besant figured so prominently in the letters of his time and possessed such a strong and lovable personality, that this story of his life, told in his genial, cheery way, must inevitably appeal to a very large class of readers. A scholar who was never a pedant, a beautiful dreamer who was a practical teacher, a modest and sincere man speaks in its pages, and teaches with conviction a brave scheme of life.

The Buried Temple

By MAURICE MAETERLINCK Net, $1.40

M. Maeterlinck writes only for the thoughtful. In this volume of essays he manifests that sensitive perception and remarkable insight as to the things pertaining to the spirit which were the charm of his former books. The rare and beautiful philosophy of life and the mysticism so characteristic of him pervade the book, and create an atmosphere of which the reader is conscious.

Thomas Henry Huxley

By EDWARD CLODD Net, $1.00

This is a concise, but most interesting and authoritative biography of the famous naturalist. It portrays the salient features of Huxley's character, and indicates his attitude towards the burning questions of his time.

Sister Beatrice and Ardiane and Barbe Bleue

By MAURICE MAETERLINCK Net, $1.20

Two plays by the talented Belgian writer, whose "*Pelléas and Mélisande*," as presented by Mrs. Campbell on her American tour, has been so favorably commented upon by the critics throughout the country.

DODD, MEAD & COMPANY

Publishers 372 Fifth Avenue New York

ELEMENTARY EXPERIMENTAL CHEMISTRY

By W. F. WATSON, A.M.,

Professor of Chemistry and Biology, Furman University, Greenville, S. C.

"It is a most admirable text-book; one of the best, in fact, we have ever seen on the subject. The scheme of illustration can be highly commended, and is on an entirely new plan. Instead of scattering cuts through the text as heretofore, there are twenty full-page cuts, showing all the apparatus and chemicals used in the experiments, giving the student a comprehensive view of the subject. The text is clear, concise and admirably written."—*Scientific American.*

BOOK BUSINESS FOR SALE.

A well-known book business, now barely paying expenses, but established on a sure basis, following safe lines, and capable of profitable development, can be bought for $50,000 cash.

Particulars can be learned from E. N. H., care of the *Nation*, New York.

Books for Teachers

Field Book of American Wild Flowers

By F. SCHUYLER MATHEWS, author of "Familiar Flowers of Field and Garden," etc. Long 16mo, more than 500 pp., 350 illustrations, including 24 full-page colored and nearly 250 black and white full-page plates; net, $1.75; full flexible morocco, net, $2.25. (Postage, 10c.)

Here at last is the long-sought pocket botany—light, compact, strong—suited to become a constant companion in one's rambles, prepared by an eminent authority, and furnished with probably the best floral illustrations ever printed in a book.

Wales

By O. M. EDWARDS, Lecturer on Modern History at Lincoln College, Oxford. No. 62 in "The Story of the Nations." 7¾x5¼. Fully illustrated, net $1.35. Half leather, gilt top, net, $1.60. (Postage, 15c.)

The first English history of Wales that gives a continuous record from earliest times, suited to the uses of the general reader.

Mediaeval Rome (1073-1535)

By WILLIAM MILLER, author of "The Balkans," &c. No. 63 in the "Story of the Nations." 7¾x5¼. Fully illustrated, net $1.35. Half leather, net $1.60. (Postage, 15c.)

This book deals with the centuries of Roman history least generally known, and almost wholly neglected by English writers. Its perusal will greatly increase the pleasure and profit to be derived from a sojourn in Rome.

The Basis of Social Relations

By DANIEL G. BRINTON. Edited by LIVINGSTON FARRAND. No. 10 in "The Science Series." 8vo, net $1.50. (By mail, $1.65.)

Dr. Brinton was one of the world's foremost anthropologists, especially in the fields of American linguistics and archæology. This, his last writing, is a much-needed work; a succinct argument for the doctrine of the ethnological unity of man.

Henry V.

The Typical Mediæval Hero. By CHARLES L. KINGSFORD. No. 34 in the "Heroes of the Nations." 12mo. Fully illustrated. Net, $1.35. Half leather, gilt top, net, $1.60. (Postage, 15c.)

No admirer of Prince Hal will willingly forego the reading of this book. It is a biography of unusual power, with a subject of unusual interest.

Edward Plantagenet

Edward I. The English Justinian. By EDWARD JENKS, M.A., Tutor of Balliol College, author of "Law and Politics in the Middle Ages," etc. No. 35 in the "Heroes of the Nations." 12mo. Fully illustrated. Net, $1.35. Half leather, gilt top, net, $1.60. (Postage, 15c.)

The military achievements of Edward have had a less beneficent after-effect than his efforts toward the perfecting of English law and government. His lifetime marks an epoch in the development of England's nationality.

Books for Summer Reading

HENRY HARLAND'S GREAT NOVEL:

THE LADY PARAMOUNT

By the author of "THE CARDINAL'S SNUFF-BOX" (85,000th), "COMEDIES AND ERRORS," "GREY ROSES," &c.

The New York Tribune:
"All extremely captivating."
"We delight in him."
"A novel one cannot help enjoying."

The New York Sun:
"A book full of sunshine and sparkle."
"A book without a shadow."

The Chicago Record Herald:
"It will be a prime favorite for summer reading."

The Baltimore Sun:
"The brightest piece of fiction that we have read in many moons."
"The most brilliant of contemporary novelists."

THE LADY PARAMOUNT

*** *Considering the profusion of glowingly appreciative reviews from the critics during the last week, the announcement that the publisher has just gone to press with the 50th thousand will not cause surprise.*

Catholic Controversy in Fiction

A TRIO OF NOVELS demonstrating in enlightened and just discussion the influence of **ROMAN CATHOLICISM** on social life to-day

1. Casting of Nets
By RICHARD BAGOT
12mo. Price $1.50
Opinion of Rabbi Joseph Krauskopf, D.D.:
"The story is excellently written; it holds the reader spellbound from first to last."
Purpose: Shewing Rome's Proselytizing Methods

2. A Roman Mystery
By RICHARD BAGOT
12mo. Price $1.50
Opinion of Literature:
"'A Roman Mystery' shows a very accurate observation of the social atmosphere of the Italian capital; so true a glimpse of the inner life of the Roman aristocracy."
Subject: Temporal Power of the Pope

3. The Catholic
BY AN ANONYMOUS WRITER
12mo. Price $1.50
Author's Advertisement:
This is a "picture of life," not a novel with a purpose. The story is the record of a proud Englishwoman under the influence of a great spiritual power. She is not held up to the admiration or to the reprobation of the reader; judgment is not passed upon her by the author; she is merely presented.
Scope: Conversion Among the "Upper Ten"

An Epoch-Making Volume of Poetry

Just Published. Price $1.50 net. Decorative Cover Design. 12mo.

LOVERS OF POETRY HAVE A FEAST OF PLEASURE BEFORE THEM THIS SPRING and SUMMER IN READING and RE-READING

INDIA'S LOVE LYRICS

Collected and Arranged by LAURENCE HOPE

The London ATHENÆUM, in its review of the volume, written by one who must be himself a true poet, writes:

"Mr. Hope brings to his task considerable command over various rhythms and a delicate gift of melody and sensuous beauty. His garden signifies the tremulous

IRRECOVERABLE DELICIOUSNESS OF YOUNG PASSION.

Mr. Hope has caught admirably the dominant notes of this Indian love poetry, its delirious absorption in the instant, its out-of-door air, its melancholy. Slender brown limbs stir silently in the garden,

WHERE FLYING FOXES CROSS THE MOON,

in the hot, jasmine-scented jungle among the pink almond blossoms of Kandahar. And always there is the poignant sense of the fleetness of love—a moment's salvage from the flux of time."

INDIA'S LOVE LYRICS

Collected and arranged by LAURENCE HOPE

JUST PUBLISHED . . . . . PRICE $1.50 NET
DECORATIVE COVER DESIGN 12MO

A feast of pleasure this Spring and Summer for all lovers of poetry—another Omar, singing love sans philosophy!

An Educational Directory.

SCHOOL TRUSTEES, PRINCIPALS, TEACHERS, and others interested are invited to consider the advantages offered by *The Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism *The Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, *The Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The advertising rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Orders may be forwarded through any responsible advertising agency, or directly to

ON SOCIAL CONDITIONS AND THEORIES

DEMOCRACY AND SOCIAL ETHICS

By JANE ADDAMS, Hull House, Chicago. Cloth, $1.25 net. (Postage 12 cts.)

MISS ADDAMS' Settlement Work in Chicago is known to every one interested in social amelioration. Her writings show clear insight and practical wisdom, born of intimate knowledge of the conditions of which she writes, touching charitable effort, household adjustment, filial relations, political reform, etc., etc.

"Thoughtful readers all over the country have learned that any book from Miss Jane Addams of Hull House, Chicago, is sure to be full of serious interest and mental stimulus. . . . It is a striking contribution to the fund of original research on the social problems of the day."—*Record-Herald.*

"Miss Addams is clear. She has not been precipitate in the preparation of her book. She has reconsidered, corrected, recorrected it, spoken with temperance and courtesy and with full appreciation of the efforts of the aspiring individualist. . . . Gentle, as patient, as sincere, and as astute as Jane Addams herself is the philosophy set forth in these pages."—*Chicago Tribune.*

THE LEVEL OF SOCIAL MOTION

An Inquiry into the Future Conditions of Human Society.

By MICHAEL A. LANE, *Author of "Great Philosophers."* Cloth, 12mo, $2.00 *net.*

(Postage 13 cts.)

"He has hit upon a new law, a new way of looking upon man intellectually, socially, and morally, and he makes much of it, and deservedly so. . . . The Level of Social Motion is a splendidly liberal education in life from its economic and moral side."—*New York Commercial Advertiser.*

PRINCIPLES OF WESTERN CIVILIZATION

By BENJAMIN KIDD, *Author of "Social Evolution," and of "The Control of the Tropics," etc.* Cloth, 8vo, $2.00 *net.*

(Postage 13 cts)

"Mr. Kidd's comparison of the economic methods existing in the various European countries and in the United States is pregnant with importance to students of our Government and laws. . . . No more thoughtful and impressive study has been written than this."—*The Philadelphia Ledger.*

NOTABLE NEW FICTION

PUBLISHED APRIL 23

The new novel of adventure by the author of "WHEN KNIGHTHOOD WAS IN FLOWER"

DOROTHY VERNON OF HADDON HALL

By MR. CHARLES MAJOR.

Illustrated with eight full-page reproductions of drawings by HOWARD CHANDLER CHRISTY. *369 pages, 12mo, gilt tops, in decorated cloth binding.* *Price,* $1.50.

As a teller of love stories Mr. MAJOR has few equals, and besides its imperious call to the universal sympathy with youth and love, the story of Dorothy Vernon has a setting of rare attractions in scenes, now brilliant in the pageantry of Queen Elizabeth's visit to Haddon Hall, now tender, mischievous, cajoling, and again sombre as in the scene of the Queen of Scots' arrest, and at times keenly pathetic.

MRS. GERTRUDE ATHERTON'S New Novel

THE CONQUEROR

BEING THE TRUE AND ROMANTIC STORY OF ALEXANDER HAMILTON.

By the Author of "Senator North," "The Aristocrats," etc. 546 pages, 12mo, gilt top, in decorated cloth binding. *Price* $1.50.

"FULL OF FORCE, vigor, brains, insight and spirit. It is absorbingly interesting."—*Boston Herald.*

"Created with remarkable power."—*Chicago Record-Herald.*

"Shows audacity and originality."—*New York Herald.*

"A clear, forceful, brilliant story . . . fascinating and absorbing."—*News Letter, San Francisco.*

"One of the notable historical novels of this decade. It towers above most of its contemporaries in the originality of its idea and the brilliancy of its execution."—*Times, Washington.*

THE MACMILLAN COMPANY 66 FIFTH AVENUE NEW YORK

The Nation.

NEW YORK, THURSDAY, APRIL 24, 1902.

The Week.

Common sense and common decency won a victory in the Senate on April 16, when the Platt amendment to the Chinese Exclusion Bill was passed, in place of the vicious measure which had been under discussion. Instead of agreeing to a bill which would violate our treaty with China, the Senate has simply voted to continue the existing law until 1904, when the treaty with China expires, and to extend its operation to the Philippine archipelago and our other islands. Bad as is the existing statute in many of its provisions, it is far better than the one proposed, which would have degraded every Chinaman within the United States. If the Senate action prevails, we shall be spared seeing our great Government photographing, cataloguing, and describing Chinamen with more care than dogs that are licensed in great cities. American vessels can still ship Chinese sailors. Teachers and students can come to us from Pekin or any other portion of China, and be treated with some semblance of courtesy and friendliness, and merchants of the Celestial Empire can still enter our portals to buy our goods and increase our trade without finding themselves wholly regarded as criminals.

The Senate having declined to adopt the House Chinese Exclusion Bill, Representative Kahn and other rabid anti-Chinese Congressmen have suddenly discovered that the Senate bill is exactly what they were seeking all the time. Indeed, Mr. Kahn would have us believe that the public does not understand how drastic the Senate measure is. This jaunty way of carrying off the severe rebuke administered by the Senate will not, however, suffice to deceive the country. There is nothing in the present law, bad as it is, that approaches in barbarity the measure of which Mr. Kahn was the sponsor, and the country is to be congratulated on having escaped the disgrace it entailed. The prospect that the Senate bill will be adopted by the House is now of the best, and the friends of fair play must rejoice thereat. But the fact remains that even this compromise is an unworthy one. To Senator Hoar, who had the courage to vote no, and thereby constitute himself a minority of one, the thanks of every lover of independence and justice are due.

The extraordinary vote on the Cuban bill in the House on Friday primarily signified the open humiliation of its Republican leaders. They were trampled upon by a large proportion—more than a third—of their followers in a way quite unexampled in party history. The vote was emphatically a vote of want of confidence in them. In other words, Messrs. Henderson, Payne, Dalzell, and Grosvenor, in assuring the President all these weeks that all would be well if he would only keep his hands off and let them manage everything, were reckoning without their host; and Mr. Roosevelt, in deferring to them, was putting himself in the hands of repudiated leaders. It is absolutely clear now that, if he had thrown himself boldly upon Congress from the first, he could have got a better bill long ago. Through the mistaken notion of making the measure one which could be passed by "a strict party vote," the long delay ends with the spectacle of the party torn and angry, and the bill finally taking form by the aid of Democratic votes. These might have been had at any time for a more generous and timely measure, and thus the practical defeat of the President's Cuban policy averted. So much for clever management and working within your party!

Scarcely less significant is the demonstration made by the upheaval in the House that the tariff question is thrust upon the country and will not down. The Democrats were astute in compelling the Republicans to go on record for or against the Sugar Trust, but the vote striking off the Trust's protection would not have been so triumphant had not the Western Republicans felt the rising storm of indignation among their constituents over any protection for any Trust. Politicians will do well to trim their sails accordingly. Tariff duties which are demonstrably needless, or which benefit only a Trust, have got to go; and if the Republican party does not at once set its hand to the work of abolishing them, the people will put a party in power that can be depended upon to do it. To-day it is the Sugar Trust that is struck at. To-morrow it will be the Steel Trust. Neither one needs an iota of protection, and neither one can have it long. As for the sugar differential, it may at present be used in the Senate to delay still further, and possibly to defeat altogether the Cuban bill, but it has set a precedent from which there will be no turning back. Once more has sugar become a Republican stumbling-block. "Strange that a manufacture," wrote Disraeli of the sugar duties in England of 1847, "which charms infancy and soothes old age, should so frequently occasion political disaster!" The threat of party disaster is written so plainly in last week's vote in the House that the wayfaring Republican cannot fail to perceive it.

Some Washington correspondents still intimate that the President will "do something" to bring order out of the party chaos; but what can he do? The time for him to do something was three months ago. What he chose to do was to put himself in the hands of the House managers, and it is hard to see how their defeat is not his also. Indeed, the bitter talk among Republicans at Washington seems to be directed as much at Mr. Roosevelt as at the inept leaders of the House. Nor will the alarmed Republicans be comforted by reading the President's remarks at the Columbia banquet, in which he brought out again his recipe for real efficiency in public life. An ounce of practice would be worth a pound of preaching just now, they will think. At the outset of this Cuban struggle, the President let it be understood that there were two things he was determined to avoid. One was the moral humiliation of Mr. McKinley in connection with the Porto Rican tariff; the other was such a party rupture as followed the passage of Cleveland's bill for repealing silver purchase. Unfortunately, however, as the case stands, President Roosevelt has ingeniously managed to incur both those forms of odium.

What we are really seeing in this outbreak of Republican dissension is the inherent antagonism of protection to foreign trade. Everybody knows that Cuba offers a great field for American exports, and that the stimulus of free trade or lowered tariffs is all that is necessary to double our Cuban commerce. We have only to look at the immense quickening of our Porto Rican trade, caused by the abolition of customs duties, to see what might be done in Cuba. We now take from Porto Rico three times as many goods as came to us before the Spanish war, and send there five times as great a volume of exports. The latter promise to foot up, in the current fiscal year, no less than $10,000,000 in value. This is but a trifle compared with what might be done in Cuba. But no, says protection, the thing cannot be done if it means touching one of our sacred tariff duties. And the reason that protection has its way, for the time, is the same that Cobden gave, namely, "The protected interests combine and the public does not." We do not say that such a stupid and obstructive protectionism accounts for the whole of the Republican "insurrection" at Washington. Personal elements, no doubt, enter in. Many Republican votes were cast against the organization to express hostility to its policy of letting the tariff, with all its monstrosities, go unrevised except for this minor cut in Cuba's behalf. But behind all, and giving body and cohesion to all,

was the old protective idea, which dreads foreign trade, and which still has such a hold on the Republican party as to disable it from either intelligently seeking new markets, or governing our dependencies in an enlightened way.

There can be no question that the War Department has been seriously discredited by the recent revelations of the manner in which it so long deceived the country regarding the question of torture by our troops in the Philippines. The story of Sergeant Riley of Northampton, Mass., has produced a most unfavorable impression. It will be remembered that Riley wrote a letter which was published in a Northampton (Mass.) newspaper, over a year ago, telling how he had witnessed the administration of the "water cure" by officers of the regular army, and that the War Department, after long delay, gave out a statement which purported to show that no such torture had been inflicted, and which virtually held Riley up to contempt as a liar. The Boston *Herald* thus characterizes the action of the Department:

"It was inconceivable then that the War Department would resort to such a pettifogging imposture as now seems to be revealed. The questions put to Riley and to the officers of the regiment were ingeniously framed to relate solely to the regiment. Riley's letter did not say that the tortures he had witnessed were committed by the officers and men of the Twenty-sixth Regiment, but by officers and soldiers of the regular army. Therefore, when asked whether he had seen any torture inflicted by the officers of the regiment, he said that he had not. The statement published by Major George Andrews, A. A. G., while strictly true in its statements of the testimony given, was artfully misleading and deceptive in the impression it sought to convey, and did convey, to the country. The War Department 'looked into the matter,' as it now appears, not in order to discover the actual truth, but in order to suppress it and hoodwink the nation."

The fact that the War Department has been thus discredited is in itself a reason for favoring the plan which President Roosevelt has been considering, of ordering a special investigation into this question of torture by men outside the range of military rule. There is the same Secretary of War now that there was when the above outrage was perpetrated; there is no reason to suppose that there is any greater readiness in the Department to bring out the whole truth than there was when the facts in this case were so shamefully tampered with. What reason has the public for confidence that a military investigation now will be straightforward and thorough? The Administration cannot afford to have the slightest suspicion rest upon the inquiry that is to be made, and it is hard to see how such suspicion can be avoided if the inquiry is to be conducted by the same Department which has so grossly deceived the country in the past.

President Roosevelt on Thursday nominated James S. Clarkson for Surveyor of Customs at this port. The selection had the approval of Senator Platt, but the impression seems to be that Mr. Roosevelt was personally responsible for the choice. At any rate, the President is thoroughly familiar with Mr. Clarkson's career, and is properly held to account for the appointment. It is one not fit to be made by a President who believes in civil-service reform, and who professes to have high standards in politics. Mr. Clarkson is known to the country as one of the most unblushing champions of the spoils system to be found in the Republican party. He was appointed First Assistant Postmaster-General by President Harrison in 1889, and soon became known as "the headsman" for the rapidity and recklessness with which he decapitated Democratic postmasters and appointed Republican successors. Not long after his accession it was announced that the number of changes in fourth-class offices reached the great total of 1,012 in a single week. This was at the average of nineteen changes an hour, or one every three minutes from the time Mr. Clarkson reached his office on Monday morning until he left it on Saturday night. In public speech and in written articles Mr. Clarkson championed the spoils system, which he had thus applied. In 1890 he defended "rotation in office" as the strongest assurance of honest and effective administration, and the "clean sweep" every four years as the best guarantee of general interest in public affairs. In the *North American Review* he not only attacked the Civil-Service Commission and its examinations, but denounced the whole merit system.

Mr. Roosevelt was a member of the Civil-Service Commission at the time that Mr. Clarkson was denouncing that body, and considered it his duty to take notice of the attack. In a speech at St. Louis, Mr. Roosevelt said, among other things:

"The Civil-Service Commission is most undoubtedly hostile to Mr. Clarkson and the idea which Mr. Clarkson represents. We should fail in our duty if we were not. We can no more retain the good will of the spoilsman than a policeman who does his duty can retain the good will of the lawbreaker. . . . Mr. Clarkson knows perfectly well, and he cannot keep a straight face and deny it, that during his term of service as First Assistant Postmaster-General he administered that office, and had it administered, as it was administered before him, and as it must be under the spoils system, by turning out all the fourth-class postmasters, competent and incompetent alike, if the people who sought their places had sufficient political backing."

Mr. Clarkson was of Iowa when he was appointed First Assistant Postmaster-General, but he lost his hold in his own State not long after, and some years ago came to New York. He has cut no figure in the political or the business activities of the city. The sole occasion on which he has challenged public attention was when he appeared, a year ago, as the spokesman for a corporation which pushed through the Legislature what came to be known as "the West-Street Grab Bill," which was vetoed by Gov. Odell. He has absolutely no "claim" known to the public for the place now given him—even on the low plane of political activity, for he is without influence in the local Republican machine. What does his appointment mean?

Secretary Long signalizes his approaching retirement by an order destroying the last relic of the spoils system in the Navy Department. Even the "ship-keepers" are now to be under the civil-service rules. A ship-keeper is a sort of watchman on board a ship that has been put out of commission. His duties are not at all martial, and the man seeking the job never imagines that he is going where glory awaits him. Nor is his pay exactly glittering, being two dollars a day. Yet, as Mr. Long remarks, the rush and pressure to secure these positions, usually good only for a month or so, have been terrific. Congressmen by the dozen have each had a dozen candidates for each ship-keeper's berth. But the rules will attend to it all hereafter. What Secretary Long calls "the last fortress of the old system" has now been demolished, as far as the Navy Department is concerned, and office waits on proved merit there from watchmen up. It is with a peculiar grace and, we presume, with special pleasure that the retiring Secretary puts this toothless old survivor of the spoils system out of his misery.

Gov. Odell is quite justified in regarding the annual tax-rate bill passed by the last Legislature, and just signed, as a measure which will deeply impress the people of the State. The direct tax is now reduced to only .13 mill, and would have been done away with entirely but for certain Constitutional requirements which demand this petty sum. It is true that this result is in part due to the fact that a portion of the surplus of past years is to be used this year, in accordance with the recommendations made by the Governor in his annual message. He then pointed out that there was a free balance in the treasury of $8,200,000 which could be used, and he recommended that $4,200,000 of this sum should be applied to the reduction of taxes of the present year. He also added that "the only direct taxation necessary would be the 13-100 of a mill provided for by the Constitution for the sinking fund and the interest on the canal debt." Accordingly we have the lowest direct-tax rate the State has ever seen, and there will still be a surplus

of $4,000,000 "to come and go on." The Governor draws a comparison between the fiscal operations of the present State Administration and those of the last Democratic Administration—that of Gov. Flower, to which, in passing, he pays a high and deserved compliment. The result of the comparison is a difference of $1,046,714 in economy in favor of the present Administration, after making allowance for the increased charges caused by transferring the care of the insane to the State, and by the increase in the number of the insane. The whole showing is very favorable to the present Administration.

No doubt the Corporation Counsel is right in thinking that there is under the city charter no power to prevent the erection of sky signs. In view of recent legislation on this subject, however, the tone of Mr. Rives's *obiter* is, to say the least, surprising. To say, "This is a free country, and if a man wishes to disfigure his property, he has a right to," is to forget ordinances in Chicago, Buffalo, and Rochester which restrict the size and nature of street signs. We must assume that the Aldermen have no legal right at present to legislate against sky signs, but to say that "it would be an unwarrantable interference with the liberty of the citizens if the Board of Aldermen had the power to prohibit the erection of such signs," is to forget that several English cities, where the sense of personal rights is stronger than it ever was in New York, do precisely prohibit sky signs. One might be tempted to say, too, that the business of the Corporation Counsel is to express what, in his opinion, is law, not what in his feeling is "warrantable" under broad principles of human rights. If the Aldermen of New York city do indeed lack such powers as the authorities of Boston, Chicago, Rochester, Buffalo, Edinburgh, and London freely exercise, it is time that we awake to the situation and seek from the Legislature the ordinary powers of a civilized municipality.

The presence of so distinguished a gathering of American scholars and administrators of institutions of learning in this city on Saturday last was much more than a tribute to the past of Columbia University, or a personal compliment to the new President; it was an expression of confidence and hopefulness in the future of the university. President Butler is not quite in the position of a man who faces a *tabula rasa*—that was very nearly President Barnard's position, and President Low's—but rather in the attitude of one who finds before him a rough draft which must here be rectified, there beautified, and generally perfected. Columbia University to-day is in some respects a grandiose sketch, finished only in parts, for a great university. Its administrators have avoided in the main the crudenesses that have affected the newer institutions, but it is still in the position of a vast mechanism insufficiently manned. Its personnel has not fully entered into the new organization. To achieve this rhythm of men and academic machinery is the delicate task that confronts the new President. He has in the past shown the intelligence, insight, and tact which this task requires. His friends are confident of his success in the difficult endeavor.

As an expression of English disgust with the activities of the United Irish League, the proclamation of the Crimes Act is natural enough. Whether so drastic a measure was either called for by the existing situation, or justified on general principles of policy, is more than doubtful. Unquestionably there has been a revival of boycotting in Ireland, but if crimes of the more serious sort have been committed in any numbers, they certainly have not been reported. The proclamation bears the look of a counter move of the Irish landlords against Mr. T. W. Russell's land-purchase programme, and it has all the more the aspect of a retaliatory movement that it comes at the first moment when the pressure from South Africa seems to diminish. A curious feature of the situation is the fact that the Irish Secretary, Mr. Wyndham, upon whom falls the duty of enforcing the proclamation, only the other day denied the existence of dangerous disorder in Ireland, while a few weeks ago, in a public address, he deprecated seeming to "use the law to strike down political oppression in Ireland," and to "combat proceedings which are comparable to the proceedings of trade-unions in this country." The Irish Nationalists will hardly fail to enlarge upon the text which Mr. Wyndham has furnished them. The Ministry has apparently committed the old blunder of playing into the hands of the agitators.

Confidence in the speedy coming of peace in distracted South Africa seems to be justified by what is now made known respecting the state of the negotiations. That all the Boer chiefs should have gathered for consultation with Gen. Kitchener and Lord Milner; that the terms offered them were at least such that they were not compelled to reject them on sight, but could with dignity refer them back to their followers for a plébiscite; that a practical suspension of hostilities—though not a formal armistice—is to prevail for the next three weeks, while the voting of the burghers is going on; and that Chamberlain should have been silent while Sir Michael Hicks-Beach came forward as the spokesman of the Ministry to praise Boer valor and to express the hope that Dutch and English might soon be living side by side in peace—these are the main facts which encourage us to believe that this bloody and costly and most ignoble war is nearing its end. An accident or a mistake may yet renew it, but to-day the signs of peace are unmistakably bright.

Canada accepts the Chancellor's bread duties with suspicious alacrity. She sees, of course, how easy it would be to pass from the proposed tariff to a preferential in favor of the colonies. The argument, or rather the insinuation, of the Canadian press is this, in effect: "For the moment the new corn laws are a necessity. But the time will come when the revenues may safely be reduced. What more natural than to effect this reduction by removing entirely the tax on the food products of the loyal colonies, while maintaining this war schedule against the rest of the world?" It is easy to see how such an argument might be employed by Imperial Federationists of Mr. Chamberlain's school, and, of course, the establishment of a preferential for colonial products would be a significant step towards an Imperial Zollverein. Australia, which has developed a sturdy national feeling, and is no friend of the preferential, may do something to balance Canadian influence. It would not be too much to say, however, that the exigencies of the exchequer have imperilled the sound tradition of English finance. Is it not always easier to impose and collect a series of extraordinary taxes than it is to return from the abnormal to a normal basis? These are considerations which those who are forecasting the remoter effects of the deplorable war in South Africa might do well to ponder.

The Pope's encyclical, read in all the Catholic churches on Sunday, may be taken as a kind of farewell address of the aged Pontiff, and is marked by that elevated tone which we have been accustomed to expect in his public utterances. Especially pertinent are his denunciations of the spirit of war and conquest so markedly revived during the past few years, even among professedly Christian nations. Pope Leo is not taken in by the specious plea that vast armaments are the surest guarantee of peace. He perceives that they are, in the first place, almost as burdensome to the common people as war itself would be, and he knows too well how the possession of a giant's strength is a standing temptation to use it. The head of the Catholic hierarchy is not to be imposed upon by the heathen maxim, "Si vis pacem para bellum." He would rather agree with the modified version of it made by Enfantin, one of the followers of St. Simon, "If you would preserve peace, then prepare for peace."

THE SENATE PHILIPPINE BILL.

The Lodge bill for the government of the Philippines has been made the unfinished business of the Senate, and will accordingly be considered from day to day until disposed of. It is of colossal proportions, embracing one hundred printed pages. A large part of it relates to the locating of mining claims and other technical matters very difficult to unravel, and which will probably not be understood by five men in the entire Congress of the United States, even after the bill is passed. It contains provisions for issuing bonds of the Philippine Government to buy out the land claims of the religious orders, and a multitude of other things which will be looked upon by the great majority of Senators as a burden and a bore, to be disposed of as hastily as possible in order to reach the more interesting private pension bills, river and harbor jobs, and other measures affecting the American people for better or for worse. It is but a single illustration of the waste of energy in attempting to govern countries on the other side of the globe when we have not time enough to attend properly to our own affairs.

The bill embraces almost as many subjects as the President's annual message. It is too voluminous to be treated as a whole in one article. We shall, therefore, confine our present examination of it to the provisions relating to the coinage question. This part of the bill has engaged the attention of the American press more closely than any other—for the reason, probably, that it has a more direct bearing than any other on our politics and on our trade relations with the islands. It must have been made already clear to Senators that the Republican press of the country frowns upon the proposal to establish the silver standard in the Philippines, and that the Democratic newspapers have not extended to it a very cordial welcome. This cold reception of the project may not deter the Senate from passing the bill, but it will strengthen the House in its purpose to strike out that part of the Senate bill and substitute the one already agreed to by its Committee on Insular Affairs.

The Senate bill authorizes the establishment of a mint at Manila to be operated under laws enacted by the Philippine Government, which Government is authorized to coin a silver dollar of 416 grains of that metal, nine-tenths fine. All bullion brought to the mint by private persons is to be coined into such dollars, which are to be unlimited legal tender. One cent per dollar is to be charged, however, for the cost of coinage. Section 83 of the bill embraces an original conception in the matter of coinage, for which a patent ought to be issued to the Committee on the ground of novelty. It provides:

"That the dollar hereinbefore authorized may be coined at the mint of the United States at San Francisco, in California, upon the request of the Government of the Philippine Islands, with the approval of the Secretary of the Treasury of the United States; and the owners of silver bullion may deposit the same for coinage at such mint under regulations to be made by the Secretary of the Treasury of the United States as respects deposits, coinage, and transfer to the Philippine Islands, and a charge shall be made therefor at the rate of one cent for each dollar coined and the cost of transfer to the Philippine Islands in addition thereto: Provided, that such deposits at the San Francisco mint shall be confined to silver produced in the United States."

The concluding paragraph of this section, which restricts the coinage of dollars at San Francisco to silver produced in the United States, is manifestly a sop to the silver-mine owners and to the Senators representing their States. It is not impossible that the silverites made this provision a condition of their support of the measure. However that may be, it is a barefaced exhibition of greed, and it ought to be rejected for very shame. The silver-mine owners will get nothing out of it except the world's contempt, and the United States Government will be elevated to the dunce block in consequence of it if the bill becomes a law.

The other parts of the coinage provisions are mere details for the establishment of the single silver standard in the Philippines. The education that the American people have received during the past quarter of a century has enabled them to understand what this means. It is true that the silver standard already prevails in the Philippines, and that some difficulties must be encountered in changing it. Yet it is the part of statesmanship to face such difficulties, and to put the Philippines in harmony with India and Japan and other civilized nations as regards their medium of exchange. To link our Asiatic possessions to the dead corpse of Chinese currency, after excluding the Chinese themselves from the islands, would be a mark of incompetency almost ludicrous to contemplate.

CONGRESS AGAIN DEBATING.

An unusual interest has been manifest in the proceedings of either house of Congress for the past few days. One sure sign of this is the increased space which the newspapers have given to Washington dispatches. Congressmen sometimes complain that the press does not report their debates as it formerly did. The fault is in themselves. Let them make their debates interesting, and the newspapers, which always search for interesting reading as they do for hidden treasure, will jump at the chance of printing them. Consider the columns gladly give up to the Cuban debate in the House, and to the arguments on the Chinese Exclusion Bill in the Senate. They show how press reports increase directly as the square of public interest in the doings of Congress.

What has been the secret of this revived attention to Congressional oratory? It is not far to seek. In the first place, these animated discussions of public policy have been free from the deadening influence of a foregone decision on strict party lines. There has been an open give-and-take of argument, and votes have been changed by it. We have not seen a party leader, beaten in his logical contentions, rise and taunt the master of the better reasons with the fact that the heavier battalions were against him, and say, "Well, talk as you will, you are bound to lose when the roll-call comes." Now it is the very breath of life for public debate to have this possibility of persuasion in it. Merely to apply "a fine brute majority" is the way not simply to crush your opponents, but to destroy the interest and real significance of debating at all. When men can feel compelled to say, as the honest English Squire did to the able Parliamentary orator of the other party, "You have changed my opinion by your speech, but no man can change my vote," then we need no longer inquire why Congressional debates have decayed, or why public interest in them has declined.

It is obvious that the discussion of the Chinese Exclusion Bill actually brought about a vote in the Senate very different from what would have been cast but for the searching analysis of the measure. Undebated, it would have gone through triumphantly. But it could not stand exposure. Its improprieties and indecencies, its illegalities and absurdities, its lack of business sense and of humanity alike, were so driven in upon the general conviction that it was beaten off the field. The New England conscience rose in revolt, every Senator from that section voting against it except Mr. Lodge. He preferred to side with Tillman and the other advocates of barbarous methods in dealing with the Chinese; but that only confirms what we said, that the reason and conscience of New England—indeed, we may say of the Republican party—were against the bill as it passed the House. One could wish for no more complete demonstration of the value of free debate by legislators whose minds are open, and whose votes are at liberty to follow their judgment.

In the House the case has been different, but there, too, we have been given a vivid illustration of the cause of public interest in Congressional proceedings. It is not simply that the subject under discussion is large and important. So was the Philippine Tariff Bill, but it went through amid universal indifference. The reason was that then we had the certainty of a party majority at the end, while debate was limited, and a rigid rule shut out the possibility of so much as offering an amendment. That is the sure way to kill a debate. Of course, men in the Opposition

will present their views for the sake of a "record," and in order to put the party in power "in a hole"; but argument for such purposes only is obviously a dead-and-alive affair, and can never have the directness, the fire, the power and point of a speech which may change votes and really affect the course of legislation. Note the great contrast offered by the progress of the Cuban Bill through the House. It was attended by the stir and interest of an uncertain result. Party lines were broken up. Amendments could be and were offered. Tactical positions were eagerly manœuvred for. Far-reaching indirect results might follow in national politics. Hence the kindling and continuous interest with which the debate was followed by press and public; hence the new appeal to the debating power of the members themselves, with the discovery, in some cases, of an unexpected talent; and hence the restoration to the House of a measure of that national attention which used to be fixed upon it as the theatre of great debate.

The example ought not to be lost on those leaders of the House who have the shaping of its methods in their hands. Let them abolish some of their hard-and-fast rules for stifling debate, or else making it perfunctory. Let them take the sense of the House freely on all great subjects, instead of so hedging it about that the conquered cause is too often the one really pleasing to the majority, if it could find free expression, as well as to Cato. Let them open the true parliamentary career for talent by showing the aspiring orator that it is within his power to produce conviction and lead to action. In a word, let them make Congressional debate what debate ought to be everywhere—a means of bringing out the better reason and the wiser policy—and we shall hear much less of the decadence of Congress, or the growing indifference of the people to what goes on in the Capitol at Washington.

THE STEAMSHIP COMBINE.

From time to time during the past four months hints have been dropped, or facts have leaked out and found their way to the press, implying that a great steamship combination was on foot, and that it would embrace a large share of the Atlantic fleets, both English and American, plying between the United States and Great Britain. It was commonly supposed that the facts were held back by the parties in interest in order to see what chance there might be of passing a ship-subsidy bill in Congress, and how far the revenues from it might be available for the joint concern. An authorized statement was made public on Saturday. It confirms the rumors that had been afloat as to the fact of the combination, and as to the number and names of the fleets combined. These are the White Star, Dominion, Leyland, Atlantic Transport, American, and Red Star lines, whose aggregate tonnage is said to be nearly 850,000 tons. The relations of the combine to the Ship-Subsidy Bill are frankly stated by Mr. B. N. Baker, the President of the Atlantic Transport Company, in an interview published in the morning papers. He said:

"that the completion of the deal had been postponed from time to time because of the desire to see what kind of a ship-subsidy bill would be passed by Congress. 'It has become evident,' continued Mr. Baker, 'that the public and the newspapers do not want a ship-subsidy bill, and we have been compelled to proceed with our plans.' "

Mr. Baker threw additional light on the subsidy question by saying, in answer to an interrogatory, that the stock of his company would be taken in at a valuation of $300 to $325 per share. This cannot be considered an extravagant valuation, as things go in this fast age. The stock of the Atlantic Transport Company sells at $240 to $250 per share, independently of any combination or governmental subsidy, and the Company is building six or eight new ships at the present time. The Company is a remarkable success. It is almost wholly American, and its prosperity in the face of the competition of older and more famous lines is a striking commentary on the statement, so often repeated, that an American merchant marine is impossible without subsidies. It is aside from the purpose to say that these ships fly the British flag, since we can change all that by a joint resolution of Congress admitting them to American registry. As Mr. Baker is now building new ships in our own yards to add to his fleet, it is plain that he can see a way to sail them under the American flag and still make a fair profit.

It is not exactly certain that this giant consolidation will cause the defeat of the Subsidy Bill, now pending in the House, but it will considerably lessen its chances of passage. The declared object of the consolidation is to prevent rate-cutting. The more immediate purpose is to bring about a stock merger, by which the shares of the united companies can be put into a pool, and be made the basis of a new issue, of much larger nominal amount, to be sold to the public whenever the public is in a mood to buy such securities. Now the voters in the Western States, particularly, are becoming very restive on the subject of these mergers. Many persons who have been counted as supporters of the Ship-Subsidy Bill will be startled when they find themselves confronted with a gigantic shipping Trust, and discover that the American Line, for whose special behoof the Subsidy Bill was drawn and passed by the Senate, is a part of the combine, if not the head of it. "It is possible, though by no means certain," says the President of this line, Mr. Clement A. Griscom, "that the International Navigation Company [the American Line], whose chartered powers are very broad, will be made the parent company." The Western Congressman who reads these words, and discovers suddenly that in his fight for reëlection this fall he must carry not only the odium of a ship-subsidy bill, but of a $200,000,000 Trust in addition, will begin to think that it is best to divest himself of such a handicap. The only way to do this is to have the pending bill reported from the Committee adversely, and voted down now. If this is not done, it will be charged and believed that the bill is merely held back till after the election, and that it is to be passed next winter for the benefit of the combine. Of course, all the subsidy that the bill provides for the American Line will, if it passes, go into the treasury of the consolidated company.

Although the new combination looks formidable on paper, it does not follow that it will be able to control the rates for transatlantic freight and passage. There are powerful and independent lines not in the combination, the Cunard, North German Lloyd, Hamburg-American, Holland-America, and the French Line, besides the so-called tramp steamers, which will always be a competing force even if all the regular lines should combine. Moreover, a large number of competitors may be put into the transatlantic service at any time by the termination of the Boer war in South Africa. So there is no immediate danger of extortionate rates for European travel or freight service by reason of the present combination.

A REFERENCE LIBRARY OF ART REPRODUCTIONS.

Public attention has been frequently called of late to the work which the public libraries may do for art education, by making choice collections of art reproductions, giving periodic exhibitions, and supplying facilities for lectures and conferences. The time is evidently come for this kind of work, and all such efforts will meet with an aroused public interest. This is shown most significantly in the great success of the various series of cheap art reproductions. Many are in the field. They constantly increase their scope, and, at a price ranging from one cent to five, these reproductions of great works of art make their way into school and home. All these series appear to succeed, and success is gained only through an enormous circulation. The service which such enterprises render, and which the art departments of the smaller libraries may aspire to, is akin to that of the circulating library. The aim is to convey information and to cultivate taste concerning all matters of art. There is another service which the greater libraries may render—namely, that of

making complete collections of reproductions for the use of special students of art history—in effect, reference libraries of art.

It is the recent advance in the art of photography which has made it possible to study under one roof the art of the world. The isochromatic photograph is, for the trained eye, a sufficient record of any work of art. The enterprise of photographers has now gone so far that the more important pictures, statues, and drawings in public galleries have been adequately reproduced, and a good beginning has been made with the private collections. Meanwhile, the price of such reproductions nas become so reasonable that the making of a student's collection becomes rather a matter of discrimination than of sheer expenditure, and the photographs are now so permanent that the risk of the deterioration, or even of the total destruction, of a collection is quite obviated. The utility of such a repository is obvious. If no study of reproductions can ever replace first-hand knowledge of the originals, it yet is an indispensable complement to such study. It has, in fact, certain distinct advantages, for in the art library the works of a master, which are scattered through a score of galleries in many lands, may be placed upon one table, and the comparison of work with work, which otherwise would usually depend upon that fleeting thing, the visual memory, may be made in all leisure, photograph being confronted with photograph. It is the perfection of photographic reproduction which has revolutionized art history, making what was previously matter of opinion matter of demonstration, and raising art criticism to the plane of the other historical sciences.

That American librarians have laboriously built up reference libraries in the historical sciences, philology, and natural science, while virtually slighting the field of art, is very natural. In the first place, there was a superstition that art history must be studied chiefly in books, or, in another view, only in galleries. The idea that photographs and similar reproductions are the indispensable apparatus of the art historian has only lately made its way. This kind of study was a very new thing, and tainted with the suspicion of amateurism. Only a very liberal librarian—one who would strain the last point for a minute palæontologist or entomologist—could be expected to appropriate good money and devote unwonted pains for the benefit of people who merely wanted to look at pictures.

This attitude of depreciation has changed as art history has come to be a recognized science. Many librarians have given their energies to this new and fruitful field of library activity. Boston, though with a sadly insufficient appropriation, still leads in the completeness of its collection for the study of the fine arts. The Avery Library at Columbia University and the Cooper Institute have notable collections for the study of architecture and the industrial arts respectively. In Brooklyn the Pratt Institute and the Brooklyn Institute have made good beginnings, and doubtless many other libraries throughout the country have done something in this direction. We believe that many of the great libraries would undertake such collections if they could be fairly informed of the probable expense of an art department—its first cost and charges for maintenance. Benefactors, too, would probably adopt the idea readily if it came to them in a practical form. As with any new project, the question of ways and means is all-important.

Here Sir Martin Conway, Slade Professor of Art in Cambridge University, England, has some valuable suggestions in his recent book, 'The Domain of Art.' He writes:

"The great age of Italian painting from Cimabue to Tiepolo might perhaps be fairly completely represented by 20,000 photographs of pictures and drawings. . . . The cost of the photographs would not be less than £1,000. They would have to be mounted, boxed, and shelved for purposes of general reference by students, and that would cost at least £1,000 more. In practice the whole cost of such a collection would work out at nearer £3,000 than £2,000. That would enable us to produce a kind of illustrated index, chronologically classified, of all the chief paintings and drawings that have come down to us from the old Italian schools."

It is a comparatively simple calculation to deduce from this the probable cost of a complete collection for painting. Assuming that Italian painting, including drawing, comprises rather more than half of what would be necessary for an art-reference library, and remembering that photographs for northern painting are relatively more expensive, the minimum cost of a collection for painting may be reckoned at double Sir Martin Conway's figures—that is, £6,000, or $30,000; the maximum cost might fairly be put at £9,000, or $45,000. It would take several years, under ordinary conditions, to buy, mount, and properly classify the initial collection. Afterwards the cost of accessions would be comparatively small. The expense of maintenance would be at most the salary of a special curator, with an assistant. Much of the work might be distributed to the regular staff. Many of the larger libraries already have a special art-librarian, in which case the additional expense would be comparatively less.

To speak in round numbers, a gift of $100,000 would provide generously for the establishment and maintenance of a reference library of art reproductions. When these facts are known and properly presented, we believe it will not be long before the New York Public Library, the Congressional Library at Washington, and one at least of the three great Chicago libraries will be in a way to add such departments. It should not be forgotten that, while such a collection is primarily for the use of specialists, it can readily be made available also for the general purposes of art education. It would be a valuable resource as well to our artists, for by the use of such a collection they could very readily find the necessary contact with the finest traditions of the past. Under modern conditions, photographs of great works of art are to the young artist what Horace's "Exemplaria Græca" were to the young poet of Augustan times.

THE NATIONAL ACADEMY OF SCIENCES.

WASHINGTON, April 19, 1902.

The April meetings of the National Academy of Sciences, which are held in Washington, are usually more important, scientifically, than the autumn meetings, which are held elsewhere. The relations of the Academy to the Government would naturally render them so; and other circumstances tend to the same result. At the meeting which has just adjourned, twenty-six papers were presented, of which four were biographies of deceased members. Of the remaining twenty-two, five related to Astronomy, as many in a broad sense to chemistry, three each to biology and geology, two each to psychology and logic, and one to metrics; while one was a description of Mosso's station on Monte Rosa.

Of the five papers upon astronomy, one, a review of the present state of our knowledge of the constant of aberration, by Dr. S. C. Chandler, was read by title only, and one upon the coefficients of precession and nutation, by Mr. Ira Ibsen Sterner, was an affair of computation. In a paper upon the planet Eros, Prof. E. C. Pickering expressed the belief that the photographic observations of that planet thirty years hence would yield the best value for the solar parallax; but Prof. Asaph Hall held that the best value would quite possibly be derived from a certain inequality of the moon's motion. Professor Pickering discussed in a very interesting way the irregular variations of light of the same little asteroid, Eros. The period of time during which the planet goes through all its changes of brightness seems to be constant at about two and a half hours, but the amount of the change appears to depend upon the direction from which the planet is viewed. The inference is that the planet rotates about an axis which must be invariable in direction, or nearly so. Yet the planet does not appear to be displaced in position during the period of its rotation; from which it may be inferred that it is about equally bright in all parts. Hence, its variations of brightness would be owing to the angular area exposed to the eye, as the object is viewed from different sides. Thus, the amount of variation, the mean brightness, and the law of variation, as the planet is viewed from different sides, afford means for a study of its form, and of the causes of variation, in a way hitherto unparalleled in photometry.

Professor Pickering also gave an account of the present state of research into the distribution of stars of different magnitudes over the heavens, a work begun by the immortal William Herschel, from which —with such assistance as proper motions and possibly some minor sources of information may afford—must be deduced whatever knowledge of the form and constitution of the star cluster in which the solar system is as a grain of sand upon a seabeach, the denizens of earth may be destined ever to attain.

Professor Hall, who preserves a manifest attachment to analytical devices for getting at facts where observation is more or less in default, discussed the possibility of a comet's being disrupted by gravitation alone, and wrote down the general differential equations of the problem—equations which a skilled mathematician might study for many months without finding any really good way of handling. Professor Pickering remarked that a series of photographs had demonstrated the existence of a repulsive force between parts of a certain comet, at a certain epoch, which was many times as strong as the disrupting force of gravity.

Of the five papers I have classed as chemical, one by Professor Nichols, on the optical properties of asphalt, and one by Professor Morley, on the tension of mercury vapor below the boiling-point of water, were of technical interest. Professor Morley finds that the tension, as experimentally determined, is greatly less than that which had been deduced by extrapolation. Professor Crafts gave a brief statement of the progress he has made since November in the study of the catalysis of comparatively concentrated solutions, using as a catalyser what will be understood by all students of chemistry as $C_6H_5SO_3H$.

Professor Richards, who at present looks after the atomic weights more than others do, has determined that of the very rare potassium-metal cæsium. The number he obtains is about 132.879; with a range of from 132.873 to 132.882. Hitherto, 132.8 has been the number given. He also offered a largely speculative, yet highly useful, contribution to the question of what hypotheses may reasonably be tried in order to account for changes in atomic volume. It seems very extraordinary that, notwithstanding the stupendous mass of chemical facts that have been collected and the very considerable researches that have been made into physical chemistry, we are still almost entirely ignorant of what a chemical compound is, or how its constituents are held together. We are not even sure that they are held together by mutual attractions; for although heat is generally evolved when bodies combine, showing that mutual forces are satisfied simultaneously with the act of combination, yet in some cases, on the contrary, heat is absorbed during combinations—a fact which naturally leads us to inquire whether there may not be other agencies than mutual forces whose action indirectly results in the formation of chemical bodies; and whether, if so, it is not probable that such agencies, whatever they may be, are a factor even of those combinations in which they are aided by direct forces. When hydrogen and chlorine come together to form muriatic gas, there is no condensation—or none of which account is commonly taken—although there is enormous evolution of heat. But then, the extreme chemical activity of the resulting gas seems to prove that it is not a fully complete chemical compound. Notwithstanding the tremendous energy with which the ions have approached one another, they are still so active that the case must be very different from what it is when a mixture of hydrogen and oxygen loses one-third of its volume in combining. A body may undergo contraction without combining with a different body; as when aqueous vapor is cooled. In all such cases heat is plenteously evolved, and molecule unites with molecule. It is a question how far the heat of chemical reaction is anything more than heat of contraction. Contraction does not necessarily consist solely in the approach of atoms towards one another. If an atom is a vortex, it must be in itself elastic and capable of deformation; and it may be so even if it is not a vortex. If atoms are compressible, the mutual attraction between two atoms would naturally tend to deform them. Another question, therefore, to be considered is the relation between such deformations and their valency. It seems to be a fact that highly compressible elements have low valency, while carbon and other elements of high valency are little compressible. All these are interesting and valuable considerations to be borne in mind in the construction of new hypotheses upon which experimental investigations are to be based.

The geological papers were of remarkable interest. Two, by the new President of the Academy, Mr. Alexander Agassiz, related to the mode of formation of coral reefs and to the somewhat peculiar coral reefs of the Maldive Islands, which Mr. Agassiz has lately visited. Instead of being in the trade-winds, these islands are in the monsoons; and, instead of being exposed to the tremendous surf of the Pacific, they are in the gentler Indian Ocean. Darwin's theory of the origin of the coral reefs, which, as is generally known, was that the work of the coral animals began when the Pacific was a shallow sea, and that, as its floor has gradually sunk, the corals have built higher and higher, until they now rise in some cases from the deepest ocean, seems, at any rate, to be definitively exploded. In the first place, it does not seem to be generally true that the sea-floor is everywhere sinking where there are coral-reefs. In the next place, borings show that the coral-rock extends only to a moderate depth. In the third place, an admirable survey was made of the Maldives, about 1830 to 1836, from comparison of which with the existing islands it is found for certain that older and younger atolls exist side by side in the same sea, which is hardly compatible with Darwin's theory. There are several other arguments to the same effect, not so easily stated in a few words.

On the other hand, the differences between the Maldives and the Pacific coral islands, which are very remarkable, are easily explicable on the theory of their formation which is supported by Agassiz. The Maldive atolls are excessively composite. What may be called an atoll, and upon a small-scale map has every appearance of such a formation, may be found to be a composite of tens or of hundreds of partially independent atolls; and the lagoons will contain rich growths of corals, in striking contrast to the atolls of the Pacific. This is attributable to the wide and deep passages existing in the reefs. In the Maldives, as in the Pacific and near Yucatan, manganese nodules were found upon the floor of the ocean, and these are held to be necessarily of eruptive origin. Not limestone, but eruptive rocks form the foundation structures upon which the coral islands are built. Next above these rocks are limestones that are not coralline, but are composed of fragments of shells of globigerinæ. These deposits are raised to such a height as to be moved by the action of the sea and to be further thrown up in places to within 30 or 40 fathoms of the surface, at which depth the work of the coral animals can begin. After that, everything seems to depend upon the action of the sea, and so upon the prevailing winds. The nature of the changes which individual islands have undergone since 1830 are extremely interesting and significant. A coral reef is not necessarily circular. That type occurs but seldom. It is more apt to be shaped like a pear or a gourd. According to circumstances, in the Maldives, in course of time, a faro, or island, or several, may be formed upon the reef; quite commonly two, where the seas of the two monsoons strike tangentially. These islands put out spits in one direction and the other as the wind changes, and thus the two islands at length join together and the one island takes the form of a broken ring.

Professor Osborn summarized the evidence that North America and Eurasia were, during the Mesozoic and Cenozoic, joined in such wise as to constitute a single zoölogical realm. In regard to the latent homology of which he told us last October, he has since found that this had been long ago remarked by Owen, and named homoplasy. Professor Osborn presented part third of a monograph on the bombycine moths of America. This part relates to the Sphingicampidæ.

Professor Cattell read a paper on psychophysical fatigue, in which he showed that Mosso's method of experimenting upon lifting a dead weight from the ground, the amount of work being measured by the product of the mass into the height through which it was lifted, is open to the objection that there is much effort before the weight is stirred. By experimenting upon pulls against a spring, Professor Cattell has entirely avoided this objection; and the consequence is, that the strange anomalies of Mosso's results now completely disappear. Three papers by Mr. C. L. Peirce, on Color Sensation, on the Postulates of Geometry, and on the Classification of the Sciences, were read by title.

Mr. William Sellers read a paper on the compulsory introduction of the metric system into the United States. This referred to a bill which the doctrinaires of the metric system, with their usual utter neglect to ascertain the state of facts, have introduced into Congress requiring every bureau of the Government (including the Bureau of Weights and Measures, the Mint, the Bureau of Construction of the Navy, etc.), from and after a given date, to use no other than the units of the metrical system for any purpose whatsoever. That this would render every plan in the Navy Department worthless, that it would be impossible to repair the engines of any ship, are among the smallest inconveniences which would result from carrying out the purposes of

this fantastic measure, which is, however, urgently pushed by Gen. Comstock. At present the American screw system is in use generally upon the Continent of Europe. There has been, of late years, some attempt to revolt against it; but if America only maintains her position, those countries must ultimately come to the inch for mechanical purposes, because it and its modes of subdivision are more convenient and advantageous for those purposes. America is now, said Mr. Sellers, fifty years in advance of the rest of the world in mechanics. Really, to discard the inch would be to surrender our preëminence, which could not, under those circumstances, continue, such advantage should we be at once putting into the hands of England.

The newly elected President of the Academy, Mr. Agassiz, gave a brilliant reception on Wednesday at the Arlington. President Roosevelt received the Academy on Wednesday morning with the utmost grace.

MADAME RÉCAMIER.—III.

PARIS, April 19, 1902.

Madame Récamier returned to Paris after the fall of Napoleon in 1814. She found there all those who had been persecuted like herself under the Empire. She was as handsome as she ever had been, and to the prestige of beauty she added the halo of triumph. Her friends, the Montmorencys, Mathieu and Adrien, the Duke de Rohan, Alexis de Noailles, were all in high honor. Adrien de Montmorency presented to her his son, who fell at once in love with her, which gave him occasion to cite a verse of La Fontaine, in the "Animaux Malades de la Peste"—

"Ils n'en mouraient pas tous, mais tous étaient frappés."

During these first hours of triumph Madame Récamier had the pleasure of extending her kindness to Queen Hortense, who was at Saint-Leu, as well as to Queen Caroline of Naples. She drew more closely to the royalist cause Benjamin Constant, who became very seriously enamoured of her. Queen Caroline begged Madame Récamier to find in Paris some one who could defend her interests and those of Murat at the Congress of Vienna. Madame Récamier cast her eyes on Benjamin Constant; he refused to undertake the task, which he thought unworthy of him, but this circumstance brought him in daily contact with Madame Récamier, and what had been at first only a natural attraction grew into a most violent passion.

Benjamin Constant was a man of extraordinary talent and of an unbridled disposition. He never seems to have been able to understand that Madame Récamier did not return his love, and he was exasperated at her resistance to a passion which in the end amounted almost to madness. It was strong enough to influence his politics; he was not a royalist at heart, but made himself a royalist. When Bonaparte lands in France, after having left the island of Elba, Benjamin Constant writes in his diary: "I throw myself *à corps perdu* on the side of the Bourbons. It is Madame Récamier who drives me to this." Napoleon approaches, and, on the 19th of March, Benjamin Constance, who remains in Paris (Madame Récamier had left for Switzerland, taking with her twenty thousand francs which Benjamin Constant had lent her), writes in the *Journal des Débats* an article which ends with this celebrated phrase: "I will not, a miserable deserter, drag myself from one party to the other, cover infamy with sophism, and 'balbutier des mots profanés pour racheter une vie honteuse' [I cite the text in its eloquence]."

Constant started for Nantes, but, learning on the way that the town was in the hands of the Bonapartists, he returned to Paris, thinking that he was to be arrested. He received, to his astonishment, the visit of a negotiator who invited him, in the name of the Emperor, to go to the Tuileries. After some hesitation, and on hearing that Lafayette and all the Constitutional party were united in a policy of conciliation with Napoleon, he went to the Tuileries, and, after a long conversation with the Emperor, accepted the post of Councillor of State. In the first letter which he wrote to Madame Récamier after this reconciliation with the Empire, he said merely: "The life of a courtier or a statesman be d—d! I think that I shall resign to-morrow, and I am sure I would do so if I only thought that you would thank me for it." He added: "I have had the most curious conversations. . . . They will be good to hear, if you are curious." His versatility was not rewarded; the dream of a liberal Empire soon vanished. After Waterloo, Constant found a change in Madame Récamier's attitude towards him. "I feel there," he writes in his *Journal intime*, "a barrier which paralyzes me." There is some truth in these remarks of M. Turquan: "Benjamin Constant's love for Madame Récamier seems to have dried up his brain. The unfortunate man produces nothing more; he seems to have been arrested in full development." Michelet did not hesitate to attribute Constant's failure to his unhappy love for Madame Récamier.

Madame Récamier saw the Duke of Wellington in Paris, in 1814. M. Turquan reproaches her for doing, in these circumstances, what Madame de Staël, the Duchess d'Abrantès, all the ladies of the Faubourg St. Germain did; and at any rate, she received very coldly the homage of the Duke. In 1815, after Waterloo, Wellington paid her a visit, and among his first words to her, he said, alluding to Napoleon: "Je l'ai bien battu." Madame Récamier was offended by these words, and from that day she did not see the Duke of Wellington again.

Madame de Staël fell ill, and Madame Récamier, who visited her constantly, made in her house the acquaintance of Chateaubriand, who was much struck by her beauty; but their intimate relations began only some time after the death of Madame de Staël. In 1818, Madame Récamier went to Aix-la-Chapelle, during the sitting of the Congress, meeting there, as I have said, the Prince Augustus of Prussia; on her return to Paris she paid more attention to Chateaubriand than she had done at first. She knew that he had made a deep impression on a number of great ladies, Madame de Beaumont, Madame de Castine, the Duchess de Mouchy, the Duchess de Duras. It seemed natural for her to count the author of the 'Genius of Christianity' among her ordinary courtiers. Chateaubriand soon held the first place among them; but she kept them all, even those who at first suffered the pangs of jealousy. She was a great master in the art of mingling natural coquetry with real friendship.

M. Récamier, who, after his great failure in the time of the Empire, had attempted to rebuild his fortune, failed again under the Restoration. His wife had to shut up her house, to sell a hôtel which she had bought, and she took rooms in a sort of convent for ladies, called L'Abbaye-aux-Bois. She was, of course, to live there as she liked, to receive her friends, and to keep a few servants. Chateaubriand has described her apartment:

"A dark passage separated two small suites. The bedroom was adorned with a library, a harp, a piano, a portrait of Madame de Staël, and a moonlight view of Coppet. In the windows were flower-pots. When, all panting after the ascent of three flights of stairs, I entered this cell at the approach of evening, I felt enchanted. The windows afforded a view on the garden of the abbey, on the lawn where nuns walked around and where their pupils were running. The top of an acacia reached to the height of the eye. Pointed spires cut the sky, and on the horizon the hills of Sèvres were seen. The setting sun covered everything with gold and entered by the open windows."

It was in this retreat that Madame Récamier received her friends, who were faithful to her to the end. Chateaubriand had his chair near the chimney, where he invariably sat every day for some hours. Every means were tried to amuse him. One day, Rachel, who was then at the beginning of her career, came and recited some parts of "Polyeucte" and of "Esther." She was just reciting the famous verses which Corneille places in the mouth of Pauline when she feels the operation of grace and becomes a Christian—

"Mon jeune époux mourant m'a laissé ses lumières,
Son sang, dont ses bourreaux viennent de me couvrir,
M'a dessillé les yeux et me les vient d'ouvrir;
Je vois, je sais, je crois!"—

when the door opened and an archbishop was introduced. Madamoiselle Rachel was a Jewess, and when she was presented to the archbishop she did not dare to repeat again the scene from "Polyeucte," but recited the verses from "Esther":

"Est-ce toi, chère Elise."

In 1820 there came a new visitor to the Abbaye-aux-Bois, Ampère, the son of the great Ampère who may be called the father of modern electrical science. Young Ampère naturally fell in love with Madame Récamier, and became her devoted friend. He was a charming man and became a member of the French Academy.

The assassination of the Duke de Berry (February 13, 1820) was followed by many changes in the interior policy of the Restoration. Decazes left the Home Office; it was thought for a moment that Chateaubriand would enter the Cabinet. Louis XVIII., who disliked him, contented himself with sending him as Ambassador to Berlin; he was sent later to London and to the Congress of Verona. When M. de Villèle became Prime Minister, he gave the Foreign Affairs Department to Chateaubriand. In 1823 Madame Récamier made a journey to Rome with her young niece (who became Madame Lenormant), Ampère, and Ballanche. She received almost daily letters from Chateaubriand and from Mathieu de Montmorency. At Rome she was received by the French Ambassador, the Duke de Laval. She stayed a long time in Rome,

where Ampère made the first studies which he afterwards completed in a charming book, 'Promenades dans Rome.'

M. Turquan's volume ends with a detailed account of the last years of Madame Récamier. She became a widow some time before the Revolution of 1830. This revolution caused great commotion among her friends. Chateaubriand, though he had many reasons for discontent with the Government of the Bourbons, remained the chivalrous advocate of their cause. He resigned his seat in the House of Peers; the Abbaye-aux-Bois became his refuge. It was there that he read to a select circle the eloquent pages of his 'Mémoires d'Outre-Tombe.' Madame Récamier became to him a sort of Antigone. By degrees she grew almost blind. The celebrated beauty who had carried everything before her in her early days, led at the close the most melancholy life. She died on May 11, 1849, after a new Revolution. She was a victim of the cholera, which was then raging in Paris. It is said that on her deathbed her features, softened and glorified, recovered all the beauty of former days.

Correspondence.

NON TROVATO.

To the Editor of The Nation:

Sir: In the literary notes of your number of March 20, I have been surprised to see the following sentence: "The Oxford Dictionary has been followed in the remarkable omission of 'anti-slavery,' certainly one of the best-worked of the *anti* epithets of the nineteenth century."

If such an omission had been made from the Dictionary it would certainly have been remarkable; so remarkable that one wonders the writer could let the statement go without looking to see if it could possibly be true. The word would have been duly found on page 364, column 1, with the other well-worked *anti* epithets of the nineteenth century, *Anti-combination* (laws), *Anti-corn-law* (League) *Anti-rent* (agitators), *Anti-state-church* (Association), and *Anti-vaccination*, duly distinguished by black type from the general crowd of *anti* combinations. On account of the interest of *Anti-slavery*, special trouble was taken by me to trace the epithet to its source, and I succeeded in getting a quotation from the manuscript minute-book of the British and Foreign Anti-Slavery Society of the 9th of April, 1823, which is probably the earliest written use of the word on this side the Atlantic. In addition to this, the Dictionary quotes of the same year the New York *Observer* of 17th of May, the *Anti-Slavery Reporter* of 1825, and a speech of Wendell Phillips of 1863; which, I think, sufficiently epitomize the history of the epithet.

In Great Britain, now, critics do not venture to write of the Dictionary's "remarkable omissions" when they overlook a word in it (which, on account of the vastness of the field, and the necessity for economizing space, is always possible); they modestly say they "have not found" it.

James A. H. Murray.

Oxford, April 11, 1902.

[Our dereliction arose from too good a memory and too imperfect examination, original and recent. On the first appearance (in the eighties!) of the portion of the Dictionary containing the word *anti-slavery*, we made at least a mental note of the absence of this word *from its place in the main alphabetical sequence*. At that time undoubtedly we lacked the caution the exercise of which is emphasized anew by Dr. Murray. In apologizing for this lese-Dictionary, we may properly allege the mitigating circumstance that it is not obvious at first glance on what principle like compounds are allotted now to the main alphabet, now to a subordinate place. The need of definition is not the controlling factor, as is plain, say, from *antisocial* being at the front while *anti-slavery* is perdu.—Ed. Nation.]

WHO WAS ISAAC WEAVER?

To the Editor of The Nation:

Sir: The pamphlet 'Experience the Test of Government . . . Philadelphia, printed by William Duane, 1807,' and included in Duane's "Select Pamphlets," 1814, has by some cataloguers been regarded as anonymous. A copy which has just come into my hands has, written on the back of the title-page, evidently in a contemporary hand, "Written by Isaac Weaver."

At my request the Library of Congress has made research into the matter, but finds no mention of Isaac Weaver, much less any support of this ascription. It is very desirable that, if possible, the authorship of this important tract be determined, and I hope some Pennsylvania antiquarian or bibliographer may be able to throw light on the question—at least, to discover who Isaac Weaver was. W. I. Fletcher.

Amherst College Library, April 19, 1902.

THE STUDENT GOWN.

To the Editor of The Nation:

Sir: Can some bright student of sociology explain the sudden fondness of American students for what is euphemistically termed "academic costume"? One can understand the argument that some sort of uniform is desirable in order to add to the solemnity and dignity of Commencement day. But how any young fellow with a trace of humor in his composition can, of his own choice, appear at other times in a flowing black gown and a mortar-board, is not so evident. Many college students are of very humble social position, and are compelled to do the lowest sort of manual labor in order to meet their expenses. Yet in a number of Eastern colleges the seniors array themselves for the spring term in all the majesty that this garb can give. In the course of a few weeks these seniors will go, one to his farm, one to his merchandise, and sink into the mediocrity that is the lot of the majority; but, for one glorious spring term, they have been marked off from the vulgar herd. Wherever they have gone they have been gazed upon with awe as living college seniors. Does this represent the real state of mind of the gownsmen, or must we look farther?

At Oxford and Cambridge the students have, of course, retained the distinctive dress worn in the Middle Ages, when every one was attired according to his station. American colleges were at first modelled somewhat on the English pattern, but in the course of the last two decades they have gone as far from their English models as possible. Is the gown intended to remind us of historic relations that would otherwise rapidly be forgotten? Our German cousins are rather absurdly fond of uniforms; but German students, though many of them wear modest flat colored caps, seldom venture to don a peculiar university garb except for processions.

What, then, is the genesis of this fashion? Has it come to stay, or is it a passing fad? Some one who knows will, perhaps, be good enough to tell. Oxford.

April 14, 1902.

"ACADEMIC STUDIES AND DEGREES."

To the Editor of The Nation:

Sir: In the thoughtful and temperate article on "Academic Studies and Degrees," which appeared in the *Nation* of April 10, there are certain assumptions which may well be questioned. One of these assumptions is, that the student of science is a specialist, while the student of the classics is not. Another is, that scientific studies are directly utilitarian to the student, while classical studies are not. A third assumption, which (to be sure) may be regarded as a direct consequence of those just given rather than a new proposition, is that classical studies give "the flexibility of mind which we call culture," while scientific studies do not. The writer appears, moreover, to exclude modern languages from the category of culture-giving studies.

"The studies that lead to knowledge of man, with the flexibility of mind which we call culture," is a passage to be pondered over when it is applied to the old-fashioned classical college curriculum. Is it true that Latin, and Greek, and mathematics, the main constituents of the traditional A.B. course, gave a peculiarly wide or true knowledge of man? Is it true that from their very nature or from the way in which they were taught, they gave especial flexibility of mind, a quality of culture, not to be attained by means of other studies? Occupied with such reflections, I yesterday chanced to enter the study of an acquaintance whose name would be recognized by many readers of the *Nation* as that of a man of culture. Finding myself alone there I did, what I usually do under such circumstances—that is, I looked somewhat curiously at the pictures on the walls. I found there, among others of less notable persons, portraits of Darwin, Carlyle, Emerson, Lincoln, Newman, and, I think, Chaucer. Now, it seemed to me that there was an indication, almost a proof, of liberal culture, of varied interests and sympathies, of the power to meet a great variety of educated men on common grounds, in the selection of such a list of portraits. Yet how very modern the list was, as a whole. The owner was, no doubt, more or less proficient in Greek and Latin twenty or more years ago; but I feel sure that most of the ideas, not purely literary, with which he occupies himself are ideas for which he need not go to the classics—ideas with which he would not find the classics especially helpful. And is this not true of most liberally educated men at the present time? Has not

this age, like every other age of real intellectual activity, brought forth its own intellectual products, and is not cultivation nowadays mainly concerned with these products?

And even if, in the group of portraits which I have described, one were to replace Carlyle by Pasteur, and Chaucer by Helmholtz or Clerk Maxwell, could these changes fairly be taken as indicating commonplace and utilitarian interests? Is not the true criterion of culture the ability to hold mutually agreeable and profitable mental intercourse with many sorts and conditions of men? Is it not to be sought in familiar acquaintance with many subjects of general interest, rather than in the profound knowledge of any one thing, even if that one thing be Greek? Is it not true that a student who should, at the present time, confine himself in college to such studies as his grandfather took while there, would appear uncultivated in general intellectual intercourse with most educated men of to-day? The writer of the article under discussion admits that such a student would find himself one of a very small company.

Is the writer sure that the feeling of having preserved the old tradition of "aristocratic" or "clerkly" learning, at the sacrifice of intellectual companionship with the great mass of college-trained men, would make this student anything better than a prig? Will not this writer admit that a great deal of the old spirit of "disinterested and 'clerkly' study" has gone over from the classics to physics and chemistry and biology? He has spoken of the Johns Hopkins. Did he know Rowland? Was any classicist ever more magnificently disregardful of mere utilities than he? Let us remember that the discovery of the Roentgen rays was led up to and made possible by decades of patient study in a field of physics that seemed absolutely barren of all promise of utility.

I agree, however, with what I understand to be the opinion of the writer, that some studies of a too technical character are sometimes thrown open to candidates for the A.B. degree. The danger that this will happen is perhaps especially great where a college and a technical school exist side by side. The curriculum of a scientific school which undertakes to give a professional education is almost always sadly overcrowded; things for which some use cannot be plainly foreseen must be left out of it. The result is an atmosphere of hurry and strain, a spirit of desperate economy like that which forces an Arctic explorer to leave his watch behind in making his race for life. This spirit is the very opposite of "liberal," and no amount of work done under such conditions can give a liberal education.

Very truly yours, EDWIN H. HALL.

CAMBRIDGE, MASS., April 14, 1902.

[We had no intention of excluding the modern languages, or indeed any of the historical sciences, from the category of "humanistic" studies; still less of asserting the inferiority *per se* of scientific studies. What we wished to emphasize is the cleft between these two kinds of training. Let Mr. Hall take extreme instances—a young man trained in classical and modern literatures, history, and philosophy; and another student trained exclusively in mathematics, biology, chemistry, physics, and other natural sciences—and he cannot doubt that these two different curricula would bring about two radically diverse mental attitudes. Without predicating superiority of one or the other education, it is clear that they are different. That this difference should be recognized in our academic degrees—a contention which we cannot see that Mr. Hall's interesting *questionnaire* really touches—was the plea of the article in question.—ED. NATION.]

Notes.

Our readers have had a foretaste of Prof. G. Frederick Wright's forthcoming book on 'Asiatic Russia,' illustrated with photographs and maps, which McClure, Phillips & Co. are to publish in two volumes.

William S. Lord, Evanston, Ill., has in press 'Love-Story Masterpieces,' compiled by Ralph A. Lyon; 'John McGovern's Poems,' and 'Line o' Type Lyrics,' by Bert Leston Taylor.

'Next to the Ground,' by Martha McCulloch-Williams (McClure, Phillips & Co.), is an out-of-door book of an unusual kind, in that it is a study not only of wild animals and plants, but of the biology of farm processes, crops, and domestic animals. The author shows minuteness and fidelity of observation, and considerable scientific knowledge in accounting for the facts that she notes; she has, moreover, freshness and aptness of diction, and a freedom from sentimentality that makes her book seem genuine and wholesome as befits its subject. The scene of her observations is a Tennessee plantation. To anybody familiar with Southern farms her description of August, "the ragged month," and her chapters on breaking up old grass-land and burning for tobacco seed-beds, will bring up lively remembrance of characteristic landscapes and scenes of labor. The chapters on quail-shooting, fox-hunting, and 'possum-hunting are less convincing; one cannot follow with the thrill of the chase. The study of the hog free to range in ample feeding-grounds will surprise readers who know the animal only in the confinement of the sty. The book gets some human interest from the incidental introduction of the planter and his family, but this part of the work is not uniformly skilful. Wherever the author appears to have seen for herself, her record is to be relied on. She evidently uses, however, considerable material not obtained from her own experience, and here, unfortunately, she has made mistakes that mar a highly commendable book.

Mr. Ernest Christopher Meyer, of Madison, Wis., has prepared and publishes an essay entitled 'Nominating Systems; Direct Primaries versus Conventions in the United States.' He regards the "primary" as the "citizen's citadel of right," and when pure, as "the fount from which the great blessings of democratic government flow." Of course this view implies the permanency of the party system. Independent movements will be hindered by making party machinery a part of the governmental organization, which properly knows only citizens, and favors no one because he calls himself a Republican or a Democrat. Whatever reform is to come must be reform "within the party." Nor is it to be assumed that the caucus will, on the whole, be more difficult to manage than the convention. As Mr. Bryce observes, no meeting can be held without a prearranged plan; and while the regulation of caucuses by law may make party organization more perfect, it does not follow that government will be thereby improved. Mr. Meyer, however, is firmly convinced that there is a fund of political virtue among the people which can be utilized by legalizing the caucus, and he deserves credit for the pains he has taken to collect whatever information on the subject is to be found. His book is certainly of value, but it will not supersede Mr. F. W. Dallinger's excellent work, 'Nomination to Elective Office.'

The sixth—a skip from the fourth—volume of the 'System of Physiologic Therapeutics' (Blakiston), under Dr. Cohen's editorship, is by Dr. N. S. Davis, jr., upon 'Dietotherapy.' The alternative title of "Food in Health and Disease" is more acceptable. The work is a convenient arrangement of principles and details in the matter of food and feeding, and very acceptable features are the reproduction of numerous dietaries in actual use about the world taken from Bulletins of the Department of Agriculture, and a table of the composition and fuel value of flesh foods by Mitchell. Dr. Davis accepts his father's well-known views, that alcohol is as unnecessary as a medicine as it is undesirable as a beverage, although he admits that in small doses it may be beneficial. These, however, are to be strictly guarded by prescription. As a whole, the book is a good working exposition of what may be accomplished by foods. When the author says (p. 27), "the Pasteur or Chamberlain filter is the best," and "it is made of porous earthenware," it is apparent that he has the Pasteur-Chamberland in mind, and uses "earthenware" in a very broad sense to include biscuit porcelain. More definiteness would be better. As in the other volumes of this series, the index is copious.

An edition of Gauss's classical work on 'Curved Surfaces' has, during the last generation, appeared about once every three or four years, so that it would seem to vie in popularity with 'Gulliver's Travels' and far outdo Munchausen. The last and best edition, at any rate the easiest for Americans to read, is a splendid publication by the Princeton University Library. It is in English. A mathematician who does not possess enough Latin to read a book on mathematics is cut off entirely from all the more important parts of the older literature, except what is written in French. Not only the language, but Gauss's algebraical notations, are modernized in the new publication, even in points where his preferences were emphatic. We should prefer to read the paper in his collected works. However, no doubt it is more easily read here, and all the slips are corrected. Besides the work itself, there is a translation of an earlier work by Gauss on the same subject, which never was printed until seventy-five years after it was written, in 1900. There are also an abstract by Gauss of his own memoir, and serviceable notes. A valuable bibliography is added, in looking over

which we remark that this differential geometry has been chiefly cultivated, since Gauss, by Italian and French mathematicians. But the list omits some of the topics which have most engaged attention. The work has been done by James Caddall Morehead and Adam Miller Hiltebeitel.

In "The Problem of the Universe," Professor Newcomb, writing in the *International Monthly*, goes over the whole ground of stellar distribution and the doctrine of cosmic evolution, from Wright and Kant to Darwin and Kapteyn, making it quite clear that the infinities still have it, in so far as comprehension by finite intelligence is concerned; and further, that, in spite of the rather rapid increase of human knowledge of things stellar, our ignorance must probably remain for ever colossal. The universe is a large subject for magazine treatment, but abridgment is requisite, as nowadays readers of an article expanded beyond twenty pages, on any topic save money, war, or politics, are few and far between.

Professor Bigelow, an able and industrious meteorologist of the United States Weather Bureau, contributes to the current *Popular Science Monthly* an article, on the formation and motions of clouds, which goes to show that a critical knowledge of the scientific reasons underlying natural processes and phenomena need not always blind the eye to appreciation of the beautiful. He likens the present period of meteorological endeavor to the Tycho and Kepler stage of astronomy, when observations were in process of accumulation for the use of the coming Newton. But the Newtonian age in meteorology has scarcely advanced to break of dawn as yet. Professor Bigelow is quite right in saying that the storm forecaster ought to have access, not only to the ground strata of the atmosphere, but also to those at higher levels. Mr. Lawrence Rotch of Blue Hill has demonstrated in practical form how this can be done at small expense by means of kite ascensions, and in time we shall have three simultaneous daily maps of the weather—the two aerial ones for elevations of 3,500 and 10,000 feet.

A discovery of extraordinary interest is revealed in the (Boston) *Mayflower Descendant*. Mr. George Ernest Bowman there establishes the fact, hitherto unsuspected, of the existence of a marked "gravestone of a *Mayflower* passenger, erected at the time of his death and inscribed with his name and age." The person in question was Capt. Richard More, Senior, who came over as a boy in Elder Brewster's family, finally settled in Salem, Mass., and there died, being interred in the old Charter Street Cemetery. Mr. Bowman presents sundry documents (one from the Maryland archives at Annapolis), confirming his identity, and pictures photographically his well-preserved and handsomely lettered headstone and those of his wives. The year of his death is not inscribed, and is conjectural; but Mr. Bowman things Capt. More probably outlived John Cooke, who has been reputed the latest survivor among the male passengers. Mr. Bowman's researches were greatly aided by the complete index to every name in the MS. volumes of the Plymouth County wills and inventories, the Plymouth Colony deeds, and Plymouth County wills and deeds, which he is making for the Massachusetts Society of *Mayflower* Descendants.

The *Consular Reports* for April contains a review of our foreign commerce in 1901, showing that "while the aggregate of our exports of manufactured goods has shrunk, the variety of our sales in Europe is being extended, and the territory upon which they are encroaching is being steadily enlarged." From an encouraging account of the economic conditions of Mexico it appears that there are about 10,000 Americans in the Republic, mostly employed upon the railroads, and that American capital is becoming more deeply interested. Still, our Consul-General warns the "hundreds" of college graduates who write to him for information, that "Mexico is a bad place for a young, inexperienced man without ample funds." Railroad construction is rapidly improving the means of transportation, and "there is a healthy growth of manufacturing enterprise," there being 618 manufactories in the City of Mexico alone. The reports from France include the new Ship-Subsidy Act, passed by the Chamber of Deputies, and some interesting facts in regard to the mushroom culture in the quarries near Paris. "From 2½ to 3 tons of these cave-grown mushrooms are sent to market every day, and the total value of the trade is about $3,000,000 a year." Our Consul-General at Berlin gives some indications that the lowest point of business depression in Germany has been passed; but how dangerously near a general collapse has been is evidenced by the statement that "the loss sustained through the depreciation of bank shares alone during the past year was estimated on October 1, 1901, at 2,000,000,000 marks ($476,000,000)."

The *National Geographic Magazine* for April opens with an illustrated sketch by Dr. C. Rabot of recent French explorations in Africa, beginning with the Marchand expedition of 1897-98. Other articles relate to the proposed surveys in Alaska for the present year, of which the most important is the study of the Yukon section for the investigation of its coal veins, as the accessible timber is being exhausted; and to ocean currents, with special reference to the influence of the winds on the surface water.

"Toscanelli and Christopher Columbus," with which the *Annales de Géographie* for March opens, is a review of the arguments brought forward at the Congress of Americanists held in Paris in 1900, and since published in a voluminous book, to show that the letter of the Florentine astronomer which led to the voyage of Columbus was a forgery. M. Gallois's conclusion is that there is "nothing in the letter itself, nor in the circumstances under which it was written, which can cast doubt on its authenticity, nothing which permits us to refuse to Toscanelli the honor of having inspired the discovery of the New World." We remark, also, articles upon the structure of the Scandinavian Peninsula, and the distribution of frost in France—the fewest days (less than ten) on which frost occurs being at the opposite extremes of the country, the Riviera and the coast of Brittany. In an account of Italian East Africa the statement is made that the central region is the only part available for colonization. "The European can live there without danger from disease. the climate is healthy and agreeable, the colonist can cultivate the land himself, and cattle-raising is easy." There is an interesting description of the development of Kiao-Chau by the Germans, and some facts relating to the Russian emigration to Siberia, about 200,000 in 1900, in which are foreshadowed the extinction of the native races. The chief men of the Kirghiz, Yakuts, and Buryats, who have reached a certain stage of civilization, openly declare that the Russian colonization will bring ruin to their people.

The timely and unexcelled *Annuaire* of the Bureau des Longitudes for 1902 contains, in its appended scientific papers, one by M. Poincaré of the University on wireless telegraphy. He gives an historical résumé of underlying principles, going back to Hertz and Faraday, a brief description of the simpler forms of successful types of apparatus, a lucid presentation of the theory of wireless telegraphy, including that of the coherer, the advantages and disadvantages of wireless telegraphy, and the recent improvements of Marconi and Slaby. Marconi's transmitter and receiver are clearly figured, and the entire paper is perhaps the best brief exposition of the new method of communication yet published. M. Cornu follows with a technical article at some length on polyphase currents, and Admiral Guyou on the application of the decimal division of the circle to practical navigation. He makes out a clear case of rather obvious advantage, not only for nautical instruments, but for the more facile use of navigation tables. M. Janssen concludes with a brief note on the foundation and work of the observatory on the summit of Mont Blanc. Of the foreign members of the Bureau des Longitudes, four belong to the western hemisphere—Professor Davidson of San Francisco, Professor Newcomb of Washington, and two officers of the Brazilian navy. The *Annuaire* has at length adopted the very convenient and sensible subdivision of the day, long ago proposed, into hours numbered consecutively from one to twenty-four, doing away with the usual A. M. and P. M.

The principal article in *Petermann's Mitteilungen*, number three, is a review by Prof. W. Sievers of the published documents relating to the Franco-Brazilian boundary dispute. These are contained in fourteen volumes, of which ten are contributed by Brazil and three by France, and in five atlases of 250 maps, besides those in the text. He regards the Brazilian presentment as far superior to that of France, which has "little substance, consists largely of hypothesis, is not convincing, and is often very superficial." The volume containing the arbitrators' summing up of the evidence, the work mainly of an unnamed Swiss engineer, he characterizes as "a scientific work of the first order," which has enriched our general cartographical knowledge.

Mr. William I. Fletcher, librarian of Amherst College; Mr. Arthur E. Bostwick, Superintendent of Circulation, New York Public Library; and Mr. Ernst Lemcke of Lemcke & Buechner, New York city, a committee of the American Library Association, unite in a circular appeal to publishers of periodicals respecting indexes. The rules they lay down, and concerning which they desire to hear from anybody interested, are five in number. The first is that title-pages and tables of contents should always

accompany the number completing a volume; and another, that they should be printed separate from other printed matter, either advertising or reading. A third recommendation is more difficult, viz., abandonment of the "common practice of printing some first or last leaves of reading-matter on the same section with some pages of advertising."

The Queen Dowager of Italy has purchased the books and manuscripts of the famous poet and critic Carducci, leaving to the great scholar the undisturbed use of the library for his lifetime. The Paris *Temps*, from which we have the note, reminds its readers that in similar fashion Catharine the Great of Russia prevented the dispersion of Diderot's library.

The Sultan of Turkey has just shown his hostility to everything that tends to the enlightenment of his subjects in a way which brings him into sharp contrast with the rulers of China. For some time both governments have sent young men to foreign lands to be educated in the new methods that they may teach their own countrymen. There are 274 Chinese students in Japan alone, of whom 163, representing 12 provinces and Mantchuria, are maintained at the Government expense, and a month or two ago the Viceroy of Pechili sent 56 more to the military school of Tokio for a three years' course. Seventy Ottoman youths are being educated in Paris and Geneva, receiving annual Government pensions of from $250 to $1,500. A recent decree of the Sultan has deprived them all of these pensions, on the alleged ground that they took part in the Young Turkey Congress held in Paris a few weeks ago. This charge the students deny through the London *Times*—a denial the truth of which the Turkish Ambassador at Paris does not hesitate to confirm. He declared that he considered the decision of the Sultan to be "an act of extreme injustice, for not merely had he never denounced the Paris students as taking part in any propaganda, but he had himself testified to their exclusive devotion to their studies, their conduct having always been irreproachable and commanding the esteem of their professors and of all interested in them." The Sultan, not without reason, regards an educated Turk as his deadliest foe.

The fifty-first meeting of the American Association for the Advancement of Science will be held at Pittsburgh, Pa., June 28 to July 3, 1902. Mr. Stewart Culin of the University of Pennsylvania will preside over the section of anthropology. Students are cordially invited to attend and contribute papers upon subjects connected with their fields of research. Several members of the section have informally expressed the desire to devote at least one day to papers and discussions on anthropological museums, their cases, methods of installation, and technique; also that papers should be offered on the more important special collections in museums both in this country and abroad. Intention to be present should be made known to Harlan I. Smith, Secretary Section H, American Museum of Natural History, New York.

—Among the interesting events of the recent Johns Hopkins celebration was a banquet to the veteran philologian, Professor Gildersleeve, the chief feature of which was the presentation of a volume of philological studies in commemoration of his seventieth birthday (Baltimore: Johns Hopkins Press). The contributors were, of course, his former pupils. The studies, occupying more than five hundred pages, give a fair index of the range of philological interest stimulated by Professor Gildersleeve's labors. The place of distinction at the head of the volume is given to Professor Briggs of the Union Theological Seminary, who applies to the study of the Apostolic Commission the light thrown upon early Christianity by recent critical investigation of the Gospels and the book of Acts. The current tendency to depreciate the work of Matthew Arnold appears to some extent in a paper by Dr. Mustard of Haverford College, on Homeric Echoes in "Balder Dead." The realm of English literature is touched at another point in a study of the Technic of Shakspere's Sonnets, by Prof. Thomas R. Price of Columbia University. The thought worked out is that the biographical theory, with all its dark mysteries, has broken down of its own weight, and that we are to find in the sonnets rather a record of the poet's early training in the realm of the imagination for the dramas that were to come, the characters employed being "so placed in a series of imaginary situations as to exhibit, in the widest possible range of emotion, the full play of the human soul." Of the papers dealing with topics from classical antiquity, a considerable number display that broader interest which is the cherished ideal of Professor Gildersleeve himself, while others lie towards that extreme of minute statistical investigation at which he has hurled so many a dart from his redoubt in the "Brief Mention" department of the *American Journal of Philology*. A few of the papers are historical rather than linguistic or literary in their bearing, such as Dr. Christopher Johnston's study of the Fall of the Assyrian Empire, and that of Dr. C. A. Savage on the Athenian in his Relations to the State. On the whole, the volume is a tribute in which Professor Gildersleeve may well take a legitimate pride; and the wide geographical distribution of the scholars from whom the individual papers come, is another reminder of the part which Johns Hopkins University is playing in American collegiate and university education.

—Lord Ronald Sutherland Gower, whose interest in art and antiquities has already been shown by numerous writings, now publishes two very handsome volumes on 'The Tower of London' (Macmillan). We refer first to the guise of the work, because even in this day of good printing and profuse illustrations it is sure to catch the attention. The photogravures are excellent, and out of a wealth of material the choice of subjects has been well made. The only possible cavil to be raised on this score is that the plates, by reason of their great number, render the book a little difficult to read. In dodging about among the illustrations, it is sometimes hard to find the text. We must be careful, however, to state that the descriptive part is not mere letterpress. In his general manner of treatment, Lord Gower has carefully avoided the strain of Mr. Harrison Ainsworth, on the ground, as he expressly states, that "a book which professes to be a history must not be a hotch-potch of truth and fiction." In his effort to secure accuracy he has, if anything, been too punctilious. While no one would suggest the introduction of legends in such a book, save as legends, there is the other danger of becoming too bald. The author is clearly an antiquarian rather than an historian or a picturesque essayist; but when once the reader has grasped this fact, he will find cause for satisfaction in many features of the narrative. If the style is never very animated, it is categorical and direct. Many curious facts about many different persons are brought together in a comparatively brief space, not without some misprints and errors of detail (for of these we have observed several), but in such wise as to have a value which is quite independent of the illustrations. The longest chapter by a good deal, and the most valuable, is the first. In it are described the various buildings which constitute the Tower group—the White Tower, the Lion Tower, the Middle Tower, the Byward Tower, etc.—and thus, step by step, the evolution of the whole pile is traced. As it is a fairly intricate piece of topography, this account should be of considerable assistance to those who may wish to know about the most remarkable building of its kind in Europe. The historical part of the text is mainly occupied with noticing the political offenders who have been imprisoned from generation to generation within the Tower. The first volume covers the Norman, Plantagenet, and Stuart periods; the second is devoted to the Stuarts and the Hanoverians.

—'Peter III., Emperor of Russia,' by R. Nisbet Bain (Dutton), is "the story of a crisis and a crime." While in form a biography, it may more properly be called an account of certain exciting events which occurred at the Russian court during the first six months of 1762. The Emperor himself is a most unpromising subject for the historian. The admirers of Catharine II. may have gone too far in accusing him of imbecility and depravity, but if not imbecile he was unbalanced, and if not depraved he was immoral. Mr. Bain, who thinks that he should not "be stigmatized as a mere idiot," calls him notoriously unfit to rule an empire. He was, in truth, a neurotic wreck, by the sight of whose misfortunes sympathy must be awakened rather than contempt or reprobation. Mingled with much that is painful and tragic in his career, there is a touch of the ridiculous. His admiration for Frederick of Prussia went so far that he insisted on compelling regiments which had just succeeded in driving Frederick from the field to adopt Prussian drill, and at St. Petersburg he sought feebly to reproduce the life of Berlin and Potsdam. Ridiculous as all this may seem, it constitutes a political fact of grave importance. What would have been the fate of Germany had Frederick been beaten and Prussia crushed in the course of the Seven Years' War? And the contingency was not so remote when Paul III. abandoned the policy of his predecessor, and, in the midst of a desperate conflict, exchanged the Austrian for the Prussian alliance. Here we reach the crisis to which the second title of Mr. Bain's volume refers. "The reign of Peter III. coincides with perhaps the most acute diplomatic crisis, not merely in the history

of Russia, but in the history of Europe during the eighteenth century. I allude, of course, to the imminent collapse of the Prussian monarchy at the beginning of 1762—a catastrophe only and hardly averted by the enthusiastic devotion of the new Russian Emperor to Frederick the Great." Peter III. began to reign in January, 1762, and he was assassinated just after the middle of July. Thus his opportunity to influence the destiny of nations was limited by months, and even by weeks. While there has been no disposition on the part of historians to neglect the importance of Russia's *volte-face* during this reign, Mr. Bain is quite justified in stating that the episode has not yet been treated with any degree of fulness by English writers. Drawing from Russian sources, of which he gives a critical account, he has succeeded in closing up this gap. Although Peter's diplomacy is made the most conspicuous topic, there is a clear account of the measures and demeanor by which he aroused the hostility of his subjects, both gentle and simple. Under the circumstances his assassination was a foregone conclusion, and it excited no great horror. Catherine II.. is, of course, a prominent figure, but Mr. Bain adds little to our present knowledge of her. As a monograph on the diplomatic history of 1762 this essay deserves to be known and used.

—Thomas Wolsey, Legate and Reformer,' by Father Ethelred L. Taunton (Lane), is a book which is recommended at first glance by the beauty of its print and illustrations. Proceeding past these, it soon becomes clear that the author is a devoted admirer of Wolsey, of whom he says without qualification: "Wolsey stands out as the greatest statesman England has ever produced; and it is not going beyond what records reveal if we say that his was the master-mind of the age." Such a statement might call forth a vast amount of comment if one were not seeking merely to indicate the spirit in which a particular treatise is conceived. But it is not the political aspect of Wolsey's career which Father Taunton places in the foreground of his book. He is quite willing to accept Brewer's verdict on the secular work of the Cardinal. His own contribution to this period of Tudor history centres about Wolsey's ecclesiastical achievements. In other words, Father Taunton seeks to strengthen the position at precisely the point which has hitherto been deemed weakest. "In [Brewer's] 'The Reign of Henry VIII.,' Wolsey's work as an ecclesiastic is entirely passed over; and in all biographies, even the most recent, the same omission is to be found. This is strange, for, although Wolsey's name stands high as a statesman, he has as high a claim to be known as a great Churchman. He certainly need not fear an examination both close and severe, for he emerges from the ordeal with increased splendor." In coming to details, the question which naturally attracts the most notice is that of the Cardinal's attitude toward reform. As Father Taunton outlines his programme, it involved an improvement in the educational advantages of the clergy, the establishment of new bishoprics in the large towns, and a visitation of the monasteries. The need of dogmatic revision was apparently unrecognized. Father Taunton asks: "If in that hour of the Church's need, the clear-minded and far-seeing Wolsey had sat in St. Peter's chair, and had ruthlessly set his knife to cut away the abuses that were stifling life, might not the religious history of Europe have been a brighter page?" Here it is pretty plainly implied that Wolsey might have averted the Protestant revolution. He certainly was a clever statesman, and his ministry forms an era in the history of England's relations with the Continent, but something was required besides visitations and educational endowments to meet the religious crisis of the sixteenth century. Though Father Taunton speaks in a very candid way about many features of the situation, he does not seem to have a clear grasp of the main issue. At more than one point, also, the material appears to be thin and drawn out. Altogether, the present work falls somewhat below the standard which the same writer has set in his earlier books on the religious history of England.

—Prof. Charles Dejob of the University of Paris, whose Italian studies are for the most part distinguished for their erudition and acute criticism, has been doing much interesting work of late in connection with the types and characters which figure in the literature of France and Italy during the seventeenth and eighteenth centuries; and, in his 'Études sur la Tragédie' and 'Les Femmes dans la Comédie Française et Italienne au XVIIIe Siècle' (Paris: Colin), the evolution of these types in literature received serious attention for the first time. His latest addition to this series of studies, 'Les Professions et l'Opinion Publique dans la Littérature Française,' has just been reprinted from the *Revue d'Histoire Littéraire de la France*, the chief organ of French literary scholarship, in which it originally appeared. The interest of the artist in men, not merely as human beings, but as members of certain trades or professions, is here the central theme. Except in Homer, this interest is given little scope in Greek literature, and the rôle of the artisan is very slight in the Georgics of Virgil, in which the husbandman might easily have been expected to assume considerable prominence. M. Dejob indicates, briefly but trenchantly, how certain types originated in the literature of the Middle Ages, and were developed and crystallized during the Renaissance. Some of these were accepted by Molière; others, like the pedant and the braggart soldier, were eliminated by him from French comedy. The evolution of these types is carried by M. Dejob through the eighteenth and nineteenth centuries, from Mercier and Diderot to Balzac and Dumas *fils*.

—Any one who examines closely the curves representing the varying spotted area of the sun will find that no two successive cycles are alike, either in area or in form. Individuality of cycle seems to be repeated after a certain time; and this peculiarity, coupled with a like variation in magnetic curves, together with suspected cycles in terrestrial phenomena, has led to a new investigation of the whole subject by Dr. W. J. S. Lockyer, assistant director of the Solar Physics Observatory, Kensington. Next to Schwabe, the eminent and original discoverer of sun-spot periodicity, over sixty years ago, comes the late Dr. Rudolph Wolf of Zürich, who, from an exhaustive study of the spots down to the year 1876, determined that these markings on the solar disk passed through nine complete cycles every century. But he was careful to state, also, that, while the average length of the period was eleven and one-ninth years, there might be variations of as much as two years from this value in individual cases. Into the character of these secondary variations, Dr. Lockyer has sought to penetrate; and he finds, first, that the actual epoch of maximum spots, relative to the preceding minimum, oscillates round the mean value, its greatest amplitude averaging 0.8 year. Finally he is led to the conclusion that, underlying the ordinary sun-spot period of about eleven years, there is another prominently marked cycle of more than three times its length, namely, thirty-five years. Not only does this cycle alter the time of occurrence of maxima in relation to preceding minima, but it is also responsible for changes in the total spotted area of the sun, from one eleven-year period to another. This secular period harmonizes completely with Brückner's well-established period of variation in the climates over the whole earth, and with Richter's observed variations of Alpine glaciers.

THROUGH RUSSIAN TURKESTAN.

À travers le Turkestan Russe. Par Hugues Krafft. With 265 illustrations from photographs by the author, and a map. Paris: Hachette. 1902. 4to.

This is a beautiful book to look at, without and within. It is finely bound, well printed on paper comfortable to eye and touch. Its heliogravure and in-text illustrations are perfect works of reproduction from uniformly good negatives. As a book to be read, to be learnt from, it is less praiseworthy; is, in fact, somewhat thin—the notes of a tourist rather than the observations of a traveller—pleasantly written, indeed, lucidly arranged, but not thorough in any respect. Yet with such and so many fine illustrations the text is of admittedly secondary importance. The plates with accompanying notes would have justified the volume's existence, and if the reader chooses to regard the text as mere notes to the plates, he will have small further cause for hostile criticism.

Turkestan (Russian and Chinese), and all the broad fesse of territory that traverses the great Asiatic shield between Siberia above and the Indies below, is a country of deserts and oases, of great plains and high mountain ranges. Perhaps in no brief phrase is the spirit of the region better expressed than in

> "With me along the strip of herbage strown
> That just divides the desert from the sown."

It is the juxtaposition of watered oases and desert settings that the traveller remembers as the essential quality of the land—the swift exchange of fertility for barrenness. No photographs and few descriptions can translate this effect for an untravelled reader. The long, burning desert must be traversed in physical weariness before the joy of the oasis can be known; and the confinement of the oasis must be experienced before the delightful freedom of the desert and the steppe can be realized. The true life of central Asia is in the exchange between "desert" and "sown." Turkestan,

in this book, is all oases, all fertility, an umbrageous land, a garden full of houses, mosques, and ruins. Neither desert nor steppe enters its pages. There are none of the great expanses, blistering under the sunshine or swept by bitter winds, that the old travellers before railroad days made familiar to us in the tales of their sufferings. Nor are we shown many mountains in this region of ranges, only a peak or two in the background of Samarkand. We look in vain for the great glaciers, for the splintered rock-walls and mighty bastions of Turkestan's fortress enceinte. None of these things appear. The traveller went by train and stopped only at populated resorts, the centres of the larger, fertile areas; it is only of them, therefore, that he can tell us.

He chats pleasantly about the new Russian settlements beside the ancient cities, like the cantoonments in India, "toujours encadrés de végétation." Tashkent, he says, is most European, Samarkand prettiest. He chats, too, about the old cities, whereof Tashkent is the biggest, Samarkand the most utterly destroyed, in that awful three days of Russian fury about which so little was ever said. The old arts, we learn, are rapidly fading away, the old handicrafts disappearing, just as the bazaars are being knocked down to make way for wide straight open streets. Fortunately, the bazaars of Bokhara are still intact and beautiful as of old, but their day will come soon. Our grandchildren will hardly have a chance, in any part of the East, to behold the wonder of the ancient Oriental places of trade thronged with folk in all manner of costumes, and stricken by shafts of sunlight through holes in the roof. In the old independent days the turbulent little states of central Asia had their courts and their khans; and in each city was a fortress palace. Only the palace of Kokand remains, a poor thing, built crudely in the old style in mid-nineteenth century. The lost palaces in their day were doubtless splendid. Tamerlane lived in style, one may be sure; but of Tamerlane's abode no trace remains. There is a modern fort on its site.

In mosques and mosque ruins we are more fortunate. There are mosques of several kinds—ordinary places of worship, tomb-mosques, and university mosques (called Madrassahs). The university mosques were the most famous and the biggest, for, under Tamerlane and his fifteenth-century successors, Samarkand was made a great centre of Mussulman learning, and still retains living traditions of the sort. These great buildings—mosques of the three sorts—were far more numerous once than they are now. The earth has shaken many of them down in its uneasiness. Great overthrows have happened in late years and others are impending. There is the wonderful university mosque, Bibi Khanum, for instance, built by or in the time of Tamerlane out of the spoils of India. Little more remains of it but heaps of débris and one great arch, like New York's new cathedral in its embryo stage. Some day New York's cathedral will be a ruin in its turn—let us hope a ruin as venerated and as picturesque as Bibi Khanum. Who has not heard of the Gur Amir, wherein Tamerlane lies amidst his family and near the holy man whose words he reverenced? A superb blue dome, melon-ribbed, covers them. Some distance away is Shah Zinda, a royal cemetery or assemblage of tomb-mosques, built by Tamerlane and his successors of the fifteenth century. The three mosques of the Rigistan—the great square of Samarkand—must also be mentioned, one built in the fifteenth, the other two in the seventeenth century, showing a marked decadence. These are the buildings best illustrated in this book. We would gladly have sacrificed a number of the photographs of "ladies not in society" which follow, for more views of these splendid buildings, and especially for details of their wonderful decoration, now so rapidly falling into decay. All these mosques are built of gray, crude brick and adorned at important points with decoration of colored tiles. This was the style of Persia, borrowed by Iran from Mesopotamia, and first invented in ancient Babylonia.

If you wish to find what was the true local style of architecture, it is not to these royal buildings you must turn, but to the mosques of the smaller towns and villages. They are built of brick and have no tiles, but depend for decoration upon the porticos and galleries of wood attached to them. The Ferghana mosques of this type remind our author of certain Buddhist temples of China. To us they are strikingly reminiscent of the village mosques of the Hindu Kush and Karakoram valleys, such as one finds as far south as the ridge bounding the Vale of Kashmir and as far east as the Buddhist margin in Little Tibet. We were struck by the contrast between these and the Buddhist buildings, when erected within a few miles of one another. These small wooden and mud-brick mosques are in the true Central Asian style, faintly reminiscent of Greek buildings, one might say, but doubtless of purely local and independent origin. Their characteristic feature is a long wooden portico or veranda, running the whole length of the front of the edifice. Within, the roof is supported by rows of wooden columns, often remarkably slender and rather fantastically shaped, supporting beams and lined parallel to the portico. These little buildings, surrounded and overshadowed by trees, stand generally beside the small open place which is all the village can spare for assembly in the midst of its precious area of cultivable ground.

It is a great pity that the descriptions of mosques in this book are in no case accompanied by plans. The descriptions themselves are too vague to be of service alone, and the photographic illustrations, however beautiful, do not suffice for complete information. It is a further misfortune that the book is not supplied with an index. Such accurate information as it contains is so scattered about that the reader who thinks himself likely to refer to the volume at any future time is compelled to make a rough index for himself as he reads. To sum up, the book is a beautiful thing to look at, and a valuable body of fine photographic records of certain centres of population in Russian Turkestan, but it is neither profound in its learning nor wide in its observation of men and art. Still, it is a book for a book-lover to buy.

THE BOOK OF THE COURTIER.

The Book of the Courtier. By Count Baldesar Castiglione. Translated from the Italian and annotated by Leonard Eckstein Opdycke. With seventy-one portraits and fifteen autographs reproduced by Edward Bierstadt. Charles Scribner's Sons. Pp. xiv, 439.

If the literary tastes of an age are as typical of it as its creative impulses or the great works of literature which mirror its various life, the future historian may find it not unworthy of his notice to consider the attractiveness of the Renaissance for the more exquisite of contemporary minds. The last thirty or forty years may, indeed, be said to have witnessed the "rediscovery" of the Renaissance, much in the same way as the Middle Ages were rediscovered by the earlier Romanticists of the century that has just passed. In the impulse given to this new interest, scholarship has done its share, but, in English-speaking countries at least, the name of Walter Pater must be associated with those studies which have tended more and more to give to this enthusiasm somewhat of the nature of an esoteric cult. The aristocratic temper of the times, the taste for luxury, the growth of the courtly spirit, and the new scientific ardor—all marking a reaction against the democratic ideas of the Revolution—have found in the period alike of Ariosto and Titian, of Machiavelli and Galileo, a reinforcement of their most intimate spiritual and æsthetic needs. Some of the typical books of the Renaissance have assumed anew the splendor and fame of classics, and of none is this more true than of the 'Cortegiano' of Castiglione. The Elizabethan version of Sir Thomas Hoby has been twice reprinted within a year, and a new English rendering, with annotations and a profusion of illustrations, is now presented to cultivated readers by Mr. Opdycke.

The 'Cortegiano' is a dialogue, in which the family and the retinue of the Duke of Urbino discuss the qualities of the perfect courtier. What is a courtier? What accomplishments should he possess? What is the purpose or aim of courtiership? These are the questions which the courtly interlocutors, the sprightly Emilia Pia, the Duchess Elisabeth Gonzaga, Giuliano de' Medici, Bembo, and a score of others, discuss and argue after dinner. Here the dialogue form is no mere Platonic or Ciceronian convention of the age, but gives the required opportunities for individual characterization, for *nuances* of thought and expression, and, in short, for all the artistic qualities which make of a mere social treatise a delicate and permanent work of art. These qualities are apparent in the most cursory perusal of the book itself, but some historical explanation is essential before the general reader can assume the point of view of the interlocutors, and find a more than perfunctory interest in a discussion of the courtier and of courtiership.

Each age, considering the eternal problem of the individual's relation to his social environment, develops its own ideal of perfect manhood, and more often leaves to a critical age the problem of formulating it. For secular society in the Middle Ages this problem is simple. There knighthood expresses the highest aspirations of social life. The infinite gradations of feudal society offered no common basis for individual perfection, and in the knight mediæval chivalry developed a visible symbol of ideal manhood. Forming part of a warrior class, the knight's virtues are martial virtues, courage, magnanimity, loyalty, courtesy; and of

all these honor was the touchstone. But, being a child of his age, and therefore of the Church, the knight was not merely a soldier but a Christian soldier, and chivalry borrowed from religion some of its external rites and some of its sanctified spirit. By his profession called to all parts of the world, he was essentially a wanderer, and hence arose the bastard forms of knight-errantry; but his home life was passed at the feudal courts, and from this social life there sprang the finer developments of courtesy and the system of courtly love.

Here we find the point of departure for the ideal of the next age. Feudalism, with its innumerable courts and varying gradations of society, had disintegrated through internal corruption and external action. Political concentration was the result, and the countless castles of feudal lords ceased to be important social and military centres. The life of every state was focussed on a single prince and a single court, and here alone were the opportunities for individual preferment. These are historical commonplaces, but they indicate, as is well known, the conditions under which the courtier, the ideal man of the Renaissance, gradually developed. No longer merely a warrior like the knight, the courtier yet inherited some of the martial virtues of chivalry; and the knight's amusements, which had naturally been martial, became the fashionable amusements of the courtier. With more leisure, and a single centre of interest, it followed that the courtly graces, courtesy, chivalrous love, and the like, were still further developed, and loyalty to the prince took the place of devotion to a cause. The religious element was eliminated, and, more important still, Humanism added the further grace of culture, and fused the ideal of honor with the classical ideal of glory.

As knighthood had virtually been the creation of mediæval France, so courtiership was a product of Renaissance Italy, and of this ideal the 'Cortegiano' is the complete and certainly the noblest expression. The courtier, according to Castiglione, must be proficient in letters and arms, and in all the graces and accomplishments which form part of a refined and cultivated society. He must be a lover, for love is one of the highest virtues. All this and more he must be, not solely for the sake of his own individual *virtù*, but more especially for the sake of the prince at whose court he is a courtier. This is the ideal element in Castiglione's conception—that virtues and accomplishments alike are nothing unless, working through the prince, they accomplish moral ends. But this is perhaps the dream of an idealist, and the courtier as a type is rather a man in the universal cultivation of his accomplishments, like Castiglione himself—soldier, poet, courtier, and diplomat.

The 'Cortegiano' was published by Aldus in 1528, and its success was immediate, not only in Italy, but throughout Europe. The reason is simple. The Renaissance was just beginning to permeate Transalpine life, and the two gates to the Renaissance were Humanism and the courtly spirit. That Humanism alone was not sufficient is shown by the case of Germany, where there was no true Renaissance because the courtly spirit was absent. The Renaissance in Spain virtually begins with Boscan's classical rendering of the 'Cortegiano' in 1534, in France with Colin's in 1537, in England with Hoby's splendid version in 1561. Sir Philip Sidney consciously modelled his life according to the ideals of the book, and, like Castiglione, he represents the full flower of courtiership in its harmonious development of graces, accomplishments, and virtues.

Sidney and Castiglione were both beautiful spirits, yet there never dwelt on sea or land a courtier like that in the mind of either. Such a courtier was, after all, an ideal, and many cultivated men felt how far short of this ideal fell the actual life of courts. Spenser, in one of the noblest passages of the 'Faerie Queene' (book ii., canto iii., stanzas 37-42), rejects some of the essential elements of the courtly ideal, returns to the finer spirit of chivalry, and recommends the quest of honor "in woods, in waves, in warres." The ideal no longer chimed with men's conceptions of perfect manhood, and Spain, in introducing new modes of honor, courtesy, and love, was next to add its share to the spiritual life of Europe. It is beyond our province to show how the gallant succeeded the courtier; how the former was first completely developed in France from the beginning of the seventeenth century; and how, at the Hôtel de Rambouillet and the salons of other women, the martial element was almost wholly discarded for an ideal of gallantry and culture. It is also beyond our province to show how, after dominating social life for two centuries, the gallant succumbed to the democratic influences of the Revolution, and in the new conception of the "gentleman" England added to the ideal of honor, which expresses what is due to ourselves, the nobler ideal of duty, or what is due to others. Of all these shifting conceptions of knight, courtier, gallant, and gentleman, the second alone has received adequate expression in an interpretative work of literature—the ideal of the courtier in the 'Cortegiano' of Castiglione.

Nothing of all this, however, appears in Mr. Opdycke's volume, which suffers in this way from the lack of an introductory essay. The critical apparatus at the end of the book consists of an excellent bibliography, a two-page life of Castiglione, and about a hundred pages of notes. The last, which are chiefly explanatory of the proper names in the text, make us wonder what Mr. Opdycke conceives to be the duty of an editor, or what audience he is addressing, when he thinks it necessary to devote rather long notes to such names as Catullus (p. 346), Sappho and Pindar (p. 391), Aristotle (p. 414), Aspasia (p. 361), Procrustes, Diomed, and Antæus (p. 412), Prometheus (p. 408), Themistocles, Lycurgus, Hasdrubal, Sardanapalus, Henry VIII., Pygmalion, and a host of other names familiar to the schoolboy of twelve or thirteen. Fully a third of the annotative matter is thus made up, and much of the rest is of rather flimsy scholarship. Serafino dell' Aquila (p. 373) is, according to Mr. Opdycke, "identified by Cian" as a forgotten Neapolitan poet, in the same way, we suppose, that Mr. Opdycke himself has "identified" Aristotle and Henry VIII. The 'Hypnerotomachia Poliphili' (p. 405) "is said to be," what every scholar ought to know it is, a mixture of Humanism and allegory.

Mr. Opdycke succeeds better as a translator. His rendering is fluent and at times not without grace; literally, it is accurate, but the accuracy is of the sort that can most easily be attained with the aid of an Italian reviser. The delicate shades of Castiglione's thought and expression Mr. Opdycke does not often render. A single example of this (pp. 288, 289) will suffice. In Bembo's splendid Platonic rhapsody on love towards the end of the 'Cortegiano,' man is credited with three modes of perception: sense, from which springs the physical appetite, which man has in common with brutes; reason, from which arises choice (*elezione*), man's natural condition; and intellect, from which springs will, by which he is able to commune with the angels. Naturally in the mediocre stage of reason, man can choose between brute sense and angelic will; or, as Mr. Opdycke translates the passage, "Being by nature rational and placed as a mean between these two extremes, man is able at will [*per sua elezione*], by descending to sense or mounting to intellect, to turn his desires now in the one direction and now in the other." "At will" is not an inaccurate translation of the original phrase, which means more strictly "by his own choice"; but it should have been perceived how the use of the word "will" creates a confusion of the second stage, or choice, with the third stage, or will.

He must be a churlish and ungrateful reviewer, however, who would not thank Mr. Opdycke for the taste and care exhibited in other than scholarly matters. This is a beautiful book, bound in full vellum, stamped in gold with Castiglione's seal, charmingly printed by the De Vinne Press on the richest paper, and profusely illustrated with autographs and an interesting array of contemporary portraits. Binding, typography, proof-reading, illustrations, and general arrangement alike display the zeal and the discretion with which the book has been put together. The illustrations really illustrate, and in themselves make the book worth possessing. But this, after all, is the mood of dilettantism—to consider the externals with infinite care and to allow content and spirit to take care of themselves. Or, as the English poet for whom the 'Cortegiano' meant most, has put it:

> "For like a child that some fair book doth find,
> With gilded leaves or colored vellum plays,
> Or, at the most, on some fine picture stays,
> But never heeds the fruit of writer's mind."

Lincoln's Plan of Reconstruction. By Charles H. McCarthy. McClure, Phillips & Co. 1901.

For many reasons the present time may be regarded as favorable for writing the history of Reconstruction. The anger and hatred aroused by the civil war have burned themselves out, and sectional jealousy and hostility have ceased to be openly manifested, even if they have not altogether disappeared. At the same time, there are many living who personally recollect the controversies of that troubled period, and who will read whatever is written of them with enlightened and critical interest. We cannot, however, agree with Mr. McCarthy in the view that his work, so far at least as concerns any logical exposition, conducts the reader over untravelled ground. In fact, we are rather inclined to regard the work as peculiarly weak in logical exposition, while the ground over which it conducts us, even if untravelled, is to a great extent not worth travelling over. The space devoted specifically to the exposition of

Lincoln's plan is small, and we learn neither how far that plan was deliberately thought out, nor whether Lincoln would have been likely to modify it because of opposition in his party.

We should have been glad, also, to have some comparative estimate of the different plans of construction, some criticism from a constitutional point of view, in place of the minute detail of incidents which, while exciting enough, are not indispensable to our comprehension of the period. Mr. McCarthy hardly appreciates the distinction between history and annals, and he has not acquired the art of condensing debates. A great deal of space is wasted on utterly unimportant things. Why should we have to read that "Mr. Perry of New Jersey spoke of the duration of the war, predicted the general bankruptcy which its great expense would bring about, and calculated that in eleven years the cost of the war would equal the assessed value of property"? Or that "Fernando Wood declared that he had listened with interest and pleasure to words of conciliation from the South," and was followed by Mr. Le Blond of Ohio, whose speech added nothing of value to what had been said before? Our thoughts are not widened by information that "the speech of Mr. Williams was marked by considerable fluency," or that Senator Trumbull replied to Senator Howe, who was not in his seat. We might as well be told what o'clock it was, and whether the day was sunny. History is not written in this way.

We comment on these defects with severity because they spoil what might have been a good book. They fatigue and distract the attention. Had Mr. McCarthy reduced the bulk of his extracts one-half, he would have doubled their value. Had he worked over his notes, and given us their real meaning, we should have seen clearly the great issues, instead of having to grope after them. Nevertheless, we must acknowledge our indebtedness for a useful compilation, and when we have winnowed out the chaff, we find a substantial residuum.

The theory adopted by Mr. Lincoln was necessary, in his opinion, as a logical justification of the war. In his view, to assert that the Southern States were no longer in the Union, was to make "the fatal admission that States, whenever they please, may, of their own motion, dissolve their connection with the Union." He did not think the Union could survive that admission, saying: "If that be true, I am not President; these gentlemen are not Congress." He justified his emancipation proclamation as an act of war, but did not think that Congress had any Constitutional power to prohibit slavery in the States. Hence he was anxious to have slavery prohibited by Constitutional amendment, and, in order to obtain the required number of votes, he desired to restore loyal government in some of the States. This he thought he could do under the clause which declares that the United States shall guarantee the States a republican form of government, and he used his power as commander of the army to set up governments whose *de-facto* existence might in the rapid course of events cause their *de-jure* weakness to be overlooked.

According to this theory, a government established by a very small minority of the people of any State might be republican in form. In his message of December 8, 1863, Mr. Lincoln said, "An attempt to guarantee and protect a revived State Government, constructed in whole or in preponderating part from the very element against whose hostility and violence it is to be protected, is absurd." But he was willing to allow those who had participated in the rebellion, with certain exceptions, to take an oath of allegiance and of recognition of various acts of Congress and Executive proclamations, and thereupon to take part in restoring republican government. He announced that whenever, in any State in rebellion, one-tenth of the number of voters at the general election of 1860 should form a government which was in harmony with this oath, he would recognize it as the true government of that State. Governments created after this plan in Tennessee, Louisiana, and Arkansas were held by him to be legal. He appears to have considered that, as Commander-in-Chief of the Army of the United States, he might, while war continued, guarantee republican government without the aid of Congress.

President Johnson, it may be observed at this point, tried to carry out this theory after the war was over, and did what Lincoln had called absurd in practically allowing new governments to be formed by "unreconstructed" rebels. The fact that peace had been restored made the theory untenable, if Congress refused to concur with the President. The "guarantee" of the Constitution was to be given by the United States, and not by the Executive alone; and while the Executive guarantee might suffice in time of war without confirmation by Congress, it was void in time of peace when repudiated by that body.

Probably Lincoln would have had his way if he had lived; and it might have been better for the South and for the negro. He was determined that slavery should be ended, and would have been glad to have the suffrage given to such of the blacks as were qualified. In the end, political power gravitated to the most powerful class, and the Congressional scheme of reconstruction came to grief. When the former rebels finally grasped the reins of government, they had been exasperated by the rule of the "carpetbaggers," and took revenge on the blacks, who had been demoralized by having the responsibilities of government thrust upon them. In fact, the Congressional theory was impracticable. If the Southern States had "committed suicide," and were to be treated as conquered territory, they ought to have had a military government. Governments by minority rule could not be stable, and they required military support from the beginning.

Lincoln's governments, it is true, had this weakness, but they would have served the great end of getting rid of slavery by formally Constitutional methods; and this was what Lincoln chiefly desired. Probably he overestimated the number of loyalists in the South; but it is at least conceivable that the conservative elements in society might have taken up the work of government in better spirit on the close of the war than after a period of outrageous misrule. No doubt there would have been trouble with Congress; but Lincoln was so strong with the people that he might have prevailed. He had displayed his policy; he had practically vetoed a Congressional measure adverse to it; and he had been triumphantly reëlected. His death and the folly of his successor gave his opponents their opportunity; but the manner in which they used it does not fall within the scope of this book, and need not here be reviewed.

Memoirs and Letters of Sir James Paget. Edited by Stephen Paget, One of his Sons. With portraits and other illustrations. Longmans, Green & Co. 1901. Pp. 429.

The name of Sir James Paget has been familiar as that of the great surgeon and perhaps the pioneer pathologist of England, whose writings marked the transition from the older to the newer doctrines, such as had then been heard of in Germany alone. Few persons, however, have been aware of the interest which attaches to his early years, and the portion of the above Memoir which treats of this period is that which is likely to excite special attention in the lay reader. Although Paget's life was passed so largely in seclusion and was barren of striking social or political "events," the narrative of it reveals to an unusual degree the building up and working out of a remarkably fine, strong character and a very keen intelligence. The history of privations borne with constant and cheerful patience, of unremitting and well-directed labor, and of final success—not unsought, indeed, but which would not have been welcomed had it not been felt to have been fairly won—is warmed and lightened by the story of domestic problems, sorrows, and joys. As one reads, it is easy to feel himself bodily transported to the quiet quadrangle of St. Bartholomew's, where so many of Paget's early years were spent, and impossible not to feel morally lifted to a high plane of thought. Paget's characteristics of strength, purity, fine intelligence, and balanced judgment were shared by his parents and his brothers, so that this was, in a great measure, a case where the stem was strong because the root was sound and the stock good. Nevertheless, it would be to miss the moral of his life if we overlooked the extent to which incessant training and cultivation were responsible for each stage in the continuous progress.

Born in 1814, at Yarmouth, he spent the first four and a half years of his medical life as apprentice to Mr. Costerton, an active and energetic local practitioner, and next went on to London, intending to pass a limited period in further study at St. Bartholomew's, one of the several London medical schools which were then on a relatively poor basis, and were struggling with difficulties within and without to maintain their footing. Here, even while still a student, he worked so ardently that he soon became recognized as a fit candidate for recognition and for promotion, which, however, was long and weary years in coming. Meantime his father's resources failed, and it devolved more and more upon the sons, themselves hardly earning more than enough for a bare subsistence, to keep the family in comfort, and to pay the debts which soon arose. Not until 1861—that is, until nearly thirty years after Paget's first

arrival in London—were these debts finally paid. That whole period was one of continuous struggle, lightened by many encouragements, nevertheless, and by the growing recognition of Paget's merits among scientific men. He had, too, the unfailing help of Miss North, to whom he was engaged for eight years, and whom he married so soon as his appointment to the wardenship of the collegiate department of Bartholomew's Hospital (a department instituted largely at his solicitation) gave him the means of looking a little further ahead. From first to last his relations with his wife were remarkably happy. "No human wisdom," he says, "could have devised a step so wise as was this rash engagement," contracted at a time when his future, to judge from outward signs, was wholly uncertain.

It is noteworthy that the ambitious young student began very early to observe for himself, and throughout his life he prized the memory of the influences that had fostered this tendency. As an amateur botanist, he had acquired the habits of careful observation and preparation of specimens which enabled him to put the museum work of St. Bartholomew's on a new basis, and had gained a confidence in his power to *see* things which other people only *looked at*, that remained one of his strongest scientific characteristics, and made him the first English pathologist of his day. From being Curator of the Museum he was advanced, after several disappointments, to a lectureship, then to a wardenship, finally to the assistant-surgeoncy. At last there came the long anticipated period of private practice, with its early years of patient waiting and its final shower of honors. During the seven years after obtaining his diploma, his largest income from practice was £23 13s., and not until he had been a surgeon sixteen years had it ever exceeded £100. Finally, it began to rise, and went on increasing until it had exceeded £10,000 a year. Then, he says, he gave up operating, and it fell at once to £7,000 and slowly decreased further.

The lighter phases of life found little place in the midst of Paget's arduous toils. Even as a boy he had cared more for his botany than for his sports, and in his maturer years the pleasures of London went on around him almost without his knowledge. Nevertheless, he had a disposition sensitive to pleasure as well as to pain, and was ever equipped for using each moment of leisure for enjoyment of every quiet sort that came to his hand. In later years, when for the first time his income allowed him to take vacations, his pleasure in the sight of foreign lands was unbounded. Obscurely as he lived when young, the wiser men whom he met picked him out very early as one bound to win in the race, and, before he died, his list of friends, both personal and scientific, was long and varied.

This volume consists largely of an autobiographical memoir, written when Paget was about seventy years old, and of extracts from his letters. The contributions made by his son carry on the story interestingly and intelligently, except that the changes of style and the overlapping are occasionally somewhat disconcerting. The make-up of the book, and the illustrations, are admirable.

Frederick the Great on Kingcraft. From the original MS. With reminiscences and Turkish stories. By Sir J. William Whittall, President of the British Chamber of Commerce of Turkey. Longmans, Green & Co. 1901. Pp. viii, 236.

The title of this book is of the kind that reverses the real contents. What we actually have in it is a very living, garrulous, and amusing account of an English family in the Levant, how they came to be there, what happened to them there, and how Turkey and the Turks strike the writer. Early in the last century his grandfather settled in Smyrna and married the daughter of a French refugee. Through his marriage he was brought into close relations with France and French refugees of all shades of respectability and politics, and especially with Marshal Savary, the Duke of Rovigo, who was thrice in hiding in his house in Smyrna. On another side this marriage made him the head of a Venetian family which dated back to the twelfth century. With such ramifications and connections, the life even of an English nineteenth-century merchant could be eventful enough. And so, between the wars of Napoleon, the perpetual Turkish squabbles, and the revolutionary movement of 1848, it was in this case. Of it, however, we are not given here any detailed chronicle, but simply such scraps of reminiscence as an old man might jot down or tell over for the amusement of his descendants. So Richard Cobden and the Sultan Abd al-Aziz, Fouché and Savary, the Prussian navy when it consisted of a single vessel and had a Dutch admiral and a Swedish captain, and, above all, Turks—from brigands in simple to High Commissioners *in excelsis*—roll along anecdotally through these pages. The effect is of after-dinner talk, and has salt of its own. The later part drifts over, as such talk naturally would, from anecdotes to tales, edifying and otherwise, scraps of folklore, of Turkish popular wisdom in parabolic form, and, especially, of selections from the stories of the undying and inexhaustible Khoja Nasr ad-Din, the national butt, buffoon, and philosopher of the Osmanlis—Handy Andy, Aesop and Rabelais, with a squinting brain. All goes to illustrate Turkish thought and ways, and for that will be much more to the purpose than many learned volumes. Only, Sir William Whittall must not think that his stories are new outside of Turkey. They have probably all appeared already in English in some form or other. Nor must he think that his facetious Yankee had necessarily plundered him of the story of Hassan. The hunchback who falls among fairies, dances with them, shouting a chant of the days of the week, and is rewarded by losing his hump, is a *lieu commun* in folklore, from Brittany to China.

But, for all this, the title has a fair justification. On the cover the Prussian eagle glares and gasps in gold, and, certainly, part of the book is calculated to make all loyal Prussians glare and gasp too. The notorious 'Matinées,' truly or falsely of Frederick the Great, have often been printed before, but never by an acknowledged editor from a known MS. with an authenticated genealogy and with *bona fides* guaranteed. Up to a certain point, the *bona fides* in this case cannot be doubted. That Savary in 1816, when he was in hiding at Smyrna, showed the grandfather of the present editor a MS. of the 'Matinées' and allowed him to take a copy of it; that he professed to have stolen that MS. from Frederick's apartment at Sans Souci when he was there in 1807 with Napoleon; that the present edition is a faithful reproduction of that MS.—all that may be accepted as certain. The point is the *bona fides* of Savary. To his credit is to be set that he was ashamed of the theft, and exacted a promise that the MS. should not be published in the lifetime of either of them; also, that he evidently believed it to be a MS. of the first importance, for he carried it with him even when an otherwise empty-handed fugitive. If Savary was himself deceived, then the problem remains how this MS. came to lie in the writing-table drawer of Frederick, in his apartment where everything had been religiously respected since his death.

So far only, this book puts the controversy on a new footing. The matter of internal evidence remains as before. We have still our choice between Carlyle's immaculate Frederick and the author of these cynical and worldly-wise counsels. Carlyle's hero-king, it is true, is fast fading as his Cromwell has faded, and it is not now so difficult to bear up against the lurid rhetoric and ponderous sarcasm with which he assailed the 'Matinées' and all who were foolish enough to read them. Rhetoric passes, but facts remain, and the present edition undoubtedly adds to the burden of facts adverse to Carlyle's conception. And there is, too, the never answered question, Where, in the eighteenth century, was the man who could have created this character of a pseudo-Frederick?

The Ethnic Trinities and their Relations to the Christian Trinity: A Chapter in the Comparative History of Religions. By Levi Leonard Paine, Waldo Professor of Ecclesiastical History in Bangor Theological Seminary. Boston: Houghton, Mifflin & Co. 1901.

Like our author's 'Critical History of Trinitarianism,' this is an astonishing book to proceed from the Professor of Ecclesiastical History in a theological school which has had the reputation, heretofore, of being unspotted from the world of modern thought. The heresy of Professor Gilbert's book, which cost him his chair in the Chicago Theological Seminary, was inappreciable in comparison with the heresy of Professor Paine's, which compares the Christian Trinity with the ethnic trinities, to the former's partial disadvantage; views the Bible as a purely human collection of imperfect writings; regards the wonder-stories attaching to the birth and death of Jesus as deserving no credence; assigns to Jesus a purely human nature; and, in short, denies to Christianity any supernatural character whatsoever. Interesting and important as the book is, considered as the individual product of a learned orthodox professor, it is much more so considered as a sign of the times, for it is no isolated product, though it is marked by a preëminent frankness and audacity. The wonder is how long the process can continue without some realignment of the theological forces such as that which followed a similar condition of affairs some eighty years ago. The trouble seems to be that there is not now any party relatively

orthodox enough to put on the screws and squeeze out the heretics.

Quite apart from its significance in this regard, and its demand for a new Christianity that shall be wholly unsectarian and undogmatic, Professor Paine's study of the various ethnic trinities is of great value, and the more entertaining because he does not resist the temptation to give an occasional side glance across from India and Persia to the "social trinity" which is a late device for saving something from the general wreck. We have, first, a "Preliminary Survey," which is a brilliant summary of the main positions of the book. This is followed by a chapter on "The Special Causes of the Rise of the Ethnic Trinities." We have here a denial of any primitive sense of the sacredness of certain numbers, in particular the number three, or any crude perception that the godhead has necessarily some kind of three-fold character. It is at this point that the "social trinity" is denounced as "the most illogical and fatuous" of all trinitarian theories. There is certainly, thinks Professor Paine, no evidence that such considerations had weight with the framers of the ethnic trinities. His own persuasion is that these were naturalistic, and that generative and mediatorial ideas were dominant in them. This opinion is worked out carefully and persuasively. A very interesting particular is that of the occasional transposition of the different members of these trinities. The son, especially, has a tendency to assume the father's place. We are advised that the Christian Trinity has exhibited a similar tendency, the Son displacing the Father in popular reverence, and (in Roman Catholic worship) the Virgin gaining on the Son and quite obliterating the Holy Spirit. We read of a Roman Catholic movement, now on foot, to place the Virgin formally on a level with the members of the Trinity, making of it a quaternity of which the Virgin would practically be the head.

The Hindu Brahmanic trinity has a chapter to itself; so, too, the Persian Zoroastrian. The Zoroastrian development is particularly interesting. Professor Paine does not incline to the opinion of Darmesteter that Zoroaster was a mythical character. Here the trinitarian development was never quite complete. The idea once commonly entertained by Avestan scholars, that the groundwork of Parseeism was monotheistic, is discredited. Polytheism is the soil from which trinitarian conceptions naturally spring. We have an apparent exception in Christianity, but it is only apparent, because the Christian trinity was a Greek idea engrafted on a Jewish stalk. Moreover, its determinative antecedent, the Plotinian trinity, was hardly an ethnic trinity at all, but a private speculation, at once deriving from Plato and distorting him.

A chapter on the Greek Homeric trinity is of surpassing interest, especially where it treats of the Odyssey, to which Professor Paine brings a glowing admiration. In the Iliad we have a second trinity emerging from the background of a first, and in the Odyssey we have a third. In a comparison of the Virgin Mary to Athene, we have one of Professor Paine's most characteristic remarks. It is that "the same historical process which overthrows the faith in Mary as the virgin mother and the queen of heaven must overthrow the kindred doctrine of Christ's deity." The Greek philosophic trinities next receive consideration, the Plotinian having a chapter to itself. Professor Paine's intellectual engagement with this, while holding it to have been the baleful source from which the Augustinian (pantheistic) trinity derived, is a charming paradox. It is here that Professor Paine parts company with Prof. A. V. G. Allen and others, contending that what they regard as the merit of Athanasius was the defect of Augustine.

In a second division of his book, Professor Paine considers the relations of the Christian trinity to the ethnic trinities. The external relations were through Judaism to the Avesta, and through Justin, Origen, Athanasius, Augustine, "first of all philosophical thinkers," to Greek philosophy and mythology. Coming to the internal relations, resemblances between the Christian trinity and the ethnic trinities are found to be more in evidence than differences. Of these last, "the raising of Christ from the position of a man to that of a divine being" is marked as the most radical. Everything up to this point has had for its object the discrediting of the forms of thought which are elaborated with so much intellectual sympathy. The promise of the future, we are assured, is that of an undogmatic gospel of the spirit, independent of all creeds and forms, a gospel of love to God and man. Love, truth, and freedom are the constitutive members of its glorious trinity. We read in conclusion of "The Unreadiness of Christendom for the Fulfilment of its Mission," and of the perils that beset organized Christianity. These are predominantly ignorance and insincerity. It is a terrible indictment that is brought against the ministers and churches under the second head. What Coleridge called "orthodox lying for God" has perhaps never before been so cruelly alleged by an accredited teacher of orthodoxy in one of its theological schools.

The great modern event for Professor Paine is the publication of Darwin's 'Origin of Species' in 1859, and there is something slightly dogmatic in his treatment of evolution, as if it were already a finished doctrine to which nothing can be added and from which nothing can be taken away.

British Vegetable Galls: An Introduction to their Study. By Edward T. Connold, Honorary General Secretary to the Hastings and St. Leonard's Natural History Society. Illustrated with 130 full-page plates and 27 smaller drawings. E. P. Dutton & Co. 1902.

This work belongs to a type of useful popular treatises much more common in England than elsewhere. The author tells us in his preface why he was constrained to write, and his statement applies to almost all similar compositions:

"For several years past it has been one of my favorite pastimes to collect vegetable galls and to observe the many peculiarities connected with their growth. The accumulation of a large number of specimens and a mass of notes resulting from these researches has awakened the desire to arrange them in book form."

The volume embodies, therefore, the results of a large amount of loving labor by one who does not profess to be a specialist. It is plainly designed to present in an attractive form the facts and phenomena which have chiefly interested him. With the abundant resources of modern photographic reproduction at his command, he has made an uncommonly pleasing volume. It is not easy to see in what way the illustrations could have been improved. They are very telling and are beautifully printed. The text in some places is unnecessarily obscure. For instance, p. 36, we read "Fungi, or Fungus. Of the known species none is excessively destructive as regards its ravages upon the food of man." Unquestionably the author alludes here to the fungi which produce gall-like distensions of vegetable tissues; but as the statement stands, it is incorrect, for it leaves out of account the many blights, mildews, rusts, smuts, and the like, which constantly threaten the plants yielding human food, and refers only to the few fungi which injure the fruits of our plums, and so on. But in a non-scientific book such statements are not likely to lead the reader astray; he can make use of the charming plates for purposes of identification of the gall-like objects gathered in a stroll.

Galls present many points of extreme interest, and well repay the trouble of examination. Take, for instance, the commonest case of all: an insect pierces the tissues of a twig or leaf, and there deposits an egg. The effrontery of the procedure is beyond words. The plant is helpless and can make no resistance at all. It has had thrust upon it a foreign object, with which it has nothing in common, either in structure or in mode of life. Now what the plant undertakes to do is to treasure the egg or eggs in a most unselfish fashion. It freely contributes of its substance material to construct a temporary lodging-place for the foundling, whereas the foundling cannot, either in its early or its later stages, contribute anything to the plant. Instead of being of any use to the plant, so far as is known, the presence of the egg and of the hatched egg is a disturbance of no small degree in the life of the attacked twig or leaf. Some of the gall-homes, as they have been called, are of great complexity, and in not a few instances they may be fairly regarded as beautiful, both inside and out.

It is to be hoped sincerely that Mr. Connold's charming plates of the more common of the British galls may lead to a wider popular interest in the galls of our own trees and shrubs. Certainly those who are inclined to collect and study them can, with this book in hand, have no excuse for not understanding how to collect and how to photograph them. In fact, the directions err perhaps a trifle on the side of being too explicit, if this is ever possible. For example, there are photographs of "a long strip of black cloth . . . serving the purpose of a pincushion," and of "the padding of cloth upon which specimens are to be pinned," and of "string, useful in numerous ways," and of "three ordinary wooden broom-handles fastened to a five-inch triangular platform," and also of "a two-foot length of broom-handle which slides up or down through the top platform."

Romance of the Renaissance Châteaux. By Elizabeth W. Champney. Illustrated. G. P. Putnam's Sons.

Two winters ago we had from Mrs. Champney the 'Romance of the Feudal Châteaux,' and now there comes to us the second series, whose title is given above. Each book contains a number of full-page illustrations—the present one, six photogravures and about thirty half-tones; the subjects of each class being partly architectural and partly the reproduction of paintings, either portraits or modern pictures of history or legend. The latter will be, of course, well known to most visitors. They are such as Lenhardt's "Michelangelo at the Death-bed of Vittoria Colonna," Delaroche's "Assassination of the Duc de Guise," and the frontispiece, Comte's "Meeting of Henry III. and the Duc de Guise" at the foot of the staircase at Blois, with the scowling partisans on either side contrasting with the smiling ceremonial of the two chief actors. As for the architectural views, to a person who has made a study of such things the greater number will be fairly well known, but perhaps not all.

Though the book pretends to have to do with châteaux, it has little to say of them, dealing exclusively with fantastical legends of the curious epoch during which the Renaissance châteaux were built. Whether the telling of the tales is left to an imaginary Jean Goujon, the sculptor, or is ascribed directly to some modern housekeeper who opens an old mansion for the authoress, the stories are equally devoid of historical truth. The same remoteness from it which makes it possible to speak of the two great cardinals whose statues kneel in Rouen Cathedral as if they had "Amboise" for their family name, appears in every page of the book. There is no illusion; and if that be undesirable, then there is no historical accent. One thing or the other: we should either be transported to the sixteenth century, and believe that the story is being told us by the contemporary who seems to be telling it, or else it should be told from the point of view of the modern who looks with some admiration, but with more critical disapproval, upon the daring and artistic, but cruel and treacherous, nobility with whom these legends deal. The whole effort here is to make the stories seem ancient, to seem of the sixteenth century indeed; and a singular effort at antique simplicity of language in the English is used to correspond in a way with the supposed French of the time—but nothing could be less convincing. The stories can be read by one who will have romance at any price; otherwise the book can be disregarded except for the illustrations as above.

BOOKS OF THE WEEK.

Abernethy, J. W. American Literature. Maynard, Merrill & Co. $1.10.
Bacon, B. W. The Sermon on the Mount. Macmillan. $1.
Ballagh, J. C. A History of Slavery in Virginia. Baltimore: The Johns Hopkins Press. $1.50.
Bridge, Norman. The Rewards of Taste, and Other Essays. Chicago: Herbert S. Stone & Co.
Bruce, W. S. The Formation of Christian Character. Edinburgh: T. & T. Clark; New York: Scribners. $1.25.
Burnet, Joannes. Platonis Res Publica. Henry Frowde. $1.25.
Campbell, D. H. A University Text-Book of Botany. Macmillan. $4.
Carmichael, Montgomery. The Lady Poverty. London: John Murray; New York: Tennant & Ward.
Catalogues des Tableaux de Maitres Anciens et Modernes, Composant la Collection de Feu M. Edmond Huybrechts. Anvers: F. Delehaye & Fils; New York: Arthur Tooth & Sons.
Clodd, Edward. Thomas Henry Huxley. Dodd, Mead & Co. $1.
Colcock, Annie T. Margaret Tudor. Frederick A. Stokes Co. $1.
Comments of a Countess. John Lane.
Condict, Alice B. Old Glory and the Gospel in the Philippines. Fleming H. Revell Co. 75 cents.
Darwin, Charles. On the Origin of Species. Unit Library. 11d.
Davidson, A. B. The Book of the Prophet Isaiah. (Temple Bible.) London: J. M. Dent & Co.; Philadelphia: J. B. Lippincott Co.
Davidson, Augusta M. C. Translations from Lucian. Longmans, Green & Co. $2.
Deveron, Hugh. Songs of the Sahkohnagas. Abbey Press. $1.25.
Eldridge, J. L. What Think Ye of Christ? Abbey Press. $1.
Elwell, J. B. Bridge: Its Principles and Rules of Play. Scribners. $1.25.
Emerson, R. W. English Traits. Unit Library. 5d.
Emerson, Edwin, jr. A History of the Nineteenth Century Year by Year. 3 vols. P. F. Collier & Son.
Fitch, Clyde. Capt. Jinks of the Horse Marines. Doubleday, Page & Co. $1.25.
Flagg, Isaac. A Writer of Attic Prose. American Book Co. $1.
Forsyth, P. T. Religion in Recent Art. Edwin S. Gorham. $3.
Four-Place Logarithmic Tables. H. Holt & Co.
Fowler, W. W. More Tales of the Birds. Macmillan. $1.
Fragments from Fénelon concerning Education. Edwin S. Gorham. 50 cents.
Gauss, K. F. General Investigations of Curved Surfaces of 1827 and 1825. (Translated by J. C. Morehead and A. M. Hiltebeitel.) Princeton (N. J.): The Princeton University Library. $1.75.
Goldsmith, Oliver. The Vicar of Wakefield. Unit Library. 9½d.
Grafton, C. C. Pusey and the Church Revival. Milwaukee: The Young Churchman Co.
Greenleaf, Sue. Liquid from the Sun's Rays. Abbey Press. $1.50.
Grove, Lady. Seventy-one Days' Camping in Morocco. Longmans, Green & Co.
Hale, E. E. The Man without a Country. (Birthday edition.) The Outlook Co. $1.
Hastings, Gilbert. Siena: Its Architecture and Art. London: The De la More Press. 3s. 6d.
Helps, Arthur. The Spanish Conquest in America. Vol. II. John Lane. 3s. 6d.
Hempel, Walther. Methods of Gas Analysis. (Translated by L. M. Denis.) Macmillan. $2.25.
Hill, F. T. The Minority. Frederick A. Stokes Co. $1.50.
Hope, Laurence. India's Love Lyrics. London: William Heinemann; New York: John Lane.
Hulbert, W. D. Forest Neighbors. McClure, Phillips & Co. $1.50.
Jeremias, Alfred. The Babylonian Conception of Heaven and Hell. London: David Nutt. 1s.
Judd, D. H. That Old Kitchen Stove. Abbey Press. 50 cents.
Kensington, Cathmer. Glenwood. Abbey Press. $1.25.
Ledding, J. D. Garden-Craft Old and New. John Lane.
Mabry, W. D. When Love is King. R. F. Fenno & Co. $1.50.
Malone, J. S. Guided and Guarded. Abbey Press. $1.25.
McDaniel, H. P. War Poems, 1861-1865. Abbey Press. $1.
Monroe, Forest. Maid of Montauk. William R. Jenkins. $1.
Naval Actions and Operations against Cuba and Porto Rico, 1593-1815. Boston: Military Historical Society.
Nott, C. C. The Seven Great Hymns of the Mediæval Church. New ed. Edwin S. Gorham. $1.
Poynter, E. Frances. Michael Ferrier. Macmillan. $1.50.
Reed, Edwin. Bacon and Shake-speare Parallelisms. Boston: Charles E. Goodspeed. $2.50.

A NEW BOOK ON NATURE STUDY

Hodge's Nature Study and Life

By C. F. HODGE
Of Clark University
With an Introduction by Dr. G. STANLEY HALL.
List Price $1.50

GINN & COMPANY, Publishers,
Boston New York Chicago London

ANY BOOKS, OLD OR NEW, SUP- plied to out-of-town residents. Questions answered. Orders promptly filled. Liberal discounts. I. BAYLIES, 418 Putnam Ave. (Brooklyn), New York City.

Penobscot Bay.
MAINE.

FOR SALE.—The finest large shore tract in this section left unoccupied and for sale at prices of ten years ago. The property comprises 400 acres of land, with nearly four miles of shore front; has beautiful headlands, cliffs, coves, and beaches. The land is much diversified in character, alternating between heavy woodland and open fields. There is a great variety of beautiful drives through and around the tract. Steamboat landing, with daily communication with Boston, near the property. Most exquisite views of bay, ocean, islands, and mountains everywhere. Islesboro and Castine are within five miles of the land. There are two farmhouses and a pond on the property, and several salmon privileges on the shore. Address
J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

Islesboro, Maine.

FOR SALE.—A nice farmhouse of 8 rooms in perfect repair and order. Splendid situation, facing the Camden Mountains; 4 acres of land, barn and carriage house, nice orchard, and well. Shore privilege and boat landing in front of house. Fine chance to enlarge into a summer cottage at small expense. Price $2,350, if bought before May 15. Part mortgage if desired. Address L. N. GILKEY, Executor,
Islesboro, Maine.

THE NEXT GREAT AWAKENING

By Dr. JOSIAH STRONG,
Author of "Our Country."
12mo, Cloth, 75 cts.

When and how the next great religious revival will come.

THE BAKER & TAYLOR CO., New York.

JUST PUBLISHED.

THE OLD ROYAL PALACE OF WHITEHALL.

By EDGAR SHEPPARD, D.D., Sub-Dean of H. M. Chapels Royal, Sub-Almoner to the King; Author of "Memorials of St. James's Palace." With 6 Photogravure Plates and 33 other Illustrations. Medium 8vo, $7.50.

LONGMANS, GREEN, & CO.
93 Fifth Avenue, New York.

TOVT BIEN OV RIEN

Houghton, Mifflin & Co.'s
NEW BOOKS

PUBLISHED TO-DAY

THE CLAYBORNES

By WILLIAM SAGE, author of "Robert Tournay."
Illustrated. Crown, 8vo, $1.50

A romance of the days of '61, giving a vivid picture of the Civil War. It tells of the winning of a Yankee girl by a young Virginian who had been educated at West Point, and who adheres to the Union cause although his father and brother are fighting for the South.

OPENINGS IN THE OLD TRAIL

By BRET HARTE. *16mo, $1.25*

A collection of nine new tales of life in the West, told with all the delightful charm of Mr. Harte's other stories.

ROMAN BIZNET

By GEORGIA WOOD PANGBORN. *With a Frontispiece. 12mo, $1.50*

A novel which is distinctive in style and plot. The hero is the son of a half-breed and a French Canadian, and the grandson of a German musician. The keen interest of the novel springs from the portrayal of this strangely endowed personality moving among people of conventional ways and character.

IN THE DAYS OF GIANTS

By ABBIE FARWELL BROWN, author of "The Book of Saints and Friendly Beasts" and "The Lonesomest Doll."

With Illustrations and a decorative cover by E. Boyd Smith. *$1.10,* net, postage 11 cents.

Stories of the gods, giants, and dwarfs of Norse mythology, clothed with fresh attractiveness by the lively fancy and humor with which Miss Brown invests the tales. The six illustrations are delightful reproductions of the quaint conceits of these old legends.

SOCIAL SALVATION.

By WASHINGTON GLADDEN, D. D., Author of "Ruling Ideas of the Present Age," etc. *16mo, $1.00,* net, postage 10 cents.

The author considers the relation of the church and pulpit to social questions of the day. He holds that the Christian purpose is a social as well as an individual regeneration, and that the central interest in these problems is the interest of character.

EDUCATION AND THE LARGER LIFE

By C. HANFORD HENDERSON. *Crown 8vo, $1.30,* net, postage 13 cents.

Mr. Henderson regards the chief end of educational endeavor to produce men, women, and children of power, accomplishment, and goodness. He criticises existing conditions and gives a clear indication of a way to a better order.

Books for Summer Reading

HENRY HARLAND'S GREAT SPRING NOVEL:

THE LADY PARAMOUNT

By the Author of "*The* Cardinal's Snuff-Box" (85,000), "Comedies and Errors," "Grey Roses," etc.

WHAT AMERICA SAYS:

The New York Tribune:
"All extremely captivating."
"We delight in him."
"A novel one cannot help enjoying."

The New York Sun:
"A book full of sunshine and sparkle."
"A book without a shadow."

The Baltimore Sun:
"The brightest piece of fiction that we have read in many moons."
"The most brilliant of contemporary novelists."

WHAT ENGLAND SAYS:

The London Times:
"A fantastic, delightful love-idyll."
"Sparkle . . . easy grace of form."
"He is easily first in his own delightful line."

W. L. Courtney (Daily Telegraph):
"An admirable tale—lightness, dexterity, humour."
"Dialogue so light, so amusing, so utterly paradoxical, so clever."

The Daily Chronicle:
"Atmosphere, sunny and coloured."
"Sunny, glittering, romantic, told under the trees to the music of birds and fountains."

*** *Considering the profusion of glowingly appreciative reviews from the critics during the last week, the announcement that the publisher has just printed the 50th thousand will not cause surprise.* **12mo, $1.50**

A Sparkling Veranda Novel

(1) Plot, Thrilling; (2) Style, Fresh. Result: Brilliance.

The London Spectator says of it:
"The reader is given a real feeling of the brilliant sunshine and exhilarating air."

The Story of Eden

By DOLF WYLLARDE

The Chicago Post:
"No competent critic will question its cleverness. There is not only knowledge in the book, not only asseveration, not only experience; there is a lot of fine brain power. It is full of subtleties, intricacies, flavors."

The Story of Eden

By DOLF WYLLARDE

The Brooklyn Eagle:
"It is a brilliant novel, very interesting, full of lively conversation."

The New York Journal adds:
"It is daring but delightful."

The Chicago Record-Herald echoes:
"A daring novel, bold and outspoken."

An Epoch-Making Volume of Poetry

Price $1.50 net. Decorative Cover Design. 12mo.

LOVERS OF POETRY HAVE A FEAST OF PLEASURE BEFORE THEM THIS SPRING and SUMMER IN READING and RE-READING

India's Love Lyrics

Collected and Arranged by LAURENCE HOPE

The London **Athenæum**, in its review of the volume, writte n by one who must be himself a true poet, writes:

"Mr. Hope brings to his task considerable command over various rhythms and a delicate gift of melody and sensuous beauty. His garden signifies the tremulous

IRRECOVERABLE DELICIOUSNESS OF YOUNG PASSION.

Mr. Hope has caught admirably the dominant notes of this Indian love poetry, its delirious absorption in the instant, its out-of-door air, its melancholy. Slender brown limbs stir silently in the garden,

WHERE FLYING FOXES CROSS THE MOON,

in the hot, jasmine-scented jungle among the pink almond blossoms of Kandahar, And always there is the poignant sense of the fleetness of love—a moment's salvage from the flux of time."

India's Love Lyrics

Collected and Arranged by LAURENCE HOPE

DECORATIVE COVER DESIGN. 12MO. PRICE $1.50 NET

A feast of pleasure this Spring and Summer for all lovers of poetry—another Omar, singing love sans philosophy!

THE EQUITABLE

"STRONGEST IN THE WORLD"

J. W. ALEXANDER PRESIDENT — J. H. HYDE VICE PRESIDENT

"What lawsuits grow out of the graves of rich men every day; sowing perjury, hatred and lies among near kindred, when there should be nothing but love." —DICKENS.

The Continuous Instalment Policy of the Equitable does away with any possibility of a lawsuit. It permits a man to practically probate his own will, and to protect any dependent as long as he, or she, lives. He even protects them against themselves, for the money paid under such a policy can neither be squandered nor wasted. It provides a fixed yearly income during the life of the beneficiary, and the Equitable, the strongest financial institution of its kind in the world, is the executor of the will.

For information fill up and mail the following coupon.

New York.

"A lovely picture of the sunny land of France"

ANGELOT

By Eleanor C. Price

Illustrated, $1.50

"A story of people, not of puppets. It is altogether out of the common, and is a pleasure to read. There is much of humor in this story and it is as true as the pathos."—*Philadelphia Telegraph.*

"The situations are real, the dialogue is sprightly."—*New York Journal.*

"Not an historical novel, but a pure romance; a bright, wholesome story."—*Washington Post*

"*The most faithful portraiture of New Hampshire country life that has ever been written.*"

MARY GARVIN By Fred. Lewis Pattee $1.50

The *Baltimore Sun* says—"It contains more elements of interest and is a better written story than either 'Eben Holden' or 'David Harum.'"

The *Syracuse Herald* says—"A story of men and women, and the emotion of the universal human heart."

Thos. Y. Crowell & Co., New York

The Nation.

NEW YORK, THURSDAY, MAY 1, 1902.

The Week.

A Commander-in-Chief who has to send orders to his subordinates 11,000 miles away is bound to fall into awkward situations; and President Roosevelt is more to be pitied than blamed for the miscarriage of his wisely conceived purpose to prevent the punitive expedition against the Moros of Mindanao. His telegraphic correspondence with Gen. Chaffee amounts to this:

Gen. Chaffee: "I propose to send a column of 1,200 men to Lake Lanao."

President Roosevelt: "That would be a mistake. Don't let the men leave the coast."

Gen. Chaffee: "But the men have already started.

President Roosevelt: "Very well, let them go."

As we say, that has a most embarrassing look for the Commander-in-Chief, but we see no help for it. He is bound to take the word of his division commander when the latter is on the spot, and the spot is half-way round the globe. That is the military moral. The political moral is simply the old Philippine puzzle—what on earth are we doing in that Moro galley, anyhow?

The mere fact that President Roosevelt countermanded the punitive expedition shows that we have learned something in our three bitter years of schooling in the Philippines. We are not so terribly anxious now to uphold our prestige in the archipelago, if it means a needless and bloody war. If such orders had been issued to Otis as were sent to Chaffee—though so unfortunately late—there would have been no war in Luzon. That there may be now a general war in Mindanao is only too likely. If there is, it will be the result of a perfectly insensate proceeding on Gen. Chaffee's part. As a mere piece of skilful management, the settlement with the Moros by the tactful diplomacy of Gen. Bates was by far the most creditable thing we have done in the Philippines. The policy pursued was to let the chiefs alone, provided only that they would acknowledge our flag. They are polygamists, but we kept a blind eye for that. They have slaves, but we looked the other way. We paid them a subsidy to keep still and not bother us, and thought ourselves, as we were, lucky to get off so easily. Now comes Gen. Chaffee with the rough soldier's idea of showing the heathen who is boss, and threatens to bring on a general war with the wildest and most formidable inhabitants of the archipelago. The reason assigned is that two native murderers have not been produced, and that the dattos would not keep their appointments with the American General. We can wink at polygamy, can stomach slavery, and can pay over our tribute like any Spaniard of them all; but if it comes to treating us with personal disrespect, why, blood must flow.

"Hell-Roaring Jake," so Mr. Stephen Bonsal informs us, is the name by which Gen. Smith is known among his army intimates. If his private conversation is more gruesome than the military orders which, it is now undisputed, he gave in Samar, he fully deserves the sobriquet. Indiscriminate slaughter of non-combatants and the laying of the whole island waste—that is what the counsel of an American general admits to a court-martial that he ordered. He may yet offer the defence, as Major Waller did, that he was only executing bloody instructions which came to him from his superior officers. If, however, Gen. Smith can be shown to have been guilty without orders of these frightful violations of the laws of war, these clear infractions of the "Instructions for the Government of Armies of the United States in the Field" (known as General Orders, No. 100), these unspeakably fiendish barbarities, then we say that he ought to be shot. Military law would justify such a punishment for such crimes; and unless our national conscience is seared with a hot iron, it will cry aloud for the sternest justice upon an officer who has outdone Spanish savagery. Suppose that, four years ago, on the eve of the Spanish war, a dispatch from Havana had even hinted at practices by a Spanish general so atrocious as those now coolly admitted by an American general—why, we should have rent the skies with our indignation. Yet the moral law has not changed in the meantime, and God still requires innocent blood at the hands of murderers, be they men or nations.

The letter of instruction sent by Gen. Chaffee to "Hell-Roaring Jake" when the latter was put in command of the brigade operating in Samar will be relied upon as a part of the defence in the court-martial of the latter. One paragraph especially is quoted as a justification of the orders given by Smith to Waller. Chaffee said:

> "I have all the time thought that we do not appreciate the fact that we are dealing with a people whose character is deceitful, who are absolutely hostile to the white race, and who regard life as of little value, and, finally, who will not submit to our control until absolutely defeated and whipped into such a condition. It is to our interest to disarm these people, and to keep them disarmed, and any means to that end is advisable."

This is an instruction from a superior to a subordinate officer, not merely to deal severely with enemies in arms, but to exterminate a people because they are "deceitful"—that is, they will not disclose to invaders the places where they keep their arms. In order to get their arms away from them, Gen. Chaffee says any means is not only admissible, but advisable. Of course "killing everything over ten" is one such means, and Gen. Smith will be prepared to show that it is the very best means to the end. Gen. Chaffee may himself be brought before a court-martial for giving such bloody instructions. If so, he may point to the fact that the contents of his letter to Smith was known to the War Department, and was at least tacitly approved. One of the dreadful sayings of "Hell-Roaring Jake," which was known at the War Department for more than a year, and was never questioned, was that "neutrality must not be tolerated on the part of any native. The time has now arrived when all natives in this brigade who are not openly for us must be regarded as against us." This means, Suspect everybody, and kill everybody whom you suspect.

President Roosevelt's military right to order Gen. Funston to die with all his Philippine music in him is doubtless beyond dispute, unless it could be held that silence, in the case of a man like Funston, is one of those cruel and unusual punishments forbidden by the Constitution. The Kansan Brigadier had been having such a good time losing his temper and loosing his tongue about the Philippines. But he ought to take the President's rebuke as a really necessary step in his somewhat neglected military education. Taciturnity is a characteristic trait of great soldiers. Moltke was silent in seven languages, and Funston can begin by being speechless in one. So we hope he will wear his gag gracefully. We do not see that his military glory, such as it is, will be dimmed by his reprimand. The Duke of Wellington was once twitted in Parliament with "never yet having entered into a contest with Englishmen in which he was not beaten." Funston's case is similar. He simply did not know how the moral sense of the country and of the President would be shocked by his insolent attack upon Senator Hoar as a man with "a superheated conscience." Now he knows.

"So far from being in any way a provocation to war, an adequate and highly trained navy is the best guarantee against war, the cheapest and most

effective peace insurance. The cost of building and maintaining such a navy represents the very lightest premium for insuring peace which the nation can possibly pay." Thus spoke President Roosevelt, in his message of last December, and Monday the naval committee of the House brought in their little "peace-insurance" bill of $77,659,000. The additions to the navy proposed are two first-class battle-ships, two first-class armored cruisers, and two gunboats. These are to be added to the 138 vessels already built or building, at a cost of $235,000,000. Such are the burdens of an armed peace, which, as the Pope recently declared in his encyclical, are rapidly becoming as grievous as those of war itself.

The rowdyism of certain officers of the United States navy and marine corps in a public place in the city of Venice has drawn upon themselves the attention of the police, and upon the United States that of other nations. Is it possible that this outbreak is one of the signs of our newly acquired dignity and standing as a World Power? However that may be, it is gratifying to know that we have a gentleman at the head of the Navy Department. Secretary Long says that, if these men have committed an infraction of the law in Venice, they must suffer the consequences of their acts. They have been sentenced to prison for no very long period, but sufficiently to put a stigma upon them, and after they have "served time" they will be liable to court-martial at home. The penalty visited upon them by the Venetian tribunal is mild by comparison with the summary method of punishing Italians for infractions of local law in Louisiana. Our civilized and enlightened method is to promptly lynch the offenders and any others found in the neighborhood. Then, when the Italian Government demands satisfaction, we assure the Ambassador of the aggrieved nation that we treat his countrymen as well as we do our own. How could he ask more?

We gravely apprehend that President Roosevelt is defeated in his Cuban policy, and that Congress will pass no bill in aid of Cuba before the date for setting up the native government, May 20. This seems to us the unmistakable inference from the situation at Washington. The Senate was pictured for months as feverishly eager to enact an adequate measure of Cuban relief. It could hardly wait for the House to pass even a mangled bill. Well, such a bill passed the House a fortnight ago, and the Senate Committee has only provided for further and indefinite delays. Senator Teller's resolution to investigate the holdings of Cuban sugar by the Sugar Trust was distinctly understood by Administration organs to be offered as an obstructionist and dilatory move, yet it has been adopted by the Committee, and the faint "hope" is now expressed by Senator Platt that he may be ready to report a bill in three weeks or so. This is a square defeat for the Administration, and we fear that it will produce alarm and dejection in Cuba, with consequences that will be bad, both politically and financially. The worst of it is that the President has so procrastinated, through being imposed upon by the assurances of leading Republicans in Congress, that he cannot now make a public appeal for generous treatment of Cuba with any effect. Protection and prejudice have been too subtle and too strong for him; and in spite of the noble words of his message about what we were bound in "honor" to do for Cuba, we are going to do just nothing at all for the fledgling republic.

Attorney-General Knox is rapidly becoming a mighty hunter before the Lord, his principal game being Trusts. Of course, he is doing but his simple duty under the law in ordering proceedings against the Beef Trust, since the statute expressly directs him to proceed as he has done; but his activity is all the more noteworthy because it was unexpected. Mr. Knox had been set down —very unjustly, it is now evident—as the special friend and representative in the Cabinet of unscrupulous corporations. His confirmation in office, it will not be forgotten, was stoutly opposed on the ground that he had been an attorney for the Steel Trust and other large concerns. This weighs little now, except as it perhaps yields one reason for his unusual skill in drawing complaints against illegal combinations. Granting that a lawyer has employed his talents in advising corporations how close to the Anti-Trust Law they may sail, he would be just the man, if so minded, to detect and punish those which had imprudently gone over the line. Certainly Mr. Knox's success in at least frightening the corporations, and spiking the guns of the Democrats, illustrates the power of specially trained wits in meeting specially trained wits.

Dear food in America, caused whether by Trusts or taxes, comes by a strange coincidence at the same time that the new tax on bread in Great Britain is causing an outcry. The Chancellor of the Exchequer has already been proved a false prophet as to the effect of his duty on wheat and flour. Despite his predictions to the contrary, the millers and bakers have promptly raised their prices. They may have done so unnecessarily, and the grumbling which is certain to come may be uncalled for, but important political results will follow, nevertheless. That the new tax is unpopular in Parliament may be inferred from the falling off of the Government's majority in the Commons. It sank about fifty below the normal when the vote on the second reading of the corn duties was taken. The Liberals are taking up the new issue with avidity, and there is even talk of reviving the Anti-Corn Law League. This will probably not be done, unless the war should go on and the corn duties go higher. Then, indeed, the old battle might have to be fought over again, and of some future Prime Minister it might be said, as it was said of Sir Robert Peel, that he "gave his fellow-countrymen abundant and untaxed food, the sweeter because it is no longer leavened by a sense of injustice."

A study of the platform adopted by the Republican organization in Indiana shows the difficulty which politicians now encounter in formulating issues and in drawing lines between the parties on such issues. The Indiana Republicans are "gratified that Cuba will soon pass to the control of her own people"—although Senator Beveridge, who "sounded the keynote," took pains to point out that this control amounts to little, in view of our "suzerainty" over the island. The Indiana Republicans also "favor just and liberal reciprocal relations between the United States and the republic of Cuba"—but they refuse to tell what would be "just and liberal." The House recently passed a bill for a petty 20 per cent. reduction of duties. Does this meet the demand, or should the rate be 40 or 50 per cent.? As to the Philippines, the Indiana Republicans hold that American sovereignty must be respected; favor the establishment of absolute peace, and the erection of civil government, and "insist that the people of the islands shall be given increased participation in the administration of their domestic affairs, as they shall demonstrate intelligence and capacity for self-government." Of course, they are "opposed to all Trusts or combinations of capital whose purpose or effect is to restrict business or control prices," and, of course, they "especially denounce those whose tendency it is to increase the cost of living and the necessaries of life." They favor "legislation to prevent such abuses," but they do not point out what new laws are needed. They "adhere to the policy of protection," but they favor "such modifications of tariff schedules as, from time to time, are required by changing conditions," and they are ready to accept "carefully guarded reciprocity arrangements" with other countries wherever such arrangements can be made "without interrupting our home production." But whether at the present time any modification of tariff schedules is required, or whether the reciprocity treaties now pending before the Senate are "carefully guarded" and

would not "interrupt our home production," they refuse to say.

We doubt if there was ever a case where the first important State convention of the dominant party under a new Administration presented so colorless a statement of party faith. Liberal pensions, Chinese exclusion, the keeping out of undesirable immigrants, the suppression of anarchy, opposition to combinations which increase the cost of living, justice and liberality toward Cuba, peace in the Philippines—what opposition party could make an issue on such vague deliverances as these? The difficulty rather is to arouse any enthusiasm in the dominant party over a programme so indefinite. There is one feature of the Indiana platform, however, which affords ground for rejoicing—the plank on the sectional issue which is not there. Representative Crumpacker has been for years the chief advocate of the scheme for cutting down the representation of the Southern States in Congress and the electoral college because the negroes are not allowed to vote, and he was urgent for the endorsement of the idea by this convention. But the managers refused him the slightest encouragement, and kept all reference to the South out of the platform. This may be considered the formal rejection of the attempt to revive the sectional issue, and its worldly wisdom is past question.

The attention of all New Yorkers has been so largely concentrated upon some defects in the Police Department, and two or three "breaks" in other branches of the Government, that people have overlooked the excellent work which is being done almost everywhere by the Low Administration. The most important thing of all is the fact that we have honest men at the heads of the various departments, and that as a rule their honesty is supplemented by ability. They are saving money, and they are accomplishing greater results with smaller expenditures. Efficiency is being restored in branches of the service which had become demoralized—notably the Street-Cleaning Department. In the Water Department the new Commissioner has discovered a system of fraud in meter-inspection, and has instituted a reform by which he estimates that $600,000 a year will be added to the city's revenues from supplying water. The Building Department in the Borough of Manhattan has practically been revolutionized, as an agency for securing protection to life through a fair enforcement of the law. Equally commendable are the host of minor reforms which have already been introduced in the Charities and Health Departments. Each of these great departments has to do with the well-being of a host of people who had been shamefully neglected and abused under Tammany. The conditions in the various institutions under the Charities Department were shocking when Mr. Folks took charge, and the list of changes for the better already made means an immense gain in public decency and in the comfort of helpless wards of the city. The Health Department has been equally zealous in work for the protection of the public at large. In short, the spirit of civilization now governs in the conduct of the city Government, and the beneficent effects are becoming more plain every week. It is already clear that New York is to profit immensely from the Low Administration.

Corporation Counsel Rives's revised opinion on the advertising ordinance now before the Board of Aldermen shows a change of mind as gratifying as it is sudden. There seems, in fact, to have been a lack of clearness in his earlier opinion, owing to the confusion of restrictive with prohibitive legislation. Mr. Rives now holds that to limit sky-signs to a height of ten feet and to prescribe their material and construction would not exceed the charter powers of the Board of Aldermen. It is to be hoped, then, that the Ware ordinance now under consideration may soon become law. The Corporation Counsel's second opinion maintains that restrictive legislation concerning bill-boards and similar structures finds its justification only under the ordinary police powers of the city—that is, all hoardings which are not proved to be prejudicial to the public health, safety, or morals have a right to existence, and are not fairly amenable to restrictive legislation. This view at least is conservative, and it still leaves considerable play for reform. It is wholly consistent, too, with the very elaborate and well-considered report of the Chicago Master in Chancery on the bill-posting ordinance of January, 1901.

That the French elections would result in a substantial vindication for the Ministry was a foregone conclusion. If on the reballoting the Government does as well in the 173 arrondissements in which there were no choices on Sunday, as it has done in those in which Deputies received their majority, M. Waldeck-Rousseau will bring to the Palais Bourbon a majority of certainly a hundred. Let it be remembered that, when he became Premier, three years ago, he could hardly command a majority of a score, and the measure of his present success is fairly shown. Yet the mere fact that there was nearly a third of "no-choices" shows that the Progressists and other Republican factions very generally failed to rally to the Ministry. Paris is traditionally hostile to the Government, and the failure to elect, on the first ballot, a single Ministerial Deputy in the capital city is rather an annoyance than a serious check. The Government will still have to deal with that nondescript and brawling faction which has rallied under the banner of Nationalism, and, with reduced political power, retains possibilities for mischief-making. The solidarity of the country districts in favor of the Government is the most gratifying feature of the elections, for it shows that nothing like a real monarchical feeling survives in France, and that the Royalists and Imperialists are just about as important in France to-day as the followers of "Charles the Martyr" are in England.

Ominous or promising, according to point of view, are the repeated reports of industrial disturbances in Russia. Not so long ago a strike would have been out of the question, and manufacturing enterprises were of the most primitive character. In 1885 there were in European Russia, excluding Poland and Finland, 62,801 manufacturing, mining, and industrial establishments of all sorts, with a laboring force of 994,787, and an annual output valued at 1,121,040,270 rubles. In 1893 the establishments, under the influence of incorporation and consolidation, were 39,029, but the people employed had increased to 2,098,262—more than double—and the output had risen to 2,839,144,000 rubles. Meanwhile the growth of the textile industries has made manufacturing centres of Moscow and other ancient cities. When the peasant becomes a mill-hand, he is perforce aroused from his century-long stupor, and he faces the stern facts of modern industrial life. The mere bringing together of masses of people about the mills means the accumulation of inflammable material. The powers that be have nothing so much to fear as an enlightened and restless prolétariat, and such a class is actually forming in Russia, if slowly. Even more alarming are symptoms of political discontent among the peasantry. The Moscow correspondent of the London *Times* writes that the bread riots in Little Russia are of a political nature, and not, as has been supposed, a simple expression of agrarian distress. It is said that educated Russians have been spreading the Socialist propaganda widely among the peasantry. Though it is too early to estimate the importance of the movement, it is clear that its very existence constitutes a menace to the present order of things in Russia. The strength of the empire is the ignorance and loyalty of the peasants. When these peasants demand political rights, the empire will be put to the test, and it will be seen whether Nicholas II. has that personal force and that ability to see beyond the influences of the court which characterized his grandfather.

FINANCIAL SIGNS OF THE TIMES.

A survey of the financial situation, at this time, reveals a singularly interesting state of things. Abroad, the Boer war, for nearly three years a millstone on the neck of British industry, is apparently about to end. The production of Transvaal gold, cut down from $9,000,000 per month in 1899 to almost nothing in 1901, has risen already to two million dollars monthly, and will reach its figures of three years ago when the Cape railway is no longer clogged with Government transportation. The Continent, in advance of these new supplies of gold, is slowly recovering from its trade prostration.

In the United States, industrial prosperity continues at a rate hardly anticipated even in the hopeful forecasts contributed to the *Evening Post* on the 31st of last December. The basic iron market is in a state of unparalleled activity, with production at much the highest rate in history; the monthly output, by the last returns, running some 200,000 tons, or not less than 15 per cent., beyond the same period in 1901. Railway earnings, as now coming to hand, average fully 7 per cent. above last year, with an increase of barely 2 per cent. in mileage. Trade payments through the clearing-houses of interior cities are running 15 to 20 per cent. beyond 1901, and 30 to 40 per cent. beyond 1900, and their decrease in the East is wholly attributable to the relatively smaller stock speculation. The first of the harvests, winter wheat, will possibly be deficient, owing to the drought; but the loss may easily be repaired with good luck in corn and by the spring wheat acreage. The currency seems to be secure; the revenue is abundant, and evils arising from such sudden expansion in the Treasury surplus as tightens the money markets, are in a fair way to be corrected by an intelligent revenue-reduction law.

On the surface, then, almost all indications would appear to point to continued prosperity and industrial happiness. How does it happen, this being so, that many of the most careful and experienced watchers have expressed misgiving over the situation, and are looking, from time to time, for signs of a possible coming storm?

Such misgivings, we imagine, whether well or ill founded, base themselves wholly on the current experiments with capital. We are not among those who discourage the bold and aggressive use of capital at a time of trade prosperity. It is an axiom of sound finance that such a period, when credit is easy, capital ready for investment, and the profits of industry substantial, is the hour for bringing to a head plans for further developing the country's industrial capacity and power. If it were not done then, it would never be done. But if the structure is to stand in all its parts, it must be soundly built. Its foundations must be laid on solid rock, which will not give way in days of trade reverses, harvest failures, and hard times. The first question asked by those who scan with the eye of experience a movement of prosperity is, To what extent has fixed capital been adjusted to the emergencies of the future?

Examination of the present position, from this point of view, discloses some reasons for legitimate disquiet. A glance at the industrial prospect shows a capitalization of existing prosperity so enormous as to create grave doubts as to the ability to sustain its full obligations in the future. With scarcely an exception, the country's industries have been reorganized in corporate form with liabilities on an absolutely unheard-of scale. It is not pretended that the issues of stocks and bonds, poured into Wall Street during the short span of five years since the last depression, have been limited by the mere ratio of increased profits. Immense as that increase has unquestionably been, the ratio of increase in capitalization has trebled and quadrupled it. Vast possibilities of further expansion may reasonably be assumed for the still more distant future. But the liabilities of scores of corporations have been adjusted, not merely to what is actually earned to-day, but to the full expectation of what the next decade may further yield. The suggestion that disappointments may occur before this goal is reached, is rather commonly received with incredulity. The way in which this "discounting" process is being managed is also somewhat striking. Share capital can bridge an interval of reaction, or even calamity; but the characteristic symptom of the past twelve months has been the increase by hundreds of millions in that part of capital which must pay its regular fixed charges if the company is to weather insolvency.

We have stated, we believe, in moderate language a condition which every intelligent man with his eyes open knows to exist. There is no one in the community who cannot add some pertinent fact to the recital. We mention further only this—the scattering of the money of corporations on so lavish a scale that it fairly staggers the observer's mind. Sums which would have equipped a great corporation a dozen years ago, and which might do so again, are, month by month, disbursed outright to syndicates for the mere service of guaranteeing the sales of new securities. To some extent, this may be prudent and necessary finance; but it is calculated to make old-fashioned spectators stop and wonder who is to foot the bill.

How far these huge sums of money, poured out with so free a hand, have themselves been raised by credit operations, is another question suggested by the returns. The answer is not altogether easy to find. The expansion of loans at credit institutions may mean a dozen different things, according to the collateral that lies behind them. Taken by themselves, the figures show that in two years the loans of the New York city banks have been enlarged by $119,000,000, and those of the trust companies in this State by $223,000,000. This is an increase of no less than 30 per cent. We believe this expansion, in a single community and in so brief a period, to be not only utterly unparalleled in history, but wholly unexplainable, except on the theory that the capitalization of our huge new corporations still rests for the most part on the support of bank credits.

We are writing in neither a pessimistic nor an alarmist vein, and with full understanding of the strong points of the situation. But the signs of the times to which we have called attention are sufficiently striking, in our judgment, to demand the most careful watching by people who have the interests of the community at heart. One quite reasonable conclusion from an examination of this sort is that our banks ought to take very early measures for the better adjustment of their reserve resources to their deposit funds. For weeks, our clearing-house institutions have averaged only a trifling fraction over the 25 per cent. minimum assigned by the National Banking Law. This is scarcely wise when the deposits of these institutions, in addition to the funds of individuals, savings banks, and interior banks that keep a cash reserve at home, now include $100,000,000 or thereabouts from the trust companies, which is the only cash reserve maintained by those companies against their own $792,000,000 deposit liabilities. It is also our opinion that so novel and perplexing a situation makes it imperative that the trust companies should, like the banks, publish their weekly statements, and let the financial public know the state of their credit fund. The time for application of prudent reforms in such directions is a time like the present—when the industrial skies are clear, the country's business hopeful and prosperous, and the credit system untouched by the breath of doubt.

BENEVOLENT GRABBING.

Senator Lodge complains of his unhappy lot in being compelled to sit out the Senate debate on the Philippine bill. As chairman of the committee having the measure in charge, he is obliged to be present at its dissection by Democrats. The Republican plan is, of course, to pass the bill on the good old principle of addition, division, and silence. They can vote for it, but they cannot defend it; for it is, in truth, an elaborate and complicated plan to do what Gov. Taft told the Philippine Com-

mittee would be absolutely fatal to American rule in the archipelago—namely, to "exploit the islands."

To refresh our memories, and to show the original professions from which the Philippine bill so widely wanders, we will reprint the so-called Spooner amendment to the Army Bill of 1901. This is a record of our intention expressed in law. We would not attempt to pin Imperialists down to unctuous phrases about "benevolent assimilation," which may mean little or much—probably nothing. But here is the actual legislation, the intention enshrined in a statute, which we were told last year was to be the noble charter of our government in the Philippines:

> "Provided, That no sale or lease or other disposition of the public lands [in the Philippines], or the timber thereon, or the mining rights thereon, shall be made; and provided, further, that no franchise shall be granted which is not approved by the President of the United States, and is not, in his judgment, clearly necessary for the immediate government of the islands and indispensable for the interest of the people thereof."

All this was expressly set down as the great principle by which we were to be guided in our Philippine Administration "until the establishment of *permanent* civil government." Yet the Senate bill of to-day, which dares allege no more than that it is "temporarily" for the government of the Philippine Islands, does completely and in every respect what Congress declared a year ago should not be done. Who does not remember the virtuous complacency with which the Spooner resolution was pointed to as an evidence of our disinterestedness? All property in the archipelago, with all franchises, we were to hold as a sacred trust for the inhabitants. American concessionaires were to be unknown in the whole archipelago. Let the unblushing English promoters swarm to their New Jerusalem in Johannesburg; we would show to the world a purer example and loftier motives. That was what we said; now what do we propose to do?

Read the Senate bill, which the Republicans do not wish to discuss at all (and no wonder), and find an answer. It is a bill to allow American exploiters to take everything in sight, and many things out of sight, in the Philippines. After some meaningless preliminaries about a possible future government of the islands, which there is no pretence of setting up for a long time to come, the bill gets down to business, and with minute particularity arranges for squeezing every drop out of the Philippine orange. Sections 11-16 provide for "the lease, sale, or other disposition of public lands other than timber or mineral lands." Timber lands are looked after in section 16, where, under ostensible leave only to "issue licenses to cut timber," and to "cut timber sufficient for a mill site," or to "cut timber to get access to the lands where timber-cutting is authorized," the exploiter's axe is lifted up against the Philippine forests which we promised should be reserved for the natives. Next the bill takes up "mineral lands," and proposes to enact an entire mining code, sufficient to extract all the coal and precious metals in the archipelago without so much as a polite bow to the natives. "Franchises, privileges and concessions" are thoroughly attended to in section 76 *et seq.*, and if any Senator, in the course of the debate, can think of any bit of Philippine property which might possibly escape grabbing under the bill, we do not doubt that Senator Lodge would graciously accept an amendment to prevent the inhabitants from doing what they will with anything that is their own.

The whole thing is a shameless surrender to the exploiters. This Senate bill of 1902 bolts the Spooner resolution of 1901 whole. If Congress was honest in passing that, it cannot be honest in enacting the present measure. Either we were hypocrites a year ago, or are swallowers of our own words now. Nor is it simply a question of consistency and sincerity. The bill is fraught with danger. It ought to be, like the Spooner resolution, attached to the Army Bill, for if it becomes law, it will undoubtedly require the raising of additional troops to keep the Philippines in subjection. This was, as we have said, a point on which Gov. Taft expressed strong convictions to the Philippine Committee. How well grounded were his warnings against the military peril of exploiting the islands, we may see in our recent troubles in Mindanao. There is evidence that they are due, in part at least, to an "American invasion" of exploiters. In the orders issued by Gen. Davis on March 4, he said: "In some extensive regions it is said that the inhabitants wish to remain isolated and to exclude visits from Americans. It is the military policy to endeavor to overcome and counteract this idea, and thoroughly to explore the country." Yes, and the "punitive expedition" necessarily follows. Unless President Roosevelt succeeds in checking these attempts to exploit even the Moros, he will soon have to be calling on Congress for a larger army. Imperialism has now thrown off its mask, as regards the Philippines; and it will be plain henceforth that if there is more fighting in the islands, it will be for the purpose of aiding those who are there, not for the good, but for the goods, of the inhabitants.

THE ADAMS DOCTRINE.

It has long been known, of course, that the so-called Monroe Doctrine really had its birth in the brain of John Quincy Adams. President Monroe had neither the mind to conceive it nor the courage to promulgate it, apart from his illustrious Secretary of State. Ever since the publication of the Adams Memoirs this has been understood by historical students. The English writer, Mr. W. F. Reddaway, for example, whose little book on the Monroe Doctrine was published in 1898, gives it as the result of his researches that "the peculiar form of the Message of 1823 was due to John Quincy Adams"; and adds that "he, and he alone, logically applied it in politics." This is a commonplace with American historians.

None the less, peculiar interest and importance attach to the recent delvings by Mr. Worthington C. Ford in the archives at Quincy and at Washington. His findings he gives us in his brochure, just published, on the connection of John Quincy Adams with the Monroe Doctrine. He has unearthed documents from the Adams manuscripts, and brought out for the first time dispatches from the records in the State Department, which elevate inference to certainty, and which show us the Monroe Doctrine in the act ual making, with a clearness never before attainable. We see now with absolute distinctness what American statesman it was who perceived in the advances of Canning and the communications of the Russian Minister the great opportunity to formulate and announce the principle of the free and independent Americas. It was Adams who asserted the exemption of the New World from political meddling by the Old, and who frankly accepted the logical corollary, that America should keep its hands off Europe. Monroe had so dim a conception of the way in which these two parts of his Doctrine hang together that, in the very message proclaiming it, he was proposing to reproach France for invading Spain, and to recognize the Greeks as an independent nation. This, as Adams protested, would have been a plain interference in questions purely European, and would have been a strangling of the Monroe Doctrine in the cradle by its reputed father. What the prescient Secretary wanted to do was "to make an American cause and adhere inflexibly to that." He, at least, saw how essential to such a cause it was to "disclaim all interference on our part with Europe." The difficulties and mortifications which he experienced in bringing over the timid and easy-going Monroe to his point of view, are minutely explained and illuminated by the writings which Mr. Ford has brought to light.

Behind the Monroe Doctrine lies a political philosophy which it did not formulate. To affirm our desire and intention to maintain a political system on this continent free from any foreign influence, might be only an assertion of brute force, if we had not had some strong and guiding principle determining our ac-

tion. But we had, and by no pen was it laid down more clearly and forcibly than by that of John Quincy Adams. His opening was given him by the Russian Minister, who informed our Government of the purpose of Russia not to recognize the independence of any of the South American republics, and, at the same time, improved the occasion to refer to the "political principles" which the Czar deemed applicable to the case. In this Adams saw both a challenge and an opportunity. "If Alexander could exploit his political principles—those of a brutal, repressive policy—the United States could show that another system of government . . . could give rise to a new and more active political principle." Accordingly, the Secretary of State prepared a draft of "Observations on the Communications Recently Received from the Minister of Russia." It was a paper which underwent much mutilation before the President would allow it to be read to Baron de Tuyl, the Russian Minister. Yet, taken as a whole, it is a powerful statement of the moral and political principles which not merely justify the Monroe Doctrine, but which underlie our very existence as a nation.

One of the omitted parts, now first reproduced by Mr. Ford, is so telling an epitome of our historic polity, and so pertinent a reminder of the paths from which our feet have strayed, that it deserves the widest reprinting and discussion. Here are the words in which the Adams Doctrine, that alone gives life and vigor to the Monroe Doctrine, was set down by that early American statesman who had as vast a hope for the continental expansion of his country as Jefferson, yet who could as little as he think of the flag flying over soil where the truths for which the flag stands are denied:

> "The Institution of Government, to be lawful, must be pacific, that is, founded upon the consent and by the agreement of those who are governed; and each Nation is exclusively the judge of the Government best suited to itself, and no other Nation can justly interfere by force to impose a different Government upon it. The first of these principles may be designated as the principle of *Liberty*—the second as the principle of National *Independence*—They are both Principles of *Peace* and of Good Will to Men."

That utterance is strong enough for all the latter-day sneerers at Anti-Imperialism to break their eye-teeth upon. There spoke the man of mighty ambitions for his native land. There spoke one of the most assertive Americans that ever lived. He would have our rule extend from sea to sea; he would have Cuba come under our flag, but only as her people freely consented; yet our modern expansionists, with their doctrine of brute force, their resort to cruelty and oppression, their disregard of the Constitution and of the maxims which lie at the foundation of it, would clearly have been abhorrent to his soul. It is perfectly certain that if "the old man eloquent" were to return to the floor of Congress, and to be told what the United States is doing in the Philippines, he would make the ears of all who heard him tingle. In his Diary he once wrote: "My speech of this day stung the slaveocracy to madness." If he were alive and speaking to-day, it would be the madness of his Imperialist opponents which he would have to record.

THE OPEN DOOR.

In a speech on the Cuban Reciprocity Bill in the House, a few days since, Congressman Douglas of this city alluded to a matter of great importance in our trade relations with our insular possessions and with foreign countries, which has hitherto received scarcely any attention. It involves the whole policy of the "open door" upon which we have laid so much stress in the adjustment of affairs in the Far East. The subject was touched upon incidentally by Mr. Douglas in these words:

> "We are to-day, as a nation, so far as I can see, most inconsistent, and are doing many things which will likely be prejudicial to our future good and welfare. We have shut the door of Porto Rico to other nations. We have also closed the door in the Hawaiian Islands. We have closed it partly in the Philippine Islands, and propose to do so entirely before long. And now Cuba comes in very likely for the same treatment, and we expect to shut others out; and yet all the time we are talking very loudly about the open door in other directions, as China, Japan, India, Australia, South Africa, New Zealand, etc., and we had better pause and consider. We have also extended (or proposed to do so, although we have no ships to carry the cargo) our coastal laws to all of the possessions mentioned, even to the Philippine Islands, 10,000 miles away, after 1904. The commercial bodies of other nations are giving these matters careful attention."

Almost simultaneously with the utterance of this warning, a colloquy took place in the House of Commons between Mr. Markham of Nottingham and Viscount Cranborne on the subject of exports of hemp from the Philippines. The former asked whether the Foreign Office had any information to the effect that the United States Government had passed an act in relation to exports of hemp from the Philippines whereby a preferential rate had been enacted in favor of America; and, if so, whether, in view of the effects on the rope and other trades of such preferential rates, the Ministry purposed making any friendly representation to the United States Government. Lord Cranborne replied that no preference was given in the Philippine Islands in respect of the duty on hemp exported to the United States, but on the following day he was obliged to correct an error into which he had fallen by assuming that all hemp is dutiable under the United States tariff at a uniform rate.

He said in his corrected statement that Manila hemp is free of duty in the United States, while other hemp is subject to a duty of $20 per ton. The export duty on hemp established by the Philippine Tariff Commission is $7.50 per ton, but under our special Philippine tariff act it is provided that this export duty shall not be charged upon hemp sent to the United States "for use and consumption in the United States." The net result of this arrangement, said Lord Cranborne, is that "the American manufacturer has, in his own market, an advantage of $7.50 per ton over his British competitor." That the American manufacturer's advantage extends to other markets would seem to follow from the fact that we have no machinery for detecting the presence of Manila hemp in cordage, twine, bagging, or any other article of export. Even if it could be detected, the Constitution prohibits duties on exports.

So it appears that by a juggle, which was not generally understood at the time, we have humiliated ourselves before the world, and thrown away all claim to stand as a representative of the "open-door" policy in the Orient or anywhere. The wise arrangements made by Secretary Hay in his correspondence with the Powers in reference to trade in China depend upon the exercise of good faith on our own part. Great Britain was one of the Powers with which the correspondence was exchanged, and now we have been the first one to violate it. We have "put up a game," by which we get an advantage over other nations of $7.50 per ton in the hemp trade of the Philippines and in the industries dependent upon it. The contrivance is rather ingenious. It looks a sharp Yankee trick, and it would be interesting to know who devised it. Of course, the same Congress which passed this Philippine Tariff Bill ought to amend it by striking out the discriminating paragraph, but Congress has so many things to do, and so many blunders to correct, that we can hardly hope for any such action until the trouble becomes menacing. One way to overcome the difficulty, or, speaking more plainly, to checkmate the fraud, would be for the Philippine Commission to repeal the export duty on hemp. Then all buyers would stand on an equal footing.

In the colloquy referred to, Lord Cranborne said that at the time when the Philippines were annexed to the United States, the British Government had sought an assurance that no preferential rates of duty should be imposed which would be detrimental to any old established trades between Great Britain and the Philippines. He did not say what response had been received, but it is within the recollection of American citizens that Secretary Hay and President McKinley expressed their intention to maintain the open door in the Philippines in the same spirit in which they expected and desired that it should be maintained in China. Of course, they did

not assume to bind their successors in office or the Congress of the United States.

When we turn our eyes from the East Indies to the West, we find a similar situation, and one which is already producing anxiety in Great Britain. We have admitted the products of Porto Rico free of duty, while we impose taxes on those of the neighboring islands. These islands produce sugar, which comes mostly to the United States in exchange for our agricultural and manufactured goods. As Porto Rico is a small island, and its production of sugar is relatively limited, the harm that can be inflicted upon our trade with the English and French Antilles, by preferential treatment in favor of Porto Rico, is perhaps not appreciable. But the case is very different with Cuba. The latter is capable of producing all the sugar that the United States now consumes, so that, in course of time, if we should establish and continue reciprocal trade with Cuba and not offer the same treatment to those islands, our imports from the latter would cease. In that case the island governments would probably retaliate by giving preferential rates to Canada, which would be able to supply most of the agricultural products, meats, and fish wanted by them, and to England, which would then supply even a larger proportion of their manufactured goods than she now sends to them. It was in view of this contingency that treaties of reciprocity with those countries were framed and sent to the Senate during President McKinley's Administration. The reason why these treaties were shelved is well known. They should be ratified simultaneously with the proposed treaty with Cuba.

It is not too soon for the commercial bodies of the United States to look seriously at the questions outlined in Congressman Douglas's speech. If we do not observe the open-door policy as regards our new possessions, we cannot expect that other nations will observe it in their dealings with us. We must bear in mind that Great Britain has power to put serious obstacles in the way of our trade with Australia, India, Egypt, South Africa, and many other continents and islands. In China, too, her coöperation with us is necessary in order to keep open the door which Russia is all the time trying to close. Everything points to the need of fair play on our part if we wish to reap the advantages in foreign trade to which our resources, skill, and capital entitle us. We cannot demand the open door unless we maintain it. Our motto should be *do ut des.*

THE RICH AND THE OLD-BOOK MARKET.

The prices at the Lefferts sale recently held in this city were of a kind to sadden the collector whose memory runs back over a score of years. It required two columns in the newspapers merely to record the titles of the books (some sixty out of four hundred sold) which brought more than fifty dollars at the first night of the sale. No one could quarrel with the record price of $700 for Bunyan's 'Holy War,' 1682, for this little volume, like most of the Bunyans, was almost thumbed out of existence by the pious, during the evangelist's lifetime. Some of the really scarce items were even cheap; the 'Songes and Sonnettes' of the Earl of Surrey, 1567, was absurdly low at $1,100, being of the highest rarity. It is not these larger prices, but the fact that book after book in the recent sale brought quite as many dollars as it was worth shillings a few years ago, that gives the collector pause. Why should books often of no especial rarity bring in the auction room twice and three times the prices at which they may still be bought in foreign book-shops, simply because they are sold in New York?

To the confirmed collector there is more than mere chagrin involved in this matter. He regrets less the happier days when he still cut a modest figure at the sales than he deplores the lack of discrimination which pays for books more than they are worth. An Oriental merchant is deeply offended at the ignorant Occidental who pays him his first price. Such an abridgment of the transaction not only is a discourtesy to himself, but argues a lack of interest in his goods. Similarly the wealthy collector who writes to his agent, "Buy No. —," shows an attitude towards books which is precisely that of a housekeeper *de luxe*, who writes down on her December tablets, "Strawberries for luncheon to-day."

If the booksellers about town would submit their marked sales-catalogues for inspection, the number of unlimited or discretionary orders which are registered thereon would plunge all true collectors into still deeper gloom than is caused by the bare facts of the sales. Now it should not be necessary to say that, whatever his wealth, the true collector is never regardless of price. To get the coveted object only at its fair price is his simple duty, to get it far below the price is his most refined pleasure and ultimate triumph. To all these sweetest emotions of the collector, the man who lodges discretionary orders and unlimited bids is oblivious. What wonder, then, that the collector eschews him?—admits him to be a conqueror, a very Tamerlane of the auctions, but insists that he is, after all, a barbarian.

Naturally, dealers look with complacency upon their many clients who bring unlimited zeal and money with very little knowledge to their collecting; for the millionaire to whom a library of rarities is, like a steam yacht, merely an appanage of great wealth, will scrutinize more closely his builders' contracts than his booksellers' bills. But it is a question if this half speculative increase in book values is really in anybody's interest. In the stock market it would be called roundly "dangerous inflation." The dealers are tempted to follow the example of the more careless bidders, to pay more than books are worth or are sure to bring again. Then the fact that book-buying becomes a matter of lavish expenditure attaches it too closely to the general course of prosperity. It certainly is an indignity that books, as has happened, should fail to bring their real value, like wines of the rarer vintages, simply because stocks are sluggish.

But there is a still finer point of ethics involved. Suppose several agents find themselves at a book auction, each with an unlimited bid for a book of no great rarity. The case is not an imaginary one; under these conditions the strangest things have happened. Mr. Bullen's charming "Muses Library" has, while still in print, sold for several times its published price, and the commoner issues of the Roycroft Press have been carried up out of all reason. This is a case where the literal execution of an unlimited order comes perilously near to playing upon a customer's ignorance. In a sense, the agent is bound only to execute the order; in another sense he has a duty, a somewhat delicate one, to enlighten the bibliographical darkness in which a valuable patron is well content to live.

True collectors must extract what comfort they may from a sufficiently painful situation. Many of these books which are captured in humiliating fashion, by the brute force of money, afterwards gain reinstatement through passing to the public libraries, where they serve the general good. Then the more optimistic indulge the hope that these millionaire collectors are not wholly ineducable. Many in the past and many in the present have the finesse of the genuine collector, and merely add to knowledge of books and diligence in searching for them that proper audacity, grounded upon both knowledge and wealth, which every one must applaud. Meanwhile it is the duty of all whom it may concern to bring home to *parvenu* collectors the errors of their ways. To send in an unlimited bid on an object of average rarity is not merely an immoral act. In the eyes of the *cognoscenti* it is much worse than that; it is a capital impropriety—a gross breach of the finer traditions of collecting.

Correspondence.

"THE STATES."

To the Editor of The Nation:

Sir: When referring to this country, our English cousins generally employ one of

two designations — "America" or "the States." The former lacks precision, and savors of arrogance, in restricting to part of one continent a name which belongs to two continents. The latter, though such was not formerly the case, is now applied to no other country than our own, and is at once concise and precise. Moreover, so convenient is it that we Americans, when travelling among British subjects, readily fall to using it. And yet the American who should employ it at home would, by his fellow-countrymen, be looked upon as guilty of using a foreign phrase, of affectation, and of Anglomania. If, however, it can be shown that the expression was first employed not in England, but among ourselves, then the objection to its use by us, based on its supposed British origin, falls to the ground.

That the word "State," in the sense of "body politic," was in common use in this country throughout the seventeenth and eighteenth centuries could be abundantly proved, were it necessary. For a few years even before the Declaration of Independence, though no single colony was individually called a State, the colonies collectively were occasionally referred to as "the American States" or "the States of America." When, therefore, on July 4, 1776, the thirteen colonies ceased to be colonies and were formed into a union of States, it was inevitable that each should individually be called a State, and that collectively they should be called "the United States of America," or "the States of America," or "the American States," or "the United States," or simply "the States." This last term, it need scarcely be pointed out, had long been employed to designate the States of Holland. Thus there was nothing novel in the term itself; indeed, in the correspondence of Franklin and of others, where "the States" are spoken of, it is often only by the context that one can tell whether the reference is to the United States of Holland or to the United States of America.

The following extracts illustrate the three phases through which the term under discussion has gone among ourselves: first, it was applied to the United States collectively; secondly, after the acquisition of Louisiana, it was used to designate the States in distinction from the Territories; and, thirdly, it was again applied to the United States as a whole, but merely as a reflection of British use. The last of the extracts seems to indicate that the term has entered upon a new phase.

"It is true that the king being the head of the American states, and at the same time under the control of the two houses of parliament here [England], a virtual control arises to them from thence over his conduct in America." 1773, June 11, A. Lee, in *Life* (1829), i. 231.

"The following is a Copy of an *infamous Thing* handed about here last Tuesday Evening, and now reprinted to satisfy the Curiosity of the Public. As it is replete with consummate Impudence, the most abominable Lies, and stuffed with daring Expressions of Tyranny, as well as Rebellion against the established, constitutional Authority, both of GREAT-BRITAIN and of the AMERICAN STATES, no one will hesitate in pronounsing it to be the *genuine* Production of that perfidious, petty Tyrant, *Thomas Gage*." 1775, June 8-15, *New England Chronicle*, No. 359, p. 2\1.

"The resolutions being read aloud to the army, the following toasts were given, . . . 1. The American Independent States. . . . The Union Flag of the American states waved upon the capitol [at Williamsburg] during the whole of this ceremony." 1776, May 17, in Wirt's *Life of Patrick Henry* (1818), p. 195.

"Sir:—The Congress having yesterday been pleased to promote you to the rank of Brigadier-General in the Army of the American States, I do myself the pleasure to enclose your commission, and wish you happy." 1776, Aug. 10, President of Congress to A. St. Clair, in *St. Clair Papers*, i. 372.

"St. Patrick's day, multitudes of Irishmen in the streets with green in their hats. Went into the city [London] & called at the N E Coffee house, where I heard that the states had elected Genl. Washington, *Lord protector*." 1777, March 17, E. Oxnard, in *N. E. Hist. & Gen. Register*, xxvi. 225.

"I am just now also transiently told that he [Franklin] had been received in the public character of a plenipotentiary from the American States." 1777, March 20, A. Hamilton, *Works* (1886), vii. 478.

"The Congress of the United States of America have seen with concern in the public newspapers an edict of the late King of Portugal, dated at the Palace of Ajuda the 4th of July, 1776, wherein the States are spoken of in terms of contumely." 1777, April 26, B. Franklin, *Works* (1888), vi. 91.

"Billy and Sam C—— and Bob Schaw will be obliged to leave Carolina for not taking the oaths to the states, and so must several Scotch, for the like crime." 1777, June 21, James Murray, *Letters* (1901), p. 266.

"The Committee . . . are also to take the Names of all Refugees & other disaffected Persons & take the Names of all Towns & States, from whence such persons come, who are justly suspected of being inimical to the States of America." 1777, March, *Boston Records*, xviii. 277.

"Mr. John Pidgeon . . . brings fresh news of our Success against ye Enemy in recovering ye Fort on Hudson's River, which they had lately taken from ye States, & fortified more Strongly, which is called Stoney Point, near King's Ferry." 1779, July 21, Rev. E. Parkman, *Diary* (1899), p. 148.

"I immediately wrote to the Inhabitants in general, Informing them where I was and what I determined to do desireing the Friends to the States to keep close to their Houses and those in the British Interest to repair to the fort and fight for their King." 1779, Nov. 9, G. R. Clark, *Campaign in the Illinois* (1869), p. 68.

"Capt. Derby, in a large ship of his brother's, is now at Nanz, to return in a month; which is encouraging to all not under the ban of the States." 1783, Feb. 14, S. Curwen, *Journal & Letters* (1864), p. 404.

"But I hope your forgiveness for saying that the assiduity of the British Commanders to restrain the Indians from hostilities still wanted the visit which by your command I have made to them, to satisfy the Indians that they had nothing to fear from the enmity of the States." 1783, Aug. 18, E. Douglass, in *Penn. Archives*, x. 90.

"In a visit I lately made by the North river to the lakes, in the necessity I was under of returning thro' Canada to the States, I was informed of some of the measures adopted by the British Government in that province." 1784, Oct. 30, J. Monroe, *Writings* (1898), i. 39.

"They feel the consequences of trade and commerce with America too sensibly to pursue such mistaken policy as that which lost not only this commerce but the subjection of the States." 1784, Nov. 26, J. Tyler, in *William & Mary Coll. Quart.*, i. 37.

"The Spaniards, the French, the English, and the States of America, have had many and painful proofs of their address and prowess in this method [of Indian warfare]." 1794, S. Williams, *Hist. Vermont*, p. 148.

"Washington [County] . . . ought to be extended to the St. Croix, or what the natives called the Magacadava, but the English have crouded in on the states as far as the Cobscook." 1795, J. Sullivan, *Hist. Maine*, p. 396.

"Colonel Allen and Major Lunno met at the same place [Isle aux Noix, Canada], and the Major requested Colonel Allen to put down in writing the most important matters for the consideration of the Commander in Chief . . . . Colonel Allen declined writing anything on the subject, lest his writings should be exposed (which would be dangerous to him in the States, and destroy his influence there)." 1798, I. Allen, *Hist. Vermont*, p. 165.

"Our principal communication from Lower Canada to the States, is by way of Lake Champlain and St. Johns." 1799, *A Tour through Upper & Lower Canada*. By a Citizen of the U. S., p. 5.

"Yesterday captain Lewis while hunting killed a bird not common in the states: it is like a magpie and is a bird of prey." 1804, P. Gass, *Journal* (1807), p. 40.

"Caught a curious little animal on the prairie, which my Frenchman termed a *prairie mole*, but it is very different from the mole of the States." 1804, Z. M. Pike, *Sources of the Mississippi* (1810), p. 31.

"In the states, those who follow the plough, are scattered over the country; while the mechanics, and retailers of merchandise, gather in a cluster. Hence the difference in the appearance of the towns or villages of this country, from those of the states." 1814, H. M. Brackenridge, *Views of Louisiana*, p. 119.

"She had seen [at New Madrid, Missouri] families of fashion and opulence, from 'the states,' as they call them, and from old France settled there." 1826, T. Flint, *Recollections of the Last Ten Years*, p. 228.

"After the death of Pe-shau-ba, I wished to have made another attempt to come to the States; but Waw-zhe-kah-maish-koon prevented me." 1830, J. Tanner, *Narr. of Captivity*, p. 177.

"The inhabitants were uneducated French people, who . . . expressed much surprise when I told them the ground they lived upon was in dispute between Great Britain and 'the States.'" 1838, J. T. Hodge in C. T. Jackson's *Second Report on the Geol. of the Public Lands*, p. 62.

"Molly proved unfaithful to her first husband, and eloped with her two children, in order to enjoy the society of Joe in the States." 1841, G. Powers, *Hist. Sketches of Coos*, p. 182.

"The banks of the Purgatory, where this stream debouches, begin to assume something of a mountain aspect, different from scenery in the States." 1846, Lt. W. H. Emory, *Notes of a Mil. Reconnaissance* (1848), p. 17.

"I thought of 'caching' everything, and walking into the States; but what was to be done with the sick man?" 1847, Lt. J. W. Abert, *ibid.*, p. 534.

"In spite of this, however, and in spite of narrow and dirty streets, the city [Montreal] has a *finished* air, which distinguishes it from all towns of equal size in the States." 1854, B. Taylor, *At Home & Abroad* (1860), p. 169.

"The newspapers in 'the States,' the title by which the islanders [of Porto Rico] distinguish the home country from its new possessions, have just recorded certain experiments made in Connecticut." 1902, Feb. 6, *Nation*, lxxiv. 107\2.

The history of the term thus proves to be curious. First used by ourselves, frequently employed for a few years, it gradually fell into disuse in this country, was adopted in England, and is now so completely obsolete in the land of its birth as to be regarded by us as of British origin. It is, then, a question not of introducing a foreign term, but of readopting one of our own discarded expressions.

ALBERT MATTHEWS.

BOSTON, April 1, 1902.

"AS FIT AS A FIDDLE."

TO THE EDITOR OF THE NATION:

SIR: The colloquial phrase "as fit as a fiddle" (= in good "form," or condition)

seems to be quoted in Dr. Murray's New English Dictionary only from the years 1882 and 1889. For an earlier use—apparently with a different meaning—see Beaumont and Fletcher, "Women Pleased," iv. 3:

Bart. Am I come fit, Penurio?
Pen. As fit as a fiddle;
My master's now abroad about his business.

W. P. M.

HAVERFORD, PA., April 24, 1902.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: May I rectify a misunderstanding which seems to be involved in one or two of the statements (in the report of the meeting of the National Academy of Sciences) on page 323 of your last issue? The theory of compressible atoms is not advanced to explain the law of gas volumes discovered by Gay-Lussac and Humboldt; that law is already adequately covered by older hypotheses. The new theory is rather suggested in order to explain plausibly the anomalies exhibited by the structure and contraction of *solids* and *liquids*, as well as the inexactness of the equation of Van der Waals.—Yours faithfully,

THEODORE W. RICHARDS.

HARVARD UNIVERSITY, CAMBRIDGE, MASS., April 28, 1902.

Notes.

Prominent among Doubleday, Page & Co.'s forthcoming publications is Dr. John Henry Clewell's 'The History of Wachovia'—an account of the Moravian Church in North Carolina during a century and a half, 1752-1902.

Volumes v. and vi. of Captain Brinkley's monumental work on Japan and China (Boston: The J. B. Millet Co.) will be issued next month, completing the numbers allotted to history, literature, manners, and customs. Volumes vii. and viii. will treat pictorial and keramic art respectively. The remaining four will be devoted to China. The set will be complete with the year.

A new edition of Clive Holland's 'My Japanese Wife,' with illustrations by Genjiro Yeto, is in the press of the F. A. Stokes Company, who also announce for the fall an important collection of 'Bismarck Letters,' in two volumes.

T. Y. Crowell & Co. will offer to vegetarians and others interested Mr. Sidney Beard's 'Guide-Book to Natural, Hygienic and Humane Diet.'

We receive, through the courtesy of Messrs. M. Knoedler & Co., the catalogue, in folio, of the 'Collection Edmond Huybrechts,' which is to be sold at auction in Antwerp, May 12-15. The volume is sumptuous even for its expensive kind, and abounds in heliogravure reproductions of the rarer pictures. These we cannot enumerate at this time, but it may be remarked in passing that the older Dutch and Flemish schools are fully represented—by Rubens, Van Dyck, the elder Brueghel, two admirable Terburg portraits, and a Wouvermans snow scene, among others; the modern Belgian schools claim Baron Leys (fifteen examples), and an interesting series of Van Beerses and Alfred Stevenses. The chiefs of the Barbizon school—Troyon, Rousseau, Corot, and Diaz—are well represented, while a fine Géricault may be named among the older pictures of the French school. Scattering pictures, Italian and Spanish, many of indefinite attribution, complete the assortment. A tiny panel, "The Virgin with Angels," by the rarest of old French masters, Jean Fouquet, is the gem of the collection. One could wish that some turn of good fortune might bring it to the Metropolitan Museum. It is of the loveliest quality. The catalogue may be obtained through the Knoedlers or other of the prominent local dealers.

A wife's devotion and inexperience excuse the bulk and disorder of 'Men and Memories: Personal Reminiscences,' by John Russell Young, edited by May D. Russell Young (New York: F. Tennyson Neely). The book is unreadable connectedly, and the late Mr. Young's journalistic style had no charm to make literature of his collected articles. That on Lincoln, designed to form part of an original work having some coherency and plan, exemplifies the merits and defects of the writer. As reporter of the Gettysburg speech, he has something really significant to tell us of the total want of effect produced in the brief delivery from a single sheet of paper. One who has patience may find a similar reward in running through these scrappy jottings about Forney, Bayard Taylor, Grant, Edwin Forrest, Whitman, Bennett, Greeley, Raymond, Jennings, Curtis, Phillips, Lowell, Dickens, Henry George, etc., etc. Not a few letters to Mr. Young from notabilities are to be encountered in this medley.

Mr. David W. Hoyt, Providence, R. I., sends us Parts vi. and vii. of his 'Old Families of Salisbury and Amesbury, Mass., with some Related Families of Adjoining Towns and of York County, Maine,' which usher in his second volume. They are mostly derived from eighteenth-century records of Salisbury and Amesbury churches now in private hands. The compiler-publisher is continuing the work at a loss, and its prolongation and size must depend on the support of those interested.

An attempt to establish a Kentish connection of the New Jersey Woodruffs is made in a brochure of thirty-eight pages by Francis E. Woodruff of Morristown. Copies are for sale by the New Jersey Historical Society, in Newark.

From the Unit Library, Limited (London and New York), come the first four numbers of its new series of reprints: 'The Vicar of Wakefield,' Sterne's 'Sentimental Journey,' Darwin's 'Origin of Species,' and Emerson's 'English Traits.' These books are of a size for the pocket, and are neatly bound in red paper, cloth, or leather, according to price. The paper is poor, and the letter-press only tolerable. The editors, however, offer the inducement of an excellent choice of texts, fidelity to good editions, and brief bibliographical notes. The originality of the enterprise lies in the fact that these reprints are sold according to number of pages—that is, roughly, by cost of production. The "unit" is twenty-five pages, for which, and every fraction thereof, ½d. is paid. Covers are paid for separately, 1d. for paper, 5d. for cloth, 1s. for leather. This makes the first issues cost, in paper: 'The Vicar,' 5½d.; 'The Sentimental Journey,' 4d.; the 'Origin of Species,' 11d.; 'English Traits,' 5d. It will be seen that these prices compare favorably with that of "Morley's Universal Library," or of the Cassells' still cheaper series of pocket reprints in paper, while the Unit Library engages that all texts chosen shall be reproduced in their integrity. The "unit" plan, it may be said, in passing, is merely a refinement upon that of the admirable "Reclam-Bibliothek." To follow the present issues are Hamilton's Memoirs of Count Gramont, Goethe's "Faust" (Anster's translation), Burney's 'Buccaneers of America,' Browning's 'Poems' (1833-'58). The quality of the proof-reading remains to be determined.

As already announced, the second 'Year Book of the Pennsylvania Society of New York' does more than report the second annual festival of that body. It abridges a number of articles of the twelvemonth which relate to Pennsylvania, like Mr. S. W. Pennypacker's comparison of the Quaker to the Puritan commonwealth, to the disadvantage of Massachusetts; and has papers on Revolutionary parks, monuments, and memorials, 1901; memorial portraits, 1901; historic anniversaries and celebrations; historical buildings, etc., as well as reviews of new Pennsylvania books, a long list. The illustrations are numerous, diversified, and often curious in the extreme—from a sketch-map of Fort Duquesne to a view of Valley Forge, and from Pennsylvania Quaker silhouettes to the map of a preliminary survey for Mason and Dixon's line. The 'Year Book' may be had of the Secretary, Mr. Barr Ferree.

The fifteenth bound volume of Mr. Charles F. Lummis's *Land of Sunshine*, the last to bear that name, which passes into *Out West*, reaches us from Los Angeles, Cal. The usual rich variety is spread before us, and on the material and social side we select for mention papers on how to colonize the Pacific Coast, on Rochdale Coöperation in California, on State and national irrigation policies and the struggle for water. The editor contributes two more authentic translations of sources of early Western history, of which Perea's report on New Mexico, in 1632-33, will be included in the sumptuous edition of Benavides's Memorial now in press under Mr. Lummis's direction.

Decided interest attaches to the January-March number of the *American Journal of Archæology* (Macmillan) by reason of Prof. R. B. Richardson's description, with illustrations, of the series of colossal statues at Corinth uncovered by the American School at Athens, of which he is the director. Neither the statuary nor the architectural ornamentation, being Roman work of the second century A.D., is intrinsically beautiful, but there is considerable novelty in adaptation and in the pseudo-Caryatid construction.

"Who Burned Columbia?" is asked and answered, with probability if not conclusively, by Mr. James Ford Rhodes in the *American Historical Review* for April. The origin of fires, whether accidental or incendiary, is too frequently indeterminable in ordinary times to make the debatability of a war-time conflagration unnatural. Southern authorities early and fiercely fixed the sole blame on Sherman, as having deliberately ordered the wiping out of Columbia. This would make the story of the event a peace tract. Mr. Rhodes's inclination is to make of it rather a temperance tract. A jail delivery of Union prisoners as well as convicts threw upon the town, deprived of all civic control, elements bent on reprisal or

plunder. The first Union troops to arrive "were at once supplied by citizens and negroes with large quantities of intoxicating liquor, brought to them in cups, bottles, demijohns, and buckets." This made them unmanageable and prevented their use as guards in preserving public and private property. After dark the sack of the city was accompanied by the firing of buildings. "Some fiend" began it; but who was he? The Union generals who arrived on the spot before Sherman, did their best to stay the flames, but almost in vain. The next morning, February 18, 1865, the Third Brigade killed 2 men, wounded 30, and arrested 370 in restoring order.

The latest form of Count Gubernatis's activity is visible in the International Hellene-Latin Society of his recent founding at Rome. The constitution of this society is given in the first number of its fortnightly organ, the *Cronache della Civiltà Elleno-Latina* (Rome: Corso Umberto I., Palazzo Bernini, No. 151), in the production of which he has had the laboring oar. From his pen are long articles on Victor Hugo, General Stephen Türr, Sully-Prudhomme and Mistral and Gaston Paris, and the Goethe statue at Rome; and his are the greater part of the book reviews. The *Cronache* is a fair quarto of 32 pages, in which one may expect to meet and to understand Italian, French, or Spanish, into one of which languages will be concurrently translated any article in another tongue that may be admitted. Not one word of Greek appears in this first issue, except in the title. There are several illustrations, chiefly portraits. We will call attention further to a private letter from the Uruguayan Minister, Dr. Daniel Muñoz, on the changes which Castilian has undergone on the American continent. This movement of Count Gubernatis's smacks somewhat of a response to pan-Teutonic assumption of world-superiority.

Count Gubernatis's 'Su le Orme di Dante' receives notice in the April number of the *Zeitschrift für Bucherfreunde*, beginning its sixth volume (Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner). The number is, however, essentially a monograph on the British Museum, with many illustrations of the building and its literary treasures, by H. A. L. Degener of Oxford. The editor, Fedor von Zobeltitz, and his publishers have to confess that this admirable periodical, a pioneer, has not yet made the meat to feed on and prosper. Accordingly a rise in the subscription price has been resolved on—to nine marks the quarter-year.

A Spanish weekly journal *Vida Nueva* (New Life), which numbers among its contributors many of the best Spanish authors, has recently published some startling revelations concerning the application of torture to accused persons in order to extort confessions of their guilt. A workman on a railroad was charged with stealing a piece of freight, arrested by the police, and thrown into a subterranean dungeon, where he was subjected to cruel torture by means of thumb-screws, which crushed his hands. He proved to be innocent of the alleged crime and was released. Although threatened with severe punishment if he should reveal what had occurred, he went to several physicians, as well as to the editors of different papers, showed the condition of his hands, and made a full statement of the case. The *Vida Nueva* took the matter up and found, as the result of further investigations, that judicial torture is still practised in Spain, and that instruments employed by the Inquisition for inflicting pain are still in use. In this instance the inquisitors (two in number) were tried and sentenced to six months' imprisonment for "exceeding their powers" and showing "excess of zeal in the exercise of their office." On their release they might find congenial occupation in the Philippines.

Dr. J. C. Kapteyn of Groningen, Holland, continues the publications from his astronomical laboratory; No. 5 being a mathematical discussion of the distribution of cosmic velocities, prepared with the collaboration of his brother, W. Kapteyn, professor at Utrecht. It forms an important contribution to stellar theories, in that it is an attempt to deduce from the observations a so-called "law of the velocities"—that is, the law which defines the number of stars having a linear velocity equal to a third, a half, double, or perhaps triple that of the solar system in space. Or it may be stated as the law in accord with which the frequency of a linear velocity is expressible as a function of its magnitude. The investigation may be regarded as in a sense tentative, and the time is fast approaching, in consequence of the able work of Campbell at the Lick and Frost at the Yerkes Observatory, when its results will in great part be superseded by those deducible from spectroscopic methods whose accuracy is independent of distance. Another paper by J. C. Kapteyn (No. 8) embraces a discussion of the average distance of stars whose magnitude and proper motion have been ascertained. His conclusions suffice for the deduction of certain generalizations on the distribution of the stars throughout space, and the frequency of different degrees of absolute brightness in the stellar universe.

The letter of Levi Woodbury, among the historical manuscripts published in the April Bulletin of the Boston Public Library, recalls an almost forgotten episode in our history, the Congress of American Nations at Panama in 1826. The heated controversy as to whether the United States should take part in it led to the bloodless duel between Randolph and Clay, about which this query is raised: "How far will the retention of Mr. Clay in the Cabinet after this be an approbation of the duel?" Woodbury's comments on the manner in which J. Q. Adams spent a part of an appropriation for furniture for the White House is interesting as showing the feeling about amusements in many prominent men of that day. "It has been a subject of mortification here to his friends, and must have astonished you, I think, that *'a billiard table* $50,' *'billiard balls* $6,' *'chess men* $23,' etc., etc., should compose a part of the articles purchased by him with this public fund and should go down to our posterity as a part of the furniture for the *President's use*—in this virtuous stage of our country's growth and history. The newspapers have, to my joy, been very silent about this, and I hope yet that some explanation can be given, but none has been attempted up to this time here." A passage in one of Gen. Henry Dearborn's letters, referring to the Presidential campaign of 1823 and the "small chance for an election by the people, . . . which would be a great misfortune," gives expression to a fear which there has been small opportunity to justify. "No other circumstance will, in my opinion, so much tend to a disunion of the Confederacy as contested elections of President by Congress."

—Those who fear lest the Japanese hand should lose its cunning in artistic industry may be reassured by reading the circular of information just issued by the Higher Technological School of Tokio, which was established in May, 1881, for the instruction of artisans, in pursuance of an act of the Department of Education. By an imperial ordinance of last year the school has taken its present name. It is under the direct control of the Minister of State for Education. Its edifices and grounds, occupying more than 15,000 square yards, are on the river Sumida, facing the broad way leading to the great Asakusa public gardens, which almost every foreign visitor in Tokio visits. Two canals afford special facilities for transportation to the furnaces, experimental shops, and laboratories. The departments are the Higher Technological School, the Annex School of Industrial Apprentices, the Training Department of Industrial Teachers, and the Annex School of Industrial Supplementary Education. The arts taught are dyeing, weaving, keramics, applied chemistry, mechanical engineering, electricity, industrial designing, work in metal and wood, lacquer, etc. In the twenty-one years of its history, the school has graduated 974 persons, who are now serving as engineers, foremen of factories, and teachers in industrial schools, while others are pursuing their studies in Europe or America. Thirty-seven are in military service under the conscript law, and only 2 per cent. are unknown to the School authorities or to public fame. The term of each course extends over a period of three years, and the work prescribed is both theoretic and technical. The school hours in the higher school are thirty-nine per week, and the year of work is from September 11 to July 10. The age limit for entrance is under twenty-five in the higher school, and, besides the vernacular, the applicant must know English, sciences, and mathematics—in other words, have an education equivalent to that of the Middle School. After graduation, at least one year must be spent under the supervision of the School, in practical work in factory or workshop. Provision is made for eclectic students, and certificates are granted. The Annex School for Industrial Apprentices holds from April 1 to March 31, or the entire year, the school hours per week being from thirty-five to forty-four; and graduates must serve two years under supervision for training in practical work. The Annex School of Industrial Supplementary Education is, for the most part, a night school. As matter of fact, it is not possible, amid the absorbing demands of modern work and fashion, to get work done like that, for example, at the World's Exposition in Chicago, or recently in Paris, where the architecture and decorations of the middle and early ages were reproduced, except through these graduates of the high Technical School in Tokio. The value of such education has been demonstrated beyond cavil.

—Louisa Evelyn Denison has edited, and E. P. Dutton & Co. have published, 'Fifty Years at East Brent: The Letters of

George Anthony Denison, Archdeacon of Taunton.' Hardly could there be a more representative biography contributory to the ecclesiastical history of England during the last half of the nineteenth century. During that period, "the god of things as they are," the established order and belief, had no protagonist more mettlesome than Archdeacon Denison. Born in 1805 and dying in 1896, he was about five years younger than Newman, and outlived him about five years. They had much in common; much in difference. Denison's was a much more conservative mind than Newman's, as fixed as Newman's was restless; the ancient landmarks counted for much more in his reverence and affection. Hence he remained an Anglican in spite of storm and stress. He was a High Churchman of the type that anticipated the Oxford Movement, and at a time (before 1830) when Newman was still evangelical. This beautiful book, with its charming head-piece illustrations and excellent portraits, compresses the first forty years of the Archdeacon's life into a brief preface, and opens the long series of his letters at 1845, the year of Newman's Roman submission. Thereafter Archdeacon Denison was foremost in the assault on every new form of liberal thought or usage, every new concession to the liberal spirit. The Gorham decision, which gave Manning's Anglicanism its quietus, first invited his opposition; then 'Essays and Reviews'; next "the many and mighty errors" of 'Ecce Homo'; while Temple's appointment to the Exeter bishopric, the assault on the Athanasian Creed, the Church Schools Bill, the Burials Bills, and finally 'Lux Mundi,' each of them found him a resolute opponent of innovation. 'Lux Mundi' he denounced as the most deadly blow *ab intra* that the Church had ever received. "The unfettered exercise of the right of private judgment" was for him England's "dishonor and her sin," and "the use and application of intellect simply that of confirming ourselves and others in the implicit acceptance of what has been revealed." There is something very interesting in the consistency of a mind untroubled by a single doubt of the traditional forms of worship and belief.

—Villemain, writing of Edward Young in 1864, declared that the power of the author of 'Night Thoughts' was not yet exhausted; but a subsequent generation that responds indifferently to the profounder *Weltschmerz* of Chateaubriand and Byron has little predilection for the diluted melancholy of the eighteenth-century clergyman. It is very probably for this reason that the elaborate monograph by Dr. W. Thomas (Paris: Hachette), entitled 'Edward Young: Étude sur sa Vie et ses Œuvres,' has succeeded in fulfilling the demands of contemporary literary study by showing no obvious bias. This voluminous work of six hundred pages may claim a place on the same shelf with Dr. Angellier's monumental 'Burns' and Dr. Léon Morel's 'Thomson.' (One may well ask, in parenthesis, why English scholars have allowed such lacunæ to be filled by French pens.) Of the two principal divisions, the second, treating of the character and influence of Young's work, is the more valuable and interesting, for in the preceding biographical chapters the noteworthy features are merely the rectification of dates, and the attempt at vindicating Young from charges so often made concerning his self-seeking worldliness. But Dr. Thomas's examination of Young's critical ideas and of the rôle played by the 'Night Thoughts' in the history of literary relations between England and the Continent practically exhausts the subject. An occasional exaggeration in detail may be noted. There is, for instance, no ground for tracing Byron's "Sorrow is knowledge" to Young's "Knowing is suffering" (p. 497), seeing that both poets must have been familiar with Eccl. i, 18. Young certainly did not invent the verb *uncreate*, which occurs in the famous peroration of 'The Dunciad'; and who but a foreign critic would imagine that in the following verse Young intended the word *because* to be accented on the first syllable?

"Shall Truth be silent because Folly frowns?"

—Mr. A. G. Bradley, who has already published a life of Wolfe, returns to the subject of the Seven Years' War in 'The Fight with France for North America' (Dutton). The volume before us either represents a second impression, or else the book has been slow in reaching this country, for the English edition appeared last year. We mention this fact because Mr. Bradley writes specially and avowedly for English readers. It is a source of regret to him that there should be no general knowledge in England of the events whereby the French were driven from their possessions on the St. Lawrence and in the West. "Every schoolboy knows, or is popularly (or probably very erroneously) supposed to know, the details of the Plains of Abraham, but I will undertake to say that there are many thousands of schoolmasters who have never so much as even heard of the still bloodier battle of St. Foy, fought upon the same ground, within six months, by the same troops." The modest purpose of this volume is to lighten such darkness. Mr. Bradley, by drawing from Warburton, Kingsford, and Parkman, succeeds in getting together such information regarding the war as is most essential, but in important respects this book leaves much to be desired. For example, the character of the Old Régime in New France is not well grasped, or Mr. Bradley would never have written this passage: "They [the French Canadians] had been, in fact, slaves —slaves to the *corvées* and unpaid military service—debarred from education and crammed with gross fictions and superstitions as an aid to their docility and their value as food for powder." While we have no desire to write an apology either of seigniorial tenure or of the ecclesiastical system, we must protest that these words are greatly exaggerated. If Mr. Bradley will examine, for example, the actual obligations of the *censitaires*, he will find that the Canadian tenantry were far from being slaves. In short, he has prepared his narrative without much reference to the large body of literature on the subject which exists in French. Considering the professed limitations of his purpose, this may not be a fatal omission, but the larger interests of historical writing suffer by such neglect. "I make no attempt in these pages to address the serious student of this war, if, indeed, there be any such on this side the Atlantic. I have few incidents to relate that have not been told with greater elaboration elsewhere; indeed, I am writing more especially for those to whom nearly the whole story will be new." Mr. Bradley shows much fondness for his theme, and he is not unlikely to gain readers among those who constitute his chosen audience, but his book has been loosely put together, and will be less useful here than in England, where little notice has yet been paid to the details of the contest.

—The 'Review of Historical Publications Relating to Canada' continues to be edited each year by Prof. G. M. Wrong and Mr. H. H. Langton (The University of Toronto: Published by the Librarian). Volume vi. contains few long articles, but during the past twelvemonth there has been no dearth of books and articles which suggest minor notice. The history of Canada as a whole seems to be attracting more attention than that of the separate provinces. Of the other departments here represented, "Archæology, Ethnology, and Folk-Lore" comes first, with "Geography, Economics, and Statistics" next. Dr. A. F. Chamberlain of Clark University has made himself the *cheval de bataille* for this number of the 'Review,' since no less than forty-seven titles are credited to his share. Col. Cruikshank and Mr. J. S. Carstairs have also been active contributors. The only other signed articles are by Professor Davidson and Mr. Angus MacMurchy, so that, on the whole, the reviewing continues to be largely anonymous. The longest single article is devoted to the life, works, and autobiography of Sir J. W. Dawson. Among other interesting reviews we may mention Mr. Carstairs's criticism of the 'Military Life of Field-Marshal George, first Marquis Townshend.' This is a misleading book on an important subject—the conduct, namely, of operations before Quebec, and the character of Wolfe as a commander in the campaign which has given him abiding reputation. Col. Townshend, the author of the biography, has gone wrong in a multitude of details, plagiarized openly from Warburton, and taken up the cause of his ancestor against Wolfe with more vehemence than knowledge or discretion. We should point out that this work is not historical in the sense of excluding from its pages reference to contemporary life and progress in Canada. In examining each new 'Review,' we are impressed by the care which is taken to secure completeness in this respect. This year, there is a good deal about Imperialism, the Canadian troops in South Africa, the present status of Newfoundland, the development of coal and steel industries in Cape Breton, and the geographical exploration of the Northwest. Another point ought also to be emphasized. The present work has a rather peculiar bibliographical value. That is to say, the literature relating to Canada that appears each year is not so vast that it cannot be kept in hand by two vigorous editors. As a result, few items of any importance are omitted, and the reader at a distance may use this 'Review' with the feeling that he has before him a conspectus of current writing upon the Dominion and its provinces, which is practically complete.

HARRISSE'S DISCOVERY OF NEWFOUNDLAND.

Découverte et Evolution Cartographique de Terre-Neuve et des Pays Circonvoisins, 1497-1501-1769. Par Henry Harrisse. London: Henry Stevens, Son & Stiles. 4to, pp. 420, with 26 plates.

Mr. Harrisse, having set forth his theo-

ries regarding the course of cartographic development during the sixteenth century in his great work on 'The Discovery of North America,' published in 1892, has now gone on to show how these theories stand the test of an exhaustive detailed study of a single well-defined locality. Newfoundland provides an admirable subject, in every way suited to his purpose, by its early and continuous prominence on the maps, and because of Mr. Harrisse's especial familiarity with the history of the region. It does not appear that he has ever visited the northeastern American coast, but for thirty years his studies have repeatedly led him in that direction. The Cabots, Corte Real, the printed and manuscript sources for the history of New France, the discovery of the Mississippi, have provided subjects for books and essays from his pen, very nearly equalling in amount his voluminous writings about Columbus. High expectations were aroused by the announcement of this latest work by the master student of the period of discovery, and it is a pleasure to report that the two handsome quarto volumes amply justify the anticipations of those who were most familiar with his previous works.

Mr. Harrisse presents these volumes as a study in cartographic method, as an attempt to find out what maps have to offer towards increasing the stock of knowledge of the history of the world. If his results are not, on the whole, very striking, if no very considerable additions are made to what was before known regarding the course of events, the fault is not with the method nor with the way in which it has been applied. The investigator must perforce be content with what his material contains, and Mr. Harrisse has undoubtedly extracted well-nigh all that was to be got from the maps of Newfoundland. When a student goes beyond the usual sources of information, each new scrap of detail, however insignificant in itself, affords valuable means of verifying and substantiating the general mass of information already made familiar. Data secured from other than the ordinary written narratives have a peculiar importance in checking the documentary material. Mr. Harrisse's 'Terre-Neuve' has thus a value for historical students much greater than its contribution to their knowledge of the geographical history of eastern Canada and Newfoundland, because it reveals most clearly how many things there are which ought to be known before the early history of that region—and of every other—can be understood completely. By his analyses of the maps, Mr. Harrisse shows repeatedly that voyages were made, coasts visited, explorations undertaken, many years before the earliest expeditions to the places in question which are recorded in the surviving written documents.

There are two distinct divisions, not always distinguished, and perhaps not clearly appreciated, by Mr. Harrisse, in the study of the way in which geographers have arrived at what is now supposed to be an exact representation of Newfoundland. The first traces the way in which the coast line was put down, fragmentarily, on the sailing-charts of successive voyagers, and then coördinated and verified upon the mariners' maps at the home ports. The mid-Atlantic forelands visited by the Corte Reales and by the fishermen of Western Europe little by little attached and detached themselves to and from the neighboring coasts; slowly, but on the whole regularly, progressing toward an accurate portrayal of the triangular mass of headlands and inlets which make up Newfoundland. The fishermen and sailing-masters, familiar with the ways of seacoasts, understood how little reliance can safely be placed upon maps, even those of one's own making, and so they had little trouble off-shore or on the high seas. They took the land as they found it, charted it for future guidance, and fixed its relative location as best they could to match with the other shores they and their friends had visited. The few examples of their handiwork which are still in existence prove that these sailing-charts hit upon the real facts with surprising exactness. The reason is obvious; the makers were under no inducement to delineate anything of coast or continent beyond what they personally knew about. Troubles began when these charts reached the workrooms of the professional map-makers, whose business it was to portray the whole world, with all its component parts.

The second division of Mr. Harrisse's subject introduces us to the men who made a business of geography, and who, having, like some of their successors, seen very little of the outlying parts of the globe, tried to find out how they ought to represent the lands beyond the North Atlantic fishing-banks. What should they do, for example, with a chart giving a roughly drawn representation of the curious quadripartite peninsula of Avalon, in from Cape Race? Other charts, quite as correctly, because drawn by men who had sailed around the cape from St. John's to St. Mary's, showed this same tract as a rectangular promontory. How was the geographer to tell which was correct, with no common scale of measurements and no clue by which to harmonize the contradictions? Each geographer of necessity based his ideas and his maps upon those of his predecessors, with nothing to show where personal observation ceased and scientific guessing began. Ruysch, who had visited the Newfoundland waters, published a remarkably correct representation of the Avalon peninsula at Rome in 1508; but those who used his map, at some far-away German seat of learning, had no means of knowing that this was the one single detail which must not be altered, and that all the rest was drawn in accordance with sound general principles, subject to amendment upon specific information from actual observation. Mr. Harrisse supplies abundant material for studying these phases of his subject, but without hinting at their interest or their real significance. For him, everything centres around the "schools" whose existence and relationship he first described in his 'Discovery' of 1892. His groupings by nationalities, localities, and derivative adaptations are most suggestive, but he would surely be the first to explain how much still remains to be found out before his conclusions may safely be accepted as the complete explanation of the divergencies and the anomalies of early American cartography. As yet there is no one fully competent to traverse Mr. Harrisse's opinions on matters of American discovery, the field in which he has for so long been pre-eminent. No one else has his intimate familiarity with the whole course of the history of this period, or his exhaustive acquaintance with the documentary and cartographic literature. Whatever corrections may be made hereafter in the details of his work, to Henry Harrisse will always be due the credit of outlining the subject, and of showing how cartographic history should be studied.

Whenever Mr. Harrisse's chapters deal with matters of fact or opinion which are subject to independent verification, a careful examination shows that, as we have pointed out more than once on former occasions, his practice does not always conform to the rigid and unexceptionable rules of exactness which he so frequently lays down for the guidance of historical investigators when dealing with the lapses of those he differs from. Indeed, his pet aversion, the Spanish Academicians who failed to make him one of their number, and whose sins are many, never issued a volume containing more aggravating slips of the pen and of the attention than occur in Mr. Harisse's 'Terre-Neuve.' The watchful reader will presumably not be misled by the remark that in 1500 "huit *mois* s'étaient écoulés depuis la découverte de l'Amérique" (p. 10), or by a quotation from "Thomas Jefferson, *alors* secrétaire d'État, au Congrès des États-Unis en *1761*" (p. xxxix). The statements on page 214 that the coast line on La Cosa's chart runs "de l'Ouest à l'Est, ou du Sud-*Est* au Nord-*Est* (suivant l'orientation réelle . . . de Terre-Neuve)," and on page 37 that the Corte Reales "commencèrent à se tourner vers le Nord-Ouest et l'*Est*," are too palpable slips to worry the reader, were it not that they are typical of faulty orientation in the author's mind. The last quotation may, as a matter of fact, be quite correct, for the sixteenth-century chroniclers wrote of voyages across the Atlantic from Europe "going eastward" so often that there is a strong presumption that they used the phrase to signify that the voyage was on the route for the Orient. Mr. Harrisse, however, long ago committed himself to the correction of East into West in each of these passages, and he does not easily alter a decision once made. His difficulty in keeping the compass clearly in mind is distinctly shown on page 249, where he observes that a map which omits "une grande partie du littoral Ouest" of the island resembles another, "tout en omettant aussi la côte orientale." Somewhat more exasperating is the account of the Paris Gilt or De Bure globe, where the text states that the Avalon region is represented as two large islands, while the accompanying sketch of the configuration on the globe shows one of these islands—the one whereon hangs the argument of this particular paragraph—clearly attached to the main body of Newfoundland. Of ordinary misprints, such as careful proof-reading would have obviated, *e. g.*, "Alfonse part de la Rochelle le 16 *août* 1542 (après *Pâques* qui tomba le 9 de ce mois)," on page 156—there is no lack, as appears from a list of more than 50 errata, not including those mentioned above, printed at the end of the work. It is doubly a nuisance to have to be on guard at every statement to see if the text correctly expresses the author's obvious meaning, in such a work as this, where the nature of the subject and the method of treatment alike require for profitable reading the constant exercise of the keenest critical attention.

It would be unfair to close this notice without mentioning the admirable phototype plates additional to the 165 sketches and outlines drawn by Mr. Harrisse to illustrate the arguments of the text. Although they represent only the field of Mr. Harrisse's studies, which includes the entire St. Lawrence basin and much of the New England coast, this is usually sufficient to exhibit the typical characteristics of the maps, so that students of other sections of the coast can infer where to look for desired information. In nearly every case the plates are copied directly from manuscript maps not previously reproduced, or at best known only through sketch drawings.

LADY SARAH LENNOX.

The Life and Letters of Lady Sarah Lennox, 1745-1826. Edited by the Countess of Ilchester and Lord Stavordale. With numerous photogravure portraits. Two vols. London: John Murray; New York: Charles Scribner's Sons. 1901.

George II., who made Kensington Palace his chief place of residence, used frequently to walk in Kensington Gardens. One day, in 1750, as he was taking his usual promenade, a little girl who had just broken away from her Swiss governess ran up to him and said with a laugh: "Comment vous portez-vous, Monsieur le Roi, vous avez une grande et belle maison ici, n'est pas?" What spasm seized the nurse, history does not record, but the King was much pleased with the child and asked that she might be brought often to see him. On the occasion of one of these visits "he suddenly snatched her up in his arms, and, after depositing her in a large china jar, shut down the cover to prove her courage; but soon released her when he found that the only effect was to make her, with a merry voice, begin singing the French song of 'Malbruc,' with which he was quite delighted." Curiously enough, this girl of five was a descendant of the Stuarts. She was Lady Sarah Lennox, fourth daughter of Charles, second Duke of Richmond, and therefore a great-granddaughter of Charles II.

Few Englishwomen of the eighteenth century had a more striking or romantic career than Lady Sarah Lennox. George II. romped with her, George III. wished to marry her, and she ended by becoming the mother of the three famous Napiers. Nor at this distance of time can there be any harshness in referring to another celebrated fact in her life, the liaison with Lord William Gordon, which led to her divorce from Sir Charles Bunbury, and adds one more element of the unusual to a most exceptional experience. Strangest of all, she retained the affection of her family and her closest friends in spite of the escapade which she calls her "fault." In Col. Napier she found a distinguished and devoted husband, while her brilliant sons worshipped, with the chivalry of their strong natures, the beauty, the sweetness, and the unselfishness of their "beloved mother."

The action of Lady Sarah's life properly begins in 1760, when she was fifteen years old. Regarding her attractiveness at this time there can be no question. Horace Walpole is often cited as bearing witness to her beauty, but one of the principal points in his statement about her is often omitted from such quotations. He distinctly says, in a letter to the Hon. H. S. Conway (September 9, 1761), that she has "neither features nor air." On the other hand, she was the "chief angel" among the numerous bridesmaids of the Princess Charlotte, and saw George III. marry this princess from Mecklenburg with no apparent disappointment at her own failure to become a queen. She was doubtless beautiful, but she had charm and animation as well, besides a kindness of heart which made her grieve more for her squirrel's death than over the political necessity which led George III. to select his wife in Germany rather than among his own subjects.

As might be expected, this incident is a prominent one in the memoirs, and we can at length see just what the advances were which the young King made. The whole story is too long to tell here, but it seems clear that Lady Sarah, though only sixteen, acted with perfect dignity while the addresses were being paid, and showed no petty resentment after the Duchess of Brunswick and Lord Bute had succeeded in directing his Majesty's glances elsewhere. There is every reason to believe that the keenest mortification was felt in other quarters. The Duke of Richmond is supposed never to have forgiven George III. for the slight paid his sister, while Henry Fox, first Lord Holland, felt all the grief of a disappointed politician. Lady Ilchester publishes for the first time the memoir which Lord Holland drew up "on the events attending the death of George II. and the accession of George III." To him a match between Lady Sarah Lennox and the King might conceivably mean a good deal, as she was his sister-in-law, and through her he might hope to reach a higher post in the state than his cleverness and nimble conscience had yet brought him. It is not our desire to turn aside from Lady Sarah for the sake of noticing Fox's innuendos against Pitt, or any other obvious features of his memoirs. None the less, it is a document with which the future historian of English politics during the Seven Years' War must be familiar.

At Holland House, Lady Sarah Lennox met her closest and most enduring friend, Lady Susan Strangways. She was the daughter of Lord Holland's elder brother, Lord Ilchester, and an own cousin of Charles James Fox. Romance entered her life through an Irish actor, William O'Brien, whom she married in defiance of parental opposition and lived happily with in spite of poverty. As the O'Briens went to America in 1764, and remained there for seven years, the horizon of Lady Sarah's correspondence expanded, and she herself began to take a keen interest in American affairs. During the Revolution she had many friends in the war, which she looked upon with abhorrence. Apropos of Bunker Hill, she writes: "Since I began this I've heard the news of the action near Boston. O Lord! how it makes one's blood run cold to think of *any action*, much more such a bloody one, and among one's own people almost."

Lady Susan O'Brien has been specially mentioned because these two volumes consist almost entirely of the letters which were written to her by the subject of the memoir. That Lady Sarah Lennox did not permit herself to be deeply disturbed by the King's marriage to another may be inferred from the fact that, a few months later, she was married to the most celebrated racing man of his day, Sir Charles Bunbury, whose horse "Diomed" won the first Derby. She was only a little more than twenty-three when she went away with her cousin, Lord William Gordon, and thus caused a scandal which could not be overlooked. By the intervention of both families the two were separated, and Lady Sarah entered upon a strict seclusion, from which she did not emerge until the end of twelve years. Having been divorced in 1776, she married in 1781 the Hon. George Napier, a remarkably handsome man, and one of the few heroes of the American war. Three of their sons—Sir Charles, the conqueror of Scinde; Sir George, the Governor of Cape Colony; and Sir William, the historian of the Peninsular War—were among the most eminent Englishmen of the next generation.

These remarkable incidents of Lady Sarah's history are not recited because they are unknown, but because her character, as it is discovered by her letters, cannot be fully understood unless one bears them constantly in mind. The social atmosphere of London in the era of Henry Fox and the elder Pitt was not conducive to moral exhilaration, and we need feel no deep surprise that Lady Sarah yielded so unreservedly to her natural impulses. The remarkable thing is that, once she had taken a false step, she did so much to redeem the past. She neither followed the familiar advice of Goldsmith which is applicable to such cases, nor did she permanently lose her self-respect. She had unbounded kindness and good humor, she loved her friends sincerely, and she called forth the adoration of her sons. The strong humanitarian sympathy, for example, of Sir Charles Napier seems directly traceable to her. It is to be seen first in her fondness for animals and her willingness to nurse them when ill; afterwards, in her girlish affection for Lady Susan Strangways; and, finally, in the sacrifices which she made to secure the proper education of her eight children. The depth of her family affection, combined with her feeling of admiration for generous aspirations, may be clearly seen in the letter which she wrote about her nephew, Lord Edward Fitzgerald, six weeks after his death from wounds in Dublin jail:

"If he had met with as fair dealings as his own he would have lived to have been as thoroughly known and consequently admired as he deserved to be by all good and honest men—men now blinded by the mysterious jugglings of a wicked set, who have availed themselves of the strong engine of *fear*, and worked on the passions of mankind till they have blinded some of the best. But yet wickedness cannot *always* thrive, and *truth* will force itself into light. To *time* and God I trust! That God, in whose presence that dear angel is, who judges his failings with mercy and his merits with an all-seeing power that rewards them justly!"

Lady Sarah Lennox was not an intellectual woman, nor was she at all points a model. At the same time one cannot help feeling that she had a sound heart, and that she possessed in abundance the qualities which command respect. Her son Henry, the historian of Florence, wrote a short account of her early life which is included in these memoirs. In it he refers to the "truth, single-mindedness, and natural unsuspiciousness of her character." Beneath the gayety of her early days and

the trials of her prime, one can see the traits which are thus emphasized by one of her own family, and they add its chief charm to her correspondence. The gossip, whether social or political, is interesting enough, but of greater interest still is the woman.

We may say in conclusion that these volumes are very handsomely printed and illustrated. They have also been well edited. The biographical notes are full, and every effort has been made to render the letters easily intelligible to their readers.

The History of Mary I., Queen of England. By J. M. Stone. London: Sands & Co.; New York: E. P. Dutton & Co. 1901.

At the Cambridge Local Examinations a question was once asked regarding the character of Mary I. In answering it, a candidate whose upbringing had been rigidly Protestant, kindled anew the Smithfield fires and justified the use of that dreadful epithet, "Bloody." But, with an unexpected leaning towards mercy, he concluded his indictment thus: "After all, we should not blame Mary too much, for it must be remembered that she had five stepmothers."

Mr. Stone goes far beyond such extenuation as this. His position is not that Mary's delinquencies are accounted for and pardoned by the unfortunate surroundings of her early days. He sees in her nothing less than a royal heroine whose virtues present a shining contrast to the vices of Elizabeth. In an age of moral corruption, she was exemplary, she kept a kind heart for her friends, and showed herself merciful towards her enemies; she was a devoted wife and a religious woman. Even the persecutions of the reign (natural enough though they were, at a time when Melanchthon and Beza applauded the execution of Servetus) need not be ascribed to the vindictiveness of the Queen, but must be placed largely upon the shoulders of Parliament.

> "The persecution was a movement of expediency, set on foot by the Council as a means of coping with the disturbances. . . . But Parliament willed it, and 'it was not therefore,' says an authority on English law [Reeves], 'the policy of the Church but of the crown, and not merely of the crown but of the state.' It was the act of the crown with the authority of Parliament and the assent of the council."

Mary undoubtedly has been much maligned, and it is not undesirable that there should be a statement of everything that can be urged on her behalf. Besides Foxe, Strype, Burnet, Fuller, and Collier, modern historians have more often than not depicted her as morose and implacable. A passage which represents the current view of educated Protestants may be found in Dr. Bright's 'History of England' (vol. ii., p. 455). It begins in the following terms: "Philip's departure left the Queen miserable and almost mad. She roamed wildly about her palace, and sat grovelling on the floor in the twilight, with her knees drawn up to her face. She betook herself to the gloomy satisfaction of religious persecution, and in the three dioceses of Canterbury, Rochester, and London there was but little cessation of sacrifices at the stake." The trouble is that a traditional view is repeated over and over again by those who only look for the confirmation of it in Foxe, if they even look for it there. Mr. Stone goes somewhat too far in the other direction; but his personal estimate of Mary comes much nearer the truth than that which is furnished by the average historian of Protestant sympathies. The most candid and convincing account of her career is the article by Mr. Sidney Lee in the 'Dictionary of National Biography.' Mr. Stone gives fuller details, but as a critic he is less satisfactory.

Like other Tudors, Mary had a hasty temper, and Mr. Stone rather tends to minimize the effect which was produced upon her disposition by all the trials of her troubled life. Nevertheless, where kindness of heart is concerned, she at least appears to advantage in comparison with her father and sister. When dealing with the persecutions, Mr. Stone quotes quite properly from the 'Summa Theologica' the famous passage wherein St. Thomas Aquinas states that, considering the crime of heresy in itself, "heretics deserve not only to be cut off from the Church by excommunication, but to be cut off from the world by death. They are more guilty than those who coin false money, for it is more grave to corrupt the faith which is the life of the soul than to falsify coin, by which that of the body is supported; and thus they are justly put to death like other malefactors." The Church must never condemn the heretic at first, but may only consign him to the secular arm after he has proved obstinate and she despairs of his salvation.

Here, at least, is a general principle and one which Gibbon had in mind when he said, "I am more deeply scandalized at the single execution of Servetus than at the hecatombs which have blazed in the auto-da-fés of Spain and Portugal." Mary was not a philosopher, but a humble child of the Church, indoctrinated with its ideas from the first, and confirmed in them by the wrongs which her mother had suffered. She was willing to use mildness so long as there was any chance that it would succeed, but, according to fundamental conception, her one duty was to redeem England from the grasp of the heretics. However great the folly of her marriage with Philip, and however inhuman the principles of the Roman Church, it is unjust to say that she "betook herself to the gloomy satisfaction of religious persecution." After a most unhappy girlhood, during which she showed both dignity and good feeling, she made many sacrifices as Queen for her convictions. The political effects of the reign are one thing. On the other hand, a faithful biographer is bound to observe that Mary was more disinterested than Henry VIII. or Elizabeth. Nor in feeling was she unpatriotic.

Mr. Stone, who looks at English history from the Romanist standpoint, has a hard chapter to write when he reaches "the martyrs"—that is to say, it is difficult for him to preserve, in speaking of Cranmer and the other victims of the persecution, the tone of studied moderation which marks the volume as a whole. It is an easy matter to hold up the weaknesses of Cranmer, with his six or seven recantations in addition to the time-serving which had marked his course in the two preceding reigns. It is easy to ridicule the fervid eloquence of Latimer and the breaking of pews when he preached. It is also easy to disparage Ridley by quoting that old sarcasm: "Latimer leaneth to Cranmer, Cranmer leaneth to Ridley, and Ridley to the singularity of his own wit." But this kind of detraction, when supplemented alone by an apology for Bonner and Gardiner, does not give a correct impression of the whole episode. Something, indeed a good deal, remains to be said about Rowland Taylor, William Hunter, and the intrepidity which was so widely shown. Mr. Stone at this point becomes too openly the advocate, and his chapter is not above criticism even when looked at as a forensic utterance. For example, he challenges the accuracy of Foxe's "Three Hundred Martyrs," placing the number at two hundred. The reasons for the reduction should surely be given in detail, especially since S. R. Maitland, who worked the statistics out case by case, places the total at 277 ('Essays on Subjects Connected with the Reformation in England,' p. 449). Mr. Stone is glad to quote Maitland in extenuation of Bonner; what is his authority for questioning the correctness of Maitland's list?

However, in spite of some signs of party feeling, this book is both useful and meritorious.

Reminiscences of Francis J. Lippitt. Written for his family, his near relatives, and intimate friends. Providence, R. I.: Preston & Rounds Co. 1902. Pp. 122.

This little book has no preface, nor does it seem to need one. It is a frank, outspoken story of a life spent in many places, widely distant from each other, by a man of energy and of no inconsiderable talent—a lawyer, a soldier, something of a statesman, a bit of an author and musician. The pages are interesting from cover to cover. The "Reminiscences" open thus: "I am a descendant of the Puritan, John Lippitt, who, in 1636, was a coadjutor of Roger Williams in establishing the first Government of Rhode Island. I was born in Providence on July 19, 1812"; and end as follows: "I now find myself a senior graduate of Brown University, and also the sole survivor of those persons that stood by Lafayette's grave at his burial; his grandson, the Marquis de Lasteyrie, having died some years since at La Grange."

The writer is happy in describing his childhood. The text reads as though the narrator were talking by the fireside, so simple and direct is the style. His fourteenth year was spent with an uncle, a professor in the Episcopal Seminary at Alexandria, Va. One of the students took the boy to the President's levee on New Year's day. "All I remember about it is that I was introduced to the President—John Quincy Adams—whose hand was very large and icy cold." After graduation, at the age of eighteen, Lippitt visited Washington, and was taken by Mrs. Commodore Stewart, on New Year's day, to the White House to meet President Jackson. "Contrary to my expectation, I found him to be a man of an elegant figure, whose manner was a model of graceful courtesy. I saw this particularly displayed when he stooped down and picked up a little three-year-old girl, introduced to him by her mother, and kissed her." This testimony to Jackson's kindly manner is only cumulative. The youngster heard Clay in a speech that lasted for two days. He was carried away by Clay's eloquence "in spite of his tall ungainly form,

and a mouth stretching almost from ear to ear." Years afterward, upon reading the speech, he tells us that he "could find little or no trace of those sentences which had seemed to come from a demigod."

Writing without the help of any notes or diary kept at the time, Gen. Lippitt has failed to detect a slip in his memory with regard to Edmund Randolph. "One day," he says (p. 10), "while I stood on the steps of the Capitol, my uncle pointed him out to me. He was a large and portly man, a splendid specimen of a Virginia gentleman of the old school; tall, of a robust frame, looking not to be over fifty, and clad in a blue coat with brass buttons." Of course, this imposing personage could not have been Edmund Randolph, who died in 1813, the year after Lippitt was born. He may have been Peyton Randolph, son of Edmund, and for a long time clerk of the Supreme Court of Virginia; and at that date about forty-seven years of age.

The Secretary of the Navy appointed young Lippitt as schoolmaster, to sail on the *Constellation* for a three years' cruise up the Mediterranean. On his way from Washington by steamer to Norfolk, a friend of his family, Mrs. Thomas, introduced him to her uncle, Chief Justice Marshall. "I had the pleasure of talking with him the whole way down the river. I recognized in him his well-known characteristics—a kindly nature and perfect simplicity of manner." The *Constellation* had over six hundred men. The schoolroom was "a small space between two starboard aft guns on the main deck, shut in by a canvas curtain." Capt. George C. Reed was in command. Lippitt's description of his adventures, touching at Madeira, Lisbon, and Gibraltar, is entertaining. He found it desirable, however, to bring the cruise to a sudden end, and he left the ship in a hurry at Port Mahon. Here the problem was to get to Paris. His funds gave out at Marseilles, and, starting to walk, he actually accomplished a good part of the journey on foot. His chapter af adventures would go far to furnish forth a modern novel. Like other heroes in similar straits, he reached his journey's end, it seems, without having tasted food for twenty-four hours, and with but a single sou in his pocket. He pawned his flute, and resorted to other expedients to keep alive, like a second Oliver Goldsmith. Using letters to friends of his family, he soon got on his feet again, and we find him making a call in grand fashion upon Lafayette at La Grange. The description of a dinner with Lafayette and his daughter and granddaughters is admirable. One finds it difficult to realize that a gentleman is still living with us, hale and hearty, who once sat at table with Lafayette, and was most hospitably entertained by that hero. "I arose as I saw the General coming towards us. He put one arm around my neck, and, with his other arm around the neck of his granddaughter, Mademoiselle de Maubourg, he marched us through the entire length of the salon, where he seated us together in a corner, saying on the way that I must consider myself as his grandson" (p. 29).

A good deal is told of Lippitt's life in Paris, where he spent several years, picking up here and there a bit of work, translating and writing for newspapers, and the like. He helped De Tocqueville in the preparation of his work, 'Democracy in America.' He paid assiduous attention to the theatre and opera; and, comparing at this day Rachel and Bernhardt, he ventures to think the latter superior. Being treated by Mr. Livingston, our Minister, as a sort of semi-official attaché, young Lippitt was invited to return with the Minister and his family in the *Constitution* (Commodore Elliott), which he did. Arriving in New York, he began studying for admission to the bar, and spent seven years in New York city, not at all successful in his profession. Much of this time was devoted to military matters. He was in some capacity connected with the stirring events of the Dorr Rebellion; was a teacher in a collegiate school, at a small salary; and a lawyer on the lookout for clients that seldom came. When war was declared against Mexico, we see him eager to go to the front. He got off at last in a regiment that went around Cape Horn to California, where he landed in '49. From this time on, there is much about the early history of California, in which Lippitt took a prominent part. He was a chairman of the Constitutional Convention, and, some years later, an active member of the Vigilance Committee. At one time he went to Virginia City and opened a law office, but got no clients. At another period we find that he had retired from practice with quite a large fortune, which he went to Europe to enjoy. He was compelled to race back across the Atlantic in order to save his property from the hands of an agent in California, who had betrayed his trust.

During the war for the Union, Lippitt was in active service on the Pacific Coast. He was sent to take care of some Indians who had been misbehaving themselves. At the close of the war he was brevetted brigadier-general. Afterwards, he drifted back to his native city, Providence, and thence came to Washington, where he held office under the Hayes Administration as an assistant counsel in the Court of Claims. He is now living in Washington, active and alert for a man of ninety.

The chief value of this little book consists in the simplicity and frankness with which the writer tells of his varied adventures, keeping nothing back, and talking of himself in a style egotistic, it is true, but never offensively so. He touches upon many matters that are considered beneath the dignity of history, or even of biography, and yet are of acknowledged interest, and of some worth for completing one's view of the recent past. The book has one serious fault—there is no index. A portrait of Gen. Lippitt shows in his face qualities of energy and activity which the attentive reader is likely to discern early in the narrative of these unusual experiences.

Le Théâtre hors de France. 3e série, Le Théâtre en Italie; 4e série, Pulcinella & C. Par Henry Lyonnet. Paris: Société d'Éditions Littéraires et Artistiques. 1901.

That French dramatists and theatrical managers, while remembering that their own productions are superior to all others, can still derive benefit from increased familiarity with the drama of other countries, is the opinion expressed by Gustave Larroumet in his preface to the fourth volume of M. Lyonnet's 'Théâtre hors de France.' Having studied Portugal and Spain, M. Lyonnet devotes his third and fourth volumes to Italy. In pleasing but unpretentious style, and not without some superfluous detail, he presents much interesting and sometimes valuable information on the Italian drama of to-day. Since Italy has no dramatic centre, theatrical companies have no fixed homes, but travel from city to city. Since, moreover, the prices of admission are very modest, the scenery and costumes are usually simple, often shabby. The acting, on the other hand, is of a high order, and yet entirely different in style from any that can be seen outside Italy. When an Italian company came to Paris, French actors and critics said, "This is another art." But, while the players are thoroughly national, the plays are not. Our author occasionally saw a comedy by Goldoni, or some other Italian play; but the immense majority of plays, like so many of the novels now printed in Italy, were translations from the French, English, German, Norwegian, or what not. It is amusing to read his long descriptions of plays once familiar here, like "Niobe" and "My Official Wife." In 1899 the Eleonora Duse and Ermete Zacconi Company undertook to give a season chiefly of D'Annunzio's plays. His "Gloria" failed, and was given but once; his "Gioconda," admired as a literary work, was found lacking dramatically; and for more than half of their performances the company had to fall back on Dumas. M. Lyonnet describes this company's performances, and gives an interesting account of many other actors and actresses only less admired than these, while he also speaks of several plays recently produced by Italian writers.

The fourth volume is entirely devoted to the Neapolitan drama with masks—in particular, to the origin, history, and present condition of Pulcinella. This personage, an incarnation of Neapolitan character, is distinct from the English Punch and the French Polichinelle, although they may owe their origin to him. He has figured in Neapolitan plays since the sixteenth century, always dressed in his loose white blouse and trousers, white pointed cap, and black mask, with hooked nose. At first he was a character in the *commedia dell' arte*, or improvised comedy, in which the playwright provides merely an outline of the action. It is frequently stated that Goldoni overthrew the masked comedy in Italy. What he really did was to put out of fashion the improvisation: he himself used masked characters in many of his plays, and they are met with in popular Italian theatres to the present day, as M. Lyonnet tells us. The masks, Pulcinella for Naples, Arlecchino for Bergamo, Pantalone for Venice, and the rest, spoke their own dialects, wore their own costumes, and preserved their own characteristics, in whatever play they appeared; and so they do still when they appear, while the other actors, travelling all over Italy, speak the national language. Of all the masks, however, Pulcinella seems to be the only one with much vitality, and Naples the only city which has permanent dramatic companies. While accepting the view of Croce and Scherillo that Pulcinella first appeared in his proper person in the theatre of one Silvio Fiorillo, an actor of the sixteenth century, M. Lyonnet also agrees with Maurice Sand in tracing his ancestry back to the ancient Maccus. No direct connection has been demonstrated, but the entire loss

of a form of amusement so popular among the ancient Italians would surely be more difficult to assume than this line of descent. At any rate, Pulcinella, after a long life at the Teatro San Carlino (an humble neighbor of the great San Carlo), now makes his home at the Teatro Nuovo. He has rivals, imitators, and hosts of admirers.

These books are of value in many ways —most of all as documents for theatrical history, present and past. They will instruct any reader; it is safe to say that few Italians out of Naples know what 'Pulcinella & C.' will tell them. There are about a hundred portraits and other illustrations.

Imperium et Libertas: A Study in History and Politics. By Bernard Holland. Longmans, Green & Co. 1901.

During the last hundred and fifty years, in Mr. Holland's opinion, the most important political question for the English people has been no longer the demarcation of the frontiers between royal power and that of the body of the nation, or even that between the State and individual liberty, but that between imperial power and national liberty. The problem is to maintain dominion over remote regions and subject peoples without overtasking the dominant nation, which, as Augustine said of Rome, may break itself by its own greatness. In 1777 Burke wrote: "I am and ever have been deeply sensible of the difficulty of reconciling the strong presiding power that is so useful towards the conservation of a vast, disconnected, and infinitely diversified empire, with that liberty and safety of the provinces which they must enjoy (in opinion and practice, at least), or they will not be provinces at all." In other words, there must be empire, but it must be maintained with the least possible sacrifice of liberty.

Mr. Holland does not inquire whether empire is, after all, necessary, further than to suggest, in the phrase of Louis Napoleon, "L'empire c'est la paix." If the English colonies were not protected by England, they would be attacked by other Powers, or would quarrel among themselves. At all events, there is no indication that England will withdraw from her present responsibilities, and the inquiry how she can discharge them is timely and important. For this inquiry Mr. Holland prepares a most elaborate foundation. He reviews the American Revolution, showing that the English crown could have retained its sovereignty if it had conceded self-government. He then summarizes the history of Canada, showing that sovereignty was retained because that concession was made. These inquiries are very well conceived, and are conducted in a praiseworthy spirit, but they are really unnecessary. The conclusions have long been sufficiently established.

Much the same may be said of the consideration of the Irish question, which occupies most of the remaining space in the book. Mr. Holland favors applying the Canadian precedent to the case. He proposes to set up legislative assemblies for England, Scotland, Ireland, and perhaps Wales, which bodies should regulate the affairs of the respective provinces; imperial affairs to be directed as now by Parliament. But it is obvious that Canada furnishes no precedent for such a dismemberment of the United Kingdom, nor is it easy to find a comfortable precedent in history. Mr. Holland's solution may some time be adopted, but the prospect is not hopeful. As to the relations between the United Kingdom and the colonies, Mr. Holland makes some rather vague proposals for colonial representation and contribution, accepting the guidance of that distinguished statesman Cecil Rhodes. Cecil Rhodes, however, saw that the first step to be taken in creating the new empire was for England to give up free trade, from which Mr. Holland shrinks. After all his elaborate argumentation, he is at last brought to the rather humiliating conclusion that the colonies cannot be represented in the present Parliament, while a federal Parliament for the whole empire is impossible. Nothing remains but to accept Mr. Chamberlain's plan for a grand imperial council, possessing all the magnificent attributes of a parliament, but without its powers. But no body limited to the function of giving advice has hitherto exercised much influence on the world's affairs. The best that can be said for the plan is, that it may serve to amuse those uneasy souls who are continually fretting themselves over the possibilities of attack by foreign nations, while it will not impede the continuance of the good relations which now exist between England and her colonies.

John Chinaman, and a Few Others. By E. H. Parker. E. P. Dutton & Co.

To find out what kind of a man a Chinaman is, Mr. Parker began in 1867 to study his language and get his ideas. After this, he spent twenty-five years in his country, and then, for comparison, travelled in many lands on four continents. From the first, he acted on the principle that "the lowly are just as interesting company as the mighty." He is a hearty lover of his fellow-man, and a despiser of everything in the shape of a sham. His most healthful way of enjoying reality has enabled this ex-consul, and now professor of Chinese at Manchester and Liverpool, to give us what is perhaps the best picture extant of the actual Chinaman. Having written on family law, history, diplomacy, commerce, and travel in China, besides laying open the truth about the thousand years of Tartar rule, he now introduces us without ceremony to the average man of the queue. Under sixteen chapters, with many pictorial illustrations and a thousand modern instances, this realist brings before us in action every sort and condition of Chinese man. As he has, literally, seen them all, he tells of births, marriages, and deaths, of the Chinese innocents abroad, of kings, popes, premiers, and philosophers, of missionary and other "rows," of piracies and murders, and of ways that are dark and tricks that are vain. In short, he draws from his actual experiences with Chinese of every grade. While revealing with how little wisdom the world is governed, he shows also with how much excellence obscure persons are often endowed. He has, indeed, a vocabulary and literary method of his own, being utterly unconventional, and therefore very charming, for to him belong ability, common sense, and the fine art of being interesting. To those who personally or by near reputation were acquainted with the foreigners mentioned on his pages, Baber, Wade, Parkes, Hennessy, there is delight in reading about these old friends. The Chinese names, whether Teng or Ting, Yeh or Li, become far more distinct, and delightfully human, when we find how heartily their possessors can laugh, respond quickly to a little "chaff," yield gracefully when the game is all up, and are full of that varied nature one touch of which makes the whole world akin. For the Chinaman's religion, his worth and usefulness as a man, and his value in the scale of humanity, Mr. Parker has such hearty appreciation that he does not on a single page sacrifice truth. His book is realistic from cover to cover.

To come very close home, he tells of his student experiences in London with Minister Wu (of Washington, whom he correlates with the famous Howqua family of Canton), when, queueless in London, he was looking forward "to an English rather than to a Chinese career." At the same table with the future barristers of the Middle Temple, sat Mr. Hoshi Toru, later of Washington and Tokio, who responded in Chinese, handsomely, but with taciturnity and the pen, to the challenge as to his scholarship in the classics. The young Japanese then, perhaps, little supposed that, a quarter of a century later, in the plenitude of power and fame, he should be assassinated by a conservative fellow-countryman, reader of the books of Mencius, which justify the assassination of unpopular ministers. The London incident (evidently written by Mr. Parker before the late Cabinet Minister was slain) is in a context which shows that, in all probability, a European student could receive a Chinese degree if he went through the usual curriculum. Even aborigines from among the hill tribes, who yield a measure of conformity, can receive degrees and offices.

A curious literary illustration of "the principle of *tabu,* which has always had a wide extension in China," is stated on page 211. The mysterious combination which, in the ancient odes, means "how the Dolichos [plant] creeps," is always avoided by scholars who know foreigners, because the words *Kot tam yu* have sounds very similar to what so often proceeds from British mouths, being heard even in the consulate. Indeed, "Kot tam" is believed to be the name of an English deity, "whose wrath is called down upon the heads of luckless Chinamen on the slightest provocation." This is a curious reminder of the "god-damn hommes" of fifteenth-century France, and the dammurize-hito of the Yokohama dialect. Chinese swearing is retrospective. It has a twist towards genealogy, as becomes the age of the nation, for the objurgation smites ancestors even to the eighteenth degree.

It would be hard, in Mr. Parker's wonderful scrap-book of examples, to tell what phase of Chinese human nature he has not illustrated—from the trusted Chinese physician for whom American and English ladies and children would loosen their dress, and who was deeply mourned when he died, to ordinary "boys" or servant men whose virtues and failings are alike pronounced. The author also met many Koreans during his stay as Consul in their country. Of Japanese doctors, he says that they are patient and do not guess at ailments, but always try to get to the bot-

tom of everything. He tells also of peninsular Asiatics of various sorts, and of Mongols and Tartars. We consider this book equal in sociological value to about one thousand of the average missionary reports, and, just because of its realism—whether we call it coarse or clever—rich in cheer to those who, piercing the crusts of fashion and tradition, see in the Chinaman a genuine human being. Appropriately has the Chinese character, *fuku*, been stamped on the back of the book indicative of the sunny cheer within. There is an index and a valuable glossary.

Washington the Capital City, and its Part in the History of the Nation. By Rufus Rockwell Wilson. Two vols., illustrated. Philadelphia: J. B. Lippincott Co. 1902.

The national capital has had its full share of attention from writers of books and magazine articles. The rude beginning, the magnificence of the plan and the slow response to its demands, and then the sudden awakening into new life after the war for the Union had brought Northern ideas of progress into play at Washington—all these combined have furnished a theme for a large force of busy writers. We take up a new book upon this topic with some misgivings. It is something, however, to tell the story anew and tell it well. This feat Mr. Wilson has accomplished. He is an entertaining writer, the master of a pleasing style, and an author who shows that he has a good sense of proportion. The volumes are printed in attractive page form, and the reader who opens one is likely to find himself so well satisfied as to journey through the entire book.

Washington is truly described as having been in 1799 "a straggling settlement." The close of 1900 found it a city in reality, unsurpassed for its broad avenues, handsome streets, and delightful parks. The genius of L'Enfant at last stands revealed to even the dullest onlooker. One may not say that Washington is the United States, in the sense that Paris is France; but there are few American citizens who are indifferent to a knowledge of their capital, while many regard it in their affections as second only to their own place of residence. The people take a pride in the capital, and view with favor every reasonable plan for its improvement and adornment. The great work now fairly begun under the charge of the Park Commission is but one mode of expressing this deep-seated desire. There is no danger, therefore, that a well-written book about Washington will lack for readers. The only requisite is that the workman, in handling old material, shall show ingenuity and deftness.

Somebody said once of a gentleman who, with no love of reading, had enjoyed the advantage of extensive travel both in his own country and abroad, that he possessed a mind "nourished upon guide-books." The present work is not constructed on the guide-book plan, although from its opening pages one might anticipate that such were the fact. It is rather a narrative of the doings of public officials than a description of localities with which they have been identified. Mr. Wilson's pages present a rapid survey of men of distinction who have acted their part at Washington from the days of President John Adams down to the close of Grant's second term. The book is not exactly a history in disguise. It is a collection of light touches, anecdotes, and brief comments, all readable because of the writer's animated style. At times one is reminded of Blaine's 'Twenty Years,' save that Mr. Wilson has so many personages to deal with that he is enabled only in a few instances to bring out the character into full light. It is surprising how apt the author shows himself to be in his use of adjectives. Every member of the Cabinet, almost every Senator, together with all the more prominent Representatives, are mentioned. Usually, what is known as a thumb-nail sketch is presented. Where only a word or two is allotted to a person, Mr. Wilson displays no little art in the selection of the proper word. The Presidents in turn, as might be expected, come in for extended notice. Much space is devoted to Andrew Jackson; while the reader will encounter some facts in regard to Mr. Lincoln of which he has probably never heard before. The tone of moderation which pervades the book is its best feature. The volumes are to be commended to one who desires to take a brief survey of our political history, without caring to go deeper and learn something of the philosophy of it. Not designed to be studied, they are well calculated for the passing of a pleasant hour.

A work of this description can scarcely avoid the reproach of omissions. Nothing, for example, is said of Hamilton Fish, whose services to his country deserve at least as much praise as that accorded to more than one statesman of an earlier date. Moreover, the older residents of Washington, no less than those who are familiar with local traditions, will miss such characters as Beau Hickman, or that leader in the "third House" and prince of entertainers, Sam Ward. Errors, too, are to be expected when so large a field is covered. One of the earliest, which is most likely to arrest attention, is that of putting Chief Justice Parsons of Massachusetts in the Cabinet of John Adams as his Attorney-General (i., p. 47). But there is a much more serious instance. There are those yet living who can recall how bitter was the disappointment of the Whigs at the result of the election of 1844. They came near electing their idol, Henry Clay. The change of a few votes in New York and Michigan would have carried Clay into the Presidency. Out of this disappointment sprang the usual crop of post-election stories, explanations, and criminations. A charge that seems to have enjoyed more vitality than almost any other, was levelled against James G. Birney, the candidate of the Liberal party. We quote from Mr. Wilson's first volume (p. 404):

"Clay, in some way, had given serious offence to James G. Birney. The exact cause of this hostility had never been revealed, nor did Clay himself, so he asserted, ever understand it. Birney, however, made no secret of it. He was an active abolitionist, and there was, as had been shown in the preceding campaign, some trifling strength in the so-called Abolition party in the North. Its members met in convention and nominated Birney for President, as they had done in 1840. Birney did not want to run again, but saw in his candidacy a chance to repay Clay for the slight, or whatever it was, which had caused the personal enmity. He therefore ran, and had such revenge as caused the Whig party to lose the Presidency."

Had the writer of these words taken a little more pains to get at the truth, he would have discovered that the story, ridiculous as it is on its face, is nothing more nor less than pure fabrication. Carl Schurz, in his not unfriendly biography of Clay, disposes of a similar aspersion in short order. Of Mr. Birney he remarks: "He has been charged with committing an act of personal faithlessness in opposing Clay in 1844. The charge was utterly unjust."

Insect Life: Souvenirs of a Naturalist, J. H. Fabre. Translated from the French by the Author of 'Mademoiselle Mori.' With illustrations by M. Prendergast Parker. Macmillan Co. 1901. Pp. 320, 16 plate figures.

This is an altogether delightful book, in which the author gives, in a few chapters, the results of observations extending over many years. Not many insects are mentioned, and all are from southern France, where, as incidentally appears, the author found it a difficult task, early in his career as a teacher, to secure recognition for natural science of any kind. Two chapters are devoted to the "sacred beetle," in which, incidentally, we get much information concerning the habits of dung beetles, or "tumble-bugs," in general. We also learn that the pellets they are so commonly seen rolling on country roads are not intended as the homes of the early stages, as was usually supposed, but as food supplies for the beetles themselves. The remainder of the book is devoted to the habits of certain predatory digging wasps and mason bees. Elaborate accounts are given of the manner in which the cells, burrows, and other structures are built, and of the way in which the prey is captured and prepared to serve as food for the larva—all based on original, long-continued, personal observations.

The author's style and attitude toward his subjects are excellently shown in the following extract:

"Beauteous Sphegidæ, hatched under my eyes and brought up by my hand; . . . you whose transformations I have followed step by step, waking up with a start at night for fear of missing the moment when the nymph breaks through her swaddling-bands and the wings issue from their cases; you have taught me so many things, learning nothing yourselves, knowing without teachers all that you need to know. Oh, my beautiful Sphegidæ! fly away without fear of my tubes, my phials, and all my boxes and cages, and all my prisons for you. . . . Depart in peace, hollow out your burrows, stab your crickets scientifically, and continue your race, so as to afford to others what you have afforded to me—some of the few moments of happiness in my life."

Though absolutely accurate in detail and even prolix, the author is neither tiresome nor technical; indeed, the systematist comes in for a number of digs: "An insect is caught, transfixed with a long pin, fastened in a box with a cork bottom; a ticket with a Latin name is put under its feet, and all is said. This way of looking at entomological history does not satisfy me." And so he makes a plea for "real observation, and not to let entomology consist in rows of impaled insects." Though he has the most intense interest in all their habits, our author does not unreservedly admire all the doings of his pets. After describing how Philanthus captures and

crushes honey bees to get at the gathered sweets, he adds:

"This profanation of a dying creature, squeezed by its murderer to empty its body and enjoy the contents, has something so hideous that I should call it a crime if a Philanthus could be held responsible. In the midst of this horrible banquet, I have seen both murderer and prey seized by the Mantis; the robber was plundered by a second robber. Horrible to relate, while the Mantis held it transpierced by the points of the double saw, and was already gnawing the under parts, the Philanthus went on licking the honey, unable to abandon the delicious food even in the throes of death. Let us cast a veil over these horrors."

The author has no sympathy for those who see evidences of intelligent action in anything done by the insects under observation. He sees in it nothing but an instinct—wonderful, indeed, and in many points beyond our comprehension; nevertheless, an instinct only, which impels the doing of certain acts as a necessary consequence to definite stimulation. It is an impulse that is obeyed without question, in definite order, and without regard to conditions. To prove this point, we have an interesting series of experiments, which certainly do show that it is easy to disconcert an insect, and to get beyond the boundaries of its inherited experience. Whether the experiments have been sufficient or entirely fair in the problems presented is perhaps a question.

All the facts contained in the book could be sufficiently stated in 30 pages; that in spreading them over 300 the author has not become wearisome is due to the literary quality of the work and to the generally interesting character of the excursions and discussions. It is rare to have so true a tale so well told, for the occasionally extravagant style is not allowed to interfere with accuracy.

The illustrations are half-tones, from wash-drawings, and, as a whole, are good. But the artist has not seen the specimens as the author has; and some of them look unnatural. It is also a question whether the attempt to unite landscape with full-sized insects in the foreground has been entirely successful. The bookmaker's work has been well done; the print is bold and easily read.

Practical Talks by an Astronomer. By Harold Jacoby. Charles Scribner's Sons. 1902.

There is little occasion for aught but praise of Prof. Jacoby's 'Talks,' which are not designed as a systematic treatise on astronomy, but are concerned with subjects that admit of detached treatment and are withal of wide general interest. They are presented in a not unpleasing style, in language in large part free from technicalities, and all have, in fact, been printed in periodicals before. But this collection of disconnected essays is well worth the more permanent form, and why should we not be able to purchase light scientific books of this character at the news-stands and on the trains as well as 'The Crisis,' 'David Harum,' and 'Two Bad Brown Eyes'?

Professor Jacoby begins with 'Navigation at Sea,' and he relates a story of the old days, how,

"upon a certain voyage from England to Rio, the old captain could remember the following odd method of navigation: The ship was steered by compass to the southward and westward, more or less, until the skipper's antique quadrant showed that they had about reached the latitude of Rio. Then they swung her on a course due west by compass, and away she went for Rio, relying on the lookout man forward to keep the ship from running ashore. For, after a certain lapse of time, being ignorant of the longitude, they could not know whether they would 'raise' the land within an hour or in six weeks."

Not a little curious is it that Professor Jacoby, with his intimate knowledge of astronomy, should seem to perpetuate the too widely prevalent error that the captain of a vessel is able to determine the error of his chronometer—in other words, to get his time and longitude—merely by watching at noon "until he discovers that the sun is just beginning to descend." We wonder whether Professor Jacoby knew any ship captain who relied upon a chronometer error found in this quite impossible and most inaccurate fashion. In point of fact, the method would be about as available for the captain of an Atlantic liner who desired to make the port of New York, as was the ancient skipper's manner of chancing it for Rio. And the "lookout man forward" would even more be in need of keeping both his eyes peeled.

Professor Jacoby's choice of subjects is quite happy, giving his book an up-to-date appearance that ought to enhance its present appreciation. The polestar and Campbell's discovery of its ternary character, the new star in Perseus, the little planet Eros so recently approaching close to the earth, the wanderings of the terrestrial poles, the late Professor Keeler's demonstration of the meteoritic constitution of Saturn's rings—these are a few of the more attractive and timely titles. The story of the Moon Hoax, too, is well told, and perhaps the era never will dawn when that would be untimely.

Galileo, ever a fresh and picturesque character, is selected for one of the essays, and a few witty paragraphs are quoted from his 'Dialogue on the Systems,' citing the contemporary English translation of Salisbury, printed in London by Leybourne in 1661. Two of the three *dialogi personæ*, it will be remembered, are Salviati, advocate of the Copernican system, and the humorous and neutral Sagredus, finally convinced of the Ptolemaic error.

"Salviati refers to the argument, then well known, that the earth cannot rotate on its axis, 'because of the impossibility of its moving long without wearinesse.' Sagredus replies: 'There are some kinds of animals which refresh themselves after wearinesse by rowling on the earth; and that therefore there is no need to fear that the Terrestrial Globe should tire, nay, it may be reasonably affirmed that it enjoyeth a perpetual and most tranquil repose, keeping itself in an eternal rowling.' Salviati's comment on this sally is, 'You are tart and satyrical, Sagredus.' "

The epoch-making research of the late Lewis Rutherfurd in astronomical photography, in which Professor Jacoby has himself been actively engaged, is brought to the front with well-deserved prominence; and equally the significant work of Sir David Gill, his Majesty's astronomer at the Cape, who, twenty years ago, laid firmly the foundations of sidereal photography by turning towards the starlit heavens a simple portrait camera belonging to a local photographer. To be sure, a comet was all he sought to catch, but the myriad stars that also flecked his plate pointed directly to charting the whole heavens by photography, and became the immediate forerunner of all the astrographic congresses that have met in Paris during the past fifteen years.

Professor Jacoby's 'Practical Talks,' while in no sense a contribution to science, nor so intended, is yet a distinct aid to better popular understanding and appreciation of things astronomical, and hence is sure to perform a service worth the while. The publishers have put it in an attractive dress, so far as types and paper are concerned, the few full-page illustrations are excellent, a copious index is helpful; but instead of belittling by a cover-design of a nebulous whorl or doubtful "what is it?" the book merits rather the simple dignity of an undecorated cover.

The Roentgen Rays in Medicine and Surgery, as an Aid in Diagnosis and as a Therapeutic Agent. By Francis H. Williams, M.D. Macmillan. 1901. 8vo, pp. xxx, 658. Illustrated.

The employment in surgical diagnosis of the remarkable qualities belonging to the radiation from electrical discharges in a vacuum tube began immediately upon the publication in 1895 of Professor Roentgen's discovery, and the literature of the subject is already very voluminous. As is well known, the radiograph represents the shadow of an object opaque to these rays, and it was soon found that there was no sharp demarcation between the permeable and the impermeable. As nearly as made out, the law of absorption of the Roentgen ray is substantially this: (1.) Rays are absorbed by different substances of equal thickness in a degree nearly proportional to their specific gravities or densities. (2.) The same substance in different thicknesses absorbs with a percentage increasing with the thickness, but not proportional to it. (3.) The more opaque the object is to the ray, the more rapidly does the influence of the thickness increase. It follows that, other conditions being equal, the shadows of different tissues vary with their chemical composition, and therefore the respective normal organs have individual distinctness, and also that changes, permanent or temporary, are demonstrable. Such observations are a useful check upon those made in the more common way, and sometimes are themselves more valuable. That is to say, medical as well as surgical diagnosis is under deep obligations to the X-ray.

But, unexpectedly, therapeutics also has become its debtor. Superfluous hair has been removed for cosmetic reasons; birthmarks have been diminished or cleared away; various skin affections, chiefly serious and intractable, have certainly been cured; and, more remarkable, superficial malignant disease has been healed. Affections which are deeper-seated have not yielded to its touch; and whether the various forms of external cancer and its allies will remain healed can be determined only after the lapse of considerable time. At the worst, however, the treatment may be renewed. In surgery the radiograph has a well-established place for the elucidation of obscure conditions. The grave original objection that, as the photograph after all

only represented a shadow, a great deal of accidental misrepresentation might occur from the relation of the plate to the object, is done away by taking stereoscopic views. This is particularly required where joints are involved.

Where the field is so new and such unanticipated observations have followed experiment, it is natural that the influence of this radiance should be tried upon pathogenic bacteria. Different observers have attained somewhat contradictory results, but at present the general determination is negative. At most, as thus far observed, the growth of cultures outside the body may be checked, but developed colonies are not materially affected. In physiology proper, in the examination of foods and drugs for adulterants, and in veterinary medicine, the Roentgen rays have a growing value.

The volume before us explains at length the matters we have summarized. It contains nearly four hundred illustrations, all apposite; and, although sometimes unduly prolix, it fairly represents our present knowledge in this direction. The author has had exceptional facilities for mastering the apparatus and for observation upon patients, and of both he has taken full and intelligent advantage. More than one hundred pages are devoted to the equipment and its use. The only weak point we have observed is the inference that the static machine may be made sufficiently large and kept sufficiently dry always to work, as found in this sentence (p. 14): "During damp weather the leakage of electricity from the static machine is greater, and a smaller amount is generated, than in dry weather; therefore, the machine must be large enough to give out a sufficient amount of electricity even when the air is moist." This implies possibilities that do not always exist. In the tropics the atmosphere near the sea level is so charged with moisture as to make any static machine of practicable size unreliable. These objections do not have force against an inductive apparatus. Throughout the volume it is insisted that the interpretation of the observations requires special training, much as the meanings of chemical reactions require expert explanation. This does not lessen, perhaps it increases, the real value of the method.

BOOKS OF THE WEEK.

Armstrong, Le Roy. The Outlaws. D. Appleton & Co. $1.25.
Austin, Alfred. A Tale of True Love, and Other Poems. Harpers. $1.20.
Baldwin, James. The Book Lover: A Guide to the Best Reading. Chicago: A. C. McClurg & Co.
Barnard, F. P. Companion to English History. (Middle Ages.) Henry Frowde. $2.90.
Bourne, G. C. An Introduction to the Study of the Comparative Anatomy of Animals, Vol. II. London: George Bell & Sons; New York: Macmillan. $1.25.
Boyle, Courtenay. Mary Boyle: Her Book. London: John Murray; New York: E. P. Dutton & Co. $3.

Walpole, Spencer. Some Unpublished Letters of Horace Walpole. Longmans, Green & Co.

The Nation says:

"It is a winningly fantastic story of a gypsy wanderer, a gypsy fiddle, and a girl who was not a gypsy. . . . Miss Godfrey has contrived to combine and expand her materials in a fresh and original way, and has made a new and pretty tale."

THE WINDING WAY

By Elizabeth Godfrey. $1.50.

Henry Holt & Co., New York

Industrial Democracy.

By Sidney and Beatrice Webb. *New and Cheaper Edition.* Two Volumes in One, with Introduction (36 pp.) to the New Edition, dealing with Recent Developments. 8vo, pp. xi-929, $4.00 *net.* By mail, $4.25.

LONGMANS, GREEN, & CO.
93 Fifth Avenue, New York.

Cape Rosier,
MAINE COAST.

FOR SALE—To settle a joint account—The beautiful headland known as Cape Rosier Head, together with four hundred acres of land attached following the shore for two miles on either side. This property is part of the main land, and is within half an hour by steamer from Isleboro and Castine. There is a steamboat landing within a mile. The whole tract is greatly diversified in character. The shores have bold rocks, coves, and beaches, and the land comprises beautiful woods, open fields, and pastures. There are several farmhouses on it. The drives are varied and extensive through and from the property. The views from the "Head," as well as from many other points on the shore, are most beautiful and varied, commanding the whole range of the Camden Mountains, the Archipelago of Islands in Penobscot Bay, and the open ocean in the distance. The property is offered for sale as a whole only, at a low price per acre. Address

J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

Economic History Since 1763.

Compiled by Benjamin Rand, Ph.D. Third Edition, with Bibliography. 8vo, $3.00.

"This book may be said to mark an epoch in the teaching of political economy in this country, and to make possible a new branch of study in the curriculum of the universities of America."

A Bibliography of Economics

THE NATION

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art, both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American, desirous of keeping abreast of the best political and literary thought of the day, can afford to be without it. Subscription price, $3.00 a year, postpaid.

PUBLISHER OF THE NATION,
208 Broadway, New York City.

The Nation

VOL. LXXIV—NO. 1923. THURSDAY, MAY 8, 1902. PRICE TEN CENTS.

"MAN, THE KING UNDAUNTED."

Heralds of Empire

Being the Story of One Ramsay Stanhope, Lieutenant to Pierre Radisson in the Northern Fur Trade.

By A. C. LAUT

Author of "Lords of the North."

12mo. Cloth, $1.50

A story that tells of the days of Charles II., of the refugees of Boston Town, of Puritanism and Witchcraft, and of Radisson, that picturesque adventurer who juggled empires and who changed allegiance as readily as he would change his coat.

A Damsel or Two

By F. FRANKFORT MOORE, Author of "The Jessamy Bride," "A Nest of Linnets," etc. 12mo. Cloth, $1.50.

An officer and a gentleman and a Napoleon of finance are two of the types contrasted in Mr. Moore's interesting story of modern London, suggesting some of the "promotions" and consequent entanglements of recent years, involving a tale of loyal friendship and love.

Deep-Sea Plunderings

By FRANK T. BULLEN, Author of "The Cruise of the Cachalot," "The Apostles of the Southeast," etc. Illustrated. 12mo. Cloth, $1.50.

Mr. Bullen, who has proved himself a past master of deep-water literature, affords in these pages a series of brilliant and often dramatic pictures of the sailor's life and adventures.

A History of the United States Navy

By EDGAR S. MACLAY, A.M., Author of "A History of American Privateers," etc. New edition, in three volumes, the new volume containing an Account of the Navy since the Civil War, with a history of the Spanish-American War revised to the date of this edition, an Account of naval operations in the Philippines, and the results of the Schley Court of Inquiry, with the subsequent correspondence and the decision of President Roosevelt. Technical Revision of the first two volumes by Lieutenant ROY C. SMITH, U. S. N. Illustrated. 8vo. Each volume $3.00 net; postage, 26 cents each volume additional. A Complete Review of American Sea Power. The United States Navy, 1775 to 1902.

The History of the Louisiana Purchase

By Dr. JAMES K. HOSMER, Author of "A Short History of the Mississippi Valley," etc. With Illustrations and Maps. 12mo. Cloth, $1.20 net; postage, 12 cents additional.

The story that Dr. Hosmer tells of the acquisition of the western empire included in the Louisiana Purchase presents fresh and picturesque phases of a most important historical event. There has been no account of the Louisiana Purchase which is so popular and constant in its interest, and the authoritative character of the historian's work renders the volume indispensable for younger and older readers who wish to gain a thorough knowledge of the personal elements and the historic significance of the acquisition of Louisiana.

The love-story of a cowboy and a young Vermont schoolteacher out in the "cattle country."

Ready May 28. Cloth, 12mo, $1.50.

THE MACMILLAN COMPANY 66 FIFTH AVENUE NEW YORK

The Nation.

NEW YORK, THURSDAY, MAY 8, 1902.

The Week.

President Roosevelt was quoted, the other day, as saying to a friend that he was trying to qualify himself for making speeches "on his feet," without the necessity of any preparation. It appears to have been a speech of this sort which he delivered on Friday night at the banquet of the Sons of the American Revolution, after his run over to Annapolis, earlier in the day, to talk to the graduating class of naval cadets. Mr. Roosevelt was full of enthusiasm for the flag, and, once started on that subject, there was no telling where an impulsive man, making an offhand speech, would bring up. It is therefore scarcely surprising that, after an allusion to "the islands of the Eastern seas," he should have remarked that "the republic has put up its flag in those islands, and the flag will stay there"; and again, after he had received much applause, "I think you make it evident that you intend that the flag shall 'stay put.'" This sort of slap-dash oratory is very different from the calm discussion of the Philippine problem in the President's message last December, when he wrote that "we do not desire to do for the islanders merely what has elsewhere been done for tropic peoples by even the best foreign governments," but that "we hope to do for them what has never before been done for any people of the tropics—to make them fit for self-government after the fashion of the really free nations."

We know that the President, counselled by Gov. Taft, was fearful of the consequences of collisions with the Moros, and went so far as to countermand the recent punitive expedition to Mindanao—though, unfortunately, too late. And the history of Spanish troubles in Mindanao for two centuries is before us as an open book, in which to read a warning against our present course. Naturally, Gen. Davis is sure that the "blow" he has now struck will bring the Moros to their knees. Perhaps it will; but we cannot forget the miserable dashing of similar hopes and similar predictions for three years past. President Roosevelt could not help sending his thanks and congratulations for a fight which he himself believed should never have taken place, but how topsy-turvy he makes our military standards appear in the eyes of the world! Time was when an affair like this in Mindanao would have been called a mere skirmish by Americans; now it is a great "victory," with eight men killed and forty-one wounded. What would a survivor of the battles of the Wilderness think of that? The President should remember that there is a foreign opinion in this business which we have to consider. Other World Powers do not get so excited when a few of their soldiers at the ends of the earth are killed in a trifling action. That is part of the regular business of Imperialism.

Even if the condemnation of barbarous warfare in the Philippines by the Imperialist press is somewhat belated, we welcome it, as we welcome everything that compels Americans to give attention to a subject to which too many of them have become increasingly indifferent. Silence, we know, is consistent with shame, and may be one of the signs of its existence; and the fact that only a few of the more unblushing or foolish newspapers have defended Gen. Smith's policy of extermination, shows what the general sentiment is. To allege the provocation which our soldiers had, is to set up a defence which President Roosevelt brushed aside in advance. To fall back on the miserable sophistry that "war is hell," is only another way of making out those who engage in that kind of war to be fiends. It is, besides, to offer an excuse for ourselves which we did not tolerate for an instant in the case of Spanish atrocities. That is our present moral humiliation in the eyes of the world. We made war on Spain four years ago for doing the very things of which we are now guilty ourselves. As the Chicago *News* pointedly observes, we are giving Spain as good reason to interfere with us on the ground of humanity as we had to interfere with her. Doubtless she would interfere if she were strong enough, and thought she could acquire some islands in the virtuous act.

An interesting side-light on conditions in the Philippines was cast in the address of the Chairman at the annual meeting in London of the Chartered Bank of India, Australia, and China. This institution has branches in the Philippines, and the stockholders were informed that the managers were "disappointed at the slow pacification of the Philippines, and consequent retardation in the revival of trade." The Chairman went on to observe that, "since the advent of the Americans, the volume of business has greatly shrunken." He had some hard things to say of the vacillation and bad management displayed by the United States in its Philippine possessions, and came to this conclusion: "In the absence of a national determination to retain and *exploit* the islands, we feel, as regards our branches there, that while there is so much uncertainty, we must be very circumspect, and endeavor to keep our funds as liquid as possible." Here is certainly a new and powerful argument for hurrying through the Republican bill to "exploit the islands." Gov. Taft says, to be sure, that it would be a bad thing to do, but English bankers are openly complaining that they cannot make any money unless we go on with our exploiting.

With the inauguration of the President of Cuba hardly two weeks off, none of our promises of tariff aid for the island are fulfilled, or seem likely to be. Washington dispatches represent the situation as almost completely deadlocked, with the Administration bill so tied up and delayed that, even if it ever passes in some mangled and ineffective form, it will be a practical defeat for the President, and a serious disappointment, if not a disaster, to the Cubans. The whole controversy would seem to have degenerated into a bitter quarrel between Havemeyer and Oxnard, with Congress simply standing by as a helpless spectator. The mortification of the President and Secretary Root must be extreme as they see their measure hung up and substantially abandoned. What is most depressing about the whole display is its exceeding pettiness. A Government complacently embarking on Imperial rule does not present an imposing figure when it finds itself at the mercy of men whose ideas are only those of a parish. Much of the official boasting we have already done about Cuba has been hollow enough, to the attentive ear; but if all our brave words and explicit pledges in connection with aiding the Cubans now fall to the ground, it will be impossible for even an unwinking Expansionist to glow with "honest pride" as he contemplates the spectacle.

The Senate Committee on Relations with Cuba had Mr. H. O. Havemeyer, President of the American Sugar Refining Company, or Trust, as a witness on Thursday, and obtained from him testimony on two entirely different questions, both of which are just now engaging general attention. The first and immediate subject embraced in the examination relates to the ownership of raw Cuban sugar by the Trust. The sole reason for having Mr. Havemeyer as a witness at all was to prove that the Trust owns, or has a mortgage on, the bulk of the crop now ready for shipment, so that any reduction of the duties would be a bonus to the Trust rather than to the Cubans. Mr. Havemeyer testified that, from January 1 to April 30, the total Cuban sugar purchased by the Trust had been 93,000 tons, of which about half had been

shipped and the remainder was stored in Cuba. Those 93,000 tons, he said, represented all the interest of the so-called Trust in Cuban sugars, directly or indirectly. The Trust had made no advances on sugar held in Cuba. As compared with the purchases of Cuban sugar by the company in former years, this year's purchases are small. In the same period of 1901 it had bought 155,000 tons. About 50,000 tons of the sugar bought by the Trust this year still remained in Cuba, and this was about ten days' supply for its refineries. Here we note a discrepancy between Mr. Havemeyer's statement of the holdings of sugar in Cuba and that given by Gen. Wood on the 2d of April. According to the latter authority, the amount so held then was only 3,285 tons, but it is quite possible that the bulk of the Trust's holdings were purchased after April 2. Mr. Havemeyer said also that the Trust did not own any sugar plantations or lands in Cuba. It had had the intention at one time of acquiring such lands, but had not carried the intention into effect. Mr. Havemeyer gave a list of his private holdings in sugar factories in Cuba and in sugar lands.

Mr. Havemeyer was asked whether he did not make a very low price for sugar in the Missouri valley last summer, and he replied that he did; he had reduced it from 4 1-10 cents to 3½ cents per pound, and kept it at that price "until we recovered our trade." His reason for doing this was that the beet-sugar makers had sought to control the market by contracts ahead, which he considered "in restraint of trade," and consequently he reduced the price till he had recovered the trade. Then Senator Teller, with great simplicity, asked where the beet-sugar men were to sell their product, to which the witness made the unfeeling answer:

> "I don't know. That is their business, and they won't tell me, because they know that if they did I would get at them again. I do not propose that they shall control the trade; it is all that I can do to take care of the American Company's interests."

He added that he had no intention of driving the beet-sugar industry out of the country, but that he should fight to hold his own trade as long as there was a dollar in his company's treasury. Now if competition is the life of trade, Mr. Havemeyer was giving the country, or at all events, the people in the Missouri valley, the benefit of it. If the Sugar Trust is a bad thing *per se*, it could scarcely have been regarded as such in the places where it was putting down the price of sugar to 3½ cents per pound. It may be said that if the Trust should succeed in stopping the production of beet-sugar altogether, then it would be a real monopoly, and could extort any prices it liked for sugar. That does not follow, however, since Congress could at any time admit sugar from abroad, both raw and refined, free of duty. So the dangers of a monopoly in sugar are wholly imaginary, and we have the unwonted spectacle of a great Trust fighting for its life, and giving the country the benefits of the most unbridled competition at a time when the public is more agitated on the subject of monopolies than ever before.

The reply of the Northern Securities Company to the Attorney-General's suit was filed in Minnesota on Monday. Briefly summed up, it alleges that the group of capitalists named in the Government's bill does not own a majority of Northern Securities stock; that there are 1,300 separate holders; that no agreement exists for voting the stock in harmony; that rates on the railroads controlled have been lowered since the company was formed; that, in fact, the two railroads themselves have no arbitrary power over interstate rates; and that the Northern Securities was organized "merely to purchase the stock of those who wished to sell." An important point of the answer is its reference to the purchases by other railways of the stock of competing companies since the Anti-Trust Law of 1890 was enacted. The brief declares:

> "During the eleven years since the passage of that act, in many instances the stock of a competing railway company has been acquired by its competitor, or the shareholders thereof; such acquisition including many of the principal railways doing business throughout the country. This has been done without objection from any branch of the Government of the United States, and has invariably proven beneficial to the railway companies concerned and to the public."

We say this point of the answer is important, because it raises a consideration which even courts of justice often recognize. The question, what would follow if the decision in this case were to upset the validity of important and long-standing investments by such companies as the Pennsylvania, the Union Pacific, and the Southern, is, in the minds of conservative financiers, the most serious of all. The Attorney-General, foreseeing this argument in the answer, undertook to forestall it by a technical allegation of bad faith. The Northern Securities, he alleged, "is a mere depository, custodian, holder, and trustee" of the stocks in question; it was "organized solely to incorporate the pooling of the stocks," and "no consideration whatever has existed, or will exist, for the transfer, . . . other than the issue of the stock of the Northern Securities Company . . . in exchange therefor." This part of the bill has been recognized by all lawyers as the strategic point of Mr. Knox's move. That a general denial would be made to it, in urgent language, was expected; what adds some novel interest, however, is the defendant's further answer, that

> "The Northern Securities Company has not paid for all the stock of the Great Northern Company and of the Northern Pacific Company acquired by it in shares of its own stock, but, on the contrary, has expended upwards of $40,000,000 cash in the making of such purchases."

This is the first appearance of the above mysterious $40,000,000 in the case, and, as no details appear to accompany the statement cited, it would be premature to attempt any explanation now. We may observe, however, that the answer indicates that this question of cash purchase is not unlikely to be the centre of the legal battle-line. How far the Minnesota brief covers the dictum of the Supreme Court in the trans-Missouri case, that "the necessary effect" of a railway combination or agreement of the sort "is to restrain trade and commerce, no matter what the intent was" on the part of its authors, is a broader question.

Whether there is a Beef Trust or not—whether there was a valid excuse for the recent advance in the price of beef or not—the sudden slackening in the public demand for the article has paralyzed the cattle trade all over the West. From all quarters we hear that there is no sale for cattle, hogs, or sheep, and that the buyers and packers are telegraphing to their agents not to send any more till the yards are cleared of stock on hand. This is the fitting answer to the beef combine. The people of the United States have simply controlled their appetite for beef. They have chosen a different diet for the time being. In the multitude and variety of things offered for human consumption, it is not difficult for a family to reduce its consumption of beef one-half without going hungry or suffering much inconvenience. The result of such a change in the habits of the community is to throw back upon the hands of the Trust one-half of all the meats in the markets and in the railroad cars, and upon the drovers and ranchmen one-half of all the cattle *en route* to the packers—in short, to produce the condition of glut which the dispatches tell us exists in Chicago, Omaha, Kansas City, and Denver to-day. This lesson will be more salutary to the beef monopolists than forty lawsuits under the Sherman Anti-Trust Act. It may have the happier effect of teaching people to economize in the use of an expensive article of diet. It is said that a French family can live comfortably on the food that an American family wastes. While this is not universally true, there is a large substratum of fact in it.

Increases of wages in various trades during the past year have been shown in the reviews of the labor market on the 1st of May, published by newspapers in different parts of the country. Employment has also been much more nearly continuous than usual during the

past twelvemonth. This means that more men have had work than is generally the case, and that many of those at work have received more than the average rate of pay. This shows how the business activity affects the laboring classes. At least, it shows one way in which that activity affects them. Many men who formerly could not find employment can now earn wages, and these are, of course, much better off than they were. As to those who used to have work and now receive more pay for it than formerly, a different question arises—Does the increase in the cost of what they buy exceed their gain in wages? If it does, they were better off on the smaller pay, when food and clothing also cost them less. As regards the class of salaried men who have permanent employment at the same rate of pay, year after year, we suppose there can be no question that a "business boom" is a bad thing for them. Hard times are really good times for the college professor who is sure of his place, because his fixed income brings him more of the comforts of life in such periods than when prices are high all around.

Mr. Bryan has intimated more than once of late that he would not be a candidate for the Presidential nomination in 1904. If he designed these announcements as "feelers," to test the sentiment of the Democratic party, he must have been impressed with the plain manifestations of relief at the prospect of his withdrawal from leadership. At any rate, he has apparently decided that his best policy is to renounce ambition for another nomination, and gave public notice of it at a banquet in Birmingham, Ala., on Saturday night:

> "During his speech Mr. Bryan intimated that he would not again be a candidate for the Presidential nomination. In referring to the subject, he likened himself to Aaron, who, he said, assisted Moses in leading the children of Israel out of the wilderness by his public utterances. He said he was perfectly willing to let some other person take the part of Moses."

Where is the new Democratic Moses? That is the question which everybody naturally asks, and there would be no approach to agreement among those who should answer. It is worth while pointing out, however, that it has repeatedly happened that men have become national leaders who were hardly thought of as possible Presidential candidates two years and a half before the election. It is now May, 1902, and the next President will be chosen in November, 1904. In May, 1894, Mr. Bryan himself was serving his second term in the House of Representatives, but it is safe to say that not one human being, either in Congress or outside it, then dreamt of such a thing as his being the Democratic candidate for President in 1896, and becoming so much the master of the party organization that no other name than his would be mentioned in the convention of 1900.

The revised budget adopted by the Board of Estimate and Apportionment last week is undoubtedly at first sight a disappointment to most people who contributed to the overthrow of Tammany last fall. The general impression was that there had been such extravagance under Mayor Van Wyck that a reform Administration might save millions without impairing the efficiency of the government. To find that the revised budget now adopted, after careful study, aggregates $98,619,600, against the $97,974,541 estimated by Tammany during the campaign last fall, is a shock to all except the small number of persons who have kept close track of developments in the various departments since the beginning of the year. The truth is, that the public expected too much. The estimates made by Tammany last fall constituted what may properly be called a "trick" budget, designed to deceive the people during the campaign, and involving the necessity of increases this spring, whoever might be in power. It is necessary to appropriate $500,000 now to meet deficiencies which existed last fall, but which were not provided for then. Moreover, Tammany had allowed such neglect and inefficiency in many departments that decent service involved heavy expenditures to put the plant in good condition, as in the cleaning of the streets, or to furnish proper food and care for the city's wards, as in the Department of Charities. That $100,000 more must be expended on supplies for this latter department than Tammany granted means simply that common humanity has supplanted brutal methods in the support of thousands of helpless people.

It is probably a relief to all concerned, including the Italians, that the King's pardon sends the imprisoned officers of the United States cruiser *Chicago* back to their ship. The Navy Department must feel that the proper response to this act of royal clemency is a court-martial of the offenders as prompt and thorough as may be. At this court-martial, whatever may be said in apology for commissioned officers who get into a drunken fight in a foreign city, will undoubtedly be brought forward. For the present we have to choose between dispatches which differ widely in their contents, but which all make out a case highly discreditable to officers wearing the uniform of the United States navy. We trust that the uglier features reported of this drunkard's progress in a friendly port—the more odious because among the Italians intoxication is almost unheard of—will turn out to be untrue; enough will remain, we may be sure, to bring exemplary punishment upon officers who so far forgot the traditions of the American navy. In this matter the navy, let us hope, will show that it is an efficient guardian of its own honor.

The Irish question is again thrust upon Parliament just at the time when the need of relieving that body from the petty details of local legislation is more keenly felt than ever. Mr. Balfour has at last got his amended rules through the Commons, but, even with their aid in expediting business, he cannot see his way to avoid that hated thing—an autumn session. Even leaving out controverted political measures, like the Education Bill, such an increasing mass of legislation for the constituent parts of the United Kingdom is pressed upon Parliament that there are fresh demands for some plan to get rid of it. "Devolution of Imperial powers" is the favorite name for the method of avoiding a congestion of business at Westminster. Lord Rosebery declared himself for that euphemism in the very speech in which he forswore Irish Home Rule. The latter may yet come, smelling as sweet, under some other name. One can easily imagine Mr. Balfour, or, with more difficulty, Mr. Chamberlain, consenting to do under the guise of "devolution" what they would bitterly oppose if dubbed Home Rule. In any case, it is universally agreed that something must soon be done to save Parliament from breaking down under the pressure of local business, which could be so much better attended to by the localities concerned.

The profound sympathy which is felt for the young Queen of Holland is heightened by many considerations—her gracious personality, her youth, and the too fleeting romance of her marriage to a German princeling. The fact that her untimely death would leave the succession to the throne of the Netherlands in grave doubt, gives also an unusual political significance to the desperate hazard of life and death in which she now lies. With her the Dutch line of Nassau is extinct, and the crown reverts to collateral heirs so distantly related to the royal line that they could arouse no enthusiasm among the Dutch. Furthermore, these distant claimants, all Germans, would surely be distasteful to the Netherlanders; for, first, Germany is suspected, not without cause, of ulterior designs upon Holland, and next, the Prince Consort has certainly, by his personal actions, rather heightened than lessened an already existing prejudice against the Germans. If it were fifty years earlier, the fixing of the succession would afford a very pretty chance for a quarrel among the Powers. As it is, Parliament is perfectly capable of choosing a king among the numerous remote claimants; in which case no Prussian would be likely to succeed.

"HYSTERIA" IN 1898 AND NOW.

Col. C. A. Woodruff, speaking on Saturday in defence of Gen. Smith before the court-martial in Manila, alluded to "the hysterical public opinion" which had brought about the trial of "this gray, wounded, victorious general." It was in evidence that the victorious general had given orders to take no prisoners, to kill "everything over ten," and to make Samar a howling wilderness; but to object to such measures was mere "sentiment," Col. Woodruff asserted, and he added that, though sentiment is an "excellent thing," there is "no place for it in war."

Now this may be sound military doctrine, on general principles. On such a defence Napoleon might have fallen back, or the Duke of Alva, or Gen. Weyler; but no American can possibly make use of it. Our mouths are stopped. As a nation we solemnly denied the validity of such a defence of cruelty in warfare, and appealed to the arbitrament of the sword in protest against it. We went to war with Spain for conducting war cruelly. We did not sneer at "sentiment" in 1897 and 1898, when stories of Spanish inhumanity and torture roused our indignation. Not for a moment did we admit that it was "hysteria" which set the country aflame with noble rage at the reported Spanish atrocities in Cuba and in the Philippines. No, that was the generous uprising of a humane people to put an end to unspeakable abominations. Talk not to us of military necessity. Urge no precedents. We would listen to none of them, but went to war calling men and angels to witness that our motives were of the purest, and that we resorted to arms only because our outraged natures could no longer endure the sight of miserable beings tortured and massacred by a ruthless soldiery.

It is this great fact, within the memory of all, which puts us out of court when we begin to philosophize about the necessary evils of war. We deliberately renounced any such defence for ourselves when we refused to accept it for those with whom we were in controversy. In demanding a better standard of others, we bound ourselves to abide by it. With what judgment we judged the Spaniards in 1898, it must be meted to us again in 1902. Not for us are the apologies to be drawn from that most comfortable apothegm, "War is hell"; we put them all aside; we would hearken to no palliation, and vowed to high heaven that the conduct we complained of had no justification except on the principles of the devil. This is what makes it so impossible for us to come into court to-day with clean hands. Our own plea we ourselves have derided in advance.

Those Republican newspapers which are slowly plucking up courage to excuse the inhumanities of our war in the Philippines, take much satisfaction in reproducing the worst orders ever issued by Northern generals in the civil war. They recall what Sheridan did in the Valley of the Shenandoah, what black ruin attended Sherman's march through Georgia, and quote with delight Gen. G. M. Dodge's saying of three counties in Tennessee that "I believe our policy is to burn up these counties," together with Gen. Halleck's announced determination to "punish all whom I can catch, although I have no doubt there will be a newspaper howl against me as a bloodthirsty monster." To all which, we have to say that it does not in the least break the force of our present self-condemnation. These very examples from our own civil war were cited in 1898 as a reason why we should not madly rush into conflict with Spain for similar bloody incidents of war, but no one would pay the slightest attention. All the citation of precedents, even out of our own history, was then furiously brushed aside. It will as little avail us now.

Furthermore, we find a strange fatuity, or an ironic stroke of fate, in this reopening of the wounds of the South. The Spanish war, we know, wrought one of its many blessings in reuniting the severed sections of our country. The blue and the gray side by side in Cuba made the past forgotten, and a true union of hearts resulted. After all that, there is something sardonic in this latest sequel of the Spanish war. Northern newspapers are admitting, even boasting, that the worst grievances of the South against the Federal armies were well founded. "Yes," they are saying, "we harried you and burned you and shot down combatants without distinction of sex, as Gen. Halleck put it. As Gen. Weyler treated the Cuban rebels, and as Gen. Arolas used fire and sword in the Philippines, so did our armies ravage the South." Thus has the providential Spanish war obliterated all ill feeling between North and South!

Above and beyond all this, we have, fortunately, in the official utterance of President Roosevelt a moral and military standard which discomfits all the apologists for cruelty. The President of the United States, Commander-in-Chief of all our armies, has declared that torture and massacre will not be tolerated under the American flag. No matter what the provocation, that offence will not go unpunished. This Executive deliverance is what clipped the periods of Senator Lodge's oratory on Monday. He undertook to tell the story of Filipino cruelty. That this has been extreme we do not doubt, though Lodge had nothing but the vaguest allegations to make. But this has nothing to do with the case, and all such limping defences as Lodge's are swept out of existence by the single broad assertion of the President: "Great as the provocation has been in dealing with foes who habitually resort to treachery, murder, and torture against our men, *nothing can justify or will be held to justify the use of torture or inhuman conduct of any kind* on the part of the American Army." Senator Lodge seemed to be dimly aware that his entire speech was snuffed out in advance by that one sentence. That is the reason, perhaps, why he made his oration a specimen of smoking flax so easy to quench.

THE PESKY ANTI-IMPERIALIST.

It is most provoking, we know, for Anti-Imperialists to pretend that they are still alive. They have been killed so often. After 1899 we were to hear no more of them. In 1900 they were again pronounced dead, although, like the obstinate Irishman, they continued to protest that, if they were dead, they were not conscious of it. Last year the slain were slaughtered once more, and that time buried as well, with all due ceremony. Yet the impudent creatures have resumed activity during the past few months just as if their epitaphs had not been composed again and again.

And the worst of it is that they seem to have acquired a strange power over the public and over Government. What the lonely and ridiculous Anti-Imperialist was whispering in the closet, a year ago, thousands are now shouting from the housetops. The impossible measures which the absurd fellow was demanding have been adopted by the President of the United States, and have even compelled the approval of Congress. When Gen. Funston, for example, began his blethering, it was the foolish Anti-Imperialists who said that the President ought to reprimand and silence him, and how the jeers arose! That was just like the silly old impracticables—attacking a popular hero. But presently the said hero had a gag forcibly inserted between his teeth by Executive order, just as if the Anti-Imperialists had been right about it from the beginning. It is not necessary to recall the triumphs of the mistaken beings in the whole matter of the Philippine investigation and of courts-martial for the implicated officers. Enough to say that, in the entire affair, the Administration and Congress have acted on the demand and as if by the advice of that handful of out-of-date and laughable persons, the Anti-Imperialists.

The phenomenon occasions much scratching of the Imperialist head. How to account for it? Imperialist editors and statesmen are puzzled. Their despised and helpless opponents are actually swaying the policy of the Government! It is absurd, of course, really quite preposterous, but there stands the fact. It is all very fine, and it's lots of fun, to make merry at the expense of

wrong-headed people who get in the way of national progress, and hope to turn back the hands on the dial of evolution, but how if they succeed? Prodigiously unreasonable, it goes without saying, and truly disgusting to the well-ordered mind of the Imperialist; but what is the explanation?

Very simple, cocksure brothers of the Empire, we assure you. All you have to do is to remember that Anti-Imperialism is only another name for old-fashioned Americanism, and all will be clear to you. An American who has a settled body of convictions, as to which he is ready to speak out at a moment's notice, and which he is ready to apply promptly and sharply to every fresh set of circumstances that turns up; who with his inherited ideas has an inherited courage, an inherited love of equality and of justice; who has also a sense of humor which cannot be imposed upon by Uncle Sam masquerading in Louis Quatorze garments—why, he is a natural born Anti-Imperialist, and it is simply his Americanism that makes him think and act as he does.

We have had some beautiful illustrations of this truth in the weeks last past. What is the true American way of dealing with a rampant military banqueteer like Funston? Or with news from the Philippines that makes the blood curdle? It is to say on the spot what you think, is it not? Well, that is exactly what the Anti-Imperialists did. It was the other sort who looked at each other in wild surmise, wondered if they dared say anything at all, kept still until shame finally drove them into mumbling speech, and acted in all ways as if they were the terrified and hunted minority afraid to say their souls were their own. Is that Imperialism? We do not know. We only know that it is not Americanism, and that in this case, as so many times before, the citizens who first found their voices, who first spoke out their honest indignation and made their righteous demands, were the ones to move public opinion and to influence official action, while the palterers and the apologizers had to come shamefacedly after.

And it is, too, the "ancient humor," as well as the elder stanchness, of true Americanism that has been coming to its own in the recent successes of the Anti-Imperialist cause. What are our anxious and solemn Imperialists thinking of when they imagine that Uncle Sam has forgotten how to take a joke? They gather about the old gentleman with attentive flatteries, and keep serious faces when he nervously asks them how his ermine hangs, and if his crown is on straight. All the while he would much prefer to have them laugh at him openly and tell him not to be a durn fool. Mark Twain is showing us to-day how true is his descent in the right line of American humor by his continued satires on the airs and graces of our Imperialists. He speaks in the very voice, if not in the numbers, of Hosea Biglow, and with all his sarcasm at the expense of the high and mighty ones who think to arrange all matters of statesmanship and of national policy without consulting the inquisitive democrat of field and shop—

"Wal, it's a marcy we've gut folks to tell us
The rights an' the wrongs o' these matters, I vow."

This, in a word, is what makes the Anti-Imperialist so pesky—he is American to the core. He has fed on his country's tradition. With him, as with Gov. Andrew and with Lincoln, justice does not depend upon the color of a man's skin. He cannot distinguish between the flag and the principles which first set the flag flying. With John Quincy Adams he believes that the Declaration of Independence is the very Alcoran of American political doctrine. And he does not in the least mind being in a minority. He remembers that the history of success is the history of minorities. Sneers and jeers are alike indifferent to him, and when the Red Slayer thinks to have made an end of him, he turns and passes and comes again. He is content to bide his time, knowing that the road of popular persuasion is a long one, though sure in the end, and that republics cannot march to their goal with "the decisiveness and consistency of despotism." Withal, he knows how to shoot a dart of ridicule at Imperialist folly as it flies, and derives amusement as well as hope from Uncle Sam's humorous appreciation of his present plight. This might well be caricatured to-day, as we have heard it suggested, by a picture of your Uncle ruefully contemplating his Philippine extremities, enormously swollen by ulcers and boils, and saying with whimsical melancholy, "And they call this expansion!"

REFORMERS AND APPEARANCES.

Another version of President Roosevelt's reason for giving an avowed spoilsman a lucrative Federal office is furnished in a Washington dispatch to the *Times*. It is that Mr. Roosevelt "liked" Clarkson. He made him Surveyor of the Port because "he knew him to be a big, strong man." It was not a case of yielding to "importunity"; the President "was as much pleased with the idea of making Clarkson Surveyor as were any of Clarkson's Iowa friends." This explanation sounds very probable. It puts the Clarkson appointment in line with that of Murray and Daniels—also men whom the President knew to be big and strong. Very likely, he is in the habit of calling the new Surveyor "Jim," just as he calls the others "Joe" and "Ben." He could not, of course, overlook the fact that Ben had omitted to mention that he was an ex-convict; but it would obviously be drawing it quite too fine for an admirer of big and strong men to refuse to appoint one of them to office on account of some miserable little technicality like having previously been denounced by Mr. Roosevelt himself as hostile to decent government.

Now we are quite ready to believe that President Roosevelt's intentions, in all this matter of the civil service, are of the best. We know that he has fought and is still fighting the spoilsmen of his party. His general standards of appointment are undoubtedly high. But what he seems to forget is the fact that good intentions cannot excuse a reformer for doing things which appear precisely like the acts of a spoilsman, and that to justify himself by giving exactly the explanation which a corruptionist would advance is only, as Disraeli said of a "vindication" offered by Sir Robert Peel, "an aggravated avowal of the offence of which he was accused."

Mr. Roosevelt did not, as Civil-Service Commissioner, fight with wild beasts at Ephesus without learning that one of the first excuses to leap to the lips of Senators or Representatives, urging unfit appointments, is that they "know" and "like" the candidates. Perhaps the big and strong men have not been, as such, so high in favor with valetudinarian Senators as they are with the athletic President; but if personal acquaintance and liking are sufficient, why, the worst ward-worker that Mr. Roosevelt ever barred from office was as warmly vouched for as Clarkson. Senator Hanna, for example, knows and likes Rathbone. The President cannot be more emphatic about Joe Murray than Hanna is about his Ohio lieutenant, temporarily in controversy with Cuban officers of justice. The very language used by Mr. Roosevelt about *his* man is employed by spoils-mongering Senators to describe the virtues of *their* men. "Why, I know Rathbone," says Hanna, "and a cracking good fellow he is." "I know Sayler," says Quay of his discredited Consul, "and a truer man never overcharged the State Treasury." No one would be swifter than the President to see the hollowness of such a reason for naming unfit men. But is not his own reason in the Clarkson and Murray cases practically the same? It will not do for him indignantly to assert his good intentions. Hanna and Quay would lay their hands on their hearts and profess only devotion to the public good. The one question is as to the merit and fitness of the nominee; and that can no more be settled by warm assurances from the White House than from the Senate chamber.

The sum of our complaint is, that there are well-settled principles and practices which reformers have contended for when spoilsmen were in office, and which cannot be waived without scandal by reformers when they themselves get into office. Take the appointment of Murray to succeed Commissioner Mc-

Sweeney. Saying nothing now about the propriety of removing the latter, why should the office have been at once taken from the competitive class? Apparently, it was in order to make it certain that Murray could get it. His ability to pass an examination was doubtful, and so the examination was abolished for his benefit. Is it any excuse for this to say that the President had summered and wintered with this man, and knew him to be a worthy fellow, even if illiterate? We think not. Imagine what Civil-Service Commissioner Roosevelt would have said of such a proceeding by President Cleveland. He would have asked what the rules were for, and why the classified service existed at all, if an executive order were to be allowed thus to break down the system for the sake of doing a personal favor.

It is a common temptation of reformers in office to take their own good character and excellent purposes as an excuse for doing what they would not for a moment tolerate in another. They forget the importance of appearances in such matters. They think that, being good men in office, they can override safeguards which were devised to stay the hands of bad officials. Thus their sole defence is, "The others were scoundrels, but we are virtuous." But that is a highly perilous defence. The public will not accept it. If the rules and the methods and the standards which have been loudly advocated in the name of reform, are suspended or abandoned by reformers as soon as they get office, people will say, and they cannot be blamed for saying, that reform stands convicted of being either impracticable or insincere. None of the reasons of state alleged will suffice with this out-of-door public. When it sees a President allowing in himself the thing that he condemned in another, and hears him speak of the considerations that have led him to change his opinion and vary his practice, it will ask with Junius, "My Lord, is this the wisdom of a great statesman, or the ominous oscillation of a pendulum?"

THE BANKS AND THE TRUST COMPANIES.

The New York Clearing-house last week made public certain resolutions to the effect that the trust companies, being direct competitors of the banks, ought to submit to some of the bank requirements in the matter of cash reserves. To understand this move, a bit of historical retrospect is needed. Every reader of financial news is aware that the organization of trust companies has been as characteristic an incident of the last five years as the formation of the industrial Trusts. Taking the State of New York alone, the official records show that on January 1, 1898, there were incorporated 44 trust companies, with total resources of $483,739,925. At the beginning of 1902, the number of these institutions had risen to 62, and their resources to $969,393,644. The name applied to these credit institutions describes their origin. The law of 1887, under which most of them are chartered, empowers them "to act as fiscal or transfer agent" of States, municipalities, or corporations; "to receive deposits of trust moneys"; "to accept trusts from and execute trusts" in behalf of married women with a separate property, of beneficiaries under bequests, and of lunatics and other incompetents. In other words, the trust company undertook to provide, through a corporation, the services heretofore rendered by individual executors and trustees. The law was wise and necessary; it met a very urgent need.

It was not contemplated by the authors of the law that these corporations should so utilize their powers as to engage in the business of deposit banks. This is one reason why the statute placed on them virtually none of the usual bank restrictions. They might lend on real estate, which a bank is not allowed to do; the reason being that mortgages may be very proper investments for executors or trustees. They were not required to keep any cash reserve, whereas the State or national bank must hold from 7 to 25 per cent. Here, too, the reason was that to require a portion of a trust fund to be kept in idleness would be folly. But the law, as it happened, was extremely broad. Not only, on the one hand, were the companies empowered "to loan money on real or personal securities," and "to purchase, invest in, and sell stocks, bills of exchange, bonds and mortgages, and other securities"; but they were authorized, on the other, "to take, accept, and execute any and all such trusts and powers, of whatever nature or description, as may be conferred" upon them. Clearly enough, the opening of a simple deposit account, subject to demand, was the conferring of a trust or power. On the basis of this clause the trust companies have built up their general banking business, which now occupies the greater part of their activities. The companies, having sources of profit not open to an ordinary deposit bank, not being hampered with reserve requirements, and falling on a period when the community was blessed with an abundant surplus, were quick to recognize their legitimate opportunity. They offered to depositors, to whom as a rule a bank paid nothing, 2 per cent. or more in interest on current accounts. As a perfectly natural result, the deposits of the New York companies, outside of simple trust accounts, rose from $198,229,029 in January, 1898, to $440,718,602 the opening of 1902.

The position of the banks, as reflected in the recent Clearing-house resolutions, directly raises two questions: First, whether, if the legal requirement of a cash reserve is right in the case of banks, the trust companies should be allowed to dispense with it; second, whether the banks are fairly treated by a law allowing competitors to do the business of banks without the bank restrictions. The resolutions, we should suppose, are tentative, and for the present will do little more than bring up the subject for practical discussion. No banker contemplates such a thing as the instant recall of $25,000,000 cash by the trust companies from the banks, to use as a trust company reserve. We regard it, nevertheless, as highly important that the question should have been raised in exactly this way. The existing situation has all along seemed to us anomalous. It is not that the trust companies have been misusing the opportunities of the law, but that no safe guarantee has been in force that they might not do so. It is well understood that the companies, though keeping virtually no cash in their vaults, still hold a reasonable sum deposited on demand in banks. But this precaution is purely voluntary. There is also a rather interesting question as to how far a reserve entirely redeposited in bank would meet the needs of a crisis such as that of July, 1893. Every one knows what figure was then cut by New York deposits owned by Western banks. Bankers are equally aware what would have happened then to deposits of savings-banks with Clearing-house institutions, but for the "sixty-day notice" privilege. There is, of course, not the slightest early possibility of another 1893, with its run on depository institutions. But in matters of this sort we should be building for the future.

The Clearing-house resolutions suggest a possible demand for the maintenance of sufficient reserves in the trust companies' own vaults. The only right to make such a demand, and the only power to enforce it, rests in the Clearing-house's grant of its own check-clearing facilities. To the trust companies these facilities are very essential. Possibly they could dispense with them if the banks were to make really unjust demands. If, then, the bank position is to be sustained, it can only be because of its reasonableness. At all events, a situation admittedly exists which needs reform, and the alternative to reform through the Clearing-house will probably be reform through Albany. We are aware that the matter is perplexing, and that a right position cannot be reached in a single day. We admit, also, that what the trust companies now do, in depositing all their cash reserve with the banks, is exactly what the joint-stock banks of London do with the Bank of England. But the Bank of England is a quasi-

public institution; it has some special privileges of its own, and it recognizes its peculiar responsibilities by maintaining in cash some 40 or 50 per cent. against deposits. The New York banks allege that they cannot afford to make any such provision, and that they cannot rightly be asked to do it when aggressive competitors would be the beneficiaries. This is a highly interesting problem, and one, we believe, quite novel for this country. Our hope is that the trust company managers, who are large-minded and competent financiers, will themselves lend a hand to its right solution.

THE FREE-LECTURE MOVEMENT.

The annual dinner on Thursday evening of those especially interested in the free lecture courses given in the various boroughs of New York, under the auspices of the Board of Education, calls attention to a movement for popular instruction and entertainment which is of the first importance to the city. So quietly has this enterprise been conducted, and so seldom has it challenged public attention, that few people understand the dimensions which it has reached or appreciate the significance of its work.

The schoolhouses used to be closed every evening in the week. In the neighborhood of every building live men and women who "have nothing to do evenings," and who might be attracted to meetings in the schoolhouses if no admission fee were charged. It was believed that people could be found who would be willing to give evening lectures in these buildings for nominal compensation, so that the expense need not be much more than the cost of lighting. Dr. Henry M. Leipziger persuaded the Board of Education to try the experiment in a modest way, thirteen years ago, and the hopes of its projectors were soon justified. From half a dozen schoolhouses, the first year, the scope of the movement has spread until during the past season there have been more than one hundred places—schoolrooms, rented rooms, and halls, the use of which was given by the owners without charge—where systematic courses were furnished, aggregating three thousand lectures, which were attended by more than 900,000 people. The experiment was begun in the old city of New York—the present Borough of Manhattan—but it has been extended so that now every part of Greater New York shares its advantages. The city Charter expressly confers upon the Board of Education the power "to maintain free lectures and courses of instruction for the people of the city of New York." Every year the sum appropriated for this purpose is increased, and no occasion for criticism upon its expenditure has arisen.

The movement is primarily for the education of adults. Children are admitted to these lectures, which are, however, designed chiefly to broaden the interests of those who are beyond the school age, and whose lives are given to monotonous labor. The aim is to bring such people into touch with the principles of science and its recent discoveries, with the results of travel, and with the delights of music, literature, and art. There are elementary courses, designed to give information in a pleasing way, and others whose sole purpose is to follow a definite line of study. Attention is paid to the tastes and preferences found to predominate in particular localities, and it has been found that instruction is desired as much as entertainment. Courses of lectures are arranged in many centres systematically: at one, for example, fifty lectures on history and literature; at another, every Saturday night a lecture on some subject in natural science; at a third, subjects relating to education. A course on political history draws audiences composed almost entirely of men; at one on music or art women usually predominate. Lecturers note the same faces among their hearers week after week, and each year there is an increasing number of those who show an earnest desire to study a subject thoroughly.

The interest of the audiences is shown not only by the steady increase in the attendance, but by the voluntary expressions of delight which are constantly received by those in charge of the movement. Some of the letters from which Dr. Leipziger read extracts last week were almost pathetic in the display of gratitude. "The majority of us," wrote one, "know nothing but paved streets and brick walls. Nature stands at our doors, but we know nothing of her. These lectures give us instruction and mental exhilaration." Another, who has attended forty lectures since the season opened last fall, writes: "A busy and often very tired woman, unable to spare much time or sight for reading, gives thanks for the pleasure and comfort I have enjoyed through this means of instruction. I cannot adequately express my feelings." A third tells how husband and wife help each other to the benefit of two courses, the mother looking after the three small children on Monday evenings, and the father taking his turn on Thursday evenings.

The broadening influences of this movement are experienced in many directions. With this new opportunity for the teacher to reach the community about the schoolhouse, it becomes important that the teacher should be a person able to address an audience of adults. With the schoolhouse attracting grown people in the evening, it is essential that the building should contain a place of meeting better suited for men and women than the benches of the ordinary room, and the Committee on Lectures has wisely recommended to the Building Committee that in all buildings hereafter to be erected by the Board of Education provision should be made for adult education, and that an auditorium with proper seats for adults should be a feature of every such structure.

Dr. Leipziger offered the following practical recommendation:

> "Why not carry this conception of the utilization of the schoolhouse even a little further? You may walk in portions of our city where block after block consists of tenement-houses, many of these occupied by hundreds of human beings. Little that is sightly attracts the eye, and yet in the midst of one of these unsightly blocks one comes upon a splendid school building whose doors are closed. It is Sunday. The authorities of this city are now considering the proper means of grappling with the Excise Law—how to recognize the demands of human nature and obedience to public betterment. You close the saloon. Where shall the youth of the city in these crowded districts gather? Why should not the schoolhouse be open on Sunday afternoon, and people gather in its main hall to listen to an uplifting lecture of a biographical, historical, or musical nature? Would not such a use of our school buildings be justified?"

It cannot be denied that this is a perfectly feasible way of making a large contribution to the solution of the Sunday problem.

THE COUNTESS OF ALBANY.

PARIS, April 25, 1902.

The name of the Countess of Albany belongs to history in virtue of her marriage with Charles Edward, the Pretender. It belongs to literature on account of her liaison with Alfieri. For these reasons she has attracted the attention of many writers and become the subject of several books. We will cite only 'Die Gräfin von Albany,' by Alfred von Reumont (Berlin, 1860), the 'Comtesse d'Albany,' by Saint-René Taillandier (1862). Sainte-Beuve traced a portrait of her in his 'Nouveaux Lundis.' We must cite also the 'Countess of Albany,' by Vernon Lee, published in London in 1884, and the articles of Mrs. Tomei Finamore on "La Contessa di Albany e il suo Carteggio Senese" in the *Rivista Abruzzesa di Scienze e Lettere* (1892). I have before me a huge volume of 721 pages, just published by a new contributor, M. Léon Pélissier, professor of history at the University of Montpellier. M. Pélissier belongs visibly to the new historical "documentary" school. Anything, to the adepts of this school, seems valuable as a document; at the head of his title-page he writes: "Materials to serve for the history of a woman and of a society." He dedicates his work to another documentary historian, M. Frédéric Masson, to whom he gives the singular title of "Doctor in Napoleonic Sciences."

The volume is entirely made up of letters written to the Countess of Albany by her numerous correspondents from the year 1806 to the year 1824, which, since 1824, have been in the Library at Montpellier. After the death of Alfieri in 1803, the Countess of Albany replaced him with François Xavier Fabre, a painter who was already nearly fifty years old, a native of Montpellier; and after the death of the Countess, he gave to his birthplace his own collection of pictures, as well as the united

collections, pictures and papers, of his predecessor Alfieri and their common friend the Countess of Albany. Alfieri's papers have already formed the subject of a complete inventory, made by Mazzatinti (1890); Libri once made a very summary inventory of the papers of Mme. d'Albany and of Fabre. M. Pélissier gives us now three hundred and fifty-nine letters written to Madame d'Albany by more than ninety correspondents. With few exceptions, these letters are posterior to the death of Alfieri, and are dated from 1803 to 1824, during the quietest period of her life. This collection is only a part of several hundred letters preserved at Montpellier; but among them many have been found of too little interest for publication.

M. Pélissier has not reproduced the letters of some illustrious persons, published already by Reumont, such as those of Charles Edward, of Gustavus III., of Pius VI., of Madame du Bocage, of Joséphine Bonaparte, of Paul Louis Courier, of the Duchess of Devonshire, and of others. He has abstained also from repeating the letters of Sismondi and Bonstetten given by Saint-René Taillandier. He has manifested the same scruple with regard to the Italian writers. This scruple, perhaps carried to excess, has deprived his work of a great part of the remaining interest which attaches to the Countess of Albany. He has taken the plums out of his own pudding.

The letters published by M. Pélissier are all printed textually, in unabridged form. "In order," he says justly, "to understand the spirit of a time, nothing is equal to the direct contact, to the brutal effect, of a document." What will strike the reader at once is the cosmopolitan character of the correspondence. "All Europe," says M. Pélissier, "went through the drawing-room of the Countess of Albany, who exercised at Florence a sort of intellectual, literary, and worldly royalty." "The title of Queen of England," he adds in a note, "which she preserved in such a singular manner, certainly helped to confer on her this domination over people and to make her believe in it." Another characteristic of this voluminous correspondence is its incoherence. The personality of Madame d'Albany was not so commanding that she could remain always the principal character in the letters of her correspondents. They generally speak less of her than of passing events and of their own interests. "Chosen, as they were, rather promiscuously in the various groups with which she mingled in Paris and in Florence, she does not seem to have cared to establish any ties between them."

The final characteristic of the correspondence is, some exceptions made, the intellectual mediocrity of the authors. This candid avowal might perhaps be turned against M. Pélissier, and he might be asked why he took so much trouble to bring to light letters which he finds devoid of interest. He would answer you that the documentary school to which he belongs has its own rules; that even the mediocrity of the familiar friends of the Countess of Albany is a trait which must be remembered by those who wish to appreciate exactly the value and the political importance of her salon and of her influence.

"Mediocre, incoherent, cosmopolitan, these writers are nevertheless interesting. They are interesting because they are mediocre; because they have painted themselves in an epoch which, as time goes on, imposes itself more and more vividly on the passionate curiosity of history; because they have candidly told their daily impressions, their banal little lives—shown hearts without greatness, hopes without an horizon, hatreds without beauty. They are mediocre, like any of us. They are men; and, as they are sincere, they are social types, representatives of an epoch."

There is one trait which you will find in all these correspondents, one common tie: it is the spirit of opposition to the Napoleonic system. They all, more or less, discuss the merits, the faults of the Emperor. A great evolution was produced by the fall of Napoleon, and by the close of the long period of war which began at the time of the French Revolution and ended in 1815. M. Pélisser will have it that after 1815 a great fusion of ideas took place, and he thinks that he finds a proof of this in the preoccupations of the correspondents of Madame d'Albany.

"Hatred of the Empire," he says, "created a community of sentiment between the peoples; and out of it naturally arose a European, an international policy. The cosmopolitan society formed of the former adversaries of Napoleon had in the forefront of its concerns the principles of the Holy Alliance, the defence of tradition and of legitimacy, the defence of public order in all countries. In presence of these great objects the particular events of each country lost something of their local interest for those citizens of the world, who examined them chiefly as symptoms and manifestations of the great currents of international ideas. Thus it was that the reactionaries (and Madame d'Albany and her familiar friends were of their number) followed with equal curiosity the struggle of the legitimist and conservative spirit against the 'party of disorder' in each country: in England, the trial of Queen Caroline and the troubles at Manchester; in Spain, the insurrection of the Cortes, and the Trocadero expedition; in Naples, the movement *del Ventuno*; in the East, the first movements of Greek independence; in France, the parliamentary quarrels and the assassination of the Duke de Berry; in Europe, the acts of the Holy Alliance and the sessions of the Congresses."

On all these events Madame d'Albany was perpetually informed in her Casa del Lung' Arno. She wrote to Sismondi: "I am at my window, looking out on passing events." In what spirit did she judge them? We could form a reasonable judgment of this question only if we were in possession of the letters she herself wrote in answer to her correspondents. But we do not possess them, and it is to be supposed that many have been lost or destroyed. I know from the son of one of Madame d'Albany's correspondents, who owns many of her letters, that she was a very exact and very prolix writer. She used to use very large quarto paper, covering as many as five or six pages with her handwriting. It is probable that the appeal which M. Pélissier makes to the families of the numerous acquaintances of Madame d'Albany will be heard, especially since, after nearly two-thirds of a century, there is now a sort of prescription which would allow their publication. We may, therefore, hope that some day or other M. Pélissier may be able to give a sequel to his present work.

In a letter written to Mme. d'Albany by Mme. de Genlis, we read:

"I have the advantage of knowing you so well! People paint themselves much better in genuine letters, written with the stroke of a pen, than in works of the imagination. We can judge Mme. de Sévigné with certainty, while 'Zaïde' and the 'Princesse de Clèves' can give us only favorable prepossessions of their author [Mme. de Lafayette]. Hence it is, madame, that the charming letters of yours which I have read, have inspired in me feelings which could not be produced by all my printed pages."

Mme. de Genlis was a great flatterer, at times, but she was certainly not a bad judge in literary matters.

Correspondence.

THE ETERNAL LAW.

To the Editor of The Nation:

Sir: Some fourteen years ago, a biting satire on the Spanish administration appeared in Madrid under the title of 'Filipinas in their own Juice.' As the Filipinos have now got out of the frying-pan into the fire, is there no way of persuading the new cooks that they are working to their own detriment? I have now lying before me a collection of stories written by Joaquim Manoel de Macedo during slavery times under the title of 'As Victimas-Algozes' (Victims-Executioners). The eminent Brazilian novelist shows us how the mere presence of victims (slaves) has a demoralizing influence on their owners themselves, so that in the end the victims practically become the executioners of their masters. Mars is the friend of lies, and the compromises to which it is necessary to resort in order to keep the Filipinas in subjection make their acquisition dear at any cost.

I had some compunction about saying this, but there are moments when it is very hard to keep silence.

> Ἀγάμεμνον, οὐδ' εἰ πέλεκυν ἐν χερσὶν ἔχων
> μέλλοι τις εἰς τράχηλον ἐμβαλεῖν ἐμόν,
> σιγήσομαι δίκαιά γ' ἀντειπεῖν ἔχων.

Yours very respectfully, O. T. T.

May 3, 1902.

MUNICIPAL REFERENDUM.

To the Editor of The Nation:

Sir: Students of local government in America find much interest in an ordinance passed March 4 last by the Village Council of Winnetka, Ill., which establishes the referendum principle in matters relating to corporate franchises and the issue of bonds payable out of the municipal treasury. Additional significance is attached to this movement because of the fact that the village is a suburb of Chicago, inhabited largely by persons doing business in that metropolis. One need scarcely be reminded, moreover, of the dual system of local government that has long obtained in Illinois. The New England people who settled the northern part of the State brought with them the plan of town government, with its democratic ideals and possibilities, while southern Illinois, with its county system, still reminds one of the influence of Virginian colonists. The "town meetings" accordingly gave Winnetka voters opportunities for discussing all matters affecting the general welfare of the community. No less fortunate has been the elimination of party lines in questions of local importance. Hence, in point of fact, long before the adoption of the ordinance

in question the citizens enjoyed not only the right of having certain important questions decided by popular vote, but the right of initiating legislation as well.

This combination of the referendum and the initiative appears to have worked satisfactorily so far. The village now owns its own water plant and lighting equipment, and, through its Village Council and other local boards, is governed by its best citizens, who serve without compensation. One of the most influential of these says that he thinks "Winnetka is the best governed municipality in the country." The following excerpt from the recent ordinance prescribing the methods of local legislation in Winnetka may therefore prove of some value to those interested in the subject:

"1st. Before the passage of any ordinance, the Council shall order such ordinance engrossed by the Village Clerk in the proper book and posted in three of the most public places in said Village, to wit: On the Village Bulletin Board on Elm Street, just East of the C. & N.-W. R. R. tracks, on the Village Bulletin Board on Oak Street, just West of the C. & N.-W. R. R. tracks, and on the Village Bulletin Board near the Lakeside Depot.

"2d. Any ordinance which shall grant or create any franchise or franchises or valuable rights, or provide for the issue of bonds payable out of the general funds of the Village other than the issue of bonds for the payment or retirement of existing bonds, shall be submitted to the legal voters of the Village prior to its passage.

"3d. No ordinance shall come before the Council for passage until five days after the posting of the same, and if prior to the expiration of said five days a petition signed by at least fifty of the legal voters of the Village be presented to the Village Council requesting that such ordinance be submitted to a vote of the people, then it shall be the duty of said Council to so submit said ordinance as hereinafter provided.

"4th. No ordinance which shall have been submitted to a vote of the people in accordance with the above provision shall come before the Council for passage until the result of said vote has been declared in open Council.

"5th. If said vote shall consist of a majority of the registered votes at the last Village election, then it shall be the duty of the Council to abide by the decision thereby expressed.

"6th. When an ordinance comes up for passage, it shall be again read before the Council, and a yea-and-nay vote taken on the same.

"Section 4. The passage of any ordinance shall require the concurrence of a majority of all the trustees elected.

"Section 5. All ordinances shall, within one month after they are passed, be published by the Clerk, posting copies of the same for five days in three of the most public places described in Clause 1, Section 3, of this ordinance.

"Section 6. The manner of referring any ordinance to the citizens, unless otherwise requested by petition signed by at least fifty of the legal voters of the Village, shall be as follows:

"A Printed copy of the ordinance shall be mailed by the Village Clerk to each registered voter of the Village, with a numbered blank on which the voter can register his vote over his signature. This to be filed with the Village Clerk within five days after having been so mailed, but the seals to be broken and the result declared only in open Council at its first meeting held after the expiration of said five days."

It ought to be added that the population of the village is about 2,000, and that the Winnetka system, so to speak, grew out of an attempt made some years ago by the village trustees to grant a forty-year franchise to a local gas company.

Respectfully yours, B. J. RAMAGE.

SEWANEE, TENN., April 22, 1902.

THE BREAD TAX IN ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: Anent your editorial of April 17 on the new British grain duties, the following from the *Times* weekly of September 17, 1901, may interest your readers.

At a meeting held last September in the offices of the Colony of Victoria, London, the results of a test of South Australian flour were submitted. A sack selling for $4.62 yielded 100 quartern-loaves, which at 11 cents per loaf amounted to $11 (11 and 12 cents are usual prices for quartern-loaves). This left $6.38 to cover baking, working expenses, and profit—a liberal allowance for these items is $3.60—or a margin of $2.78. A tax, therefore, of 10 cents per hundredweight, or 17.4 cents for every 100 loaves, less than one-fifth cent per loaf, would not of itself necessitate any increase in the selling price. The Coöperative Baking Society further undertook to bake and deliver fifty sacks of this flour weekly for $3.60 per sack.—Yours truly,

J. W. HAMILTON.

ST. PAUL, MINN., April 28, 1902.

AN ART PHOTOGRAPHIC COLLECTION.

TO THE EDITOR OF THE NATION:

SIR: I have read with much interest your article entitled "A Reference Library of Art Reproductions." I have thought that some of your readers might be interested in a brief account of what the Norwich Free Academy has done, on a small scale, in exactly the line which the writer of your article recommends.

With the Norwich Free Academy are connected the Slater Museum, an excellent library of 12,000 volumes, and an Art School. There was, therefore, a special incentive to devise means by which photographs might be turned to the greatest use. Our library possesses about 2,000 photographs illustrating the departments of painting, architecture, and sculpture. There are twice as many photographs of paintings as there are of buildings, and twice as many architectural photographs as there are photographs of sculpture.

All the photographs are catalogued, and the cards for each of the three classes are arranged in separate drawers. The cards are so written that not only the name of the artist, but also the place where the original is found, and the school to which the work belongs, can all be referred to. The result is, that, in a wonderfully compact form, one has under his hand the best illustrations of the whole field of art in its three great divisions. The entire number of our photographs is a little less than 2,000; the cost, not including cases, has been about $3,000.

The cases are placed in the closest proximity to the catalogue, and it is an instantaneous matter to put one's hand on any photograph which one needs. It has been a source of satisfaction to find by actual experience that our comparatively inexpensive collection has been sought for use in some of our large cities which had nothing that corresponded to it.

The undersigned will gladly furnish further information to any one who may desire it in regard to our photographs, the cases in which they are contained, or any other matter.—Yours very sincerely,

ROBERT P. KEEP.

NORWICH, CONN., April 30, 1902.

AN AMERICAN ACADEMY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 17, Mr. H. E. Shepherd corrects Professor Flügel's impression that his is " the first attempt to outline the earlier history of a British Academy," and gives some important additional references. Permit me to draw attention to yet another treatment of the subject. In Prof. O. F. Emerson's 'History of the English Language' (1894), pp. 90-95, most of Professor Flügel's instances are given, along with several others, notably a proposition made by Edmund Bolton in 1617, more than thirty years before the earliest passage cited by Professor Flügel.

It may be of interest at the present time to note that the proposition to establish an Academy in this country is of considerable antiquity. In the Boston *Evening Transcript* of February 28, 1896, Mr. Albert Matthews called attention to a letter written to the President of Congress by John Adams from Amsterdam in 1780, and quoted the following passage:

"Most of the nations of Europe have thought it necessary to establish by public authorities institutions for fixing and improving their proper languages. I need not mention the academies in France, Spain, and Italy, their learned labors, nor their success. But it is very remarkable, that although many learned and ingenious men in England have from age to age projected similar institutions for correcting and improving the English tongue, yet the government have never found time to interpose in any manner. . . . The honor of forming the first public institution for refining, correcting, improving, and ascertaining the English language, I hope is reserved for congress; they have every motive that can possibly influence a public assembly to undertake it. . . . I would therefore submit to the consideration of congress the expediency and policy of erecting by their authority a society under the name of 'The American Academy for refining, improving, and ascertaining the English Language.' " (Works, vii., 249-251.)

Mr. Matthews further quoted this amusing passage from a letter written by Adams to a friend a few days later:

"After congress shall have done it, perhaps the British king and parliament may have the honor of copying the example. This I should admire. England will never have any more honor, excepting now and then that of imitating the Americans." (Works, ix., 510.)

I am, sincerely yours,

W. A. NEILSON.

CAMBRIDGE, MASS., April 22, 1902.

REGARDING "MOAT."

TO THE EDITOR OF THE NATION:

SIR: Dr. S. A. Green last November called attention in the *Nation* to the local use in Groton, Mass., of the word "moat" as applied to certain brooks at their junction with the Nashua River. As Dr. Green's query concerning the origin and currency of moat appears to have elicited no response, I submit what follows:

Manifestly "moat" meaning hill or em-

bankment is inapplicable to the thing called moat in the folk-speech of Groton. The thing described is a confluence, what the men of old time termed "a waters' meet." Moat signifying a trench filled with water is a technical term used in connection with works of fortification, and does not fit the facts given so well as "mote," a meeting or meet.

Stormonth's English Dictionary has: "Mote n. *mot;* also gemote, in *Anglo-Saxon times*, a meeting, as in the *Witenagemot*, the assembly of wisemen." Ward-mote and folk-mote are instanced. It may be added that, in the City of London, the meeting of the freemen at which Councilmen are elected is called "ward-mote" to this day. The Century Dictionary and Skeat (Etymological Dictionary) both treat mote as an obsolete form of moot, meaning meeting or assembly.

Numerous archaic compound words in which mote or mot signifying "meeting" occurs might be given; a few must suffice. Gomme, in 'Primitive Folk-Moots,' speaks of a Motestowhill near Stoneleigh where the socmen held meetings. Worsaae, in his 'Danes and Norwegians in England, Scotland, and Wales,' says: "A document of the year 1258 conveys a gift of some ground in the suburbs of Dublin in Thingmotha (from mote, a meeting). The Thing place was near the present site of Dublin Castle, the name of the surrounding parish was 'St. Andrew de Thengmote.'" Stubbs, in his 'Constitutional History of England,' vol. i., p. 431, notes the existence of *tunscipesmot*, township-meeting, shire-moot, hundred moot, and portmanmot, court of portreeve in boroughs. Vinogradoff, in 'Villainage in England,' cites *sockemanemot* and *frankhalimote*. Although Stormonth, Skeat, and the Century Dictionary all cite various kindred forms of mote in Anglo-Saxon or the Scandinavian tongues, none of them notices the use of mote or its Norse equivalents in the sense of junction or confluence. But Cleasby's 'Icelandic-English Dictionary' has the following:

"Mot (Anglo-Saxon *gemot;* Old English *mote* or *moot* in ward-mote; Danish möde, Swedish mot and möte) a meeting.

"2. As a Norse law term; in Norway a *mot* was a town meeting and is opposed to *thing*, a county meeting.

"3. A joint, juncture; *ar-mot* a meeting of waters, also a local name. [Compare Latin Confluentia, Coblentz.]"

According to Björkman's 'Svensk-Englesk Ordbok,' *möte* means confluence as well as meeting or assembly. *Aa* in Norwegian and Danish and *Å* in Swedish signify a small river or streamlet, and we have in Swedish: *Åmun*, rivermouth, *Åbryn*, river brink, *Åstrand*, riverbank, as well as *Aafiord* and *Aamot* in Norwegian. *Aamot* means "a meeting of waters" and "confluence." (See Geelmuyden's 'Engelsk-Norsk Ordbok.') According to the 'Dictionnaire des Bureaux de Poste' (Berne, 1895), *Aamot*, near Drammen, and *Aamotsdal*, near Skien, are post-offices in Norway. Map 95, g. 6 in the 'Century Atlas' shows *Aamot*, in the province of Hedermarke, Norway, on the Glommen River.

Watersmeet, where the Combe Park Water joins the East Lyn River, a few miles above Lynmouth in Devonshire, England, is well known to tourists in the Doone country. Bagworthy Water is a stream in the same region. Watersmeet is found in Johnston's Atlas, 1889 (see Devonshire), and on the North Devon sheet, *i. e.*, No. 27, of the maps of the Ordnance Survey. Again, Watersmeet appears as the name of a town in Michigan (see Map 22, C. 5, Century Atlas). Is water used as a synonym of brook or river anywhere in this country? Moore, in his Irish Melodies, sings of the "Sweet vale of Avoca," where "the bright waters meet." The waters whose meeting (mote) forms the Avoca (which is Celtic for "meeting of the waters," according to Chambers's Encyclopædia), are the *Avonbeg*, or little river, and the *Avonmore*, big river.

The Celtic *Avoca* and the Norwegian *Aamot* appear to be closely synonymous with the Devonshire *watersmeet*. One is inclined to ask whether *aa* or *mote* occurs in the folk-speech of Devonshire, or of any other English county in which Norse influence is traceable. Maps of the Lake country present so many "waters" and "becks" that one is led to think that *aa* or *mote* may still survive in the folk-speech of Cumberland or Westmorland.

It is likely that "mote," and not "moat," is the correct form of the word cited by Dr. Green, and that it was brought over sea from an early home of the Angles. Possibly there are other motes or meets in New England, but I have searched many maps for them in vain; nor have I found a mote on any map of East Anglia, or Friesland, or Denmark.

EDWARD M. HARTWELL.

BOSTON, April 23, 1902.

Notes.

A volume containing the Physical Papers of the late Henry A. Rowland of Johns Hopkins University is to be issued under the editorial direction of President Remsen and Professors Welch and Ames. The several articles reprinted from magazines and journals number sixty in all. The memorial address of Professor Mendenhall and a portrait of Professor Rowland will further enrich the volume, which may be had for five dollars, subscribed in advance of publication by orders sent to Prof. Joseph S. Ames, Baltimore.

L. C. Page & Co., Boston, who have taken over from Silver, Burdett & Co. the complete works of Prof. Charles G. D. Roberts, will publish shortly 'The Kindred of the Wild,' a book of animal life by this author, illustrated by full-page drawings by Charles Livingston Bull, and in October his 'Barbara Ladd: A Novel of Early Colonial Days.'

Immediately forthcoming from the W. A. Wilde Company, Boston, is 'What Gladys Saw,' a nature story, by Frances Margaret Fox.

A new novel by Henry James, 'The Wings of a Dove,' and a novel of theatrical life by Clara Morris, 'A Pasteboard Crown,' are in the press of Charles Scribner's Sons.

A new volume of poetry by Robert Underwood Johnson will be issued directly by the Century Co.

The Oxford University Press will soon issue the first volume of Mr. C. Oman's 'History of the Peninsular War,' extending from the Treaty of Fontainebleau to the battle of Corunna, 1807-1809. The title of this work to existence after Napier lies chiefly in the political aspect of events.

No. 11 of the Riverside Art Series (Houghton, Mifflin & Co.) is devoted to 'Tuscan Sculpture.' *Early* Tuscan Sculpture would have been a more precise title, for, as Miss Hurll had devoted a previous volume to Michelangelo, she does not touch upon his work again, nor is any mention made of his contemporaries and successors. A more inexplicable omission is that of Ghiberti, who was certainly one of the first artists of his own or any time, and whose influence on both sculpture and painting was enormous and has not yet ceased. Miss Hurll's text deals, as usual, more with subject than with art, but some æsthetic appreciation is attempted. That her books will be useful in schools we have no doubt.

Mr. Walter Crane's book on 'The Bases of Design,' first published in 1898 (Bell-Macmillan), is now issued by the same publishers in a new and cheaper edition. There seems to be no change in picture or text, the smaller form being arrived at by cutting down margins without reducing the size of the illustrations. The printed page is, however, a trifle shorter, and the type has been entirely reset, necessitating a new index, which is somewhat fuller than the old. The marginal notes have been abolished, and replaced by running headings and titles under the cuts in the ordinary manner. If the book loses some of its beauty, it loses none of its usefulness.

In 'American Masters of Painting' (Doubleday, Page & Co.), Mr. Charles H. Caffin has attempted what, so far as we know, has not been attempted before, a serious critical examination of the art of thirteen American painters. His list is, on the whole, a good one. Gilbert Stuart seems hardly in place, unless the list were to be made exhaustive. The others are all contemporary artists, or nearly so, and we find no fault with Mr. Caffin's inclusions, and only wonder at some of his exclusions. One does not understand why William Hunt does not accompany George Fuller, or why Thayer and Dewing have not their place beside George De Forest Brush. We cannot, however, much blame a writer for the choice of that of which he shall write: the important thing is what he finds to say of his chosen subjects, and the fault we find with Mr. Caffin's writing is that his point of view is too exclusively literary. He writes well enough; he discusses temperaments and the nature of personalities; everything flows along in a pleasant enough way, and one feels, for the moment, that something of importance is being said. And yet, when all is done, one has no greater insight than before into the nature of the art which these men have produced. We do not ask for discussion of technicalities, but merely for such sympathy with and understanding of the painter's point of view as shall make it vivid to us. That is what we do not get from Mr. Caffin, and it is doubtful if it ever has been got from one not himself a painter.

'The Domain of Art' (London: Murray; New York: E. P. Dutton & Co.) contains six lectures delivered as Slade professor of fine arts in the University of Cambridge by Sir W. Martin Conway. The lecturer has evidently taken his function to be not the teaching of art history or art theory, still less the teaching of technical matters or the creation of artists, but the suggestion to men of general culture, who are also likely, many of them, to be men of wealth and influence, of some notion of the nature

of art and of the motives of artists, and some idea of the ways in which wealth and influence and general culture can be used for the true encouragement of art. His six subjects are "Artist and Amateur," "The Art of Living," "Art Criticism," "The Practical Value of Art," "Art History," and "The Succession of Ideals," and on each he finds something valuable to say. The lectures on criticism and on the study of art history are those that we have found the most interesting. In the first, the author takes the view that no one but the artist has any right to attempt technical criticism, and that even in criticism of content the only good criticism is that which praises and explains, not that which condemns. "No one is sensitive to every kind of beauty," and the beauty may be there though the critic has not seen it. Where he can see beauty, let him act as intermediary to interpret it to the public, that they may see it also. In the same lecture are some good remarks on the evils of modern exhibitions and competitions. In the second there is good discussion on the management of museums, with advocacy of a Museum of Photographs, from which we have recently quoted at some length.

Prof. David G. Ritchie, having collected a number of his essays and lectures which have been printed in various periodicals, now publishes them in a volume entitled 'Studies in Political and Social Ethics' (Macmillan). This author is a disciple of T. H. Green, and is perhaps a clearer writer than his master. His criticism is of a high order, especially when he is laying bare the weak spots in systems that he dislikes. His constructive ability appears to us less marked, and many of his strictures might be turned against himself. His aversion to what he supposes to be represented by the maxim "Laisser faire" is so extreme as to lead him to scoff at the advocates of arbitration and the opponents of militarism, and to put him in the position of commending war. Those who have read his systematic work will notice little that is novel in this volume; others will find it stimulating reading.

Of the making of college-song collections there is no end. Hinds & Noble, who, some time ago, published 'Songs of All the Colleges,' have in press 'Songs of the Western Colleges' and 'New Songs for College Glee Clubs.' Their latest issue is 'Songs of the Eastern Colleges,' which contains the old favorites, together with many new songs. There are 185 in all, and no one who examines the collection will complain of a lack of variety.

Following the example of W. H. Cummings of London, Dr. James M. McLaughlin, director of music in the Boston public schools, has prepared a brief book on the 'Elements and Notation of Music' (Ginn & Co.). The chapter on Expression is little more than a dictionary of terms, with a few pages on tempo; and it is odd to find a chapter on conducting (which concerns very few musicians) preceding the chapters on intervals and scales. Apart from these features, the book may be commended as a useful little manual for teachers and pupils.

Among recent publications of G. Schirmer are 'Exercises in Melody-Writing,' by Dr. Percy Goetschius; a new vocal score of Flotow's "Martha," with an introductory essay, by H. E. Krehbiel; and a collection of 'Études for the Pianoforte' edited by Rafael Joseffy. While musical text-books are usually occupied chiefly with harmony and counterpoint, Dr. Goetschius italicizes his opinion that "the prime object of all theoretical study in music is, or should be, melody." He thinks the best results will be gained by beginning his course of studies as early as the age of twelve or thirteen; but he has made no attempt to adapt his style of teaching, which is technical and ponderous, to that age. The musical illustrations are, however, very copious, and this will help students over many difficulties. Flotow's opera still holds its own on the stage, and, with Krehbiel's erudite and gossipy introduction, will appeal anew to pianists and singers of old-fashioned taste. As for Mr. Joseffy's collection of 'Études,' it would be impossible to speak of it too highly. Mr. Joseffy, unfortunately, has but seldom played in public in recent years; but he has taught regularly at the National Conservatory, and has thus ascertained what is most needful to students of the pianoforte. Chopin is represented by three *études*, Moscheles, Czerny, Henselt, Schlözer, and Schumann by one each. The studies are carefully fingered, and the editor's helpful notes are printed on the same pages as the music. The collection is, of course, only for advanced students.

Now that the opera singers are gone to Europe, not to return till next November, the admirers of the prima donnas, tenors, and basses will have to content themselves with Gustav Kobbé's chatty "pictorial souvenir" entitled 'Opera Singers,' and published by R. H. Russell. It is a great improvement on all its predecessors. While written in a gossipy style, without any attempt at criticism, it is authentic in regard to its biographic information, the facts being derived from the singers themselves. There are also glimpses of life behind the scenes and of incidents "on the road," which will interest the large class of music-lovers whose curiosity concerning the personality of singers seems to be insatiable.

'Wild Life of Orchard and Field,' by Ernest Ingersoll (Harper & Bros.), discusses in a general way the habits of birds and small mammals. The illustrations are from excellent photographs, and the text is highly instructive, showing the author's wide acquaintance with the literature of his subject. He is occasionally careless in minor statements, however, as where he permits himself to say that butcher birds seldom eat the mice that they have caught and impaled. He writes entertainingly of the homing powers of animals, and of the nest-building and migration of birds, and describes characteristic summer, winter, and spring birds of the Eastern States; treating at length of swallows, orioles, the song sparrow, and the flicker. Among mammals, he describes with considerable detail the different species of mice and squirrels common in New York State, and takes up the woodchuck, the opossum, the short-tailed shrew, the weasel, and the muskrat. He also goes outside the vertebrate kingdom, and writes profitably of snails. There is an interesting chapter about the general effect of the advent of civilization on the birds of North America. Mr. Ingersoll says that the displacement of forests by hay and grain fields and weedy pastures, the introduction of orchards, gardens, and farm-yards, with their accompanying insects, the provision of comfortable shelter for certain species, and the destruction of hostile animals, have increased the number of singing birds east of the Mississippi.

'More Tales of the Birds,' by W. Warde Fowler (Macmillan), may perhaps be described as containing less about the birds than about people. It is a collection of pleasant English stories, in each of which some bird has an important place; but the bird's life is closely linked with human lives, and in most cases gets its main significance from them. For example, one of the best stories, "The Last of the Barons," centres the reader's interest, not in the old kite and his mate, late survivors of a race that was threatened with extermination through the zeal of oölogists, but in the needy collector, who received a liberal offer for a clutch of kite's eggs, and was forced, against his conscience, to rob this pair at the risk of extinguishing a species. "The Sorrows of a House Martin" contains more ornithological information than any other tale, describing, as it does, the martin's perils in migration, struggles for food, difficulties in house-building, and fights with its enemies; but all the stories have something from the life histories of the birds, related in an untechnical, accurate way. Mr. Fowler's art of story-telling has blemishes. He often resorts to the worn device of making birds talk, and sometimes shifts unwisely his point of view. In the story of a lark's nest on the field of Waterloo, his imagination does not rise to his subject. Yet the book is decidedly readable, and will interest young people in the birds that it describes.

In an address delivered before the Royal Academy of Belgium, and recently printed with the title of 'L'Expansion Exotique des Littératures Européennes au XIXe Siècle' (Brussels: Hayez), Prof. Paul Fredericq of the University of Ghent discusses an important and somewhat novel phase of the growth of modern literature. Considering the various European literatures, he finds that six of them have developed beyond the confines of the continent in which they were born—English, in North America, India, and Australasia; Spanish, in South America and Mexico; Portuguese, in Brazil; French, in Canada and elsewhere; Russian, in its vast Asiatic possessions; and Dutch, in the East Indies and South Africa. It is the contention of M. Fredericq that to these six the future belongs, and that such literatures as German, Polish, and Scandinavian must in the end perish, because they lack the reserve force possessed by the others. Moreover, since the centres of civilization move with the seats of empire, London will have to give way to New York or Melbourne, Madrid to Buenos Ayres, Lisbon to Rio Janeiro, and Amsterdam to Batavia or Johannesburg, in the development of their respective literatures. M. Fredericq shows considerable knowledge of the foreign growth of European culture, but he falls into several errors of detail. De Quincey, for example, is classed among American writers of prose, and Hubert Howe Bancroft is confused with his more distinguished namesake, George Bancroft.

The ninth volume of the "Oeuvres Complètes de Christiaan Huygens," in the sump-

tuous edition put forth by the Holland Scientific Society, is now being placed in the hands of subscribers. It includes the correspondence between Huygens and his friends, and, one may add, between the friends of his friends, so far as relates to his main interests, from the year 1685 to 1690. Apparently another volume will complete the correspondence, three or four additional volumes being required to conclude the works. One notices in this volume a slight waning of interest in discovery and an increase of interest in speculation natural to an old man. The construction of lenses, the Saturnian system, chronometry, horology, in some degree give place to the theory of curves, general algebra, and the calculus, the wave theory of light, and the constitution of the universe. While his study is still a sort of clearing-house of scientific information for the whole of Europe, Huygens's interests are somewhat fewer, and his range of correspondents smaller. Newton and Leibnitz appear in only a few letters, though they always illuminate the horizon. Huygens's visit to England yields only a single letter, but echoes of the visit are heard through the remainder of the volume. His eagerness to see the 'Principia' is noteworthy. He has a batch of criticisms on the third book in June, 1687, although the manuscript of that volume was not exhibited to the Royal Society until April of that year, and not printed until July. The volume is adequately illustrated, and has the usual copious indexes, sixty-five pages in all.

The third instalment of Herr Von Brandt's 'Thirty-three Years in Eastern Asia' has appeared, completing the work (Leipzig: Georg Wigand). The first two have already been reviewed in our pages, and the *dritter Band* calls for no further notice than to say that the veteran diplomatist gives herein a summary, very full, clear, and fair, of Christian missions, the opium question, the various episodes and treaties, of the Russian-Chinese incidents, of French-Chinese relations, of the audience question, and of the interrelations of China, Korea, and Japan down to 1893. There is no reference whatever to recent German movements in the Far East, of Germany's seizure of Kiao-Chau, and of her tremendously costly colony. This omission will undoubtedly disappoint many readers; but then, Herr Von Brandt professes to give only "reminiscences," and he prints on the forefront of his pleasing work, "China 1875 bis 1893." Hence he can rightly excuse himself from entering into what is problematical. Germany's past is at least secure.

The magnificent Victoria Falls on the Zambesi, discovered by Dr. Livingstone in 1855, will soon be accessible to the ordinary tourist. The section of the Cape-to-Cairo Railway from Buluwayo to that river is expected to be opened next year. A great steel bridge, having one span of 500 feet, will carry the line across the falls. A railway exploration party has been dispatched over the railway route beyond the falls, as far as Lake Tanganyika.

The progress of Egypt during the past year, says Lord Cromer, in his annual report for 1901, has been "steady and normal." The sound footing on which the fiscal system has been placed is demonstrated by a surplus of $10,000,000, notwithstanding the Sudan expenditure was over $2,000,000. The means of transportation by both rail and road have been improved and extended, and the principal irrigation works are nearly completed. Slavery, the corvée, and the coorbash are practically abolished; the army is well organized, and there are new prisons, reformatories, and hospitals. The peasant is being freed from the grip of the money-lenders, and "a very great impulse has been given to education in all its branches." In other words, "the foundations on which the well-being and the material prosperity of a civilized community should rest have been laid." Lord Cromer dwells at some length on the methods adopted to preserve the temples at Philæ, which will be partially submerged every year when the reservoir at Assuan is finished. In regard to the Sudan, which "naturally lags behind," he says "the point of chief importance has been to avoid any serious fiscal or administrative errors." The Government "endeavors to carry out the ordinary principles of civil administration through the agency of a number of carefully selected officials, most of whom are military officers." In a reference to the Government contracts for materials, there is the statement that "the contracts placed in the United States have been disappointing; none were placed there in 1901."

The tentative excavations made by the Berlin Royal Museum in Miletus have been so promising that a special organization has been effected in the German capital to push this work energetically. Enough funds have been secured to buy the whole peninsula on which the city stood, and which is now covered with vineyards, corn-fields, and cottages. The newly acquired territory includes the whole western half of the old city, together with portions of the necropolis, the "sacred way" that led up to the Apollo temple, as also the entire hill upon which the theatre was situated, and the harbor, at the entrance of which are found two colossal lions of marble, the recently uncovered marketplace and public halls one hundred metres in length, and some fine Roman fountains, together with other ruins and remains. The whole territory belonging to the Germans covers one million square metres.

—Senator Lodge contributes to the May *Scribner's* some impressions made upon him by his visit to Russia, last summer. While he takes pains to express his dissent from the extreme to which the economic interpretation of history is inclined to go, yet he regards the economic feature as the element of most importance in forecasting the future of Russian development. The power of rapid expansion has been demonstrated, as well as the power to control the various peoples brought under her dominion. The point of weakness seems to be the inability to develop profitably the immense natural resources which her territorial growth has placed within her power. Senator Lodge's use of the Trans-Siberian Railroad, in comparison with private railway enterprise in the United States, as an index of the economic inefficiency of the Russians, is hardly fair. What field of public improvement in this country, national, State, or municipal, is free from a record of wastefulness, inefficiency, and corruption? The race which from its low position of two centuries ago has produced the Russian leaders and the Russian power of to-day, certainly has great possibilities in itself, as well as in its lands and its mineral deposits; and its geographical position is such that it can afford to wait. The most important question is whether it can turn the corner toward political freedom and intellectual development of the masses without a disastrous military revolution. The most interesting feature of Dr. Gilman's concluding chapter of reminiscences is his tribute to Sidney Lanier. A German pathologist to whom Ephraim Keyser's bronze bust of Lanier was shown merely uttered the words, "Hm, tuberculosis." "Christlike!" was the comment of another visitor, who had some knowledge of Lanier's life and work. Will E. Low makes an interesting comparison of Victor Galland, Paul Baudry, and Puvis de Chavannes, raising the problem of the true relation of decorative art to architecture.

—The theory that the Anarchist is simply an ordinary criminal, to be "stamped out" by repressive legislation drastic in proportion to the enormity of his crime, receives judicious and forcible criticism in the current *Atlantic* from the pen of William M. Salter. It is an appeal to reason which legislative bodies ought carefully to consider, but they will doubtless go on enacting laws which, if in existence, would not have affected in the slightest degree the cases of Presidential assassination in the past, and the effect of which in the future must be simply to increase the substratum of anarchical opinion from which such assassinations spring. Mr. Salter's best positive suggestion is the necessity for the most scrupulous attention to law and justice on the part of our law-makers and executives themselves. Somewhat akin to Mr. Salter's paper is Miss Vida D. Scudder's study of "A Hidden Weakness in our Democracy." It is a renewed and well-enforced presentation of the old thought that the one half knows not how the other half lives, with a keen recognition of the impossibility of really successful democratic government and society under such conditions; decidedly "pessimistic" if it is unalterably decided to go on hurling that term at any one who sees evils clearly, feels them deeply, and is ready for an earnest effort to root them out. J. Laurence Laughlin pleads for a higher commercial education as a legitimate part of the mission of our universities. What is wanted is not the shallow work of the ordinary "business college," but such a broad and deep course as will possess genuine cultural value, and fit the mind of the student to grasp and solve the intricate and ever-changing problems of commerce as they arise. Thomas Sergeant Perry's appreciation of John Fiske is good reading for the thoughtful college student who is debating the question whether there is any longer a place in the world for the scholar who insists on retaining breadth as well as depth in his ideal.

—Mr. Edmund Gosse, in the current *Century*, assigns to Swinburne a somewhat peculiar position. He is at once "the summit of our contemporary Parnassus," with absolutely no serious question of his claim to preëminence since the death of Tennyson, and yet "is very little discussed nowa-

days, takes no part in the movement of literature, and is almost wholly without influence." This neglect he considers but a passing mood of an idle, sensation-loving world of letters. Mr. Swinburne exists, like a snowclad mountain rising out of the plain, and the Mahomets of criticism will sooner or later go to the mountain. The reader's attention is called, with apparent gratification, to the fact that "more than thirty years have passed since Mr. Swinburne definitely and finally relinquished the amatory paganism of his adolescence." The second group of his poems, filled with the fervor of political revolution, under the influence of Mazzini, suffers from the fact that political revolutions in the direction of republicanism are not popular at present. "It is not merely that the revolutions so melodiously heralded have not taken place, but that after thirty years there is virtually nobody left who wishes that they had." Even the poet himself seems to have fallen away from the faith. Hopeless as it is to make people care for such poetry now, yet Mr. Gosse regards this group as containing some of the best poetry ever written, destined to rank sooner or later with the best of Shelley, Leopardi, and Victor Hugo. A strong point is made of Mr. Swinburne's close relation to the great body of poetry preceding him: he has studied his Æschylus and Shakspere, is a direct disciple of Shelley, is "linked as with chains of gold to Isaiah and to Æschylus, to Catullus, and to Milton, to the Latin and Provençal, and French and English poets in a long sequence that scarcely closes with Baudelaire and Victor Hugo."

—J. Scott Keltie, in the May *Harper's*, gives a brief outline of the results achieved by Sven Hedin in his last voyage of exploration in Central Asia. Dr. Hedin has had, apparently, a very successful trip. His new maps cover several hundred sheets, including a very full representation of the Yarkand River from Lailik to Yangi-Kul, "one of the most detailed maps which have ever been made of any river outside Europe," as he himself calls it. In geographical description, meteorological observation, etc., the bulk of material secured is far in advance of that of his former trip, and Dr. Keltie's opinion of the worth of this material is very high. Curiously enough, Dr. Hedin's first news of the great outbreak in China reached him in the form of messages from home expressing grave concern for his personal safety. The article of William Carmichael McIntosh on "Marine Fish-Destroyers" is an entirely unsuccessful attempt to prove the uselessness of legislation to maintain the fish supply, on the ground of the enormous destruction of food fishes by the various monsters of the deep and by one another. The myriads of fish devoured by their own kind contribute to the growth of those that remain and to the production of myriads more, while the wasteful methods of man have no such results. That good fishing-grounds have been sadly depleted by human hands in recent times is a proposition too well supported by evidence to be successfully denied. It proves little to say that the extinction of no species of food fish has taken place in modern seas. The difference between a bounteous supply and a point far short of extinction is a very wide, and in some cases economically a very important, difference. Dr. Raymond Dodge of Wesleyan University contributes an article on the motions of the eye in the act of vision, including some practical suggestions on the danger to the sight involved in the unwise use of the eyes on street cars or other means of conveyance in rapid motion. The Easy Chair makes Opdycke's translation of Castiglione's "Il Cortigiano" the text for some gentle but effective satire against the tendencies growing out of our new position as a "World Power."

—We commented last week on the revelations concerning the origin of the "Monroe" Doctrine, made from the Adams archives at Quincy, Mass., by Mr. Worthington C. Ford. The paper forms a part of the forthcoming Proceedings of the Massachusetts Historical Society, to which Mr. Charles Francis Adams contributes a revision and expansion of his Madison address touching "John Quincy Adams and Emancipation under Martial Law." The connection of this subject with that of the Monroe Doctrine is not simply the name of John Quincy Adams, but the principle of freedom which he represented, both in his espousal of the cause of the independent American governments and in his opposition to slavery and its extension. As early as 1819 we find among the papers of Mr. Adams declarations prophetic of the conflict concerning slavery and its downfall. As early as 1820 he predicted that a war for the dissolution of the Union must result in "the extirpation of slavery from this whole continent." In 1836 he advanced his famous doctrine, which was amplified in 1842, that slavery might be abolished by the President of the United States in the exercise of the war power. This doctrine was revived in the discussions of 1861. It was used by Mr. Sumner in a speech delivered before the Massachusetts Republican State Convention on the 1st of October in that year. It was embodied by Mr. Whiting of Boston, then solicitor of the War Department, in a pamphlet published by him in the summer of 1862, on the 'War Powers of the President,' some months before the issuance of Lincoln's preliminary proclamation of the 22d of the following September. Its part in persuading President Lincoln to exercise these powers is well known, and his emancipating pen may truly be said to have been guided by John Quincy Adams. The correspondence which Mr. C. F. Adams has appended is of very great value in contrasting the ex-President's anti-slavery theory with that of the abolitionists, who gave him a direct support which he frankly withheld from them. This contrast is not, of course, now first revealed, but it has, perhaps, never been so compactly set forth. The paradox is, that the statesman who would not lift a finger—on behalf either of the slave or of the Northern conscience in revolt against the pro-slavery compromises of the Constitution—to disturb "the Union as it is," and strenuously opposed any movement calculated to disturb it from these points of view, was irresistibly impelled to precipitate disunion and civil war in defence of Northern liberties against the encroachments of slavery. The Southern fire-eaters were under a similar compulsion. The abolitionists alone cut loose from the Constitution, and, both as patriots and as Christians, saw their duty "steadily and saw it whole."

—A new volume in the series of "Handbooks to the Great Public Schools" (Macmillan) is Mr. Reginald Airy's 'Westminster.' It has the characteristic features of its predecessors—the time-tables, the estimate of school expenses, the description of school sports, the explanation of school slang. But it has also an account of the one institution peculiar to Westminster, the Latin play; and the specimen Mr. Airy gives of the celebrated Epilogues, crammed full of "topical" allusions in Latin and English, is a pleasing example of scholarly ingenuity. The yacht race figures thus, in 1893:

> Exoptata diu quaesivi pocula—frustra:
> Nam vigilant, vigilant—litore in Americo!
>
> In vain the capture of the Cup I planned;
> Their *Vigilant's* prevailed—in Yankeeland.

The one thing conspicuously absent from this handbook is the list so prominent in all its predecessors, of distinguished old boys. Is this mere accident, or is it the fact that Westminster has for years been relatively unsuccessful? This is a question we can hardly expect its eulogist to answer, but to an outsider it would certainly seem as if the situation of the school in the heart of a great city were a grave disadvantage. It remains to be seen whether Dr. Gow, who has recently come to the headmastership of Westminster, after a successful experience at a school of a very different type, will succeed in giving a fresh start to the venerable and picturesque foundation. His appointment is a sign of the times, and we may look for some changes in the school programme, if nothing else.

A SCIENTIFIC STUDY OF ENGLISH LANDSCAPE.

The Scenery of England and the Causes to Which It Is Due. By the Rt. Honorable Lord Avebury, F.R.S., etc. The Macmillan Co. 1902.

The idea of writing a book which should describe the scenery of a country by explaining the forces and causes that have made it what it is, and have given to the existing landscape its peculiar character, is an excellent one. It is, moreover, one specially suited to an age in which the conscious love of nature is growing, and increased facilities for travel enable persons of moderate means to learn to know the countries they inhabit or visit far better than in any previous time. Every feature in a landscape is due to causes which can be discovered and explained—most of them physical causes, a smaller number economic or historical. But of these causes very few would occur to the ordinary traveller, while the way in which they have combined to produce the actual visible effects would still less present itself to his unaided mind. The persons are, indeed, rare who reflect upon the things with which they have been familiar from childhood. An intelligent stranger visiting England is more likely than an Englishman born to ask himself what produced the distinctive features of English landscape.

The book before us is well planned and executed so far as regards its scientific side. The author shows a competent knowledge of English geology and climatology, and doubtless possesses a sufficient mastery of botany also, though he scarcely touches that side of the subject. Five-sixths of the treatise is devoted to an ex-

amination of the geological causes which have moulded the hills, valleys, and plains of England. It begins by a brief but sufficient sketch of the rocks of the country and their distribution, dwelling particularly, as is right, on the latest and superficial deposits of the Quaternary period, which form so large a part of the soil. After describing the general configuration of England and its relations to the European Continent, of which it formed a part at no very distant date (possibly, indeed, since the appearance of man), the author proceeds to deal with the coast line, showing why some parts are bold, others flat, what causes have enabled the sea to encroach on the land at some points, and the land to gain on the sea at others. These changes have been great—greater, in proportion to the size of the island, than those which have affected the coast line of the United States. Four chapters are then devoted to mountains and three to rivers. These are the best parts of the book. It would be impossible to criticise in detail the theories advanced regarding the origin of mountains, for some of these theories are still matter of controversy among geologists, and nearly all of them require a certain measure of technical knowledge to be mastered. But the description of English rivers, and the way in which their courses have been formed, is more within the comprehension of the ordinary reader, and is full of interest. The process by which a river bed and a river valley are excavated is investigated, the way in which rivers transport solid matter, the action of floods, the growth of deltas, the changes of river courses, the formation of terraces, the occurrence of waterfalls or rapids at particular points, the instances of subterranean water-courses, the relation of rivers to the various strata which they traverse—all these topics are handled in an intelligent and generally lucid way.

In particular there is an interesting discussion of the comparative antiquity of the chief rivers of Southern and Middle England; a discussion based on a consideration of the condition of the country in remote geological times. It has been suggested that the Thames as we know it now is a less important stream than it once was. In the days when the lias, oölite and chalk covered the whole of Western England (from which they have now largely disappeared by denudation) as far as the palæozoic mountains of Wales, the Thames may have drained an area to the northwest of its present basin which has subsequently been annexed by the Severn, then a much smaller stream; and its northern tributaries, such as the Cherwell, which joins it at Oxford, may also have at that time come down from points further to the north than their present sources. The arguments for this view, which Lord Avebury himself adopts, are too intricate to be here set forth, but they seem well founded, and are presented in a manner which is instructive, because it helps us to conceive of the way in which secular processes operate to change the surface and aspect of a country. Several pages of equal interest are devoted to explaining the remarkable cases in which, in several parts of eastern and southern England, rivers cut their way through ridges of hills instead of following what would seem, taking the surface of the country as it now exists, to be the natural line of discharge.

Another chapter examines the causes that produce lakes, and deals at some length with the theory which attributes not a few of them to glacial erosion. This doctrine has been disputed of late years as regards not a few of the instances formerly adduced, including the great Italian lakes at the southern foot of the Alps. Our author gives reasons for thinking that it holds true of many of the British lakes, though admitting that in some cases a moraine accumulated at the end of an old glacier is no less a cause of the lake than is the ice excavation of its basin. He observes, as indeed many a traveller must have observed, that lakes are a vanishing element in the landscape of the earth. Many have been filled up or have disappeared by desiccation. Many are being filled up to-day. Hardly any new ones are being created, hardly any existing ones enlarged.

One short chapter is given to the influence of what our author calls "law and custom" upon scenery. His remarks on the effect of English laws of inheritance, as compared with the laws of France, in causing the distribution of land into farms, as also in producing hedgerows and winding country lanes, are apposite, but the treatment of the general subject of the influence which man has exercised upon landscape is very inadequate. Far more might have been said about the way in which foreign trees have changed the landscape, and about the part played in it by the now dominant crops. Neither is the short chapter which considers the causes that have led to the creation of towns upon certain spots as full or instructive as it might have been made. Lord Avebury is much more at home in natural science than he is in history, and this whole side of the subject needs a treatment based on more extensive and thorough study. Neither do his etymologies always inspire us with confidence.

Speaking broadly, we may say that those parts of Lord Avebury's book which deal with the physical structure and configuration of England are carefully and intelligently done. They furnish an excellent foundation for the study of English scenery. But the superstructure has not been added. One would expect that when the physical causes had been explained, their connection with the actual landscape would have been brought out in a way to interest the tourist or the artist. There might have been what one may call a synthetic treatment of the subject, an effort to show how the causes, forces, and conditions so carefully analyzed have contributed to create the England which the traveller sees. Some typical and famous pieces of scenery might have been taken, such as Borrowdale, for instance, or the valley of the Wye, or the coast at Torquay, or the view from Richmond Hill near London, and the elements which make these spots beautiful might have been set forth in their combined action. Or certain districts might have been taken, such as the Yorkshire dales, or the Surrey downs and "bottoms," with their heaths and thickets and stretches of verdant pasture, or the moorlands of Somerset and Devon, pierced by romantic glens; and each of these classes of scenery might have been examined in the light of the geological and botanical data already given. Or the reader might have been conducted upon some journey which every traveller may be assumed to have made, such as that along the line of the London and Northwestern Railway, from Liverpool to London. The changing aspect of the surface, the lines of hills traversed or seen in the distance, the strata which successively reveal themselves in the cuttings, might have been referred to and explained. Any one of such methods would have the advantage of suggesting to the reader how he ought to observe landscape; and it is one of the chief uses of such a treatise as this to set people to use for themselves the data it supplies. Accordingly, the book is less interesting and less readable than it might have been made. The absence of labored pictorial passages is, indeed, no loss, yet a little more effort to present the characteristics of English landscape in a graphic and imaginative manner would not have been thrown away.

There is a profusion of photographic views and illustrative diagrams, well chosen, to explain the text. Though we regret the absence of what we have called the superstructure, the substructure is satisfactory. Whoever wishes to understand the physical geography of England as a preparation to the study either of the history of the country or of its scenic aspects will find the book useful. It contains a great deal of information which he will hardly find so conveniently arranged elsewhere, though he may be advised to refer for the geology to Ramsay's well-known 'Physical Geology and Geography of Great Britain,' and for the relations of physical geography to history to the recently published 'Historical Geography of the British Isles' of Mr. Mackinder, both excellent books.

TWO BOOKS ON ENGLISH PROSODY.

Milton's Prosody. By Robert Bridges. (New and enlarged edition.) Henry Frowde. 1901.

Classical Metres in English Verse. By William Johnson Stone. Henry Frowde. 1901.

The appearance of Mr. Bridges's book is very attractive. Its convenient size, neat binding, excellent paper, handsome, well-spaced type, and tasteful margins put one in a good humor with its contents. Repellent, however, and even irritating, is the arrangement of the treatise. The first part, on the verse of 'Paradise Lost,' is in three chapters; two chapters go to the second part, on the verse of 'Paradise Regained' and 'Samson Agonistes'; there follow appendices, A, B, C, D, E, F, G, H, and J. Appendix J is in two divisions, not closely related; for the former is on the rules of stress-rhythms, the latter on the accentual hexameter. In the sixty-six pages of appendices the matter presented seems quite as important as that set forth in the forty-six pages of the first and second parts. The treatise would be easier and pleasanter to read were it divided into fifteen chapters numbered serially. In indexes the book is rather pretentious, for it has three. Yet when we consult them for the word "fiction," which, in his system of verse-scansion, Mr. Bridges uses peculiarly and scarcely intelligibly as a technical term, we do not find the word indexed at all, and it appears in the index only casually under other headings.

To comprehend Mr. Bridges, it is necessary to form some idea of what he intends by this word "fiction." From what appears on pages 18, 19, 34, 45, 50, and 76 we rather

infer that the meaning is somewhat as follows. Milton wrote many lines like P. L. vii., 446:

"Of rainbows and starry eyes. The waters thus."

He intended that, in reading, each syllable should be fully pronounced as in prose; but in accounting to himself for the variety of effects in his rhythm, he considered the final syllable of "starry" to be elided before "eyes," and imagined a similar elision for all similar cases. By this resort to a non-existent elision, applicable to any part of any line, he reduced the form of his line to that of the type-line from which his variant diverges. Mr. Bridges calls every case in which, according to his view, two unaccented syllables are to be separately pronounced in reading, but considered as one in accounting for the structure of the line, "a fiction."

This is anything but satisfying. The idea appears far-fetched, while the assumption of seeing into Milton's mind and divining what he himself nowhere stated as his method, seems unjustifiable. True, the first edition of 'Paradise Lost' prints many elisions, as "Th' Almighty." But this method of printing is applied so inconsistently that no safe inference can be drawn from it. It may represent Milton's intention; it may be merely a fashion of the time, based on a vague general misconception. Besides, as an explanation, Mr. Bridges's idea is a lumbering device. How much simpler to assume Milton growing to feel that, in English verse, two unaccented syllables may, in any part of the line, stand in place of one, and that the only limit to the use of such variations is in the approval of the poet's own ear, its one needed justification the acceptance of these rhythms by a poet's audience.

Waiving our objections to the author's expression of his method, we find in his monograph the evidence of close, thorough, and sympathetic study of Milton's usage in verse, of keen insight, and of the most sensitive and delicate feeling for the finer and almost inappreciable shades of Milton's best effects. The lines on page 29, contrasted with the examples previously cited from Milton, demonstrate a real distinction between the variant lines in Milton and apparently identical variants in Shakspere, and the author appears to have proved his point, that the difference is not fortuitous, but due to a conscious intention in Milton to limit himself in such variation far more than did Shakspere. In the treatment of this matter some of the utterances are noteworthy, as on page 65: "'Liquid elisions' were adopted by Milton to the exclusion of others, not only because they pleased his ear, but because he knew why they did so"; and on page 68: "And Milton wrote much more carefully than he has been criticised."

The "rules" set forth in the first part, on 'Paradise Lost,' and those in appendix J, I., are in general just and likely to stimulate, if hardly to guide, a student or an independent investigator; in particular, they seem scarcely rules to be honored. Those in the first part are concerned less with the general structure of blank verse than with the minutiæ of its subtler variations. Those in appendix J, in so far as they set forth facts, are unimpeachable, but by no means to be subscribed to in respect to their interpretations of facts. Rule II. in this appendix is wholly good and very well expressed; those which follow are more likely to benefit a reader by clarifying his ideas as he explains to himself why he disagrees with them, than to help him as guides for the comprehension and interpretation of verse structure.

We cannot too much decry Mr. Bridges's conviction (Rules III. to VII.) that the metrical units of English are identical with the phrasing of its words considered as prose. Thoroughly in accord he seems with Mr. Stone, who calls attention to the conflict between foot stress and word accent in Greek and Latin metres; he appears to agree that some such feature should be recognized in English verse. Yet he totally ignores the much more important, more insistent requirement in classic metres that the words or phrases must not coincide with the feet. Mr. Bridges appears to be quite right, and seems original, in the idea that, in any system of notation for the scansion of English verse, the symbol for accent should appeal to the eyes more strongly than the symbols for quantity. This he sets forth on pages 77, 89, and 97. Otherwise, his system has nothing to recommend it. We cannot avoid deploring the universal habit of writers on versification: each must needs devise for his subject a new notation and a new nomenclature, partial or total. This seems never necessary, and generally ill-advised. In what he has to say of the pauses in blank verse, Mr. Bridges, apparently with some reason, prefers to the familiar classic term "cæsura" the word "break," as carrying no false connotation. His treatment of this subject is beautifully compact and sensible.

Of the observations scattered through the book some are well worth quoting. We find on page 30:

"It is easy to see how the far-sought effects of the greatest master in any art may be beyond the general taste—in rhythm this is specially the case; while almost everybody has a natural liking for the common fundamental rhythms, it is only after long familiarity with them that the ear grows dissatisfied, and wishes them to be broken; and there are very few persons indeed who take such a natural delight in rhythm for its own sake, that they can follow with pleasure a learned rhythm which is very rich in variety, and the beauty of which is its perpetual freedom to obey the sense and diction."

And on page 43:

"Poetry would be absurd which was always mimicking the diction or the sense; but that is a different thing from matter and form being in live harmonious relation."

Very interesting is the comment on Milton's twelve-syllable lines. Mr. Bridges appears, without realizing it, to have made a discovery. At least, we do not know of any one among Milton's editors or commentators who has called attention to the same facts in exactly the same way. He says on page 39 (the italics are ours):

"It is usually considered that this line (sometimes called an Alexandrine) must have a break or cæsura in the middle, between the sixth and seventh syllables. It is best known in this form, and the break is commonly so well marked that in free unrhymed verse it is indistinguishable from a pair of six-syllable lines. The characteristic of Milton's twelve-syllable line is his neglect of this break, and he makes a verse which has a strong unity in itself and no tendency to break up. In fact, he allows himself the same liberty of cæsura or break in this as in his ten-syllable verse; yet his Alexandrine is almost more coherent, *as if it were composed expressly to counteract its tendency to divide in two.*"

Then he cites, from the Nativity Ode,

"She strikes a universal peace through land and sea"

with

"While birds of calm sit brooding on the charmèd wave"

and

"Swindges the scaly horror of his folded tail."

These lines, if read with their natural accent, phrasing, and intonation, are clearly not Alexandrines. It might be conceivable that Milton wrote this kind of line unconsciously as a spontaneous variant on the Alexandrine, having hit it off by ear and repeating it from unreflecting liking for it. In the face of Mr. Bridges's careful examination of all Milton's twelve-syllable lines such a view is impossible; and, from his observations quoted above, it is quite obvious that these lines are not Alexandrines at all, nor variants on the Alexandrine, but accentual analogues of the Greek tragic iambic trimeter. It would appear also strongly probable that Milton, who was for his time a deep student of classical metres, wrote these lines consciously and intentionally. The characteristics of the classic tragic verse appear even more clearly in the line of 'Samson Agonistes' cited on page 42:

"Or do my eyes misrepresent, can this be he?"

We do not like at all Mr. Bridges's system of expressing his ideas on versification. His distinction between syllabic verse and stressed verse seems to us purely fanciful; on the other hand, his feeling for the structure of the verse he analyzes is worthy of the highest praise. Take, for example, what he says, on pages 98, 99, of certain effects in Shelley's "Sensitive Plant." We disagree wholly with his interpretation of them, but how much we respect his adequate perception of the facts! Still more do we admire what he says on pages 103, 104, of Shelley's stanzas beginning,

"Away, the moor is dark beneath the moon."

Mayor, in the recent second edition of his chapters on English verse, laboriously scans these lines, but fails to get any inkling of the type of their structure. Mr. Bridges equally misses the close analogy of their rhythm with that of those classic metres (the diiambic and pæonic) which would at once explain their movement; and yet he apprehends this movement perfectly.

Mr. Stone has passed out of sound of all criticisms. From strictures we forbear. Lest, however, his well-meant words so beautifully printed may mislead the unwary, we cannot omit saying that his essay seems to us the negligible utterance of an individual as entirely wrong-headed as he was transparently sincere. What the British universities can produce in the way of serene disregard of those facts of classical criticism which German investigation, to the satisfaction of all scholars everywhere, has established beyond cavil or peradventure, may be viewed upon pages 142, 143. We find there the facts concerning accent in ancient Greek, as long ago accepted by the consensus of the world's classical scholars, placidly brushed aside with an "I regard this view . . . to be altogether misleading," and an "I affirm with confidence." For whatever is good in

Mr. Stone's paper we are quite ready to give credit to himself. Not upon him rests any blame for his misconceptions, but upon a strange combination of reverence for a local view, and conservatism towards a tradition which was in itself a mere guess at its origin, with a calm indifference to the unimpeachable deductions of the world's foremost investigators which have thrown such a flood of light on the verities of classic verse structure.

A POOR HISTORY OF NEW JERSEY.

New Jersey, as a Colony and as a State, One of the Original Thirteen. By Francis Bazley Lee. Associate Board of Editors, William S. Stryker, LL.D., William Nelson, A.M., Garret D. W. Vroom, Ernest C. Richardson, Ph.D. Four volumes. Illustrated. New York: The Publishing Society of New Jersey. 1902.

The share of the Board of Editors in the preparation of these volumes has probably been a small one. Adjutant-General Stryker, upon whom Princeton University conferred the degree of doctor of laws for his historical writings, and who was the leading authority in the State upon the history of the Revolutionary period, died late in 1900. The proofs of the four volumes, according to the preface, "have been carefully read" by Messrs. Vroom and Nelson, but it would be charitable to infer that their labors have been advisory, if not perfunctory, and upon Mr. Lee's shoulders must be placed the responsibility for a work which is uneven, and often superficial, and which, upon the whole, in spite of evident enthusiasm and a certain capacity for historical research in limited fields, is disappointing and unsatisfactory. It is at its best in those portions which record the simple annals of a neighborhood; at its worst in the attempts to give philosophical treatment to broader aspects.

An example of the author's not infrequent tendency to draw a sweeping conclusion from an unrelated premise is given on page 187, volume i., where he says:

"It was the rule of the Society of Friends to 'marry in meeting'; that is, the union of a Quaker and a Presbyterian or Episcopalian was not only discountenanced, but was absolutely forbidden, to the degree of religious and social ostracism. Thus it was that a wealthy member of the Society, having a daughter, sought to unite her in marriage to some worthy young man of another land-owning family and join the two estates."

Here are recorded two separate statements, the first of which will be conceded and the second not seriously questioned, since it has been the habit of thrifty parents everywhere to marry their children as well as possible; but the last statement is no more to be drawn from the first than is the first from the last.

Elsewhere the author asserts that the Quakers looked upon marriage as a civil contract, not as a religious institution; and again on page 322, volume i., he reiterates his belief that the Quaker did not consider marriage as a divine sacrament. In these repeated assertions Mr. Lee contradicts the Quaker authorities themselves, simply because he has failed to understand the Quaker attitude towards what Friends consider the interference of a priesthood. In 'Friends in the Seventeenth Century,' by Dr. Charles Evans (Philadelphia, 1875), the true attitude of Friends upon this question is made plain in the following sentence (p. 262): "As Friends believed marriage was an ordinance of God, they held that He alone could rightly join any therein, and that the intervention of a priest or minister was not only uncalled for, but added nothing to the sacredness of the marriage covenant." The same authority also discusses marriage as a civil contract, the Friends regarding the bond from both points of view. George Fox declared that "it was God who joined man and woman before the fall. . . . It is God's joining that is the right and honorable marriage, but never any priest did marry any that we read of in the Scriptures from Genesis to Revelations" (see the Journal of George Fox).

On page 187, volume i., in attempting to point out a fundamental distinction between the people of East Jersey and those of West Jersey the author says, "The most characteristic feature of the economic development of West Jersey was the establishment of a land-owning class. Whether or not this was designed will probably never be known, but certain it is that those who had money or ready credit invested heavily, as the records show, in real estate"; and further on he speaks of land ownership as an indication of wealth. The truth is that, at the outset, land had an insignificant money value. The settlers and their descendants gradually created wealth from the soil, but as their wants were few and there was little variety of personal property, the profits of agriculture were invested in additional land, which in turn became a source of revenue; the process keeping pace with the development of consumers in villages and towns. There were, of course, families in West Jersey whose members were superior in ability, in character, in substance, and in education to the unlettered, simple-minded tradesmen, small farmers, and farm hands about them; but Mr. Lee's desire to set up a landed aristocracy in West Jersey outruns his facts. The teaching of the Friends was so largely ethical—conduct for seven days in the week was so important an element in their theological theory—that there was great uniformity in deportment and address. Besides, few Friends were needy, and the Quakers stoutly maintained that the individual was much, the station in life little. All this was opposed to an aristocracy; and although the author insists more than once that there was in West Jersey such an aristocracy, similar to that of Virginia, he nowhere presents the facts to sustain his view. The chapter on "Old Homes and Old Names" in volume iii., where the reader would naturally look for such evidence, is a mere roster of names, mostly of honest country folk in whose democratic simplicity of life and bearing there was certainly little of the aristocrat.

Another instance of the author's habit of over-statement is found on page 201, volume i., where, in writing of the redemptioners, he says: "Once in the hands of a new master, the life of the redemptioner was more distasteful than that of the slave." The services of the redemptioner were sold for a limited number of years to pay for his passage across the ocean. In the beginning the transaction was a voluntary one on the part of the redemptioner. Later, when vessels became so crowded that the passenger's personal belongings, his chest holding his clothing, and often his money, were left behind at the place of embarkment, the transaction became an involuntary one. It need not be pointed out that the situation of the slave was very different. Moreover, the redemptioner enjoyed the hope of marrying the daughter of the colonial who purchased his services, and the opportunity was so frequently improved—every community where redemptioners were found offering examples of such marriages—that in those early times, where an employer and employed, purchaser and redemptioner, labored side by side, ate at the same table and lived the same life, it is apparent that there was no sharp social distinction between the family and the "help," who so often subsequently became a member of the family by marriage. Mr. Lee says the redemptioner seldom aspired so high as to a seat in the New Jersey Legislature. As a matter of fact, well-known examples of redemptioners who rose to high station were Matthew Thornton, signer of the Declaration of Independence, and Charles Thomson, Secretary of the Continental Congress.

On page 195 of the same volume, the author has thought it worth while to record that sanitary plumbing, window screens, and bath-tubs were unknown to the New Jersey colonist, and declares that "in all cases the houses were without conveniences," meaning that they were without the conveniences of to-day. The conveniences of their time and locality of course they had. Of minor errors may be mentioned the reference to Anthony Wayne, page 180, volume ii., where he is called Col. Wayne. The time referred to is 1778. Wayne became a brigadier-general in the previous year. The inscription under the picture of the old inn at Haddonfield declares that "in this hotel the Continental Congress held many sessions." While the Legislature met in the hotel, and the Council of Safety was there organized, there is no foundation for the assertion that the Continental Congress ever sat there. The building represented on page 122, volume iv., was not the New Jersey building at the Centennial Exposition of 1876, as the book asserts. There is often marked inadequacy of statement. On page 285, in the same volume, it is declared that in Mount Holly, "before the opening of the civil war, two fire companies, an insurance company, and water, gas, and telegraph companies had been organized." When it is known that one of the existing fire companies was organized in the eighteenth century, and that the water company was one of the first in the United States, the vagueness of the phrase "before the civil war" is better appreciated. Elsewhere, on page 299, the author declares that at Lawrenceville is one of the three leading preparatory schools in the United States. Where are the other two?

The work has been written in a series of monographs, each chapter being supposedly complete in itself so far as the topic of which it treats is concerned. The method is not without its disadvantages. Thus, we are given in the first volume chapters on "The Beginnings of Transportation" and "Ordinaries, Inns, and Taverns," which are related subjects, separated by three chapters upon other topics. The chapters on

"The Steamboat Monopoly" and "New Jersey's First Railroad Charter" are in another volume, and "The Days of Camden and Amboy" in still another. Again, the reader is brought back to the subject of taverns in a chapter on "Social Conditions at the Close of the Century" in volume ii. Volume i. relates to the colony, volume ii. to the Revolution, and volume iii. to the first half of the last century, while volume iv. brings the narrative down to the present time. If the last volume had been omitted altogether, which, in view of its bare recital of commonplace facts to be gathered from almanacs and newspapers, might well have been done; and if the general discussion of national politics and national questions indulged in on every occasion had been curtailed, and the thinnest of the chapters on State topics had been cut down, the work would have been far less bulky, and at the same time there would have been room for an adequate account of the battle of Monmouth in place of the present meagre references to that contest. In connection with one phase of this battle the author names two gallant American soldiers, but fails to mention the real hero of the episode, Col. Nathaniel Ramsay of the Maryland Line, who thrust one British dragoon through the body with his sword, before being shot at close range, in his effort to fulfil his promise made to Gen. Washington that he would hold the position until troops could be brought up, or die in the attempt. Curiously enough, neither in the list of Princeton graduates, among whom both brothers are to be numbered, or elsewhere, is there any reference to Col. Ramsay's brother, Dr. David Ramsay, the "Father of American History," whose account of the war for Independence, including the New Jersey campaigns, still remains, after more than a century, one of the best, as it is one of the most authoritative, historical narratives of the war. However, Mr. Lee has concerned himself little with literature relating to the State, although Henry Armitt Brown's address at Burlington, Andrew D. Mellick's "Story of an Old Farm," and Isaac Mickle's "Reminiscences of Old Gloucester" were models of what his own work should have been.

The many curious facts recorded in the first volumes, such as the manufacture of wampum in New Jersey as late as the year 1860; the organization by the Dutch of a church at Bergen in 1660, the oldest church in the State; the establishment at the same place by the same race of people in 1664 of the first school in the State; the Loyalist record of Shrewsbury (an English settlement); the facts relating to the exercise of their right to vote by the women of New Jersey under the Constitution of 1776; even a number of meritorious chapters like those relating to slavery, currency, and counterfeiting, only serve by contrast to deepen regret that a work so good in part should be marred by imperfections so obvious.

Of the marginal illustrations in color scattered profusely through the volumes, many are without any special relevancy, and a number of nameless ones were inserted, apparently merely in order that the page should have a picture. The engravings of portraits of distinguished Jerseymen are more dignified in character and more in keeping with the kind of historical work which these volumes aim to be, but fall short of being.

Disciples of Æsculapius. By Sir Benjamin Ward Richardson, M.D., F.R.S. With portraits and illustrations. E. P. Dutton & Co. 2 vols., 8vo, pp. 827.

The cables of thought that run through human history connect one era with another, although few of their strands maintain prolonged continuity. Generally, the threads that bind one stage of social and intellectual development with the preceding are replaced later by others of different hue and texture, so that, in tracing backward a particular science, course of study, or doctrine, one may be surprised to find how completely its fundamental concept has been changed, and sometimes to learn that minds whose main distinction was in other realms could be claimed as originally of the one in question. For instance, John Keats was a medical student, and had practically no other education or occupation; not that he advanced medicine by his genius, but medicine seems to have given occasional tone and illustration to his thoughts. The philosopher, John Locke, author of the fundamental Constitution which the Proprietors of 1663 attempted to use in Carolina, and of the 'Essay concerning Human Understanding,' was an Oxford bachelor of medicine, and in his earlier years a successful practitioner, who never wholly discarded professional interest.

From the writings of the late Sir B. W. Richardson, himself an active-minded man, especially concerned with preventive medicine, are here collected more than forty addresses commemorative of men who, in one way or another, contributed to or were connected with medical science. Not all of them were physicians, but all were interested in modes of right living, and nearly all in the cure or the prevention of disease, or in discovery and public service bearing directly upon the prolongation of human life. These two volumes of essays are intelligent and interesting studies of great men, and present in most instances details little known, except to scholars in biography. They are discriminating reports of worthies who have placed the world in debt, although much of that has passed by the lapse of time into the outlawry of oblivion; and they make up a compendium convenient for reference and sufficiently complete for the pleasure and advantage of many writers and more readers. The papers are not arranged chronologically, nor by subject, and they run from the birth of French surgery and of modern anatomy to our own times. The acute and outspoken Willis, the learned and successful Sydenham, Paré courageous and devout, Black and Priestley, Rush and Wiseman, Digby and Browne, are among those passed in kindly but sagacious review.

The student reviewing the last three centuries of medicine will find here illustrations of its incidental interlacings with many kindred lines of study, and an interesting collective exhibition of modes of thought, as well as of achievement in different periods. For reading and for reference this compilation is equally appropriate for private collections and public libraries.

The Contendings of the Apostles: The Ethiopic Texts, now first edited from Manuscripts in the British Museum, with an English Translation, by E. A. Wallis Budge, M.A., Litt. D., D. Lit., F.S.A. Vol. II. The English Translation. Henry Frowde. 1901. Pp. xvi, 736.

Among the most important legacies to us from the gnostic sects of the early Christian centuries have been various apocryphal acts, preachings, and martyrdoms of the apostles. These were taken over in self-defence by the Catholic Church, purged mostly of their heretical doctrines and allusions, and have reached us in this modified form. Apart from their value for the history of the popular ideas and beliefs of the early Church, they are of high interest for sociology and folklore. One group of these apostolic legends, known as the "Contendings of the Apostles," appears, according to the researches of Guidi, to have assumed form under the Patriarchate of Alexandria. The earliest traces are in Sahidic Coptic, but in that language only fragments so far have been found. From Coptic, as the language of the people changed, it was rendered into Arabic, and of the collection in that form we possess several manuscripts. This translation must have been made in the second half of the thirteenth century, and marks a new period in the history of these stories, coinciding, apparently, with a literary and religious revival in the Alexandrian patriarchate itself. From Arabic a translation was finally made into Ethiopic, but not earlier than the first half of the fourteenth century. Thus, at last, these half-wearisome, half-weird tales reached the Abyssinian Church. No other church has given them so free an entrance among its sacred books; elsewhere, they have ranked as religious novels, a cross between 'Robert Elsmere' and 'The Prince of the House of David'—the one on the gnostic, the other on the Catholic side; there, they have lacked little of full canonicity. Perhaps, then, it was fitting that this, their most complete attiring in a European garb, should be by passage from the language which had proved most hospitable to them. From every other point of view an edition and translation of the Arabic version, in the lack of complete Coptic manuscripts, would have been more desirable. The Ethiopic is only another remove from the lost original, and adds little or no interest of its own.

Dr. Budge in this volume makes no reference to the industrious S. C. Malan, who anticipated him in the greater part of his work with a translation published in 1871. Without doubt, however, his own is more literal and elaborate, and has been made from fuller manuscripts. The version in itself certainly suggests conscience and care. The unwieldy sumptuousness of the form is due to the munificence of the late Marquess of Bute. A fuller introduction and commentary would have raised higher gratitude in us than the present heavy paper and more than ample margins. As it is, the student must take refuge with Lipsius and Guidi.

Church Building: A Study of the Principles of Architecture in their Relation to the Church. By Ralph Adams Cram. Boston: Small, Maynard & Co.

The greater part of this volume first reached the public in a series of articles in the columns of the *Churchman*. They were

of real value, and it is proper that they should assume the more permanent form of a book. That ecclesiastical architecture in America is on a lower plane than secular is a proposition not likely to meet denial, and any book which helps great numbers of people to see this and to wish for better things, is to be warmly welcomed. Mr. Cram's criticism is not merely destructive. He is not content with pointing out the defects of our average church and the tastelessness of its fittings. He tells us how things should be done. He gives us plans and pictures showing how they have been, and may again be, properly done.

He covers a wide field, starting with the village chapel and ending with the cathedral. On the first page he strikes the keynote of his treatise. "Let us remember this: when we build here in America we are building for now, we are manifesting the living Church." "It is the present that demands us—the immutable Church existing in times of the utmost mutability. We must express the Church that is one through all ages; but also we must express the endless changes of human life, the variation of environment. This is church architecture." He plunges at once into the question of how most wisely to spend the small sum usually at the command of a rural population, and shows so clearly what to avoid and what to strive for, that the wonder is that the right thing, seeming so simple, is not oftener done. The problem, as he puts it, is "to build a shelter for the altar and congregation, together with such adjuncts as are necessary, for the smallest cost consistent with honesty, durability, dignity, and reverence." Then follows the analysis of plan, its length and width, its way of seating the people, its provision for service; next, the materials and the ways of working them, and then the outcome of all this in the expression of the building. The summation comes at the end of the chapter: "Build in stone or brick; plan with rigid simplicity; design both exterior and interior with reserve, formality, and self-control; have the mass simple, the composition equally so; imitate no form or detail of larger structures, but work for the dignity and reverence that are theirs."

Mr. Cram's English is nothing if not vigorous, his opinions nothing if not positive. Could every member of every church-building committee be made to read, mark, learn, and inwardly digest this book, great would be the gain for decent, honest, straightforward architecture.

The Development of Cabinet Government in England. By Mary Taylor Blauvelt. Macmillan Co. 1902.

It is not an easy task to write of cabinet government, with Bagehot's brilliant essays illuminating the subject so clearly as they do. Yet it is one of the defects of such genius as his that it is dazzling; our eyes do not penetrate the nooks and corners left in shadow. This book is adapted to remedy these defects. It does not offer a philosophical explanation of the necessity of a cabinet, or of something homologous, in all governments; perhaps it would be more effective had more been attempted in that direction. What it does is to show how the cabinet came into existence, and how its powers came to increase. To attain this result, the author appears to have carefully examined the records, of all descriptions, which throw light on the subject.

Few monarchs have had the ability to conceive and carry out a policy. Every human being, indeed, whether king or subject, must act through agents in any considerable enterprise. A strong king may rule his ministers; a weak one will be ruled by them. In England the Tudor sovereigns were capable enough to rule without depending on Parliament. The Stuarts were incapable rulers, and their ministers exasperated the country so that Parliament became powerful. The folly of James II. was so extreme as to destroy the monarchy and make Parliament supreme. When the Stuarts were driven out, loyalty went with them. Some figure-head was of course necessary; the name of monarchy had to be preserved. But it was ridiculous to expect loyalty to the first Georges. The Whig aristocracy had to maintain them, and did so by making Parliament the governing body. But loyalty is a sentiment, and is no more to be made to order than religious feeling, and it was a century before the Tories really accepted the Hanoverian line as ruling *de jure*.

Long before this century was completed, Parliament had grasped the reins of power too firmly to be disturbed. It had the whole of the reigns of George I. and George II. in which to develop its system of government. The great Whig houses chose the members of Parliament, and gradually those members turned the direction of affairs over to a committee. That committee, for deferential reasons, was represented as a council of the King, and George III. was able to control it at times. But neither he nor any later sovereign has been supported by the sentiment of loyalty to any such extent as to make it practicable to overthrow Parliament. The details of the process that we have outlined are well worked out in this book, which deserves to be classed among histories of substantial merit.

Essais sur le Mouvement Ouvrier en France. Par Daniel Halévy. Paris: Georges Bellais. 1901. Pp. 300.

But for the new edition of Mr. Rae's 'Contemporary Socialism' these essays would have an almost unique value as a review of the recent progress of the labor movement in France. As it is, while Mr. Rae's chapters treat the subject in a more familiar way, M. Halévy's book is by far the most comprehensive discussion of it that has fallen under our eye, without being a plea for any party. One of the three essays is primarily historical, and traces the growth of French trades-unionism. The second deals with some social-economic aspects of the labor movement, such as co-operation and university extension; the third with the political activity of the unions. While M. Halévy is in sympathy with the general principles of French trades-unionism, he fully concedes the bad results of it. The unions have had a hard fight to gain their footing, and recognition of them has come later than in England; but they seem to be rather more disposed to abuse their new privileges than are the English unions. For one thing, strikes are multiplying with alarming rapidity. Between 1870 and 1880, only 30,000 workmen were affected by strikes; but, from 1890 to 1895, 92,000 were out, and the total days of idleness were more than three times as numerous as from 1870 to 1880. From 1895-1899 a still further increase in time thus lost is observable, and statistics for 1900 show an aggregate of 216,530 strikers, with not less than 4,000,000 days of idleness. Strikes, too, are becoming more dangerous, since they are both more violent and more inclusive than they were formerly. From this state of things arises a desire to find a remedy for the strike. Some profess to find such a cure in conciliation and arbitration, and hence the discussion of certain plans patterned after the New Zealand system, none of which, however, have been seriously considered. On the whole, M. Halévy thinks trades-unionism, despite its bad features and its many sins, a needed support to workers whose welfare is endangered by the combinations of capital, and at the same time an aid to the state in its unequal contest against plutocracy.

Coöperation has made considerable progress, and the movement for popular education and improvement is still in the flush of first enthusiasm. French workmen are doing a good deal in the way of supporting one another, and are seeking greater adaptability to industrial change through scientific knowledge. The educational movement does not, however, neglect the humanities wholly; and though the English notion of culture is not readily grasped, a substitute for it is being developed even where it did not formerly exist at all. These hopeful symptoms of better social organization make it all the more unfortunate that unwise political action should have been attempted, and that the trades unions should have linked themselves with the Socialist cause. There is really no necessary connection between Socialism and the labor movement. Just how they have become associated in France, M. Halévy makes very plain—but this part of his story is by far the most familiar to English and American readers. Socialism, in his opinion, has not engendered class contests, but has changed their character for the better by making them more reflective and self-conscious. In this fact he sees the hope of the future—a society transformed not by warfare, as heretofore, but by economic changes directed toward a common object, the greatest happiness of the greatest number.

The weakest feature of M. Halévy's book is his failure to view the labor movement in its relation to capitalism. It is not only a social development, but is conditioned by its economic bearings as well. But this shortcoming is too common a vice with social theorists to be laid too heavily upon a single scapegoat.

BOOKS OF THE WEEK.

Bangs, J. K. Uncle Sam, Trustee. Riggs Pub. Co. $1.75.
Besant, Sir Walter. Autobiography. Dodd, Mead & Co. $2.40.
Clewell, J. H. History of Wachovia in North Carolina. Doubleday, Page & Co. $3.
D'Avenel, G. Le Mécanisme de la Vie Moderne. Paris: Armand Colin. 4 fr.
Dendron, Bertram. The Man in the Moon. Bonnell, Silver & Co. 50 cents.
Dix, Dorothy. Fables of the Elite. R. F. Fenno & Co. $1.
Dunbar, P. L. The Sport of the Gods. Dodd, Mead & Co. $1.50.

JUST PUBLISHED.

AIKINS' LOGIC

By Prof. HERBERT AUSTIN AIKINS of the Western Reserve University. 498 pp. 12mo. $1.50 net.

Logic is treated, not as a "science of the laws of thought" and still less as a set of rules for verbal manipulation, but rather as an account of the most general relations that all thinking takes for granted; and on this basis the traditional rules are explained and restated. There are abundant exercises.

RAMSEY'S SPANISH GRAMMAR

WITH EXERCISES. By Prof. M. MONTROSE RAMSEY of Stanford University. 610 pp., 12mo, $1.50, *net*. A new college text-book, sufficiently complete for study and reference, and equipped with very full exercises, which as far as practicable have been given the form of connected description, narrative, or conversation. *The Nation* said of the author's larger "Text Book of Modern Spanish": "We mention it because of the very great advance it shows over all existing Spanish grammars in English. This applies to almost every detail of the work."

Henry Holt & Co.

29 W. 23d St., New York. 378 Wabash Ave., Chicago.

Adventures in Tibet

By WILLIAM CAREY

Including the Complete Diary of Miss Annie R. Taylor's Remarkable Journey from Tau-Chau to Ta-Chien-Lu, through the heart of the Forbidden Land.

Large octavo, silk cloth binding; 75 handsome illustrations.

Price $1.50 net.

Miss Taylor made the journey with only faithless native guides as attendants. It is a remarkable tale.

THE BAKER & TAYLOR CO., New York.

A New and Really Original Novel
